The figures in the table below tell the real story of BHP's lacklustre profit performance in recent years. Looking at the domestic sales figures for the November six months period, we see that these figures have fallen significantly over the last three periods.

PROGRESSIVE FALL

Whereas local steel sales were, 2.490 million tons in the six months to November, 1974, the corresponding figures have fallen progressively to 2.167 million tons, then 1.986 million tons and now only 1.860 million tons.

While these steel sales to the Australian market are presumably priced to return BHP a good profit, the reduced steel demand has forced BHP to sell more and more of its steel on the export market.

The problem here is that just about every other steel producer in the world has been facing the same situation of declining demand in its own domestic market, there is a substantial surplus of steel available.

JUST COVERS COST

In order to clinch an export sale, BHP has had to pitch its price so low that it only just covers its marginal operating costs.

So there must be just about no profits at all in BHP's steel exports. And the table shows how these exports have risen in recent years to help maintain an overall steel production level at the rate of around 6 million tons a year.

In this situation, it is apparent that nothing would please BHP more than a resurgence of the Australian economy, as this would enable it to increase its sales in the domestic market and reduce them on the export market.

If this were to happen, BHP would gain significantly from the better prices it can get on the Australian market.

As it is, BHP appears to be in a good cash situation at the moment. Its cash flow after dividend payments increased to $147.4 million for the six-month period compared with $125.2 million in the previous corresponding period.

The company says that the continuing strength of the group's cash flow means that the group's liquidity has been maintained at a satisfactory level.

BHP's STEEL SALES

('000 tonnes)

| 6 months to | Exports | Domestic sales | Total |
|---|---|---|---|
| Nov. '74 | 835 | 2,490 | 3,325 |
| May '75 | 1,008 | 2,125 | 3,133 |
| Nov. '75 | 1,273 | 2,167 | 3,440 |
| May '76 | 1,277 | 1,894 | 3,171 |
| Nov. '76 | 1,573 | 1,986 | 3,559 |
| May '77 | 1,204 | 1,773 | 2,977 |
| Nov. '77 | 1,471 | 1,860 | 3,331 |

## QUAKERS URGE DISARMAMENT

### HON. EDWIN B. FORSYTHE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. FORSYTHE. Mr. Speaker, I wish to insert the following statement by the Friends World Committee of Consultation on the U.N. Special Session on Disarmament. I hope it stimulates discussion on this subject. For disarmament deserves earnest and deep consideration by our Nation and the other nations of the world. It is my belief that all nations should strive toward disarmament.

The statement follows:

FRIENDS WORLD COMMITTEE FOR CONSULTATION, RELIGIOUS SOCIETY OF FRIENDS (QUAKERS), FEBRUARY 21, 1978

The Religious Society of Friends (Quakers) with members in 27 countries, in expressing the belief in the value of every human being in the sight of God, has throughout its 300 years' history consistently worked for peace and against war and the preparations for it.

The escalation in the arms race and the increased destructiveness of modern weapons make the need for disarmament more imperative than ever before. The high level of armaments, held by most governments to be essential to security, is instead a major threat to peace. Armaments are also a tragic waste of human and material resources which should be used towards removing the extreme poverty in which most of the world's people still live. Effective disarmament agreements must be accompanied by other measures such as strengthening procedures for the peaceful settlement of disputes through the United Nations, developing international law and guaranteeing basic human rights.

The Special Session of the UN General Assembly on Disarmament to be held in New York in May/June 1978 is an historic opportunity for governments and peoples not only to proclaim the urgency of disarmament, but also to commit themselves to practical steps of disarmament and to ending the international trade in arms. Any government can take the initiative. We call on them to do so. The risks of disarmament are no greater than the risks of war. We urge that the Special Session should be used as a turning point for governments to respond to the yearning of people everywhere for a world free from war.●

## POMONA GRANGE SPEAKS OUT AGAINST GUN REGISTRATION

### HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. ASHBROOK. Mr. Speaker, members of the Pomona Grange of Coshocton, Ohio, have gone on record against the gun registration efforts of the Bureau of Alcohol, Tobacco and Firearms. In a letter to BATF Director Rex Davis, they declared they "are adamantly opposed not only to the idea of gun registration but also to the processes whereby gun controls are presently being used to force gun registration upon the people of the United States of America."

I agree wholeheartedly with their views. I am currently sponsoring a joint resolution disapproving the proposed BATF plan.

At this point in the RECORD I would like to include the full text of the Pomona Grange letter:

WEST LAFAYETTE, OHIO,
*April 5, 1978.*

Director REX DAVIS,
*Director of Alcohol, Tobacco & Fire Arms Division, Washington, D.C.*

DEAR DIRECTOR DAVIS: The Coshocton County Pomona Grange of Coshocton, Ohio hereby emphatically declares that its members are adamantly opposed not only to the idea of gun registration but also to the processes whereby gun controls are presently being used to force gun registration upon the people of th United States of America. Our Government is one Of The People, By The People, and For The People. Any rule, regulation, or law that is forced upon the people without the consent of the majority must be rejected.

Our elected representatives and appointed members of Government apparently see themselves as the Great Protective Father. This is a false idea. Any one who truly believes in our Representative Republic must know that you build character and responsibility in people by requiring that they shoulder their own problems by cooperative action in times of need.

Over protective governments build weak citizens and is the direct cause of the downfall of former governments. We only need to look at the history of past nations to see the results of ambitious governments. Let's not follow the example of Nazi Germany and Communist Russia.

Gun registration must not be dictated by some government individual bureau, or department. After all, it is not the majority of citizens that are using guns wrongly. It is the duty of government to control only the ones who use guns for the wrong purposes. When the laws, now on the books can be truly enforced, there will be no need for further limiting the freedom of law abiding citizens.

It is true that guns wrongly used kill many people but so do automobiles, drugs and alcohol, knives, clubs, electricity, and many other devices. We must not, in a freedom loving country, deny the people the free

choice of the benefits of these devices just because a small percent of the citizens are let go unpunished when they use them wrongly.

Very truly yours,

EDWIN C. LAPP,
*Legislative Agent.*
LLOYD J. FOWLER,
*Legislative Agent.*
ROBERT F. MCCLURE,
*Master.*●

## DEREGULATION DEBATE SHROUDED IN SECRECY

## HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. ARCHER. Mr. Speaker, I recently received a letter from Mr. David Cohen, president of Common Cause, which called attention to the manner in which the Democratic Caucus has disregarded the intent of House rules concerning open conferences on the natural gas deregulation issue.

Mr. Cohen's comments are of particular importance at this time because of the gravity of the issue at stake, and I would like to share them with my colleagues.

Certainly they reflect my own feelings on this issue of open meetings—as well as the continuing issue of how this energy legislation has been handled by the majority.

The letter follows:

Hon. BILL ARCHER,
*U.S. House of Representatives,*
*Washington, D.C.*

DEAR REPRESENTATIVE ARCHER: Common Cause strongly believes that the natural gas pricing conferences held after the Easter recess should be held in open session, as was the March 22 conference.

Common Cause has been concerned that the House and Senate Democratic conferees for a three month period chose to ignore House and Senate rules and exclude the public from critical deliberations and conduct its conferences in secret.

It is our understanding that these closed meetings were dealing with the heart of the natural gas pricing question and that substantive actions were being taken—offers made, counter-offers proposed, and decisions reached that will vitally affect every segment of American society. To conduct these sessions in secret is a clear violation of the public's right to know and totally contravenes the open meeting rules of the House and Senate.

Since the passage of strong Sunshine rules, open meetings in both the House and Senate have become a natural and productive way of doing business. A Common Cause study showed that in the first year after passage of the House open meetings rule in 1973, over 90% of House markups were open to the public. Although no similar statistics exist for the Senate, it is clear to those who follow the Senate that the closed meeting is the rare exception to a general rule of openness. In addition, both Democrats and Republicans in the House of Representatives have adopted rules opening their party caucuses to public observation.

The House rule governing open conferences states that all conferences must be open to the public unless a majority of the entire House votes to close the conference. The Senate rule requires open conferences unless a majority of the managers votes on the record in open session to close a conference.

Clearly these procedures have been flouted by Democrats meeting in closed conferences on the energy bill. The reason cited is that these meetings are not conferences but simply "Democratic Caucuses" where members meet for casual consulting. This claim is spurious, for major substantive issues were being discussed by Members of the two Houses of Congress, compromises formally offered and counter-offers discussed and debated. In fact, the future natural gas policy for the United States is being shaped, debated and probably decided in these secret so-called "Democratic Caucuses."

If these conferences are held in secret after the Easter recess, this basic violation of House and Senate rules places the entire bill in jeopardy. If rules are violated and proper procedures are ignored, points of order can legitimately be lodged against the legislation.

We strongly urge you to hold any future conferences on energy in open session. Controversial and sensitive matters are decided in public every day in Congress. This matter should not be treated any differently.

Sincerely,

DAVID COHEN,
*President.*●

## TRIBUTE TO CARPENTER'S UNION ED GALE

## HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. EDWARDS of California. Mr. Speaker, on May 5, 1978 hundreds of friends of Ed Gale will gather in San Jose, Calif., to honor him on the occasion of his retirement. Congressman MINETA and I feel that it is appropriate at this time to note the years of service which Ed Gale has dedicated both to the carpenter's union and to the community in which he lives.

Ed has served the carpenter's union in San Jose since 1946 in a variety of capacities, including business agent, financial secretary, recording secretary, and on countless committees. He has lent his efforts to encouraging and assisting young people through the Carpenter's Apprentice Committee and toiled for work place safety through his position as chairman of the Labor Committee of the Governor's Safety Conference Committee from 1965 to 1972. He has also worked for safety as a member of the planning committee for the Occupational Safety Conference of San Jose State University.

Ed has been a worker for human rights and brotherhood as a member of the San Jose Human Relations Commission from 1959 to 1965, and serves with a large number of fraternal, community, and civic organizations.

Ed Gale epitomizes the sort of commitment to trade unionism, community, family, and good government that makes our country vibrant and healthy. We owe him a round of thanks and both Congressman MINETA and I are pleased to recognize him and applaud him on the occasion of his retirement.●

## CONGRESSMAN FOLEY'S VOTING RECORD

## HON. THOMAS S. FOLEY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. FOLEY. Mr. Speaker, I hereby submit a compilation of my voting record for the month of March of the 2d session of the 95th Congress:

75. H J Res 554. D.C. Voting Representation. Adoption of the rule (H Res 1048) providing for House floor consideration of the joint resolution to amend the Constitution to provide for full voting representation in Congress for the District of Columbia. Adopted 386–21 March 1, 1978. Yes.

76. H J Res 554. D.C. Voting Representation. Edwards, D-Calif., motion that the House resolve itself into the Committee of the Whole for consideration of the joint resolution to amend the Constitution to provide for full voting representation in Congress for the District of Columbia. Motion agreed to 369–15 March 1, 1978. Yes.

77. H J Res 554. D.C. Voting Representation. Edwards, D-Calif., motion that the House resolve itself into the Committee of the Whole for further consideration of the joint resolution to amend the Constitution to provide for full voting representation in Congress for the District of Columbia. Motion agreed to 394–12 March 2, 1978. Yes.

78. H J Res 554. D.C. Voting Representation. Passage of the joint resolution proposing an amendment to the Constitution to provide for full voting representation in Congress (both in the House and the Senate) and to retain the right granted by the 23rd Amendment to vote for the election of the president and vice president (the resolution would repeal the 23rd Amendment). Passed 289–127 March 2, 1978. Yes.

79. Procedural Motion. Bauman, R-Md., motion to approve the House *Journal* for Thursday, March 2, 1978. Motion agreed to 304–20 March 3, 1978. Announced yes.

80. H Res 957. Veterans' Affairs Committee. Adoption of the resolution to authorize $400,000 for calendar year 1978 for expenses of investigations and studies of the House Committee on Veterans' Affairs. Adopted 336–1 March 3, 1978. Yes.

81. H Res 953. District of Columbia Committee. Adoption of the resolution to authorize $275,000 for calendar year 1978 for expenses of investigations and studies of the House Committee on the District of Columbia. Adopted 318–15 March 3, 1978. Yes.

82. H Res 1012. Rules Committee. Adoption of the resolution to authorize $49,500 for calendar year 1978 for expenses of investigations and studies of the House Committee on Rules. Adopted 321–13 March 3, 1978. Yes.

83. Procedural Motion. Ashbrook, R-Ohio, motion to approve the House *Journal* for Friday, March 3, 1978. Motion agreed to 331–11 March 6, 1978. Announced yes.

84. H J Res 715. Sun Day Designation. Lehman, D-Fla., motion to suspend the rules and pass the joint resolution to designate May 3, 1978, as "Sun Day" to promote and call attention to the possibilities of solar energy. Motion agreed to 348–7. March 6, 1978. Announced yes.

85. HR 10551. Education Act Waiver. Perkins, D-Ky., motion to suspend the rules and pass the bill to continue fiscal 1978 funding and waive some requirements of Title I of the 1974 Elementary and Secondary Education Act for 13 school districts that participated in demonstration programs to improve operation of Title I programs. Motion agreed to 404–0: March 7, 1978. Yes.

86. HR 11180. Debt Limit. Adoption of the rule (H Res 1056) providing for House floor consideration of the bill to increase the debt limit and revise procedures for establishing it in the future. Adopted 285–115. March 7, 1978. Yes.

87. HR 11180. Debt Limit. Bolling, D-Mo., amendment to delete title II, which would establish the debt limit through concurrent budget resolutions in the future. Adopted 277–132. March 7, 1978. Yes.

88. HR 11180. Debt Limit. Passage of the bill to increase the debt limit to $824 billion through March 1, 1979. Rejected 165–248. March 7, 1978. Yes.

89. H J Res 746. Power Supplemental Appropriations, Fiscal 1978. Passage of the joint resolution to appropriate $13.1 million for the operation of the Southwestern Power Administration for fiscal 1978. Passed 353–50. March 7, 1978. Yes.

90. H Res 1003. Public Works and Transportation Committee. Adoption of the resolution to authorize $2 million for calendar year 1978 for expenses of investigations and studies of the House Committee on Public Works and Transportation. Adopted 399–1. March 7, 1978. Yes.

91. Procedural Motion. Bauman, R-Md., demand for the yeas and nays on the question of dispensing with further proceedings under a quorum call. Proceedings dispensed with 372–34. March 8, 1978. Yes.

92. Procedural Motion. Dickinson, R-Ala., motion to approve the House *Journal* of Tuesday, March 7, 1978. Motion agreed to 377–26. March 8, 1978. Yes.

93. Procedural Motion. Bolling, D-Mo., motion to table the Zablocki, D-Wis., motion to reconsider the vote approving the *Journal*. Motion agreed to 313–91 March 8, 1978. Yes.

94. HR 50. Full Employment Act. Rousselot, R-Calif., demand for the yeas and nays on the Bolling, D-Mo., motion to order the previous question on the adoption of the rule (H. Res. 1057), providing for House floor consideration of the bill to promote full employment, balanced growth and price stability by economic planning and employment programs. Motion agreed to 371–36 March 8, 1978. Yes.

95. HR 50. Full Employment Act. Adoption of the rule (H. Res. 1057) providing for House floor consideration of the bill. Adopted 349–58: March 8, 1978. Yes.

96. HR 50. Full Employment Act. Bolling, D-Mo., motion to table the Long, D-La., motion to reconsider the vote adopting the rule providing for House floor consideration of the bill. Motion agreed to 368–29: March 8, 1978. Yes.

97. HR 50. Full Employment Act. Hawkins, D-Calif., motion that the House resolve into the Committee of the Whole to consider the bill to promote full employment, balanced growth and price stability. Motion agreed to 364–32: March 8, 1978. Yes.

98. Procedural Motion. Ashbrook, R-Ohio, motion to approve the House *Journal* of Wednesday, March 8, 1978. Motion agreed to 386–15: March 9, 1978. Yes.

99. HR 50. Full Employment Act. Wright, D-Texas, amendments, to the Sarasin, R-Conn., amendments, to require the president, beginning with the third year after enactment of the bill, to include in his annual economic report goals for reasonable price stability, and to formulate policies to reduce inflation. Adopted 277–143: March 9, 1978. Yes.

100. HR 50. Full Employment Act. Jeffords, R-Vt., substitute amendment, to the Sarasin, R-Conn., amendments, to require the president, beginning with the third year after passage of the bill, to include in his annual economic report goals for reasonable price stability, and to formulate policies for the reduction of inflation; and to define reasonable price stability as reduction of inflation to 3 percent within five years of enactment. Rejected 198–223: March 9, 1978. No.

101. HR 50. Full Employment Act. Jeffords, R-Vt., amendment to require the president's economic report to differentiate between employment in the private and permanent public sector and employment in temporary public service programs. Adopted 239–177 March 9, 1978. No.

102. HR 50. Full Employment Act. Quie, R-Minn., amendment to include maintenance of farm income at 100 percent of parity at the marketplace among the goals of the president's economic report. Adopted 264–150 March 9, 1978. Yes.

103. HR 10982. First Budget Rescission, Fiscal 1978. Passage of the bill to rescind $55,255,000 in fiscal 1978 appropriations: $40,200,000 in military assistance; $10,055,000 for the Federal Home Loan Bank Board; and $5,000,000 in international peacekeeping activities. Passed 318–0 March 10, 1978. Yes.

104. HR 6635. Retirement Bond Interest. Conable, R-N.Y., demand for a second on the Ullman, D-Oreg., motion to suspend the rules and pass the bill to allow the interest rates paid on U.S. retirement plan and individual retirement bonds to be increased to the rate paid on U.S. series E savings bonds. Second ordered 372–1 March 13, 1978. Yes.

105. HR 7814. Federal Employees' Flexible Work Schedules. Solarz, D-N.Y., motion to suspend the rules and pass the bill to authorize federal agencies to experiment with flexible and compressed work schedules. Motion rejected 242–141 March 13, 1978. Yes.

106. HR 10126. Federal Employees' Part-Time Employment. Schroeder, D-Colo., motion to suspend the rules and pass the bill to establish a program to increase part-time career employment within the U.S. Civil Service. Motion agreed to 294–84 March 13, 1978. Yes.

107. HR 9146. Postal Service Changes. Hanley, D-N.Y., motion to suspend the rules and pass the bill to provide for a one-house congressional veto within 60 days of proposed postal service changes submitted by the U.S. Postal Service. Motion agreed to 371–6 March 13, 1978. Yes.

108. H Res 1010. Judiciary Committee Funding. Ashbrook, R-Ohio, motion to recommit the resolution to the House Administration Committee with instructions to report it back with an amendment requiring that $300,000 of the $1,482,805 provided for the committee by the resolution for the remainder of the 95th Congress be earmarked for the committee's internal security functions. Motion rejected 161–216. March 13, 1978. No.

109. H Res 956. Assassinations Committee Funding. Bauman, R-Md., motion to recommit the resolution to the House Administration Committee with instructions to report it back with an amendment cutting funding for the committee to $600,000, from $2.5 million, and instructing the House Administration Committee to justify further funding for the Select Committee on Assassinations. Motion rejected 182–198. March 13, 1978. No.

110. H Res 956. Assassinations Committee Funding. Adoption of the resolution providing $2.5 million for the activities of the House Select Committee on Assassinations for the remainder of the 95th Congress. Adopted 204–175. March 13, 1978. Yes.

111. Procedural Motion. Michel. R-Ill., demand for the yeas and nays on the Sisk, D-Calif., motion that the House dispense with further proceedings under the quorum call. Motion agreed to 331–72. March 14, 1978. Yes.

112. Procedural Motion. Bauman, R-Md., motion that the House *Journal* for Monday, March 13, 1978, be read in full. Motion rejected 99–301. March 14, 1978. No.

113. Procedural Motion. Foley, D-Wash., motion to approve the House *Journal* for Monday, March 13, 1978. Motion agreed to 371–29. March 14, 1978. Yes.

114. Procedural Motion. Foley, D-Wash., motion to table the Edwards, R-Okla., motion to reconsider the previous vote. Motion agreed to 308–91. March 14, 1978. Yes.

115. S 1671. Absaroka-Beartooth Wilderness. Johnson, R-Colo., demand for a second on the Roncalio, D-Wyo., motion to suspend the rules and pass the bill to designate 904,500 acres of the Custer and Gallatin National Forests in Montana as the Absaroka-Beartooth Wilderness. Second ordered 380–20. March 14, 1978. Yes.

116. HR 810. Government Officials' Travel Expenses. Conable, R-N.Y., demand for a second on the Ullman, D-Ore., motion to suspend the rules and pass the bill to permit private foundations to pay foreign travel expenses of government officials under certain circumstances. Second ordered 387–2. March 14, 1978. Yes.

117. HR 2028. Home Production of Beer and Wine. Conable, R-N.Y., demand for a second on the Ullman, D-Ore., motion to suspend the rules and pass the bill to permit individuals aged 18 and older to produce limited quantities of beer and wine for personal and family use without incurring excise taxes or penalties. Second ordered 388–3: March 14, 1978. Yes.

118. S 1671. Absaroka-Beartooth Wilderness. Roncalio, D-Wyo., motion to suspend the rules and pass the bill to include 904,500 acres of national forest lands in the National Wilderness Preservation System and designate it the Absaroka-Beartooth Wilderness. Motion agreed to 405–7: March 14, 1978. Yes.

119. HR 810. Government Officials' Travel Expenses. Ullman, D-Ore., motion to suspend the rules and pass the bill to permit private foundations to pay foreign travel expenses of government officials under certain circumstances. Motion agreed to 372–38: March 14, 1978. Yes.

120. HR 3813. Redwood Park Expansion. Adoption of the conference report on the bill to provide for the immediate expansion of the Redwood National Park in northern California by 48,000 acres. Adopted 317–60 March 14, 1978. Yes.

121. Procedural Motion. Ashbrook, R-Ohio, motion to approve the House *Journal* of Tuesday, March 14, 1978. Motion agreed to 387–15 March 15, 1978. Yes.

122. HR 50. Full Employment Act. Hawkins, D-Calif., motion that the House resolve into the Committee of the Whole to consider the bill to promote full employment, balanced growth and price stability. Motion agreed to 380–19: March 15, 1978. Yes.

123. HR 50. Full Employment Act. Ashbrook, R-Ohio, amendment to the Baucas, D-Mont., substitute for the Ashbrook amendment to the bill. The Ashbrook amendment to the Baucus substitute would provide alternative language for the original Ashbrook amendment to the bill. Both Ashbrook amendments aimed to achieve a balanced federal budget within five years. Rejected 205–215: March 15, 1978. Paired against.

124. HR 50. Full Employment Act. Baucus, D-Mont., substitute, to the Ashbrook, R-Ohio, amendment, to declare that one of the purposes of the act is achievement of a balanced budget consistent with achievement of the unemployment goals enumerated in the bill. Adopted 411–3: March 15, 1978. Yes.

125. HR 50. Full Employment Act. Hawkins, D-Calif., motion to end debate at 5:45 p.m. on Title I of the bill and all amendments thereto. Motion agreed to 237–170: March 15, 1978. Yes.

126. HR 50. Full Employment Act. Quie, R-Minn., amendment to make specified permanent reductions in individual and corporate taxes a medium-term goal to be included

in the first Economic Report submitted by the president following enactment of the bill. Rejected 194–216: March 15, 1978. No.

127. HR 50. Full Employment Act. Hawkins, D-Calif., motion that the House resolve itself into the Committee of the Whole to further consider the bill to promote full employment, balanced growth and price stability. Motion agreed to 379–8: March 16, 1978. Yes.

128. HR 50. Full Employment Act. Jeffords, R-Vt., amendment to make removal of architectural barriers to the handicapped one of the explicit national priorities under the bill. Adopted 398–0: March 16, 1978. Yes.

129. HR 50. Full Employment Act. Pike, D-N.Y., amendment to exclude from the measurement of unemployment used under the bill persons unemployed because of strikes, those who have been unemployed less than four weeks, those who have jobs waiting but for their own convenience are not ready to enter employment, those who are not seeking full-time work, and those who voluntarily left their last jobs. Rejected 199–204: March 16, 1978. No.

130. HR 50. Full Employment Act. Wiggins, R-Calif., motion to strike the enacting clause and thus kill the bill. Motion rejected 106–310: March 16, 1978. No.

131. HR 50. Full Employment Act. Ashbrook, R-Ohio, amendment to require the president, in carrying out the purposes of the act, to consider the impact of all the provisions of the U.S. Code and Code of Federal Regulations on the national economy. Rejected 114–296: March 16, 1978. Announced no.

132. HR 50. Full Employment Act. Conable, R-N.Y., amendment, to the Rules Committee substitute to Title III of the bill, to permit the Joint Economic Committee to submit an amendment recommending economic goals to the first annual concurrent resolution on the budget, eliminating provisions that would permit the joint committee to report its own concurrent resolution each year. Adopted 259–153: March 16, 1978. Yes.

133. HR 50. Full Employment Act. Bauman, R-Md., amendment to terminate the provisions of the act Sept. 30, 1983, unless extended beyond that date by act of Congress. Rejected 196–216: March 16, 1978. Yes.

134. HR 50. Full Employment Act. Quie, R-Minn., substitute for the bill to set as national goals 4 percent unemployment and 3 percent inflation rates, 100 percent of parity in farm prices, a reduction in tax levels and a balanced federal budget; to prohibit use of public service jobs to meet the unemployment goal; and to establish a presidential task force on youth unemployment. Rejected 137–276: March 16, 1978. No.

135. HR 50. Full Employment Act. Passage of the bill to promote full employment, balanced growth and price stability. Passed 257–152: March 16, 1978. Yes.

136. HR 11274. Middle-Income Student Assistance. Erlenborn, R-Ill., demand for a second on the Ford, D-Mich., motion to suspend the rules and pass the bill to expand educational grant and loan programs for middle-income students. Second not ordered. 156–218: March 20, 1978. Yes.

137. H. Res. 996. International Relations Committee Funding. Adoption of the resolution to provide $375,000 for the expenses of investigations and studies by the International Relations Subcommittee on International Organizations through Oct. 31, 1978. Adopted 367–13: March 20, 1978. Yes.

138. HR 7700. Postal Service Act. Adoption of the rule (H Res 1078) providing for House floor consideration of the bill to reorganize the United States Postal Service. Adopted 387–0: March 20, 1978. Yes.

139. H Res 1082. Aldo Moro Kidnaping. Adoption of the resolution to condemn the terrorist kidnaping of former Italian Premier Aldo Moro on March 16, 1978, and to express the sense of the House that the president press for consideration of antiterrorism measures by the United Nations. Adopted 398–0; March 21, 1978. Yes.

140. HR 11518. Debt Limit Extension. Adoption of the rule (H Res 1092) providing for House floor consideration of the bill to extend the public debt limit. Adopted 314–80; March 21, 1978. Yes.

141. HR 11518. Debt Limit Extension. Passage of the bill to extend the public debt limit at its existing level of $752 billion through July 31, 1978. Passed 233–172; March 21, 1978. Yes.

142. HR 11315. Campaign Financing. Adoption of the rule (H Res 1093) providing for House floor consideration of the bill to amend the Federal Election Campaign Act, last amended in 1976, and to permit a floor amendment on the public financing of House general election campaigns. Rejected 198–209; March 21, 1978. Yes.

143. HR 5383. Mandatory Retirement Age. Adoption of the conference report on the bill to amend the Age Discrimination in Employment Act of 1967 to raise to 70, from 65, the age limit for protection of non-federal workers from age-based discriminatory practices, including mandatory retirement (except for certain high-level executives and tenured college and university faculty), and to eliminate the upper limit for most civilian federal employees. Adopted 391–6; March 21, 1978. Yes.

144. HR 7700. Postal Service Act. C. Wilson, D-Calif., motion that the House resolve into the Committee of the Whole to consider the bill to reorganize the United States Postal Service. Motion agreed to 364–2; March 21, 1978. Announced yes.

145. H J Res 796. Disaster Relief Appropriations, Fiscal 1978. Passage of the joint resolution to appropriate $300 million for the remainder of fiscal 1978 for disaster relief programs caused by the severe winter weather conditions throughout the country. Passed 393–4; March 22, 1978. Yes.

146. HR 9518. Shipping Act Amendmments. Adoption of the rule (H Res 1074) providing for House floor consideration of the bill to increase the penalties for illegal merchant marine rebating and to expedite the enforcement of the rebating laws. Adopted 365–33; March 22, 1978. Yes.

147. HR 9518. Shipping Act Amendments. Murphy, D-N.Y., motion that the House resolve itself into the Committee of the Whole to consider the bill to increase the penalties for illegal merchant marine rebating and to expedite the enforcement of the rebating laws. Adopted 376–0; March 22, 1978. Yes.

148. HR 9518. Shipping Act Amendments. Passage of the bill to increase the penalties for illegal merchant marine rebating and to expedite the enforcement of the rebating laws. Passed 390–1; March 22, 1978. Yes.

149. HR 6782. Emergency Farm Bill. Foley, D-Wash., motion to disagree with Senate amendments attaching emergency farm aid provisions to the House raisin promotion bill, and request a conference with the Senate. Motion agreed to 332–63; March 22, 1978. Yes.

150. HR 6782. Emergency Farm Bill. Foley, D-Wash., motion to table the Moore, D-La., motion to instruct House conferees to support a Senate amendment providing a flexible parity program of graduated target prices for wheat, corn and cotton for 1978. Motion agreed to 224–167; March 22, 1978. Yes.●

## STRUTHERS HIGH SCHOOL WOMEN'S BASKETBALL TEAM WINS CLASS AAA STATE CHAMPIONSHIP

### HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. CARNEY. Mr. Speaker, on the weekend of March 31, 1978, the city of Struthers, Ohio, was elated as over 3,000 citizens turned out to greet the Struthers High School Wildcats basketball team as the 1978 class AAA girls' Ohio State champions.

The Struthers Wildcats, cocaptained by Bonnie Beachy and Patty Fitzpatrick, defeated the Middletown High School girls' basketball team 53–51 at St. John's Arena in Columbus, to win the Ohio State AAA girls' basketball championship. With 23 straight wins and a 25–1 record, the Struthers team ended the season on a festive note, with a public celebration held on Sunday, April 1, 1978.

At the Sunday post-game rally, Mayor Centofante praised the team and presented Wildcats' Head Coach Dick Prest with a city proclamation. In addition, Struthers High School was presented with a commemorative resolution by Mahoning County Commissioner Tom Barrett. The Ohio General Assembly will present a commemorative resolution to individual team members.

The team is cocaptained by two outstanding players. The first is Bonnie Beachy, who was elected most valuable player in the AAA tourney at Columbus. Cocaptain Patty Fitzpatrick was chosen for the all-tournament team.

In their remarks, Beachy and Fitzpatrick stressed that the Wildcats' success was due to a real team effort, and that the close-knit team spirit extends beyond the court, too. Becky Hanna, a team member, reflected this spirit when she commented:

We're all friends. We all do things together. The love we have is genuine.

In addition, the team was further honored by a special school assembly. The Youngstown Vindicator of April 7, 1978, reported this event as follows:

STRUTHERS GIRLS FETED AT SCHOOL

It was a "banner day" today at Struthers High School as the newly-crowned State Class AAA girls' basketball champions were honored during a morning assembly.

Trophies, banners and proclamations earned by the team during the season were officially presented to the school. And the uniform worn by All-Ohio Bonnie Beachy was retired.

Head Coach Dick Prest and assistant coach Bill Minchin introduced players and made the presentations.

Members of the team and their families along with several members of the Struthers girls' state championship teams of 1925 and 1926 were honored at a luncheon in the school cafeteria.

I am proud of the Struthers Wildcats' accomplishment, and I am hopeful that their status as State champions will be maintained for many years to come. But just as important as the championship itself is the manner in which it was won. The Wildcats have established a reputation for their good sportsmanship that was recently commended in the Struthers Journal. The Wildcats are true champions in this respect as well.

In addition to Beachy, Fitzpatrick, and Hanna, team members include Cheryl Simko, Lisa Laughner, Colleen Karnes, Paula Ringos, Diane Shirilla, Virginia D'Altorio, Jamira Ellis, Jackie Beachy, and Cathy Miller. The assistant coach is Bill Minchin.

Mr. Speaker, the Wildcats' victory will serve to increase awareness of women in sports throughout the Mahoning Valley

and the entire State of Ohio. The acclaim surrounding the Wildcats' victory indicates that women are quickly taking their rightful place alongside of their male counterparts in the sports world. Hopefully, Bonnie Beachy, Patty Fitzpatrick, and the other stellar team members will be given opportunities to continue playing basketball in college to further develop their excellent skills and sportsmanship.

I join the residents of Struthers, Ohio, in congratulating each and every one of these women for their accomplishments and wishing them continued success in their sports career.●

## HATCH ACT REVISION

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. DERWINSKI. Mr. Speaker, I have been and continue to be opposed to repeal of the Hatch Act and I believe the House acted in folly and haste when it passed H.R. 10 last summer. I am more than pleased to see that my view is supported by one of the Nation's leading newspapers. The Washington Star, in an April 12 editorial, points out that President Carter's proposed reform of the Civil Service system strengthens arguments against repeal of this law. The editorial, which I commend to my colleagues, follows:

[From the Washington Star, Apr. 12, 1978]

HATCH ACT REVISION

President Carter's proposed reform of the Civil Service system already has produced one salutary development: it has strengthened arguments against repeal of the Hatch Act's ban on political activity by federal workers.

Opponents of Hatch Act revision have argued, and rightly so, that it could lead to politicization of the federal service. The danger would be compounded if it and the Civil Service reorganization proposed by Mr. Carter both were enacted.

The Hatch Act revision bill, which has passed the House and is before a committee in the Senate, would allow federal workers to run for office, work in political campaigns, raise funds for candidates and perform other political chores. Polls have indicated that a majority of federal workers want to keep the Hatch Act intact; rather than regarding it as an unwarranted restriction on their activities, they see it as a protection against political coercion.

President Carter's proposed overhaul of the Civil Service system is aimed at making it easier to fire incompetent federal employees and at making advancement in the federal service depend more on merit than time on the job. While there is much to commend Mr. Carter's approach, it would tend to make for less personal security in the federal service, especially at the top levels where the president would create an elite corps of managers called the Senior Executive Service.

If removal of the Hatch Act ban on political activity were combined with the loosening of job protection proposed under the Carter plan, it might well make the federal service as Sen. Charles Mathias, R-Md., warned the other day, "the most partisan it's been since U.S. Grant." The existing Civil Service system, which removes most federal jobs from direct political influence, is an outgrowth of the "spoils system" abuses of the Grant and other administrations of the 19th Century.

During a hearing before the Senate Government Affairs Committee, Sen. Charles Percy, R.-Ill., also expressed reservations about "moving the two [measures] together."

We hope the committee chairman, Sen. Abraham Ribicoff, D-Conn., was right when he told opponents that they didn't have to worry about the Hatch Act revision because it "isn't going anywhere." But we're not all that confident that supporters of the Hatch Act revision bill, principally the unions and the White House, won't find a way to maneuver the bill to the Senate floor around Senator Ribicoff's opposition.

As Senator Percy pointed out, President Carter could give his Civil Service reorganization plan a boost by pulling back on Hatch Act revision. We suspect that Mr. Carter is more interested in Civil Service reorganization than in Hatch Act revision. If so, we hope he got what seemed to be the clear message that reorganization and Hatch Act revision won't fly together.●

## A LASTING PEACE IN THE MIDDLE EAST

### HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. DORNAN. Mr. Speaker, as always, the first principle of our Nation's foreign policy ought to be that it be determined by what are our Nation's just, best interests. A genuine Middle East settlement to the express benefit of every nation concerned is certainly in our Nation's best interests, as it is to the best interests of peace and liberty everywhere.

The most recent bilateral initiative toward a final settlement begun by Israel and Egypt has certainly had its peaks and valleys. However, having had the opportunity to talk at length with key and participating officials of both sides, I sincerely believe that the quest for a mutually beneficial settlement by both Israel and Egypt is a genuine one.

What is alarming many informed Middle East watchers at the moment is the apparent Midas-touch in reverse demonstrated by the Carter administration in the current Middle East negotiations. It is a Midas-touch in reverse, because everything the administration touches turns to failure. In the space of only 4 months, the White House has succeeded in angering just about everyone with any stake in the current negotiations, whether representing the side of the United Arab Republic or of Israel.

An editorial in the Evening Outlook of Santa Monica, one of California's finer papers, provides an excellent analysis of the current problems Middle East peacemakers are having with the White House. Although dated March 27, the editorial is characteristically prescient. I encourage all of my colleagues to read it, and pass along the good word to any friends any of us might have in the administration.

The editorial follows:

CARTER'S SURRENDER

The following editorial supports Israel's position in the stalled Middle East peace talks.

Our conclusion that Israel is not acting irresponsibly—as is suggested by the Carter administration—is based in part on information assimilated by editor R. D. Funk during a recent 10-day tour of Israel. Funk was in the country when terrorists massacred 35 civilians on the road north of Tel Aviv.

We feel our readers should know, however, that the tour Funk participated in was sponsored by the American Zionist Federation. About 40 American news representatives were on the tour. As a result of the federation sponsorship, the cost to the participants was about half of what it would have been if each individual had paid regular rates for airfare, hotels and meals.

We ask our readers to accept our statement that this reduced cost has not influenced our decision to support Israel in the current dispute. Over the past several years, we have consistently believed Israel must retain defensible borders if she is to survive.

It's becoming increasingly clear that the blame for the breakdown in the Middle East peace talks rests squarely with the Carter Administration—and not with Prime Minister Menachem Begin.

What has happened, we believe, is that President Carter has scrapped the traditional United States interpretation of United Nations Resolution 242 in favor of the Soviet-Arab interpretation. This resolution was adopted by the United Nations in 1967 following Israel's stunning military successes in capturing the Golan Heights from Syria, the West Bank from Jordan and the Sinai Desert from the Egyptians.

It called for "withdrawal of Israel's armed forces from territories occupied in the recent conflict." But it also said that Israel was entitled to "secure and recognized boundaries."

Since 1967, the Soviet Union and the Arab states—and more recently, the Palestine Liberation Organization—have claimed that the resolution meant Israel should withdraw "all" her armed forces from "all" her occupied territories. The United States, Israel and other allied nations have argued successfully over the years that omission of the word "all" and "the" from the resolution gives Israel room to negotiate for "secure and recognized boundaries."

In other words, the resolution, which the U.S. helped write, didn't attempt to force Israel to return to her traditional (and implacable) enemies those areas from which they had shelled Israeli civilians and launched terrorist raids into Israeli territory.

Now, apparently, President Carter has told Begin that the old ground rules no longer apply—that as a price for continued U.S. military and moral support, Israel must relinquish control over much of the territory she considers to be absolutely vital to her safety.

This constitutes a major change in U.S. policy in the Mideast. We think it means that the Carter administration has lost control of events and is desperately trying to appease the Arabs and head off another oil price increase.

Saudi Arabia already has warned the United States that there soon may be a new oil price increase because of the declining value of the American dollar. The long slide in the dollar value has been due in large part, of course, to the unchecked flow of American dollars into foreign banks—principally into accounts of the oil-rich Arab states. This outflow of dollars for energy to keep our economy going is the direct result of the Carter administration's inability to deal with the energy crises in this country—to formulate a plan that will permit us to develop our own fossil fuel resources, to move ahead

with nuclear power, to bring on line more solar power, and to conserve our present resources.

As long as we have no strong domestic energy policy—a policy that will relieve us of dependency on foreign oil imports—the Arab nations can call the tune on events in the Middle East. And we think that is precisely why the Middle East peace talks are stalemated, and why they may collapse.

We can be sure that Egyptian President Anwar Sadat didn't initiate peace talks with Israel ever dreaming that Israel would give up the Golan Heights, the West Bank and the Israeli settlements in the Sinai Desert. He came to the Knesset saying, in effect, let's trade: The Palestinians need more autonomy, you need your security; both of us need peace. There's a middle ground somewhere.

Now, however, the Carter administration is telling Israel that this isn't a give-and-take matter—that the Israeli government will have to do all the giving.

Palestine Liberation Organization leader Yasser Arafat must be rubbing his bloodied hands together with glee.

Instead of helping the cause of peace in the Middle East, the president has seriously endangered it.

We think the Carter policy vis-a-vis Israel constitutes a surrender of the vital interests of both countries. We hope Mr. Carter recognizes this before it is too late.●

## ILLICIT DRUG IN SCHOOLS

### HON. W. G. (BILL) HEFNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. HEFNER. Mr. Speaker, as many of my colleagues may remember, during the last Congress I sponsored legislation to combat one of the most serious problems facing our country and our schools—the increasing use of illicit drugs by our young people. In some schools the problem is reaching critical proportions, and I am again introducing this important measure in hopes that it will be acted upon quickly.

The very worst habit anybody can ever acquire is the use of drugs as a means of escaping from reality. Drugs all too often doom the lives of those young people who use them and rob the families of the drug users of their happiness and, in a large measure, of their hopes and dreams for their children.

Drug use which was once confined to the "street culture" has already become a feature of college life in our country and is increasing in our high schools. Now, even our elementary schools are being invaded by illicit drugs. Few schools are immune to the problem.

A part of this problem, and ample evidence exists to show it, is that many drugs are sold by nonstudents or other individuals who come onto school grounds or hang around school neighborhoods to supply their student customers. This is a cause of concern among law enforcement officers, school administrators, teachers, and parents. I share their concern.

I think we have to come to the realization that people who sell drugs to our young people are criminals and should be treated accordingly. I personally believe that the selfish individuals who traffic drugs should be given the harshest punishment the law knows.

Our main legal tool against the drug problem, the Controlled Substances Act of 1970, already provides penalties for persons who illegally distribute or dispense controlled substances. Furthermore, the act goes on to double these penalties for individuals selling drugs to persons under 21 years of age. This of course begins to deal with the problem of drugs in our schools.

The legislation I am introducing again today should carry this effort further. This bill would supplement the provisions of the Controlled Substances Act to identify specifically the problem of drugs being sold on or adjacent to school property and provide mandatory sentences for individuals convicted of this offense. I hope this will be a strong tool which will go directly to the problem of drug pushers in our schools.

More specifically, this bill says that a person, 18 years of age or older, who violates the Controlled Substances Act by manufacturing, distributing, or dispensing a controlled substance on or within 100 feet of the grounds of a public or private elementary or secondary school will receive certain additional penalties. Differing from the Controlled Substances Act, this bill prescribes a minimum as well as a maximum sentence. Further additional penalties are prescribed for second or subsequent convictions of the same offense. The bill also provides that these sentences may not be suspended and that probation may not be granted. Persons sentenced under this proposed law would not be eligible for parole until serving at least the minimum sentence prescribed by the bill.

The purpose of this bill is to deal with those persons who have no business in or around our schools except to sell drugs to students. I realize that the bill does not extend to the problem of drug traffic among the students themselves. And I understand that this too is a real and serious problem, but these matters are generally handled by school officials in cooperation with local law enforcement agencies. In addition, a harsh attitude toward outside drug pushers would not only be a warning to the student pusher, it would also go a long way toward drying up these students sources of illicit drugs.

I feel that an important part of this bill is that provision for mandatory sentences for violators. This harsh step is necessary because all too often the courts have failed to provide the necessary sentences for drug pushers. A questionnaire I recently distributed to my constituents showed that 53 percent of the respondents feel lenient courts are the principle cause of rising crime. And 96 percent of them feel that mandatory sentences for serious crimes, including drug violations, are a necessary step to deal with the crime problem. I believe the citizens of this country are calling for action.

I have consulted with law enforcement officers, educators, and parents in my district and State about the drug problem and possible solutions. I believe these concerned and involved people are in support of the bill I am introducing today. In fact, the attorney general of North Carolina has informed me that he would welcome such legislation as an aid to local and State efforts to deal with the problem of drugs in our schools.

I am certainly not interested in involving the Federal Government any more than it already is in the affairs of our schools, nor do I want to interfere with the work of our State and local law enforcement bodies, which, after all, are the front line in the war on crime of all sorts. This bill is not an intrusion into our schools or local law enforcement, but it is another tool, to be used where appropriate, to assist with the problem of drugs.●

## "PERSPECTIVES ON PROTECTIONISM," MONNETT CRYSTALIZES THE VIEW

### HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. GAYDOS. Mr. Speaker, the Department of Commerce recently announced the United States sustained a massive trade deficit of $4.5 billion in February—the 21st consecutive month our trade balance has been in the red.

Shocking? Yes. Surprising? No. It is merely the latest statistic to reflect the steady decline of the United States in world trade. A decade ago, the United States was the champion in that arena. Today it is just another struggling gladiator.

I submit one reason for this development is the traditional position of die-hard "free traders" and "protectionists" who have become an anachronism, refusing to recognize the international trade world of today is not what it was 100, 50, or 10 years ago.

Both concepts are out of step with time. A. A. Monnett, Jr., vice president of corporate planning for U.S. Steel Corp., demonstrated this in a recent speech before a seminar on the "Financial Strategies for Multinational Corporations" in Chicago, Ill.

Mr. Monnett contends the terms "free trader" and "protectionist" are artificial and emotional, having no place in a thoughtful analysis of the trade problems confronting the Nation today. Both positions are extreme and fail to include a key factor which, he believes, must be considered in formulating national trade policy.

Mr. Monnett recalls that while trade and/or tariff barriers were being lowered over the world and the economies of Western Europe and Japan were growing in sophistication and capability "a divergent political trend passed virtually unnoticed."

This trend consisted, Mr. Monnett observed, of the United States remaning committed to the market system for its economy, while its major free world partners increasingly brought government into direct or indirect management of industrial affairs. He used Japan and its steel industry to illustrate his point.

Steel, Mr. Monnett explained, is a world commodity with no secrets as to production. Raw materials, equipment, technology are available to any nation. But, steel is the critical industrial material for any manufacturing economy, he emphasized, and every nation must be concerned about its supply to support its industrial economy and to sustain its growth.

Japan early recognized the essentiality of steel and the economic policymakers selected it as a "target" industry. It was to be developed as rapidly as possible, along with some basic consuming industries, such as shipbuilding and automobiles, to capture a large share of the world markets.

The objective was to build an industrial base to utilize available manpower, help domestic industrial growth and through export earnings accumulate foreign exchange to purchase raw materials and other imports.

It takes money to build an industry so the Japanese Government backed commercial bank loans to the industry on a degree impossible for American producers to match in the private market. Because of the Government's support, Japan's steel production rose from 5 million tons in 1950 to 131 million tons in 1973. Last year it produced 113 million tons; yet its own economy could consume just 72 million tons.

To solve the problem of capacity far outstripping domestic demand, the Government turned to exporting its excess steel. In fact, Mr. Monnett notes, exports accounted for nearly two-thirds of steel growth in Japan during the last decade.

The fixed interest on debt, combined with a social policy of lifelong employment meant the Japanese steel industry had to have an extremely high break-even point. Production had to be maintained at a high level even if it meant selling steel at any price. Japan's steelmakers, Mr. Monnett points out, cannot show a profit unless they operate at full capacity. In exporting its steel, Japan, of necessity, also was exporting unemployment in the industry.

Mr. Monnett emphasizes it must be remembered, Japan's steel industry from the start was, and remains today, a creature of government. The country had no particular comparative advantage to be a major steel producer. It has no domestic iron ore, coal, oil, or gas, and technology was purchased. The industry would have had little capital if it were not for Government intervention.

Mr. Monnett asked:

Where is the natural and permanent comparative advantage (upon which the concept of free trade is based) that free traders would have us believe justifies accepting unlimited and uncontrolled amounts of Japanese steel into our markets?

The government's management of the steel industry in Japan so grossly distorted conditions of competition with the United States that the traditional basis for formulaing trade policy can no longer be applied, the U.S. steel official believes.

As a matter of fact, he states, competition with a government-managed steel industry abroad has forced the American steel industry to turn to its Government, which has intervened in the industry's affairs. In essence then, he says, the U.S. market system is eroded as a direct consequence of the political and economic policies of foreign nations. And, Mr. Monnett warns, one wave of Government intervention in industry leads to other waves in other industries.

The United States, he insists, must recognize the change in the world's economic system and strengthen and enforce its laws on injurious and predatory import practices and revise provisions of GATT to provide adequate and effective safeguards against domestic market disruptions.

Mr. Monnett observes we can neither be protectionists or supporters of the old theory of free trade in viewing the world economy of today.

. . . This issue . . . is now at the heart of the most crucial issue of all, the ability of America and its market system to co-exist, prosperously, with the new and different economic systems of friendly sovereign nations throughout the world

Mr. Speaker, Mr. Monnett admits he has no solution to the problem but he has crystalized the futility of the outmoded debate of "free trade" versus "protectionism." He has given all of us food for thought.●

## SETTING THE RECORD STRAIGHT ON HUMPHREY-HAWKINS

### HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. HAWKINS. Mr. Speaker, on March 16, 1978, my colleagues made crystal clear the determination of this Congress to attain full employment and reasonable price stability by overwhelmingly voting for passage of H.R. 50, the Full Employment and Balanced Growth Act of 1978. The vote, 257–152, shows a national consensus for enactment of the policies and programs set forth by the Humphrey-Hawkins bill, and serves as an encouragement for early Senate action.

Many efforts have been made to either confuse or minimize the significance of the gains made during floor consideration of the measure, and in order to set the record straight, I urge my colleagues to read the following informed account of the Floor activities on H.R. 50, a brief analysis of the provisions of the bill and related grassroots support activities.

The insertion follows:

HUMPHREY-HAWKINS BILL PASSES HOUSE

SETTING THE RECORD STRAIGHT

Thursday, March 16, 1978 marked an important day in the history of efforts to achieve a full employment economy in the United States. On that day, proving all the pundits wrong, the U.S. House of Representatives passed the Humphrey-Hawkins Full Employment and Balanced Growth Act overwhelmingly by a vote of 257–152. During four days of debate, the Full Employment Bill supporters were successful, in a series of record and non-record votes, in turning back amendments designed to weaken the legislation.

As the focus of attention moves to the Senate, it is important to assess the progress which has been made, particularly in light of continuing attempts to minimize the significance of the gains.

The House of Representatives began debate on March 8th on the Humphrey-Hawkins bill, described by Business Week magazine as one which "puts the nation's unemployment problem squarely at the center of economic policymaking for years to come," a bill which the chief New York Times economic correspondent described as "establish(ing) targets for economic activity and jobs involving a degree of specificity the nation has never known before."

That was the bill which was presented to the House of Representatives for action, and that was the bill which, with some refinements, was passed by the overwhelming margin. Opponents of the Full Employment Act, seeing the extent of support which the bill had received across the nation as people became more familiar with its provisions, decided not to make a head-on attack on H.R. 50, but instead to subvert the bill's purpose of achieving full employment with price stability by trying to write in other economic policies which could be used as distractions from the primary full employment goal.

H.R. 50 ANTI-INFLATION PROVISIONS

This was a clever strategy, but, unfortunately for its proponents, one which the House saw through, and one which the public will see through as well. The strategy was to introduce amendments labeled as "anti-inflation" amendments, a "permanent" tax cut amendment, and anti-government regulations amendments. The strategy of those offering these amendments was that anyone who voted against them could be called "for inflation", "against a balanced budget", "against tax cuts" and "for government regulation".

The distinction is crucial. Take, for instance, the question of inflation. The Full Employment and Balanced Growth Act contains the strongest program for price stability yet put forth during the current debate. But price stability is to be achieved at the same time as unemployment is lowered. rather than, as was done by the past two Administrations, maintaining high unemployment in the belief that it would keep inflation low.

Thus, When Congressman Ronald Sarasin (R-Conn.) offered an amendment to set a specific target for inflation in the Full Employment Act, he was offering a provision which could be used by economic policymakers in the future as an *excuse* for not implementing full employment policies. Instead Congressman James Wright (D-Tex.), the Majority Leader of the House, offered an anti-inflation amendment which made clear that price stability is to be achieved through policies which begin by focusing on achieving full employment. Wright's amendment was approved by the House by a vote of 277–143.

A BALANCED BUDGET AND BALANCED GROWTH

Similarly, an amendment designed to make a balanced budget a primary goal of national policy, introduced by Congressman John Ashbrook (R-Ohio), was soundly defeated in favor of an amendment by Congressman Butler Derrick (D-S.C.) and Congressman Max Baucus (D-Mont.), which made clear that a balanced budget was to be achieved through full employment policies. As more people work, more pay taxes, the government spends less on unemployment and other social insurance programs, and we move the nation toward a balanced Federal budget.

After the House had firmly rejected the effort to confuse the purpose of the Full Employment Act, and had instead adopted merely clarifying amendments, Congressman Charles Wiggins (R-Calif.) offered a motion to strike the entire bill, thereby killing it for the Session. He argued that the bill had been weighted down with amendments and

was like a Christmas tree and should therefore be killed. The House's resounding response to that contention was "no" by a vote of 106 to 310. Yet at least one commentator has tried to make the Wiggins effort into a major condemnation of the bill.

Those who remember the days, several years back, when the "experts" laughed when we said that Congress was going to pass a Full Employment bill, can now smile at the victory won in the House. Yet we must be clear-eyed that we still face a hurdle in getting the bill passed by the Senate, and we must always recognize that the Full Employment bill is the first step in pursuing full employment policies. The Administration must develop and implement the specific economic policies which will achieve full employment. It must look at every economic decision, every program, and tell us how each policy and program will move the nation toward full employment. With the resounding victory of the 257–152 vote in the House current, the Administration should begin the specific full employment policies.

Persons around the country must begin a campaign of support for the passage of the Full Employment bill by the Senate. Prospects are good for passage, and public support of the bill, and particularly opposition to weakening amendments, is necessary for final enactment. Full Senate action is expected in June.

WHAT THE RECENTLY PASSED HUMPHREY-HAWKINS BILL DOES

1. Recommits the Federal Government to the goal of creating conditions that assure meaningful employment to all who are able, willing, and seeking employment opportunities. The bill mandates interim goals towards this end, and provides for the availability of better jobs, training programs, opportunities for promotion and better job security.

2. Provides for the comprehensive integration of our fiscal and monetary policies and programs with structural programs to assist disadvantaged groups and reduce inflation.

3. Requires the President to set forth annual anti-inflation goals and to detail the policies and programs needed to reach reasonable price stability and full employment. The bill rejects the discredited "trade off" theory, which encouraged slowing down the economy to help promote price stability.

4. Provides for a coordinated and democratic economic policy decision-making process for the Federal Government. Requires annual and long-term projections to be made by the President and the Federal Reserve Board, and to be reviewed by the Congress. We would no longer have to react to one crisis situation after another (such as energy, food, recessions, etc.).

5. Specifies an interim numerical target for the reduction of unemployment to 4 percent overall within 5 years. This replaces the unacceptable notion that 6 percent unemployment, or higher, is "tolerable unemployment".

6. Establishes the Federal Government as the employer of last resort. It is possible that the last resort jobs may not be needed at all or only in limited amounts if the right policies and programs are undertaken.

7. Provides for the bedrock commitment of reducing the high unemployment levels of certain groups in the labor force (youth, minorities, women, elderly, veterans, and the handicapped) to the national average on an equitable and nondiscriminatory basis.

A full employment society provides: Better jobs, security and working conditions for the employed; meaningful jobs for the unemployed; markets for businessmen and farmers; lower taxes as a result of less welfare and more revenues from productive activities; more goods and services as reasonable prices for consumers; and less crime, social disease, and civil disorders.

A LOOK AT THE VOTE ON FINAL PASSAGE

H.R. 50 was passed by the House of Representatives on March 16, 1978, by a vote of 257 to 152.

The vote showed a national consensus for the enactment of the full employment bill, with votes from 42 states, including every state in the deep South and 24 Republicans, joining 233 Democrats from all over the country, in a resounding majority decision.

COMMENTS ON THE FULL EMPLOYMENT BILL

Hobart Rowen—Chief economic writer for the Washington Post; "There is much more than meets the eye in the compromise Humphrey-Hawkins "full employment" bill . . . the vigor of the attack on this latest Humphrey-Hawkins version should suggest to the careful observer that the proposal would, in fact, have an impact on the economy and the way economic policy is made . . . Complying with the timetables would not be optional . . . The Humphrey-Hawkins bill, as it emerges now, with Carter's cooperation, is worthwhile."

Charles C. Killingsworth—University Professor, Economics and Labor, Michigan State Univ.; ". . . the Humphrey-Hawkins Full Employment Bill represents the straight line between two points. I believe that the approach set forth in this bill would activate a multiplicity of efforts in government and in the private sector which would give us a fairer society, a more compassionate society, a sounder society, and even a more prosperous society."

Bishop James Rausch—General Secretary U.S. Catholic Conference; "What happens to a nation that begins to accept the notion that it cannot use the talents and labor of all its people? What happens to us as a people as we watch families which have made the slow and painful climb up the economic ladder, only to be pushed down again into poverty by the loss of a job?"

The National Council of Churches in the U.S.A.—"We commit ourselves to the task of shaping a national policy of full employment which would provide the hopes for a better and more productive life for ourselves, our families and our neighbors. We call upon the Federal Government to make full employment the nation's number one priority."

Clayton Fritchey—Editorialist/Journalist; "The Humphrey-Hawkins bill, as introduced was based on the sound proposition that no matter how costly it is to put people to work, it is far more costly and wasteful to pay them not to work, as we do now with unemployment compensation and other benefits that run into many billions of dollars."

Carl Rowan—Editorialist/Journalist; "It does something very important: It establishes the right of all Americans to a useful job at fair wages. We have never before had such a specific national commitment . . . You ought to understand what I am sure Jimmy Carter understands: While the compromise gives the President some flexibility, he cannot change the 4 percent goal without Congressional agreement . . . I hope the Congress passes [the Humphrey-Hawkins bill]." ●

## RECOGNITION OF PRESIDENTIAL COURAGE

### HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. FINDLEY. Mr. Speaker, a recent article in the Christian Science Monitor by Joseph C. Harsch recognizes the courage displayed by President Jimmy Carter in taking actions unpopular with some segments of American public opinion, actions clearly in the best interests of the United States as a whole. The American people can benefit from the perceptive analysis contained in Mr. Harsch's article, and I include it in the RECORD:

THE MAKING OF A PRESIDENT

(By Joseph C. Harsch)

Just two weeks after President Carter became the first American President since the days of Dwight Eisenhower to say a firm "no" to Israel he startled Washington again by defying the Greek lobby.

No president would challenge either the supporters of Israel or the supporters of Greece if he thought he could avoid doing it. Israel enjoys the support in Washington of probably the strongest and most effective organization ever mobilized there on behalf of a foreign country. The Greek lobby controls nothing like the number of votes in Congress that Israel's friends can muster, but it probably ranks with Italian, Irish, and Polish lobbies in the second rank.

Certainly no president would want to disappoint both the Jewish and Greek communities at the same time, particularly if he was also trying to round up the votes necessary to carry his controversial Panama Canal treaties through to ratification in the Senate.

The fact that Mr. Carter did take steps distressing to Israel's friends and bitterly opposed by the Greeks, and within two weeks of time and while the Panama treaties are still in danger, shows how much importance he attaches to the steps he did take. One was to make clear to Israeli Prime Minister Begin his profound disappointment over Mr. Begin's response to the Sadat peace initiative. The other was the decision to ask Congress to lift the three-year embargo on the sale of American weapons to Turkey.

Political expediency would have counseled Mr. Carter to put off any confrontation with either the Israeli or Greek lobby at least until after he had had his final test in the Senate on the Panama treaties.

Obviously, Mr. Carter thinks that the last best chance for peace in the Middle East will

be lost unless Mr. Begin becomes more responsive to Mr. Sadat. And obviously, he thinks it essential to the welfare of the NATO alliance that the delivery of weapons to Turkey be resumed even though Turkey clings to a larger share of the island of Cyprus than most neutral onlookers think is fair or reasonable.

Here then are two cases where Mr. Carter has done what he believes to be in the best long-term interests of the United States regardless of immediate and inevitable short term disapproval by important and influential blocs of Americans. He is saying "no" to a lot of Americans with real political influence and real future voting power.

No president likes to have to do unpopular things. Mr. Carter did virtually no unpopular thing during his first year in office. He did all sorts of things which were immediately popular with the groups who obtained short-term benefits.

One of his first deeds was to raise White House salaries (extravagantly, in my opinion). That deed is coming home to roost now. It makes it difficult for him to oppose price and wage rises. Then he pleased a bigger chunk of Americans by agreeing to a rise in the minimum wage, and more by raising payroll taxes to support social security. He went along with higher farm price supports, and with import controls.

Every one of these actions was popular with some group of citizens, and every one was inflationary. Mr. Carter's first year was marked by permissiveness. He was the good guy who liked to say yes, and almost never said no. And it was not a year of spectacular success.

No one likes to say no, particularly a president who wants to be reelected. But it is a safe rule that by and large the great presidents are the ones who have done the hard, the difficult, the dangerous things which they would much rather not have done.

We cannot know yet whether Mr. Carter will from now on do many more things which he thinks ought to be done no matter how unpopular with some one or another important segment of the American population. But he has dared to disappoint two powerful constituencies and—so far—no roof has fallen in. And we do know that the inflation rate is dangerously high and that it will go higher unless Mr. Carter embarks upon a consistent anti-inflation program.

Presidents Nixon and Ford underestimated the momentum of inflation. Mr. Carter has obviously done the same. He is now the third president in line who has faced inflation and been unable to manage it. This is his moment at Armageddon. Can he learn to say no, and make it stick? If he does he can still be a successful president. If he does not, he will probably be just another one-term president. We may be watching the turning point in his presidency right now.●

## CONGRATULATORY MESSAGE TO LOCAL 599 HONOREES

### HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. KILDEE. Mr. Speaker, I want to take this opportunity to commend six persons who have distinguished themselves with 20 years each of service as elected union officials from UAW Local 599, which serves the workers of the Buick Motor Division plant in Flint, Mich. Special recognition also is being given three others.

Local 599 is one of the Nation's oldest UAW locals, receiving its charter on January 10, 1939, only 2 years after the sitdown strikes in Flint that led to the birth of the UAW–CIO. It has a long history of strong local leadership, and annually honors those elected union officials who have 20 or more years of elected service. The honorees receive the Walter P. Reuther Distinguished Service Award, which is an appropriate honor to be given in the name of the man who devoted his life to helping others obtain social justice and enjoy a better life.

Members of the United Auto Workers can take pride in the knowledge of belonging to a progressive union that is universally recognized for its social leadership as well as for its dedication to the well-being of its members.

I am proud to bring to the attention of my colleagues this year's winners of the Walter P. Reuther Distinguished Service Award from UAW Local 599. The honorees for 20 years of elected service as union officials are Danny D. Sain, Stan Marshall, Charles L. Weaver, John Neilson, Robert Dallas, and Lyman Turner. Mr. Sain is president of the Greater Flint CAP Council, former chairman of the Genesee County Democratic Party, former president of the Beecher Board of Education, and the 1975 recipient of the Liberty Bell Award from the Genesee County Bar Association.

A Walter P. Reuther Distinguished Service Award for community involvement also will be presented to Robin B. Owens by recommendation of local 599, and a special local 599 award will be presented to Lloyd and Mary Eckenrod for their involvement in retiree affairs.

All will be presented their awards at local 599's third annual retirees' banquet on Sunday, April 16, 1978, in Flint.●

## SECRET NEGOTIATIONS

### HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. CONABLE. Mr. Speaker, during the course of the campaign President Carter frequently indicated his belief in open government, or government in the sunshine. Last April when he proposed his national energy plan, and frequently since, he has also indicated his strong support for the rapid development of solar energy. Given that we apparently have a heliophile as President it is difficult to imagine how the natural gas pricing issue has been drawn into the shadows, into secret behind-closed-doors White House negotiations.

If the press reports are true, then yesterday and again today the President and his chief energy adviser are closeted with a select band of Members from the majority party in sessions which will presumably determine the fate of those that use as well as produce natural gas.

There is no need for these negotiations to be conducted in secret. They should be out in the open. In the words of then candidate Carter:

> Meetings of federal boards, commissions, and regulatory agencies must be open to the public, along with those of congressional committees. (The only exception should be those actually involving narrowly defined national security, those dealing with unproven charges similar to grand jury proceedings, and those whose preliminary knowledge might cause serious damage to our nation's economy.)

If these meetings are not open to public scrutiny, then, again in the words of then candidate Carter:

> The veils of secrecy have seemed to thicken around Washington.

It was, perhaps, a slip of the tongue when Senator HENRY JACKSON, one of the chief Senate negotiators on the natural gas issue stated:

> You can see why I have urged strongly that we have quiet diplomacy . . . I think the public get-togethers before we really have our ducks in a row create nothing but problems . . .

Yet this is the view of open government which the majority party has adopted in this vital area. Energy policy is all pervasive and it is unfortunate that President Carter feels that he must deal with it out of public view.●

## IS THE WHITE HOUSE FINANCING THE NEW LEFT?

### HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. DORNAN. Mr. Speaker, certainly the prevailing political climate is one in which citizens are demanding that their Government be held more accountable. The public demands more scrutiny by those who would spend taxpayers' dollars, and they are skeptical of how their money is used. I share this skepticism, and I encourage it.

In fact, I would like to see a systematic and comprehensive investigation of Federal spending at all levels, and especially by that part of our Government which is furthest away from the people—the Federal agencies. Unelected and too often unaccountable even to the President appointing them, the agencies need to be checked by the eternal vigilance of Congressmen who were elected to represent taxpayers everywhere. The Government Accounting Office does an excellent job, in my opinion. The GAO keeps close tabs on how much is spent.

But it ought to be the role of Congress to more closely evaluate these agency appropriations. We ought to be investigating not only how much is being spent, but closely determining why it is spent, and concluding whether or not certain line items are wasteful.

Perhaps the ACTION agency is a prime candidate for such heightened congressional scrutiny as I am proposing. If what Pat Buchanan describes in the following column is illustrative of agency activity in the Carter administration, we

are obliged to the taxpayer to begin a systematic review of agency spending now. As always, Mr. Buchanan lucidly cuts through to the core of the problem. Read for yourself, and sincerely ask yourself whether or not this core is rotten; whether or not House appropriations for ACTION are in fact being used to finance the new left.

Regardless of one's own identification for or against new left politics, it is only reasonable to ask that money collected from the taxpayers without their consent not be used for partisan political purposes. If indeed we are financing partisan political action at ACTION, then it is the responsibility of the Congress to take the necessary steps to "clean up its act."

The column follows:

IS ACTION CARTER'S RADICAL AGENCY?

Last year President Carter directed the U.S. delegation to the U.N. to drop its opposition to Hanoi's admission. It was, you might say, a red-letter day for U.S. Communists, fellow travelers, and radicals who had worked diligently for a decade or more for an American defeat in Southeast Asia.

When Hanoi's beaming delegates arrived at Manhattan's Beacon Theater for a welcoming party, the audience of thousands exploded with applause.

Present, and all choked up by the occasion, was Sam Brown, Carter's choice to head ACTION, the umbrella agency that contains the Peace Corps.

"I am deeply moved," Sam said. "It's difficult to describe my feelings—what can you say when the kinds of things that 15 years of your life were wrapped up in are suddenly before you."

Well, it's difficult to describe my feelings about that comment. What can you say about an American who spent 15 years helping bring to power a regime which seeks to extort our economic assistance by holding for ransom the bodies of dead American pilots?

Sam appears a mite more candid these days about the kind of peace he always sought for Southeast Asia. He is more candid about other matters as well.

In an interview in December Penthouse—that journalistic compost heap where radical politics is mixed evenly with softcore pornography Sam volunteered his views * * * colleagues at the FBI and CIA:

"I take second place to no one in my hatred of the intelligence agencies."

His indulgent interrogator wondered if perhaps the wealthy, the business community, and Republicans in general might not feel a bit threatened by what Sam was up to at ACTION.

"I assume they will and they ought to." said Sam. "If they don't then I'm not doing my job."

The budget for Brown's umbrella agency is around $200 million. And there seems little evidence to refute the charge of Illinois Republican Robert Michel that Brown is engaged in an "effort to transform ACTION into a tax-supported sanctuary for radical activists hired at outrageously high salaries."

Under Brown, ACTION is crawling with veterns of the "movement." Lee ——— one of the Chicago Seven. was brought aboard as a consultant at $180 a day. As director of VISTA, the domestic peace corps. Sam selected Margery Tabanian.

According to a recent conservative newsletter, Marge junketed to Hanoi at the height of the war, white American POW were down the street at the Hanoi Hilton being tortured in Uncle Ho's prisons.

She came home to declare, at a U.S. war crimes press conference, "It's no longer bridges, railroads and military targets that are being attacked, but 90-year-old men, and civilians who cannot run fast enough to bomb shelters."

Today, this Axis Sally of the Vietnam War takes home a higher federal salary than almost all the young American pilots she accused of war crimes six years ago.

Under her leadership VISTA has made a $400,000 donation to the Midwest Academy. Run by ex-SDSer Heather Booth, with the assistance of hubby Paul, the Chicago-based academy, by it's own admission, instructs radicals in confrontation tactics over such issues as government funding for abortion, and "redistributing social wealth and power."

Yet in a letter to The New York Times a month ago, Brown asserted his belief that "public funds should not be used to promote a political cause." His record in office belies that statement.

What is needed, and what appears to be coming, is a sweeping congressional investigation of ACTION. The nation has a right to know how under President Jimmy Carter an agency established to help the poor has become a burgeoning rabbit warren of the radical left.●

## THE FARM POPULATION

### HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. FRASER. Mr. Speaker, a recent editorial in the St. Paul Dispatch raises a fundamental question, "How long can the 'family farm' remain the 'family farm'?"

An increasing number of family farmers have to expand their farms in order to make an adequate return on their investment due to decreasing prices received for commodities tied to increasing costs of production. In Congress, we should look at the underlying reasons for the push to expansion as well as the result—larger farms run by fewer farmers.

The April 11, 1978, editorial is thought provoking and I hope my colleagues have an opportunity to read it.

The article follows:

THE FARM POPULATION

Fewer than 8 million Americans, out of a population of about 206 million, now live on farms, according to the Bureau of the Census.

Considering the annual surpluses produced by American agriculture, these figures could be considered a tribute to the farmer's efficiency—and so they are. We can take immense pride in the fact that with only about 3½ percent of our people engaged in growing crops, raising cattle and milking dairy herds, we vastly out-produce a country such as the Soviet Union, where nearly 50 percent of the people still are "on the land."

But the figures can be cause for concern, too. The decline in farm population in 1977—a decrease of 5.4 percent from the 1976 figures—was of course only a continuation of a long historical trend. Since 1970 alone the farm population has dropped an average of 3.1 percent per year.

Moreover, the figures are misleading, because the Census Bureau defines a farm as anything 10 acres or more producing $50 or more in agriculture products offered for sale. Considering that the average-sized farm is now 400 acres, it is obvious the actual number of real farm folks is much smaller than 8 million.

So what? What's to worry—so long as those left on the land are farming as much land as ever and can keep on outproducing everybody else in the world?

Well, how long can the "family farm" keep on expanding? The farmer who used to be able to handle no more than, say, 80 acres with his and his wife's labor and that of a hired hand, and two or three of his sons and daughters, now is, likely as not, farming 500 or 600 acres with only his wife to help. And doing a superb job. But is there not a limit to be reached? Is there not a point beyond which he cannot go even with the very latest and best and most powerful tractors and combines and multi-bottom plows? Isn't there a limit to the number of cows he can milk, no matter how efficient his all-electric operation?

How long can the "family farm" remain the "family farm"? That is the basic, and increasingly disquieting, question. That is a question that goes beyond (though it is related to) questions of parity, of seasonal fluctuations in prices, of the ever-increasing costs of production. Fundamental matters of production and distribution, involving changes that perhaps not even the best agricultural theorists can envision today, may be involved—indeed, will be involved if the farm is to remain a stronghold of individual initiative in the United States.●

## CONGRESSIONAL DECISIONMAKING PROCESS

### HON. HAROLD C. HOLLENBECK

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. HOLLENBECK. Mr. Speaker, there have been a number of issues throughout the 95th Congress involving major differences of opinion between the administration and members of the legislative branch. Those issues are well known to all of us—the B–1 bomber, the breeder reactor, the Panama Canal treaties, and Middle Eastern arms sales, to name just a few. When such issues arise, Members of Congress are faced with a multitude of pressures they must react to in arriving at their final voting positions. These include the views of their constituents, the views of other parties that may be affected by the legislation, their inclination (or disinclination) to support the President, and of course, the merits of the issue.

All too often this last item gets lost in the haze of conflicting arguments and pressures swirling about an issue. In some cases, due to overemphasis of certain arguments, such as potentially unfavorable reaction by the Executive to our legislative actions, we may fail to exercise our congressional mandates and responsibilities. It is for this reason that I want to call to your attention the remarks by my colleague, Congressman BARRY M. GOLDWATER, Jr., during a Science and Technology Committee markup session yesterday on an amendment concerning the Clinch River breeder reactor.

Mr. GOLDWATER'S thoughtful commentary goes right to the heart of the decisionmaking process that each of us,

as Members of Congress, must participate in on a daily basis. I commend these remarks to my colleagues, and congratulate Mr. GOLDWATER on his insight and, incidentally, on his contributions to a winning argument.

His statement follows:

STATEMENT BY CONGRESSMAN BARRY M. GOLDWATER, JR. ON THE AMENDMENT REGARDING THE CLINCH RIVER BREEDER REACTOR

Mr. Chairman, I am deeply disturbed by the gentleman's amendment, which apparently involves the termination of the Clinch River Breeder Reactor Project. The most striking feature of this amendment, in my opinion, is that it completely ignores the testimony that was presented to this Committee by the electric utility industry, reactor manufacturers and other participants in the nuclear program. What struck me most about that testimony is that the utility industry, which is responsible for keeping the lights burning in his country, came in here and told us that "the nuclear breeder reactor program is the backbone for our long-range capacity of providing a reliable source of electricity for the future generations of our society," and yet the amendment would destroy the keystone of that program.

We have also heard from the environmentalists, who are opposed to this amendment. Thus, we have a situation where both the nuclear advocates and critics are opposed to the approach now before us. Since it won't satisfy either of them, I don't see how we can proceed with it. We are, after all, meant to be a representative body, yet the decisions this amendment would make are not at all representative of the views they have expressed to us.

As to the views that were expressed by some of my colleagues here this morning, to the effect that they are for the breeder program but could not support Clinch River, I ask how we can ever expect to benefit from these energy technologies if we do not have the courage to build the plants that will show whether they are really practical? What is more, when I hear my colleagues say that we have to back off Clinch River because the President will veto it anyway, I ask if we are not abdicating our congressional responsibilities by this kind of approach. We have two independent branches of government in disagreement here, but if one, the Congress, refuses to exercise its duties due to fear that another, the Executive, will disapprove, then I say that we are ignoring our constitutional mandate to make ourselves heard.

Finally, perhaps the most striking feature of the Administration proposal to terminate Clinch River and establish a conceptual design study for a new, large breeder is that it seems to hold together on the surface, but analysis indicates that it has been thought out only to a point, beyond which it starts to unravel. This became apparent to me when I read the answers to the questions that I and other Members of this Committee submitted to the Department of Energy.

I don't know how many of my colleagues on the Committee have also taken the time to read these answers through, but I believe they contain several points which must be noted before we can act on the Administration proposal. They show, for example, that:

1. There is uncertainty within DOE as to exactly what the proposal would accomplish.

2. We may lose the utility industry as participants in future cooperatively-funded energy demonstration projects.

3. The Federal Government would be left with open-ended, unknown liabilities from the cancellation of Clinch River.

4. The number of people whose jobs would be lost would be at least twice that which we were told in testimony by the Administration.

5. Valuable licensing experience will be lost.

6. Unnecessary time will be lost in establishing the next breeder project, if it is ever established.

7. At least a ten-year delay will occur between the availability of the new breeder, if built, and the date when Clinch River was originally to be available.

8. Dangerous reliance will be placed on foreign technology, a situation which all previous Administration's and Congresses have rejected.

9. We are being given a snow job as to the "existence" of additional uranium supplies that might justify a delay in the breeder. There are no additional uranium supplies, at least not yet.

10. There are no firm criteria as to when the large breeder may be built, if at all.

It would seem to me as a matter of common sense, especially for all my colleagues who are "for" the breeder, that we should stop playing politics and vote this issue on its merits. And those merits, as the answers to my questions have shown, are clear—we still need Clinch River, and we will be greatly damaging the Nation's energy prospects if we meekly sit back and vote for its termination.●

## METAL INNOVATIONS

## HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. JACOBS. Mr. Speaker, new ideas are the stuff of which American industry is supposed to be made.

Therefore, I insert the following for the RECORD.

The article follows:

METAL INNOVATIONS CHIEF HIGH ON HIS NEW IRON POWDER PROCESS

(By Jim O'Connor)

STAMFORD, CONN.—M. D. (Doc) Ayers, president of Metal Innovations, Inc., here, is a man with an idea whose time he hopes has at long last arrived.

So far this year, he reports about a dozen companies have paid him a total of $60,000 to demonstrate his idea for production of iron powders and a variety of alloys through use of a water atomization process.

The resulting powders, as he has repeatedly shown, can be fed directly into a compacting mill, then into a sintering furnace and finally through a hot roll mill from which they emerge as strip ready for the fabricator.

"There is a worldwide need for strip and we could set up a 50,000 ton a year mill for $5-million . . . but no one wants to be first." he said during an interview last week.

"We can produce steel in gages ranging from 0.025 to 0.050 for about $100 a ton that would cost $200 a ton in the cold roll process," Ayers insists.

Moreover, he claims the finished strip will represent a 95 percent yield of the raw material, compared with about a 70 percent yield for a standard cold roll and anneal production.

The Ayers method can also be used to produce tool steel strip or billet from powder for conversion to rod with 50 percent better performance than conventional production methods, the inventor and holder of six patents declares.

In the Metal Innovations process, molten metal is poured from an electric furnace directly into a stream of water, the pressure and flow of which is carefully controlled.

Result is almost instantaneous atomization of the metal into a powder requiring no secondary annealing operation except drying before going to the compacting mill or, in the case of preforms, to the compacting press.

Among corporations Ayers says have looked at his process are General Motors, which was interested in stainless steel containers for the new catalytic converters and Westinghouse which was once interested in 42 percent nickel alloy for a controlled expansion alloy that could be sealed to glass.

Delay in the adoption of catalytic converters caused GM to postpone further stainless steel work and Westinghouse subsequently went out of the alloy business.

Last year, Ayers and his two-man staff produced 5,000 pounds of nickel powder for Sherritt Gordon at a rate of 1,000 pounds a day, but he is uncertain about that company's plans.

Because his equipment here is suited only to pilot size runs from 100 to 300 pound melts, demonstration strip is usually limited to 10 to 12 foot lengths and 3 to 6-inch widths.

However, conversion of melt to powder is so rapid that in a commercial model, Ayers is convinced that continuous strip production would be practical.

Sample strip produced has included low carbon, carbon, tool steel and silicon, nickel and copper alloys.

Ayers held supervisory jobs with U.S. Steel, Stelco, Wheeling Steel and with Kennecott Copper Corporation, where he was assistant to the president and later director of engineering before leaving in 1963 to pursue his powder process.

Since then, he has exhausted most of his personal funds and has raised some capital through sale of stock to members of his family to keep the pilot plant going.

"Our number one problem is to get the first powder plant and strip plant going commercially," he said. "We have the processes and plans to scale up to commercial production and can build it, but we don't have the money to do it."

"Our process involves low capital cost, low operating costs and eliminates eight or nine operations in standard steel production. Our second problem is to get some interested company to be first." Ayers said.

MAYBE GREATEST YEAR EVER AT OVER 150 MILLION TONS TO WIN BACK NO. 1 SPOT

(By Hi Howard)

PITTSBURGH.—The American steel industry has just about chalked up its greatest year in history.

By yearend, barring a most unlikely catastrophe, its production of raw steel will have reached an unprecedented 150-million tons-plus and its shipments of finished steel products will have hit an all-time high of at least 108-million tons and perhaps as much as 110-million tons.

In physical achievement—in the smelting of iron ore, in the coking of coal, in the rolling, processing and finishing of steel into myriad forms—many new records will almost certainly be established.

During 1972, for the first time in more than half a century, the United States lost world leadership in steelmaking to another nation. The Soviet Union actually poured more raw steel.

But this year American steelmakers will almost certainly win back the No. 1 position.

Almost every domestic mill is crammed with orders, and most are rigidly controlling their acceptance of additional orders, even from old customers.

In a market that appears stronger and broader than ever before, indications are that the producers of every kind of steel—stainless and alloy, as well as carbon grades—will be able to sell all they can make not only through the remainder of 1973, but deep into 1974.

It is obvious, currently, that the American steel industry doesn't have sufficient capacity to make all the finished steel that American consumers need and want.

The actual consumption of finished steel in the U.S. is expected to reach around 120-million tons by yearend.

But total domestic mill shipments including about 4-million tons into the export trade (mostly fulfilling long-term commitments) probably won't exceed 110-million tons even though the nation's steelmakers continue to run at full capacity.

To make up for most of the shortfall between actual consumption and domestic supply, steel imports this year will total from 14-million to 15-million tons, and may be even higher.

In general, the price tags on this imported metal have been as high or higher than those on domestic mill products. So it's generally agreed that the domestic mills could have sold considerably more if they had had it to sell.

Which raises a big question:

Why doesn't the American steel industry have enough capacity to meet at least domestic needs?

As part of the answer, as has already been brought out, U.S. steelmen point to their industry's poor profitability over recent years.

UPSURGE IN IMPORTS

But they also put much of the blame for the earnings lag on the tremendous upsurge in steel imports between the years 1965 and (expectedly) 1973—an upsurge which continued despite such feeble restraining moves as the so-called "voluntary quota arrangements."

Both parts of this answer, they explain, are intertwined. Since the imported steel was being offered at prices well below domestic mill prices, competition held down all steel prices and the domestic steel industry couldn't earn enough to spend enough.

At the same time, since foreign mills had captured such a large share of the American market, most American steelmakers couldn't boost their sales volume sufficiently to financially justify adding more capacity.

During the years from 1965 through 1972, the records show that steel consumption in the U.S. (as measured by the total purchases of steel) rose 6.4-million tons annually, while imports gained 7.6-million tons annually and domestic mill shipments to domestic consumers fell off 1.2-million tons a year.

In short, imports not only took all of the growth in total steel demand, but also cut into domestic mill sales.

IMPORTS REDUCING

During 1971, steel imports captured 18.4 percent of the total U.S. market for finished steel. During 1972, partly because of the dollar's devaluation, imports eased a bit but still gobbled up 17.2 percent of the whole market.

This year, with steel demand at a new peak not only in the United States but around the world, steel imports will be down again, probably to about 15-million tons, or about 12.5 percent.

But the import decline this year doesn't reflect any real improvement in the domestic industry's ability to compete against foreign mills.

Rather, it will mainly reflect the superstrong demand for steel in Europe, in South America and in the Orient, and the fact that world prices for steel have bounded up to levels as high or higher than in the U.S.

The foreign mills are simply selling more of their steel in their home markets. The Japanese mills, in particular, have a bigger home market, and also have found new and sometimes more attractive markets in other countries since the dollar's second devaluation and the imposition of price ceilings on American-made steel.

Practically gone from the marketplace are the "bargain" prices on steel formerly quoted by importers. And left in the lurch are a number of domestic steel users who were big customers of foreign-made steel while it was readily available at low prices.

Many of these have, of course, tried to turn back to domestic suppliers, but—understandably—aren't getting much sympathy or help.

What's obvious, of course, is that the foreign mill retreat from the American steel market has thrown the full burden of meeting this year's much-greater-than-expected upsurge in steel demand upon the domestic mills.

What consumers want to know is what can and should be done to make enough steel dependably available in the domestic market as soon as possible.●

## VERMONT LEGISLATURE SUPPORTS FEDERAL FUNDING FOR BARRIER REMOVAL FOR THE HANDICAPPED

### HON. JAMES M. JEFFORDS

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. JEFFORDS. Mr. Speaker, I would like to bring to your attention a joint resolution passed by the General Assembly of the State of Vermont regarding the Federal funding of special education. The Vermont State Legislature specifically endorses two bills on this issue: H.R. 7626 and H.R. 9761.

I introduced H.R. 7626 on September 7, 1977, as an attempt to focus congressional attention on the extremely unfair situation created by the wide-reaching section 504 of the Vocational Rehabilitation Act of 1973, which prohibits discrimination against the handicapped. This law was passed 5 years ago, and there has not been a penny of Federal money appropriated to help the States comply with the HEW regulations. A conservative estimate from an unofficial study done by HEW is that it would take $2.4 billion to correct current violations of this law. Others estimate the amount to be considerably higher; probably as high as $50 to $100 billion. Although my constituents know that I do not normally advocate this type of Government spending, H.R. 7626 would authorize $6 billion for the implementation of section 504. Otherwise, the burden will continue to fall, as it does now, at the State and local level, and will strain already tight resources. The Education and Labor Committee has begun to hold hearings on the reauthorization of this act, and I expect that this funding problem will be addressed, and hopefully alleviated in the near future.

The people in the State of Vermont recognize the need to do something for handicapped citizens. I think the State is addressing its responsibilities and is perceptively moving in the right direction. The resolution by the general assembly reflects a recognition of the problems they face. I can assure them, as well as my colleagues, that I will continue to work very hard to attempt to solve these problems.

The text of the resolution follows:

R–70. JOINT SENATE RESOLUTION RELATING TO FEDERAL FUNDING OF SPECIAL EDUCATION

J.R.S. 40

Whereas, the federal government, through the enactment of P.L. 94–142, the Education of all Handicapped Children Act of 1975, has required that the state guarantee a free appropriate public education to all handicapped children in Vermont by September, 1978; and

Whereas, despite the requirement in P.L. 94–142 that the state guarantee free appropriate special education services this year, the federal government proposes to phase in its financial commitment to support these services through 1982; and

Whereas, federal grants to provide special education services to handicapped children under P.L. 94–142 will only, at best, provide a fraction of the funds required of the states beginning at 5 percent of the average per pupil expenditure in the United States in 1978, and increasing to 10 percent in 1979, 20 percent in 1980, 30 percent in 1981 and reaching 40 percent in 1982; and

Whereas, the federal government, through P.L. 94–142, is attempting to achieve maximum control over state special education policies and procedures with a minimum of federal financial support; and

Whereas, the federal government, through section 504 of P.L. 93–112, the Rehabilitation of the Handicapped Act of 1973, has provided as a matter of civil right a federal action against discrimination on the basis of handicapping condition; and

Whereas, through the enactment of this "section 504" the federal government has exposed the state to potentially expensive civil liability, particularly with respect to architectural barriers to the handicapped in public buildings, yet has provided no federal financial contribution to meet this liability, now therefore be it

Resolved by the Senate and House of Representatives:

That the General Assembly of the state of Vermont endorses the laudatory purposes of P.L. 94–142 and "section 504" of P.L. 93–112 to provide a free appropriate public education to handicapped children and to remove any remaining discrimination against them, and be it further

Resolved: That the federal government must recognize its responsibility to provide an equitable share of the resources required to meet these commitments it has imposed, and be it further

Resolved: That the General Assembly of the state of Vermont petitions the Congress of the United States to enact legislation similar to that introduced by Vermont Congressman James Jeffords (HR 7626) to provide federal funds to assist states in complying with section 504 of the Rehabilitation Act of 1973, and to enact legislation (HR 9761) to increase the federal share of special education costs under P.L. 94–142 to 40 percent immediately, rather than moving up gradually from the 5 percent level as currently authorized, and be it further

Resolved: That a copy of this joint resolution be sent by the secretary of state to the President of the United States, the Secretary of the Agency of Health, Education and Welfare and the Vermont Congressional Delegation.

Approved: February 14, 1978.●

## NORTHEAST COUNCIL'S RESOLUTION ON ISRAEL

### HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. EILBERG. Mr. Speaker, on Thursday evening, April 6, I was privi-

leged to address a rally of several hundred persons in Philadelphia who came together to demonstrate their concern for the administration's policies in the Middle East.

The rally was organized by the Northeast Council of Synagogues, a coordinating body for 15 synagogues in northeast Philadelphia.

Those in attendance, Mr. Speaker, were unanimous in their feeling that the administration is making a serious error in proposing the sale of fighter-bombers to Saudi Arabia and Egypt. I joined other speakers in pointing out that the sales will create greater instability and more tension in the Middle East, and will lead to a higher level of violence should a conflict take place.

Participants in the program also urged President Carter to not apply pressure on Israel to make concessions which will endanger her security. At the conclusion of the event, the following resolution was adopted by acclamation. I would like to offer it for the RECORD and commend it to the attention of my colleagues:

A RESOLUTION

Whereas Israel is facing a crisis in the world arena more threatening and more deadly than any war she has ever fought, and

Whereas this conflict finds Israel being buffeted on one hand by an Arab diplomatic effort that includes oil blackmail and on the other hand by a most serious change in the position of the United States, and

Whereas Israel is a homeland, a nation, a heritage and a people brutalized by oppression but sustained by hope; driven through persecution but maintained by an eternal dream; challenged in war but proud in victory and prayerful for peace, and

Whereas Israel is a symbol of freedom of faith and of tradition to men of all religious beliefs, and

Whereas the survival of Israel demands the outward and public expression of concern and support by Americans of all religious beliefs and ethnic traditions,

Now, therefore, we the members of the Northeast Synagogue Council and the Northeast Jewish Community call for the Carter Administration to unite and give positive support to the State of Israel, its firmest ally in the Middle East.●

## CHARLES S. V. SANNER

### HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. BYRON. Mr. Speaker, I would like to take this opportunity to honor the memory of a native Frederick County Marylander and highly respected citizen of Frederick, Mr. Charles S. V. Sanner.

Certain individuals touch the lives of people around them with great influence, and Charles Sanner was a moving force in his community and State. It is with a great sense of personal loss that I note his passing.

Mr. Sanner was president of Sanner Realty Co., and had served as president of the Frederick Association of Insurance Agents, president of the Frederick Real Estate Board, chairman of the Frederick County Insurance Committee, chairman of the Agents Advisory Committee, director of the Montgomery Mutual Insurance Co., and on the agents advisory committee of the Travelers Insurance Co., Baltimore.

Giving tireless leadership and encouragement to the business and civic communities, Mr. Sanner was involved with the Frederick County Chamber of Commerce, Frederick Rotary Club, Frederick YMCA, Hood College, American Legion, and was particularly devoted to the Evangelical Lutheran Church.

Although Mr. Sanner's contributions are too numerous to list here, his services will long be remembered and appreciated. He will be greatly missed by his wife, Pat, and family, friends and coworkers. I know you join me in extending the official sympathies of the House in honor of this unselfish and patriotic American.●

## HUMAN RIGHTS IN IRELAND DAY PROCLAIMED IN KANSAS

### HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. BIAGGI. Mr. Speaker, I am pleased to report that the State of Kansas has joined the growing national movement concerned with ongoing human rights violations which occur in Ireland. Senate Concurrent Resolution 1688 proclaiming March 17, 1978, as Human Rights Day for Ireland was passed by the Kansas Senate on March 16 and the House on the 17th.

The more States which adopt these types of measures the more impetus will be placed on the Congress for hearings. The importance of hearings cannot be minimized. It can allow for constructive discussion of the major issues which divide Ireland as well as the various proposals which could bring peace.

At this point in the RECORD I wish to insert the Kansas resolution which was provided to me by President Jack Keane of the Ancient Order of Hibernians. I praise the Kansas legislators for this important initiative.

SENATE CONCURRENT RESOLUTION No. 1688

A concurrent resolution recommending that the Legislature declare March 17, 1978, as "Human Rights Day For Ireland"

Whereas, St. Patrick's Day is an appropriate time for all citizens to recall the many contributions made by the Irish people to the history and culture of the United States and to the State of Kansas. It is a source of pride, which all citizens can share in, that so many Irish men and women have helped to build and develop this great country; and

Whereas, Nine men who signed the Declaration of Independence were of Irish descent and thousands of Irish people fought in this young nation's Revolutionary Army; and

Whereas, The generosity, warmth and kindness of the Irish have made them a welcomed addition to the melting pot of America; and

Whereas, Ireland today is torn apart by violence. A country cannot be joined by such violence, but must be joined by a common effort by both the North and the Republic, by Catholics and Protestants to establish a system of government in which both communities will live in economic, political and social harmony. It is the love that each Irish man and woman has for their fine country that will create the foundation of a peaceful Ireland; and

Whereas, Not all Irish eyes are smiling on March 17: Now therefore,

*Be it resolved by the Senate of the State of Kansas, the House of Representatives concurring therein:* That we hereby declare March 17, 1978, as "Human Rights Day for Ireland", to focus both world and state attention to the trouble in Ireland and to show that we are concerned about the human rights, justice and peace of all the people of Ireland; and

*Be it further resolved:* That the Secretary of State forward an enrolled copy of this resolution to Mr. B. M. Watters, President, Jackson County Ancient Order of Hibernians, 5850 Central, Kansas City, Missouri 64113, Mr. Jack Keane, National President of Ancient Order of Hibernians, 7648 Grant Haven Dr., Affton, Missouri 63123, Mr. John W. Duffy, National Secretary of Ancient Order of Hibernians, 235 Wadsworth Ave., New York, New York 10033, and Ambassador John G. Molloy, 2234 Massachusetts Ave. N.W., Washington, D.C. 20008.

I hereby certify that the above CONCURRENT RESOLUTION originated in the SENATE, and was adopted by that body March 16, 1978.

ROSS O. DOYEN,
*President of the Senate.*
LU KENNEY,
*Secretary of the Senate.*

Adopted by the House March 17, 1978.

JOHN CARLIN,
*Speaker of the House.*
GENEVA SEWARD,
*Chief Clerk of the House.*●

## HUMPHREY-HAWKINS: AN IMPORTANT FIRST STEP

### HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. HAWKINS. Mr. Speaker, the House passage of H.R. 50, the Full Employment and Balanced Growth Act of 1978, demonstrated a willingness of this Congress to begin the task of reactivating our economy, which for so long has squandered our most important resource—the talent and energy of the American people. I would like to submit to my colleagues an editorial by the Christian Science Monitor on the new House version of H.R. 50, as I feel it accurately summarizes the bill's scope and purpose:

Let us assume that the Senate will pass the Humphrey-Hawkins jobs bill as the House of Representatives did last week. Then comes the hard part: ensuring the legislation is carried out to the best of its intentions. It gives the White House a mandate all too easy to avoid unless the Congress and public insist that it be followed through in good faith.

The Senate should not pass the bill as a deserved monument to Sen. Hubert Humphrey but as what Sen. Muriel Humphrey calls "an essential first step in moving America toward a new era of full employment and vigorous, stable economic growth."

Seen in this measured way, the bill should escape the danger of raising false hopes about a federally guaranteed end to unemployment. (It is not a jobs bill in the sense of creating or funding jobs.) And the emphasis on "stable economic growth" is

a reminder that the bill does not forget the control of inflation while placing jobs for everyone willing and able to work at the center of government policy.

Note that jobs and growth are combined in the title of the Humphrey-Hawkins Full Employment and Balanced Growth Act. Unlike the landmark Employment Act of 1946, which neglected the problem of inflation, Humphrey-Hawkins makes price stability a goal along with its effort, three decades later, to fulfill the spirit of the earlier act.

To combat inflation Humphrey-Hawkins proposes such measures as stockpiling critical raw materials, strongly enforcing antitrust laws, and instituting early warning systems to prepare against industrial capacity shortages. Suppose the mandated jobs goals—3 percent adult unemployment and 4 percent overall unemployment within five years of passage—conflict with inflation control. Then the bill allows the president to propose modifications of the goals.

It suggests governmental avenues of attacking structural unemployment through such means as targeted revenue sharing and public works. But the main thrust is toward use of the private sector and appropriate government policies to foster it. Gone is the specter seen in the original bill of generous government jobs drawing people away from the private sector.

Doubters on one side now call Humphrey-Hawkins, as adjusted to satisfy President Carter, a "sanitized" or toothless document, a paper tiger. On the other side, there are estimates of the billions of dollars required if the unemployment reductions are seriously sought.

Yet is there any economic goal more worthy of investment than ensuring jobs for all who want to work, especially in view of America's traditional commitment to and benefit from the work ethic? And even the sanitized Humphrey-Hawkins takes the unprecedented steps of requiring the president each year to state explicit employment goals and recommend the fiscal and monetary policies to achieve these goals. The Federal Reserve System would have to submit a written report on how its monetary policies were designed to support the president's numerical goals for employment, prices, and production.

Would such statements and reports become just rhetoric and more rhetoric? Not in the hands of a responsible president, a cooperative Federal Reserve Board, and a Congress diligent enough to demand its legislation not be ignored and to follow through with action.●

## VIGIL FOR FREEDOM

### HON. MARGARET M. HECKLER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mrs. HECKLER. Mr. Speaker, I am pleased to participate in the "vigil for freedom" on behalf of Soviet Jewish families and individuals who are being refused permission to emigrate from the Soviet Union, but I am disheartened that the family for whom I spoke last year must again be the subject of my plea this year. The Inditsky family of Moscow is still waiting—for 7 years now—they are still waiting for permission from Soviet authorities to join their relatives in Israel.

Solomon Inditsky, his wife, Khana, their daughter, Isabella Novikova, and their grandson, Mark, have applied four times for permission to emigrate. Each request has been denied. Last year Mark became a Bar Mitzvah in a private apartment in Moscow. He could not be called to the Torah in the synagogue—authorities would not allow it because this 14-year-old is a refusenik.

Once again, I join with the pleas of their family that the Inditskys be allowed to emigrate and join their relatives in Israel.●

## ATTORNEY FEES AND EXPENSES IN CIVIL SUITS INVOLVING THE UNITED STATES

### HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. DRINAN. Mr. Speaker, under existing law, a private person who is involved in litigation with the U.S. Government or one of its agencies or employees must bear the fees and expenses of attorneys. Only under a handful of statutes may such private party recover its counsel fees. Indeed prior to 1966, a private person could not even recover its costs of litigation (as distinguished from counsel fees). In that year, Congress amended the law to allow courts to award costs (but not attorney fees) against the Government when a private litigant prevailed.

Since 1966, individuals and organizations representing a wide variety of interests have asked the Congress to take the second step of repealing the prohibition against the award of attorney fees against the Government. In a few limited areas, such as under the Freedom of Information Act, Congress has responded to such requests. In addition a number of bills have been introduced which, to varying degrees, would modify or totally abrogate the existing rule.

For the past 2 years, the Judiciary Subcommittee on Courts, Civil Liberties, and the Administration of Justice, on which I serve, under the able leadership of Chairman KASTENMEIER, has explored various proposals in the attorney fee area. In 1976 we reported the Civil Rights Attorney's Fees Awards Act of 1976, which became Public Law 94-559. More recently we have examined other possible corrective action, including the question whether the prohibition against awarding fees in Government litigation should be removed.

At the suggestion of Chairman KASTENMEIER, I have undertaken to study this matter in greater detail. After consulting with a large number of groups and individuals, I have concluded that legislative action should be taken to permit private parties to recover their attorney fees when they prevail in litigation with the Government. Consequently, yesterday I introduced H.R. 12088 which would authorize the courts to award attorney fees and expenses to a prevailing party, other than the United States, in any civil action brought by or against the Government or one of its agencies, officers, or employees.

The bill would codify the dual standard for recovering such fees and expenses which the Supreme Court adopted in Newman against Piggie Park Enterprises and Christiansburg Garment Co. against Equal Employment Opportunity Commission. The essence of the dual standard is that prevailing plaintiffs should ordinarily recover their counsel fees in the absence of circumstances which would render such an award unjust. In contrast, prevailing defendants would recover their fees only if they could show that the action of the United States "was brought without foundation, vexatiously, frivolously, or in bad faith." The quoted words, which are in the bill, are drawn directly from the Christiansburg Garment case.

The rationale of the dual standard rests on the proposition that, "when a district court awards counsel fees to a prevailing plaintiff, it is awarding them against a violator of Federal law," as the Supreme Court observed in Christiansburg Garment. In contrast, a prevailing defendant does "not appear before the court cloaked in a mantle of public interest," as the Third Circuit Court of Appeals noted.

The bill also codifies the emerging judicial doctrine that a prevailing plaintiff, at least in some circumstances, may recover counsel fees expended before an administrative agency in cases where the litigant must first appear before such an agency. In many instances a person seeking to challenge adverse agency action must first go to the agency to seek relief or to present its case. Only then can the person proceed into the courts to secure a judicial ruling on the correctness of the administrative determination. The bill gives the court discretion to award the fees spent before the agency when the judicial action arises directly out of the administrative proceeding.

In addition the bill codifies court decisions which allows the award of attorney fees and expenses at an interim stage of the litigation. Recognizing that some litigation does not come to a resolution quickly, the courts have awarded such fees at important stages of the case prior to the entry of a final judgment. For example, plaintiffs will often seek preliminary relief to protect their rights at an early stage of the litigation. Indeed, issuance of a preliminary injunction may effectively resolve the controversy even though a final order is never entered, or entered many months later. When a court enters an order which "determines substantial rights of the parties," it should have the discretion to award fees at that stage of the cause. In Bradley against Richmond School Board, the Supreme Court approved such interim awards.

Of course, a plaintiff who wins a preliminary ruling may not ultimately win the lawsuit. Thus, it may be argued, it is not fair to make the defendant pay an interim award when the defendant may eventually prevail. To guard against such unjust enrichment, the bill authorizes the courts, when they award interim fees, to require the plaintiff to post a bond covering the amount of the award. In this

manner the defendant's interests will be sufficiently protected while, at the same time, securing to the plaintiff its right to an interim award.

Once the court has determined that a prevailing party is entitled to attorney fees and expenses, then it must approve an appropriate amount. Because the circumstances of each case vary, the bill commits this decision to the sound discretion of the courts. It is noted, however, that the courts should recognize existing standards which have been developed through the years to guide the exercise of that discretion. In Johnson against Georgia Highway Express, Inc., for example, the Fifth Circuit Court of Appeals listed 12 factors to be considered in determining the reasonableness of awards, including the time and labor required, the novelty and difficulty of the questions involved, the skill needed to present the case, the customary fee for similar work, and the amount received in damages, if any. These standards are discussed at greater length in House Report 94–1558 and Senate Report 94–1011, which accompanied the 1976 Fees Awards Act.

H.R. 12088 also amends the Civil Rights Attorney's Fees Awards Act of 1976. It would repeal the Allen amendment which permits a private defendant in tax cases brought by the Government to recover attorney fees upon a showing that the case was brought frivolously, vexatiously, or in bad faith. Senator ALLEN himself has expressed his disagreement with the court decisions which have narrowly construed his amendment. H.R. 12088 would correct the deficiencies which Senator ALLEN perceives in the 1976 Awards Act. Because my bill would allow taxpayer plaintiffs who prevail in suits brought against the United States, including those in the tax court, to recover their attorney fees, the Allen amendment is no longer needed.

The bill corrects two other deficiencies in the 1976 Awards Act. That statute allows prevailing parties to recover their counsel fees in cases instituted under title VI of the Civil Rights Act of 1964 and title IX of the Education Amendments of 1972. Together those titles prohibit discrimination on the basis of race, color, sex, or national origin in certain federally assisted programs or activities. Title V of the Rehabilitation Act of 1973 and the Age Discrimination Act of 1975 have similar provisions which protect the rights of handicapped persons and older Americans. H.R. 12088 would add these two statutory provisions to the 1976 act so that civil suits brought under them would have the benefit of the Fees Awards Act of 1976. I should add that I recently joined my good friend Chairman PEPPER on his bill which would amend the Age Discrimination Act of 1975 to authorize private suits expressly and to provide for attorney fees in such actions.

H.R. 12088 does not repeal any existing statute which permits counsel fees to be awarded against the United States. There are presently about a handful of such acts. They would continue in force. If a prevailing party has an option of seeking fees under a current statute or under H.R. 12088, such party could choose the law under which fees are claimed, unless existing law expressly prohibited such option. For example, under the Social Security Act, 42 U.S.C. 406(b), the court may award an attorney's fee:

out of, and not in addition to, the amount of such past-due benefits. In case of any such judgment, no other fee may be payable or certified for payment for such representation except as provided in this paragraph.

H.R. 12088 would also require the Comptroller General to prepare an annual report for the Congress which would describe the nature and size of awards made under the law. This would permit the appropriate committees to evaluate the implementation of the statute to determine whether any modifications are needed. It would be a useful tool in exercising oversight responsibilities in this critical area.

Finally H.R. 12088 continues the existing rule regarding the award of costs in cases involving the United States. The prevailing party, including the Government, is entitled to recover its costs of litigation, such as filing and witness fees, certain transcript and deposition expenses, and similar items. The bill omits the reference to 28 U.S.C. 1920, contained in current law, because the courts have not restricted the award of costs only to the items listed in section 1920. Dropping the reference to section 1920 places the United States on an exact parity with the private litigant, which was the original objective of the 1966 legislation. This technical change conforms to the aims of the earlier amendment.

Chairman KASTENMEIER has advised me that hearings on H.R. 12088 will occur on April 26 and 27. Any person interested in submitting testimony on this matter should contact Ms. Gail Higgins Fogarty on the subcommittee staff (225–3926). A copy of the bill is inserted in the RECORD at this point:

H.R. 12088

A bill to amend title 28 of the United States Code to authorize the payment of reasonable attorney fees and expenses to the prevailing party (other than the United States) in any civil action brought by or against the United States, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 2412 of title 28 of the United States Code is amended to read as follows:

"§ 2412. Costs and attorney fees

"(a)(1) In any civil action brought by or against the United States, any agency thereof, or any official thereof acting in an official capacity, the court having jurisdiction of such action (including the Tax Court of the United States)—

"(A) may award costs to the prevailing party; and

"(B) may award reasonable attorney fees and expenses to the prevailing party (other than the United States or an agency or official thereof), except that the court may award reasonable attorney fees and expenses to a prevailing defendant only if the court determines that the action was brought without foundation, vexatiously, frivolously, or in bad faith.

"(2) Costs and attorney fees and expenses awarded under this section to the prevailing party in a civil action shall be paid by the opposing party, except that a non-Federal litigant joined with the United States as a party in such action shall not be liable for the payment of attorney fees and expenses.

"(b) A judgment in a civil action awarding reasonable attorney fees and expenses under this section may include any such fees and expenses which were incurred in any administrative proceeding which is the subject of review in such action or incurred in any appeal or other review of such action.

"(c)(1) Upon the entry of any order which determines substantial rights of the parties in a civil action brought by or against the United States, any agency thereof, or any official thereof acting in an official capacity, the court may award interim costs and reasonable attorney fees and expenses to the prevailing party (other than the United States or an agency or official thereof) if the court, upon application of the prevailing party, determines that such party is likely to prevail on the merits in the action.

"(2) The court in its discretion may require the posting of a supersedeas bond by a prevailing party awarded interim costs and reasonable attorney fees and expenses under this subsection.

"(d) Payment of a judgment for costs and reasonable attorney fees and expenses shall be as provided in section 2414 and section 2517 of this title for the payment of judgments against the United States.".

(b) The table of sections for chapter 161 of title 28 of the United States Code is amended by striking out "Costs." in the item relating to section 2412 and inserting in lieu thereof "Costs and attorney fees.".

SEC. 2. Section 2414 of title 28 of the United States Code is amended by inserting immediately after the first undesignated paragraph thereof the following new undesignated paragraph:

"At the end of each fiscal year, the Comptroller General shall submit a report to the Congress setting forth the amount of costs and attorney fees and expenses awarded during such fiscal year for payment by the United States (or any agency or official thereof) under section 2412 of this title or any other provision of law which authorizes such awards. Each such report shall describe the nature and amount of the awards, the claims involved in the civil action, and other relevant information which will aid the Congress in evaluating the scope and impact of such awards.".

SEC. 3. Section 722 of the Revised Statutes (42 U.S.C. 1988) is amended by striking out "or in any civil action or proceeding by or on behalf of the United States of America, to enforce, or charging a violation of, a provision of the United States Internal Revenue Code" and inserting in lieu thereof "title V of the Rehabilitation Act of 1973, the Age Discrimination Act of 1975".

SEC. 4. Nothing in this Act shall affect any right of any person to recover costs and attorney fees and expenses under any other provision of Federal Law.●

## TEXAS UTILITIES COMPANY WINS EDISON AWARD FOR LIGNITE USE

### HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. WRIGHT. Mr. Speaker, my State of Texas sometimes is associated in the public mind with oil and gas, and not coal. And yet it is going to be necessary for utilities in Texas to convert to coal for power generation, as must utilities in other States.

Yesterday marked a significant step in that conversion process when the Edison Electric Institute presented its Edison Award to the Texas Utilities Co. system for innovative development of lignite fuel resources in the generation of electricity. The system includes Dallas Power & Light Co., Texas Electric Service Co., Texas Power & Light Co., Texas Utilities Fuel Co., Texas Utilities Generating Co., and Texas Utilities Services, Inc.

The Edison Award, highest honor of the electric utility industry, was presented to T. L. Austin, Jr., chairman of the board of Texas Utilities Co. at the 46th annual convention of the Edison Electric Institute, being held in Houston.

The text of the award reads as follows:

EDISON AWARD, 1978

For demonstrated foresight and aggressive action in reducing its dependence on natural gas from 100 percent of electric generation in 1971 to 66 percent in 1977, for development of lignite as a low-cost fuel alternative, and for conducting exemplary reclamation of the land mined for lignite, all representing highly constructive steps in making the best use of fuel resources, meeting energy needs and accomplishing environmental goals to the benefit of its customers and its service area, Texas Utilities Company System, consisting of Dallas Power & Light Company, Texas Electric Service Company, Texas Power & Light Company, Texas Utilities Fuel Company, Texas Utilities Generating Company and Texas Utilities Services Inc., is declared the recipient of the Edison Award for 1977.●

## GOVERNOR ROMERO OF PUERTO RICO TAKES A LEADERSHIP POSITION REDUCING UNNECESSARILY HIGH TAX RATES AND ENCOURAGING ECONOMIC GROWTH

## HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. KEMP. Mr. Speaker, this morning it was reported that our friend, Gov. Carlos Romero Barcelo of Puerto Rico, will soon propose a dramatic reduction in individual income tax rates, which go up as high as 83 percent in Puerto Rico. A key feature of the Barcelo program is a reduction in the highest rate from 83 to 50 percent. He notes that all the rates from 50 to 83 percent raise only $12 million per year for the Government and the Governor expects the increase in output which would result from such a rate reduction to make up the loss tenfold.

This is precisely the same point I have made in offering a 30-percent reduction in the U.S. tax rates. At present the 70- to 50-percent rates raise only about 6 percent of individual income tax revenue. But the cost of such high rates is to discourage work, investment, and entrepreneurship so that much more revenue is lost than gained.

I hope my colleagues will read this article about Governor Barcelo and join us in a similar effort to reduce tax rates and restore real growth to our economy.

[From the Wall Street Journal, Apr. 12, 1978]

PUERTO RICO ON THE MOVE

Believe it or not, one of the most popular fellows in Puerto Rico these days is Fred Martinez, director of internal revenue. Unlike our IRS director, Darth Vader, who likes to tax the wings off flies, Mr. Martinez a few weeks back let it slip to the San Juan Star that his boss, the governor, was planning some big tax-rate cuts on personal incomes to get the island economy off its bottom.

The Star rhapsodized editorially. After all, Puerto Rico has progressive personal tax rates that make U.S. rates look benign, rising to 83% at the top. A further clinker is a prohibition against separate returns by husbands and wives, which any taxi driver in San Juan can tell you encourages divorce.

The only trouble was that Gov. Carlos Romero Barcelo had not wanted the news to slip out before he had his legislative package designed and defensible. He issued a statement denying the Star article, and the Star, which is not especially cozy with his Republican administration, blasted him editorially for not coming through. The populace muttered about running Mr. Martinez for governor.

But Gov. Romero has now put himself clearly in the forefront of the tax cutting movement. On Monday First Boston Corp. hosted a breakfast seminar in Manhattan to hear the governor and his economic team outline their economic strategy. The wall-to-wall financiers heard Mr. Romero announce publicly that come Jan. 1, the legislature willing, there will be major reductions in the island's personal tax rates.

This is cheering news. There are still no specifics, but we would not be surprised if the proposal that does go to the legislature calls for a cut to 50% in the top bracket and adjustments across-the-board to bring the personal rates in line with the mainland's. Economist Arthur Laffer of the University of Southern California, a consultant to Puerto Rican Treasury Secretary Perez, has been urging such reductions. The theory embodied in the "Laffer curve" is that when tax rates are too high, reducing them will spur the economy and thus actually boost government revenue.

The highest rates—those at the top of the progressive schedule—produce almost no revenue for the Puerto Rican government, but stand simply as a barrier to productivity. What good does it do to attract financial capital from the mainland with business-tax holidays when top flight managerial talent flees the withering steepness of the personal taxes? Local professional talent bails out too, and there's nobody left to pay the top rates.

In 1975, with total island revenues topping $1.5 billion, the personal brackets from 50% to 83% produced a mere $12 million for the treasury over and above what a top rate of 50% would have yielded. Secretary Perez judges that the economy and tax base would expand so handsomely at the lower top rate that the implied revenue loss of $12 million would be made up tenfold.

It's all about time. The currency inflation of the last several years has been especially brutal to Puerto Rico precisely because its personal rates are so much more progressive than the mainland's. The economy has been barely limping along, with unemployment hovering around 20% for the last few years. The preceding Democratic administration made matters worse by trying to fight inflation with a 5% surtax atop all the other personal taxes. Gov. Romero peeled this away last year.

His commitment Monday to peel the personal rates further is an important breakthrough for Puerto Rico. The commonwealth is no stranger to tax incentives as a key to productivity, but until now it has been totally preoccupied with luring mainland capital and mainland enterprises. The lower personal rates for Puerto Ricans will invite internal generation of capital and enterprises.

The moves will be carefully watched throughout the Caribbean, and ought to be watched throughout the Third World, most of which has tax structures similar to Puerto Rico's. For that matter, the experiment ought to be watched here on the mainland too, as a controlled experiment, with the Laffer curve. If Gov. Romero does cut personal income tax rates, especially at the top, and it does boost the Puerto Rican economy, we all will have learned a great deal about economic expansion.●

## GREAT REDWOOD COMPROMISE

## HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. DON H. CLAUSEN. Mr. Speaker, legislation has recently been enacted almost doubling the size of the Redwood National Park. Many Members voted for this bill under the mistaken idea that the redwoods were endangered, and that park expansion was necessary to save the tall trees. While the environmental benefits of park expansion are of dubious value, the economic hardship and human suffering this legislation will inflict upon the people of Humboldt County is only beginning to manifest itself.

An article was recently published in New Times magazine and reprinted in the San Francisco Chronicle. It provides some sobering second thoughts on the "Great Redwood Compromise." I believe my colleagues will find the points of view expressed by the author, Arthur Zich, informative and thought-provoking:

THE GREAT REDWOOD COMPROMISE

(By Arthur Zich)

"A triumph for the majesty of redwoods," clarioned Senate majority whip Alan Cranston.

"A great tribute to the Sierra Club," declared Representative Philip Burton, the author of the bill in the House. "We now have a national park worthy of the name, that will preserve this treasure of trees for all humanity and for all generations to come."

And who could argue with that? After years of wrangling, the Redwood National Park expansion bill had finally cleared the House and Senate and was on its way for virtually certain signature by the President. No fewer than 48,000 acres has been added to the park. The Tall Trees Grove—repository of the world's first, third and sixth tallest trees—had been spared the depredations of rapacious loggers. *Sequoia sempervirens*, the noblest and most enduring symbol of man's concern for the land, had been spared.

Right?

Well, not exactly. Whatever else the bill eventually achieves, it has amply demonstrated that truth is the first casualty of politics.

The bill that rang such winning encomiums from its authors raises real ques-Humboldt county, an area economically bound to the timber industry and already bound to the timber industry and already beset with a chronic 12–14 percent unemployment rate. It removes a sizable chunk of the world's finest redwood timberland from

the public weal even as the House Agriculture Committee warns that the nation will soon be facing a critical timber shortage. It commits taxpayers to an initial outlay of some $400 million and an eventual much great expenditure.

All that might yet be tolerable if the bill did what it was supposed to do. Unfortunately, the bill of itself does nothing to remove the threat to the Tall Trees. And begging the congressman's pardon, it does not add 48,000 acres of redwoods to Redwood National Park.

The unhappy fact is that the threat to the Tall Trees comes from gravel deposits in Redwood Creek, which flows past the grove, and these are already in place—washed down from heavily logged, geologically unstable upland slopes. Says park superintendent George Von Der Lippe, "If all the logging operations in the watershed were to stop tomorrow, the threat to the trees, such as it is, would still be there."

As for the redwoods, less than 10,000 acres of old growth—the really big trees—are among the acreage the Burton bill will buy. The rest is either young second-growth timber or land that has been logged off entirely. The sad truth is that for the foreseeable future, Redwood National Park will remain the ecological B–1 it has always been—only bigger, more expensive and, in many places, uglier.

Since its establishment in 1968, the park has cost $172 million—not quite twice the $92 million Congress originally ponied up for it, but well over twice the price of all the other parks in the national park system combined. And it is not paid for yet; some $110 million is still hanging fire in the courts. The park has never drawn near the 950,000 visitor days its chief proponent, former Interior Secretary Stewart L. Udall, predicted.

Last year, visitor days totaled a scant 34,000—3.6 percent of the projection. That placed the park 32nd out of 37 national parks in terms of visitors; in terms of campers it ranked even lower. "Last year," says Von Dier Lippe, "we had 2259 overnights in Redwood Creek."

It was reverence for the redwoods that provided the cutting edge for the bill's swift passage. But a good deal of that veneration was better rooted in rhetoric than it was in reality. Contrary to popular notion, *Sequoia sempervirens* is neither rare, fragile nor slow-growing.

Some 400 million of the trees now stand along the 500-mile-long coastal corridor from southern Oregon to San Simeon. Botanists call it one of the ruggedest trees in the world. (It is no sooner cut than the stumps send out any number of sprouts, each of which is capabale of soaring into a full size tree.) The lumber companies are reforesting redwoods at a rate of around three million trees a year. And for good, sound business reasons: *Sequoia sempervirens* is the fastest growing conifer in North America—and its market price, even in California, is out of sight.

It was a bad political compromise that brought the park into being. The Sierra Club and other environmentalist groups wanted 78,000 acres encompassing most of the Redwood Creek watershed, then owned by Arcata National Louisiana-Pacific and Simpson Timber Company, plus the Jedediah Smith, Prairie Creek and Del Norte State Parks. Congress' $92 million ceiling whittled the size down to 28,000 confiscated acres; California refused to donate its parklands. And the Tall Trees, whatever serenity they provided for visitors, created one monstrous headache for park planners.

The problem was that the bulk of desired old-growth redwoods stood in a clump at the mouth of Redwood Creek, while the Tall Trees stood alone about eight miles upstream. To connect the two, park planners created "the Worm," a narrow strip of parkland running 14 miles upstream and about a quarter-mile out from each of the banks. In effect, the park had the creekbed with the Tall Trees intact; the timber companies held the watershed's uphill flanks.

To the public, it seemed a hard-struck balance between productive forestry and pristine preservation. To the Sierra Club, it was only round one.

The cutting, conservationists charged, brought down everything from landslides to streamside trees. But their principal concerns were two. First, it shattered the aesthetic experience of the park: patches of clear-cut hills above the Worm were denuded, scarred and all too visible from inside the park; the sometime whine of chain saws, crash of trees and rumble of trucks intruded on the serenity the park was supposed to provide. Second, and more ominous, the cutting process left barren hills to erode in winter rains, sending enormous quantities of silt and gravel cascading into Redwood Creek, where it piled up on the streambed above and alongside Tall Trees Grove.

The danger was threefold. The gravel build-up might be swept along on the periodic floods that inundate the Grove and gradually tear away the Tall Trees' bark and the life-sustaining cambium layer beneath. The floods might leave a dump of gravel around the trunks, which would in effect suffocate the trees. Or the creekbed gravel might cause the water table to rise beneath the trees, and drown their root systems.

The industry cried: Not so. But the state agreed, at least to the extent of tightening up on logging operations in the area. In 1974, the California Forest Practices Act—the toughest logging law in the nation—went into effect. And over the next two years the timber industry was foced into "voluntary agreements" with state and federal authorities that further restricted its autonomy.

Henceforth, wherever possible, timber men had to use cable-yarding instead of old tractor-yarding harvesting techniques. This meant that fallen trees would be slung on overhead cables to truck landings instead of being dragged by earth-gouging tractors. Clear-cut sites were strictly limited in acreage; adjacent stands would not be harvested for a minimum of three years. Within five years of a harvest, a logged-off piece of land had to be covered with three-year-old seedlings. "If those seedlings don't take the first year," says Fred Henschell, 40, the forester in charge of Louisiana. Pacific's big tree nursery near Little River, you'd better get your butt out replanting the next year or you'll soon be breaking the law."

The measures are working. "It's true," says park chief Von Der Lippe. "There's been a great deal of improvement in timber logging in this area." But the Sierra Club and related environmentalists scented all-out victory—and went for it. A flood of scarifying pamphlets poured out of environmentalists offices, complete with grisly photos of logged-off land, out-of-context excerpts from scientific studies, and the solemn, treacly poetry of Friends of the Earth chief David Brower. The thrust of it all: the timber men were cut-and-run land rapers; the redwoods were in imminent danger, the situation was critical.

It made good copy; it gave arm-chair environmentalists an uplifting cause that required neither thought nor action. And logging was undeniably ugly until second-growth took hold. But this view ignored several pertinent considerations. Over the previous decade, the cut-and-run land rapers had invested $160 million in new plant facilities in the area. The Sierra Club scheme meant seizure of thousands of acres of immensely productive property—private property at that. And there were alternatives.●

## MONTHLY LIST OF GAO REPORTS

### HON. JACK BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. BROOKS. Mr. Speaker, the monthly list of GAO reports includes summaries of reports which were prepared by the staff of the General Accounting Office. The February 1978 list includes:

NATIONAL DEFENSE

Additional Cost Of The All-Volunteer Force. FPCD–78–11, February 6.

Opportunities Exist For Substantial Savings In Administration Of Military Skill Training Programs. FPCD–78–13, February 14.

Management And Use Of Army Enlisted Personnel—What Needs To Be Done. FPCD–78–6, February 16.

Can The Army Provide Logistic Support For Its Troops In A Conventional Defense Of Free Europe? LCD–77–208, February 16.

Status Of The Navy's Vertical Short Takeoff And Landing Aircraft. PSAD–78–61, February 23.

Can The Army's $2.8 Billion Program To Modernize The CH–47 Helicopter Be Improved? PSAD–78–18, February 24.

Analysis Of Department Of Defense Unobligated Budget Authority. PAD–78–34, January 13.

Analysis Of The Need For Additional Family Housing At The Navy's Trident Submarine Base. CED–78–49, February 9.

Philadelphia Naval Regional Medical Center Is Badly Deteriorated And Unsafe. LCD–78–301, February 17.

Questionable Practices Of The Military Minor Construction Program. LCD–77–356, February 14.

*Letter reports*

How the Air Force awards contracts for repairing J75 afterburner cylinders. PSAD–78–78, February 16.

Work measurement system for real property maintenance used by the U.S. Army in Europe is of little value; improvements suggested. LCD–78–312, February 16.

The Navy should make sure that incentive provisions in noncompetitive contracts motivate contractors to keep costs at a minimum: the case of a contract awarded to Lockheed for two submarine tenders and related items. PSAD–78–82, February 21.

Answers to questions about the Reserve Officers Training Corps. FPCD–78–17, February 23.

Operation of housing on Walker Air Force Base, Roswell, New Mexico, by the Roswell Housing Authority. LCD–78–309, January 25.

INTERNATIONAL AFFAIRS

Impact On Trade Of Changes In Taxation Of U.S. Citizens Employed Overseas. ID–78–13, February 21.

How The United States Can And Should Improve Its Funding Of International Joint Commission Activities. ID–78–10, February 8.

Improved Management Needed Over The Agency For International Development's Operating Costs. ID–78–15, February 14.

East-West Center—Progress And Problems. ID–78–11, February 15.

The American University In Cairo: Alternatives For U.S. Government Support. ID–78–20, February 17.

GENERAL SCIENCE, SPACE, AND TECHNOLOGY

NASA's Resource Data Base and Techniques For Supporting, Planning, And Controlling Programs Need Improvement. PSAD–77–78, May 19, 1977.

The Maritime Administration's Evaluation Of The End Products Of Research And Development Contracts With Private, Profitmaking Firms. PSAD–78–4, January 27.

ENERGY

The Magnitude Of The Federal Solar Energy Program And The Effects Of Different Levels Of Funding. EMD–78–27, February 2.

Better Planning Needed To Deal With Shifting Regional Energy Demand. EMD–78–35, February 22.

NATURAL RESOURCES AND ENVIRONMENT

Improved Formulation And Presentation Of Water Resources Project Alternatives Provide A Basis For Better Management Decisions. CED–78–42, February 1.

*Letter reports*

The Department of the Interior should improve the accuracy of its recording and reporting of accounts receivable and improve followup actions on delinquent accounts. FGMSD–77–66, February 3.

Advantages and disadvantages of authorizing general water resources development plans rather than individual projects. CED–78–41, January 30.

AGRICULTURE

How Good Are School Lunches? CED–78–22, February 3.

Opportunities For Improving Internal Auditing In The Department Of Agriculture. CED–78–28, February 9.

*Letter report*

Progress of Agriculture's attempts to improve the national gain inspection system hampered by slow acquisition and training of staff. CED–78–23, February 27.

COMMERCE AND HOUSING CREDIT

New Interstate Truckers Should Be Granted Temporary Operating Authority More Readily. CED–78–32, February 24.

Ways To Increase The Number, Type, And Timeliness Of 8(a) Procurement Contracts. CED–78–48, February 1.

TRANSPORTATION

Is The Administrative Flexibility Originally Provided To The U.S. Railway Association Still Needed? CED–78–19, February 22.

Linking The Americas—Progress And Problems Of The Darien Gap Highway. PSAD–78–65, February 23.

*Letter reports*

Recommended changes in the Federal Aviation Administration's proposed regulations setting noise limits for supersonic aircraft. CED–78–52, January 31.

Use of helicopters by the Coast Guard to provide emergency medical services in inland areas. CED–78–54, February 10.

Information on the Coast Guard's accounting system. CED–78–35, January 10.

COMMUNITY AND REGIONAL DEVELOPMENT

The District of Columbia Needs A Program To Identify Vacant Houses And Get Them Back On The Market. GGD–78–25, February 22.

Stronger Federal Enforcement Needed To Uphold Fair Housing Laws. CED–78–21, February 2.

*Letter reports*

How planned reorganization of the Department of Housing and Urban Development will affect the State of Kansas. CED–78–53, February 13.

Problems encountered in construction of a HUD-sponsored multifamily housing project in Naugatuck, Connecticut. CED–78–40, January 31.

The Department of Housing and Urban Development should determine the extent of construction problems in Government subsidized housing projects. CED–78–39, February 14.

HEALTH

Need To Improve Administration Of A Carcinogen Testing And Carcinogenesis Research Contract. HRD–78–44, February 10.

The Consumer Product Safety Commission Has No Assurance That Product Defects Are Being Reported And Corrected. HRD–78–48, February 14.

Actions Needed To Improve The Nutrition Program For The Elderly. HRD–78–58, February 23.

*Letter reports*

Review of financial arrangements for and procedures followed in setting up the May 1977 White House Conference on Handicapped Individuals. HRD–78–47, February 1.

Reasons for errors in HEW's listing of physicians and group practices receiving over $100,000 in Medicare payments. HRD–78–32, February 7.

How the Department of Health, Education, and Welfare is carrying out requirements governing the use of Federal funds to pay sterilizations. HRD–78–74, February 27.

INCOME SECURITY

The Social Security Administration Needs To Improve Its Disability Claims Process. HRD–78–40, February 16.

Number Of Newly Arrived Aliens Who Receive Supplemental Security Income Needs To Be Reduced. HRD–78–50, February 22.

VETERANS BENEFITS AND SERVICES

Further Actions Needed To Resolve VA's Educational Assistance Overpayment Problem. HRD–78–45, February 17.

Constructing New VA Hospital In Camden, New Jersey, Unjustified. HRD–78–51, February 6.

ADMINISTRATION OF JUSTICE

The FBI's System For Managing Investigative Resources And Measuring Results—Improvements Are Being Made. GGD–78–1, February 15.

U.S. Attorneys Do Not Prosecute Many Suspected Violators Of Federal Laws. GGD–77–86, February 27.

Handgun Control: Effectiveness And Costs. PAD–78–4, February 6.

What Can Be Done About Overcrowding In Long-Term Federal Correctional Facilities. PAD–78–50, February 10.

Housing Federal Prisoners In Non-Federal Facilities Is Becoming More Difficult. GGD–77–92, February 23.

GENERAL GOVERNMENT

Voting Rights Act—Enforcement Needs Strengthening. GGD–78–19, February 6.

Personnel Restrictions And Cutbacks In Executive Agencies: Need For Caution. FPCD–77–85, February 9.

Improvements Needed In Processing Civil Service Retirement Claims. FPCD–78–10, January 30.

Problems With Federal Equal Employment Opportunity Guidelines On Employee Selection Procedures Need To Be Resolved. FPCD–77–54, February 2.

The Federal Government's Bill Payment Performance Is Good But Should Be Better. FGMSD–78–16, February 24.

Accounting For Automatic Data Processing Costs Needs Improvement. FGMSD–78–14, February 7.

A Range Of Cost Measuring Risk And Uncertainty In Major Programs—An Aid To Decision-Making. PSAD–78–12, February 2.

The General Services Administration's Consumer Information Center. LCD–78–412, February 2.

Leasing Of Social Security Administration District And Branch Offices By The General Services Administration. LCD–78–313, February 7.

Audit Of Financial Transactions Of The Sergeant At Arms For The 12 Months Ended June 30, 1977. GGD–78–40, February 28.

Audit Of The Stationary Revolving Fund For The Fiscal Year Ended June 30, 1977. GGD–78–33, February 22.

IRS Can Improve Its Programs To Collect Taxes Withheld By Employers. GGD–78–14, February 21.

*Letter reports*

Can the concept of "full funding"—providing funds for the total estimated cost of a program at its outset—be applied to more programs and activities in the Federal budget? FGMSD–78–18, February 23.

The General Services Administration should consider expanding the size of its internal audit staff. LCD–78–315, February 16.

Activities of the House of Representatives' Office Equipment Service for the year ended June 30, 1977. GGD–78–4, February 21.

GENERAL PURPOSE FISCAL ASSISTANCE

Impact Of Antirecession Assistance On 15 State Governments. GGD–77–69, February 22.

Impact Of Antirecession Assistance On 16 County Governments. GGD–77–60, February 22.

Impact Of Antirecession Assistance On 21 City Governments. GGD–77–70, February 22.

The Federal Government Should But Doesn't Know The Cost Of Administering Its Assistance Programs. GGD–77–87, February 14.

*Letter report*

Impact of small quarterly payments of antirecession assistance—under $2,000—on the ability of governments to provide basic services and reduce unemployment. GGD–78–30, February 22.

FEDERAL PROGRAMS FOR AMERICAN INDIANS

More Federal Efforts Needed To Improve Indians' Standard Of Living Through Business Development. CED–78–50, February 15.

Controls Are Needed Over Indian Self-Determination Contracts, Grants, And Training And Technical Assistance Activities To Insure Required Services Are Provided To Indians. CED–78–44, February 15.

The Bureau Of Indian Affairs Needs To Determine How Well Its Indian Training Program Is Working And Assist Tribes In Their Training Efforts. CED–78–46, February 13.

Bureau Of Indian Affairs Not Operating Boarding Schools Efficiently. CED–78–56, February 15.

Questionable Need For All Schools Planned By The Bureau Of Indian Affairs. CED–78–55, February 15.

Information On Organization Of The Indian Education Resources Center. CED–78–57, February 15.

Tribal Participation In The Bureau Of Indian Affairs Budget System Should Be Increased. CED–78–62, February 15.

More Effective Controls Over Bureau of Indian Affairs Administrative Costs Are Needed. FGMSD–78–17, February 15.

*Letter report*

How effective is coordination of Bureau of Indian Affairs activities with other Federal agencies? CED–78–47, February 8.

The Monthly List of GAO Reports and/or copies of the full texts are available from the U.S. General Accounting Office, Distribution Section, Room 4522, 441 G Street, N.W., Washington, D.C. 20548. Phone (202) 275-6241.●

## INFLATION: A NOTE TO MR. CARTER

### HON. JAMES T. BROYHILL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. BROYHILL. Mr. Speaker, the President recently issued an anti-infla-

tion statement which was long on rhetoric and short of real substance. The American people were expecting more than they received in his message. Inflation is creating a terrible burden on all the people in our country.

For example, if a person earned $10,000 last year and just received a 10 percent pay increase, he should not go out and spend that extra $1,000. After taxes and inflation erode the raise, the taxpayer will have only $102 in a real wage increase. Let us look at an example of a man and wife who both work and their combined earnings were $20,000 last year. If they should receive a combined raise of $2,000, they will have only $231 in a real wage increase.

Those are two examples found in a study on the effects of Federal taxes and inflation on wage increases conducted by the United States League of Savings Association.

To put it bluntly, salary increases and proposed tax reductions will not even keep up with inflation and higher social security taxes. When the added taxes resulting from the passage of the energy program, if it is ever enacted by the Congress are added into the overall picture, the situation worsens.

Huge deficits, costly Government regulations, more bureaucracy—these are just a few of the causes of inflation, but they are causes which we can do something about. I hope that each Member of Congress will keep that in mind during the days ahead.

Recently, I read an article, "Inflation: A Note to Mr. Carter," by Vermont Royster in the March 22 edition of the Wall Street Journal. I believe that my colleagues will find it to be of great interest as inflation continues to be the No. 1 problem facing this country today:

[From the Wall Street Journal, Mar. 22, 1978]

INFLATION: A NOTE TO MR. CARTER

(By Vermont Royster)

I read in the papers that you and your economic advisers are puzzled by the sagging stock market and the collapsing dollar abroad and are urging everybody not to worry.

After all, the stock market is supposedly a concern only for the rich and nobody understands it anyway. As for the drop in the dollar on foreign exchange markets, that affects only firms doing business abroad, a few GIs in West Germany and some tourists who might better spend their money in this country. Besides, business is good, employment is up and the inflation rate last year was only 6 percent.

I have even read that some in your administration think there's good to come from the declining dollar. It's supposed to help stimulate exports.

But there are millions of people all over this country who, I'm afraid, view these matters differently. These are the people—and their name is indeed legion—who have their little stake in union pension funds or who have just tucked away some money in savings accounts or who have bought U.S. savings bonds on a payroll deduction plan.

They are not rich people. They may not be clever enough to see the interconnection between that sagging stock market, the declining dollar abroad and our domestic inflation. They are simply good, hard-working thrifty people who would like to have something for their old age besides Social Security. But they can see clearly enough what's happening to them. And they can feel the pain.

Consider, to begin with, an individual who only five years ago thought he had a tidy nest egg in a union pension fund invested in American business. Five years ago confidence in America led him to expect his share in that fund would grow and he could look forward to the future without worry.

Quite the opposite has happened. In the intervening five years his share in that retirement fund has shrunk, not grown.

The shrinkage varies, but every fund I know of that has invested in the stocks of American business has shrunk. In one of the better managed, for one example, the loss in market value between December 31, 1972, and December 31, 1977, has been 10.3%. Others have fared worse.

SOME ECONOMIC JARGON

That loss is shared by each individual member of such a fund: His nestegg is smaller than it was five years ago. In the jargon of the economists he has suffered a *negative* compound interest rate, which is a fancy way of saying he has lost more money each year.

That should tell you what the sagging market has done to the ordinary pensioner—never mind what it has done to the rich. It may also give you an idea why people aren't rushing to invest in American business. In fact, the small investor has long since fled the stock market. From that you can deduce why capital formation is at such a worrisome low point and business is having to increase debt, rather than equity, to get money to replace equipment or for expansion.

That may strike you as puzzling, since in terms of dollars the earnings of most companies last year increased; why shouldn't that attract investors? The reason is that even unsophisticated people can see that those greater number of dollars apparently earned really buy less, whether or not they understand the earnings "deflator" that Charles Shultz computes over at the Economic Council.

In fact, the dollar loss in his pension fund isn't the only thing that has happened to the poor participant. Because of inflation, present dollars will buy only 68.4% of what those 1972 dollars bought. So in that particular example cited above, those 10.3% fewer dollars are worth only 68 cents each in the grocery store. That makes the poor pensioner's true loss of purchasing power well over a third, or about 38%.

If you take a longer span of time, say 10 years, the theft by inflation is worse. The dollar bill at the end of 1977 bought only about 57 percent of the same dollar in 1967.

Of course that affects not only those who, by pension funds or otherwise, have suffered in the stock market. Consider, for a different example, an individual who put his savings in a bank or savings and loan.

In some cases he thinks he is earning as much as 7 percent interest, which sounds like a lot. But on that 7 percent he has to pay taxes of 14 percent at the minimum rate: for someone with a modest $6,000 taxable income the tax is 20 percent.

Thus even the minimum income tax rate reduces his apparent interest return to zero: That is, it just about equals the loss of his dollars' purchasing power at a 6 percent inflation rate. If he's paying 20 percent or more in taxes he's going backwards at a rapid rate. He doesn't have to be very sophisticated to understand he's in a bind.

But what has all this to do with that other vexing problem, the decline of the dollar on foreign exchange markets?

For a clue, ask yourself why any foreigner—Japanese, German or Arab oil sheik—would want to hold U.S. dollars. There's only one answer: for what those dollars will buy of U.S. goods. Either the original holder intends to buy U.S. goods or sell his dollars to someone else who does. Either way, their value depends ultimately upon their purchasing power in this country.

With the purchasing value of the dollar steadily declining in our own country, why should we expect foreigners to be eager to buy or hold them? If it weren't for what's happening to the dollar at home we'd have less trouble with all those oil payments that so worry you. If it continues to decline we'll have worse trouble. Already the OPEC countries have begun to mutter about no longer accepting payment for their oil in dollars.

In short, everyone who has trusted the U.S. dollar—be he foreigner, pensioner or ordinary citizen-saver—feels cheated. That takes the mystery out of many things, from the stock market to the foreign exchange markets.

LONG-STANDING POLICIES, BUT

I am well aware that all these troubles can't be laid at your door. They are the consequence of long-standing policies reaching back to three Presidents before you, and the worst inflation occurred before you came to office.

But when you were running for President the country had the impression you were deeply concerned about all this. People thought you intended to do something about the size and cost of government, about the taxes this levied upon the people, about the inflationary effects of having to create money and credit to pay for huge deficits. They thought you would lift the burden of all this from the hard-working and thrifty, a class which includes those who labor as butchers, bakers and candlestick makers.

What we seem to have got instead is bigger government (that monstrous Energy Department), more costly government (a spending budget of over $500 billion), a vastly bigger deficit (over $60 billion) which assures continued inflation. Under the guise of Social Security payments this middle class even got a big tax increase, with more to come from your energy bill.

It may be, as we are told, that despite all this, future inflation can be held to "only" 6%. But even at that rate, as Dr. Schultze's computers can tell you, a 30-year-old will see the present dollar worth little more than a dime by the time he thinks of retiring at 65. He'll have to run very fast to keep ahead on his life insurance, his pension, his savings. If we have another eruption of double-digit inflation, he'll truly face a scary ride on a rollercoaster.

My guess is that people, here and abroad, are still bullish on America. I think they expect to see the stock market rise again, the dollar resume its trusted place in the world, their savings once more secure against erosion. At least they want to believe that with good leadership we will surmount these troubles as we have past ones.

But there is no puzzle about the stock market or the declining dollar, and it's no wonder people worry in the middle of the night.●

## CRIME SUBCOMMITTEE TO HOLD THIRD HEARING ON CIGARETTE BOOTLEGGING

### HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. CONYERS. Mr. Speaker, the Subcommittee on Crime of the House Committee on the Judiciary has scheduled its third hearing on H.R. 8853,

H.R. 10066, H.R. 10807, and related bills which address the problem of racketeering in the sale and distribution of cigarettes, for April 19, 1978, at 1:30 p.m. in room 2237, Rayburn House Office Building.

The purpose of this hearing will be to take testimony from the Members of Congress who have sponsored the major legislation on the subject of cigarette bootlegging.

Those Members wishing to testify or to submit a statement for the RECORD should address their requests to the House Committee on the Judiciary, Subcommittee on Crime, 207–E Cannon House Office Building, Washington, D.C. 20515 (telephone: 202, 225–1695.)●

## WHAT IS THE SOUL OF AMERICA?

### HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. CEDERBERG. Mr. Speaker, what makes some countries great and powerful and others less fortunate has been a topic of debate for centuries. Over the years, political philosophers have attempted to determine why countries repeatedly rise to power only to fall back into the wells of mediocrity. History has taught us many lessons that, if understood by countries such as America, could enable us to avoid the same pitfalls that eventually engulfed other world powers.

Mr. Vincent Murray, a long time Michigan resident and graduate of Manhattan College and the University of Detroit, recently addressed these subjects in a speech before the School of Government, Inc., in Detroit. I would like to take this opportunity to share with my colleagues his very timely words of wisdom:

"WHAT IS THE SOUL OF AMERICA?"

It is most fitting that your fine civic organization pauses between the birthdays of America's two greatest leaders to reflect on our nation's beginnings, its history, and its future. It has been said that, "Eternal vigilance is the price of liberty," and it is groups such as yours that must educate and inform on the responsibilities of good citizenship.

When the Declaration of Independence was completed and about to be announced to the world, a colonist in Philadelphia stopped Benjamin Franklin as he was leaving Independence Hall. He asked Franklin, "What have you given us, Sir?" He replied, "We have given you a Republic—if you can keep it!" Franklin meant exactly that—It was up to all of us to maintain our government. Well, more than two centuries later the Republic still stands, not a perfect instrument, but by far the finest ever devised since the dawn of history for the government of an enlightened citizenry. The key word there is "enlightened" because our government works best when the people actively participate and study its workings. And if it ever ceases to work, it is solely because we, the people, have not done our part. At times in our history its existence has been sorely tried by wars, racial strife, economic crises, labor turbulence, corruption, and social upheavals. We have not come easily to the present position of world leadership. The soul of America has been shaped and molded in the ideals of the founding fathers, in the toils and sacrifices of our pioneer ancestors, in the blood of heroes in world-wide wars, in the day-to-day life of ordinary people following ordinary pursuits, in our churches, our schools and in our homes.

How important is the soul of America? It is more important to the nation, its welfare, and its survival than our entire nuclear arsenal, or our industrial might, or our military forces. The will, the character, the national purpose, the self-discipline of our people count more than any tangible physical assets in the determination of our history and our future. That fact is proven by the rise and fall of world powers through-out history.

Some of us here can readily think back to the Spring of 1940. An invincible army stood behind an impregnable defence network, the Maginot Line. It was the largest, best-trained, finest-equipped military force in Europe, and it was considered by all military experts as a guarantee of security for France against all blows from the German forces. But what happened when the first blow came? Within a few weeks the political framework of France collapsed, and the military machine was ground to pieces with hardly a single major battle or a significant number of casualties. What had brought about such a debacle? To understand all the complex reasons why, and at the same time learn why the same thing could happen to us, it is highly recommended that you read "The Collapse of the Third Republic," by William L. Shirer. He has skillfully traced the roots of France's fall from greatness. Summed up briefly, it gives evidence of a nation so lacking in national will, so weakened by moral decay, and so divided within itself, that the soul of France had died. Germany did not win a military triumph, it was handed one.

Then in the summer of 1940 the scene shifted a few miles across the English Channel, where Great Britain stood alone, isolated, and almost unarmed, having abandoned its weapons on the beaches of Dunkerque. Britain's lifelines across the Atlantic and through the Mediterranean were under siege by the German U-boats, her cities were being pounded by the Luftwaffe almost daily, and her industrial machine was being destroyed. By every rational military standard Britain was already whipped, and further resistance seemed both futile and counter-productive. But the fierce pride in their heritage, the tenacity of its island people, the eloquent exhortations to "blood, sweat, toil, and tears" by Winston Churchill, motivated Britons to a strength and will that surpassed all understanding. In the battle of France, the once-great French nation had lost its soul. But only a few weeks later the Battle of Britain found the soul of that nation. To paraphrase Shakespeare the British taunt to German fury was: "Lay On!" And that defiance did not falter until final victory, five long years after their "darkest hour."

There is your study in contrasts—and the American nation has endured parallels to the British achievement of the 1940's. George Washington led a ragtail-army against the finest trained and equipped troops of the world's most powerful empire, in the American Revolution. Despite years of defeats, the desertion of thousands of troops, the betrayal by high commanders, the lack of basic resources and weapons, Washington's inspired leadership brought about the final victory and the creation of our national freedom. Then the founding fathers went to work to set up the "finest constitution ever framed by the hand of man" as Edmund Burke termed it. The basic premise of both the Declaration of Independence and the Constitution was that our freedoms are derived from our Creator and not from men. Thomas Jefferson stated it in these words: "The God who gave us life, gave us liberty at the same time". That recognition of the Almighty as the source of our basic rights is not only part of every great document of our heritage, it also appears in the writings of Washington, of Lincoln, of Dwight Eisenhower, and a host of other great national leaders.

The origins of our freedoms are extolled in our national hymn "America" which sings out its final verse:

"Our fathers God to Thee
Author of liberty
To Thee we sing;
Long may our land be bright
With freedoms holy light
Protect us by Thy might
Great God, our King."

Similar references to this nation "under God" are found in the National Anthem, in "America, the Beautiful", and in our Pledge of Allegiance. Who can doubt that this great tradition of freedom under God has shaped the character and fundamental essence of the soul of America?

It certainly shaped the determination of Abraham Lincoln to wipe out the institution of slavery, even at the cost of a great civil war. And it guided his thoughts for the reconciliation of the Republic after the torments of that war, a mission which he was never to carry out because of the assassin's bullet.

Despite the crimes of the Reconstruction era, the nation finally did overcome the bitterness and division to march forward to the new Promised Land. Yes, many of us are not far removed from other lands, but just as the Pilgrims in 1620 landed at Plymouth Rock seeking religious freedom and human dignity our forebears came to America in later years for those same goals. Their welcome to this land has been given from the base of the Statue of Liberty;

"Give me your tired, your poor, your huddled masses, yearning to be free. The wretched refuse of your teeming shore, send these; the homeless, tempest-tossed to me. I lift the lamp beside the golden door."

All of those millions of immigrants have shaped the character and the soul of America. In the 20th century America not only became the refuge for so many oppressed, it also extended itself in two World Wars to liberate many other lands from the oppressor. And after both conflicts it put forth its bounty and wealth to restore and feed the war-ravaged lands, and even the nations whose armies had marched against us, Germany, Italy, Japan. That magnamity, and willingness to forgive, sprang from the soul of America.

But great nations do not always remain constant in their loyalty to the national character that brought them to greatness. Witness the Roman Empire which lasted a thousand years as master of the known world. By its own internal moral decay and its inability to continue as a world leader, it collapsed under the blows of the barbarian hordes. The same fate has overtaken many other powerful nations and empires throughout history. Even in our own time we have witnessed the decline of great powers from their eminence. Can we regard the sad plight of Britain today as anything but a tragic contrast to the epical months of 1940 when "so many owed so much to so few?" Will the dictatorship of Marxism soon engulf France, Italy, Spain and Portugal? Will Canada toss away its national unity and its role as a model of democracy for small nations?

And if all those nations can lose their souls, what about the land we love? Can we continue to divide our country, class against

class, race against race, "haves" against "have-nots?" Can we recklessly fight for "liberation" of individual groups already free and equal by law? Can we seek ever higher scales of earnings without regard for economic productivity, inflationary consequences, and disastrous impact upon the body-politic? Can we demand an ever-increasing piece of an ever-diminishing pie? Can we fly in the face of the Creator by our ever-rising crime, corruption and moral decay? Will the blessings which this Republic has enjoyed be continued by a just God?

If we forget the sacrifices and labors that brought us to our present position, how long can our nation endure? Are the youth of our land ready to fight and even to die to preserve this great heritage? You can be certain that the youth of China, of Russia, of Cuba, of Vietnam, are ready to do so. How will we meet that challenge? We cannot wait for the blow to strike to frame our strategy. If our national will, our discipline and our courage are not plain to our foes, they will strike with a fury that this land has never felt before. We have to rediscover the greatness of America, find the soul of our nation, rekindle the torch of liberty, return to the things that shaped the national resolve in past crises.

When historians chronicle the record of these years, will their judgment be that America's decline from greatness started in our generation? Danger signs are all about us, and to continue on the present road is to "proceed at our own risk." How long can special interests or petty groups be allowed to force submission from the government by blackmail tactics, or violence, or economic anarchy? Government of the people must function for the common good not the private benefit of a minority. Our nation has lost much of the sense of community and neighborliness that gave life meaning and purpose in earlier years.

The courts have assumed a role never conceived by the founding fathers. Many of the ideals of majority rule with full consideration for minority rights, have been negated by the new powers assumed by the courts. They have made the schools of our land pawns in the struggles of segments of our society. And where the people who founded this nation certainly had put the Creator and His laws into the educational structure, the rule by courts has removed both. There is no longer reverence for a higher being, or a higher law, anywhere in our scheme of education. In fact there is hardly any real education left in the public schools. That is evident when academic illiterates are being graduated from high schools, and forced to be accepted in universities under quotas imposed by the courts.

All of these trends are causing the people to lose confidence in their government, to lose respect for their leaders, and to abstain from the governing process. So we are starting to forget Franklin's admonition: "a republic—if *you* can keep it!" The soul of our nation is at stake. When will we turn back from the road to our destruction? While we are faltering, America's foes are gathering strength. They witness our domestic torments, and delight in what they see. Are we counting on *our* "Maginot Line" to save us?

When the blow comes, will our disintegration be as rapid and as complete as the collapse of France? In the past few minutes many questions have been posed—the answers are not mine to give. They have to come from the national will, from the nation's soul, and from our firm reliance on the God of our Fathers. For the Book of Proverbs has told us:

"Righteousness exalteth a land, and sin is a reproach to its people."●

## F. JOSEPH (JIGGS) DONOHUE

## HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. BOLAND. Mr. Speaker, F. Joseph (Jiggs) Donohue, the former president of the Board of Commissioners of the District of Columbia, and for years a noted figure on the national political scene, passed away last week in his adopted city of Washington.

A native son of Massachusetts, he came to Washington after World War I to attend Catholic University, received his law degree, and later taught at the university's law school. He served as a special prosecutor for the Justice Department in the late 1940's and was Assistant Director in charge of enforcement in the Office of Price Stabilization during the Korean war.

President Harry S. Truman appointed him to the board of commissioners of the District of Columbia in 1951, and he served in that position with distinction and enthusiasm, fighting for racial tolerance, an end to segregated schools, and home rule for the District of Columbia.

Mr. Speaker, I include with my remarks an editorial in the Washington Post of April 6, 1978 in tribute to Jiggs Donohue:

F. JOSEPH (JIGGS) DONOHUE

Few partisan residents of this community look back with much fondness on the years when the District was entirely under the colonial thumb of Congress, with three presidentially appointed commissioners installed in city hall to mind the store as well as their municipal Ps and Qs. But if ever there was an exciting respite in the District Building back then, it was the two-year run of F. Joseph (Jiggs) Donohue as a commissioner and eventually as president of the board of commissioners. Mr. Donohue, who died here Tuesday at the age of 78, promptly won the hearts of Washingtonians with a nonstop barrage of blarney, boosterism and remarkably gutsy speeches in behalf of this city and its rightful desire for a measure of self-determination.

Mr. Donohue never was content to be a mere caretaker in the District Building. He plunged in quickly—making more than 400 speeches in his first year, initiating weekly radio and television reports to the people on the doings of government and encouraging citizen participation in their restricted local franchise. There was the time in February 1953, for example, when Mr. Donohue was sitting as a spectator at a session of the Senate District Committee, listening to members rattle off their ideas on how the city should be run. After they had finished, he was asked if he had anything to say. He proceeded to accuse Congress of "studied neglect" of the city, noting that the burden had become one that taxpayers could "no longer continue to endure."

Mr. Donohue also spoke bluntly to the Senators about the racial makeup of the city and its connection with the denial of voting rights here: "We look like Americans and dress like Americans. We pay taxes like Americans. When war comes we fight like Americans. But we have no rights as Americans either to vote for our local municipal officers, or to vote for the president or vice president of the United States."

With characteristic fervor, Mr. Donohue campaigned for larger federal payments to the city, improved personnel procedures, an end to segregated schools, greater economics development and home rule. Though his interest in home rule later turned to opposition, he will be remembered most for his stout devotion to the city at a time when it counted a great deal—and for bringing to the District Building the vitality it needed to press on for better local government.●

## DOUBLE STANDARD ON HUMAN RIGHTS

## HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. LAGOMARSINO. Mr. Speaker, I am most concerned over the apparent double standard which the Carter administration is applying toward the various Third World countries. In particular, I find the administration's human rights policy vis-a-vis the various Marxist dictatorships in Africa to be wholly inconsistent with its actions toward Brazil, Chile, the Philippines, and South Korea.

Mr. Speaker, I would like to bring to the attention of my colleagues the following editorial by Messrs. Evans and Novak which deals with the Carter administration's human rights policies.

The editorial follows:

DOUBLE STANDARD ON HUMAN RIGHTS

The state of Jimmy Carter's global human-rights campaign in its second year was reflected on his recent visit to Nigeria. There a vague, supercautious intimation that even African nations sometimes abuse their citizens was barely kept in his speech.

The original version of Carter's April 1 speech in Lagos contained a more candid statement opposing human-rights violations in Africa. But Richard Moose, assistant secretary of state for African affairs, fought to get it out. Presidential speechwriter James Fallows fought back, and the result was a watered-down compromise.

No such caution was shown at the President's previous stop in Brazil, which, like Nigeria, is under military rule. Carter did not hesitate to mention human-rights differences with the Brazilians and conferred with Roman Catholic Cardinal Paul Arns, a liberal dissenter against the regime.

The contrast is no accident. After early anti-Soviet emphasis, the Carter human-rights crusade has taken this peculiar course: While pulling no punches in assailing anti-communist dictatorships for their human-rights transgressions, Washington often looks the other way at abuses by neutralist dictatorships—particularly in black Africa.

That fits the global strategy charted by ideological young policymakers at the State Department but offends other liberals in the administration. "It gets hypocritical when we're attacking Brazil and Chile but close our eyes to human-rights violations in Africa," one presidential aide told us.

He and others did not believe Carter should ignore such violations on a continent where there is mass murder in Uganda, slave labor in Equatorial Guinea, political repression in a dozen other countries and freedom almost nowhere. So the draft of his Lagos speech contained a statement that, without men-

tioning Uganda or any other country by name, condemned what goes on.

But that violated the policy, sculpted by Moose and U.N. Ambassador Andrew Young, of courting black Africa at any price (including rejection of moderate biracial solutions in southern Africa). Moose contended that single statement would doom the president in Africa.

That's when speechwriter Fallows, a liberal young journalist from Texas, stepped in. There were reports he threatened to resign, though well-informed presidential aides tell us it never got that far. He finally managed to get these two watery sentences through Moose's censorship: "Our concern for human rights extends throughout this continent and throughout the world. Whatever [the] ideology or the power or the race of a government that abuses the rights of its people, we oppose those abuses." No names mentioned, of course.

The Moose-Fallows clash was fought without appeal to Carter, but the president himself is not immune. On April 2, he admitted to a press conference he had not mentioned Uganda's egregious Gen. Idi Amin or his anti-human-rights outrages to Lt. Gen. Olusegun Obasanjo, Nigeria's chief of state.

The president next declared "gratitude" that "the organization of African states" has condemned "black leaders" who "deprive persons of human rights." In fact, last year's meeting of the Organization of African Unity, which we attended, lionized Idi Amin and issued not one word of criticism against atrocities in Uganda or anywhere on the continent.

Carter wound up equating the United States and Nigeria in making "every effort to enhance human rights." Actually, non-ideological Freedom House calls Nigeria "partly free" and gives it a 5 rating in political rights out of a worst possible 7 (worse than Brazil's 4). The president was comparing the U.S. to a country where public executions are held, where American newsmen are excluded and where military rule still prevails.

Why that extraordinary treatment for Nigeria? One cynical, high-ranking U.S. official says there is a "three-letter answer": oil. But far more important than dependence on Nigeria as the second-largest oil supplier of the United States is its supposed leadership role in black Africa. If Nigeria wants to talk about the Cuban expeditionary force or black African repression, that is not viewed by Young, Moose & Co. as too large a price for friendship.

That actually supports the traditionalist view that foreign policy cannot be based strictly on human-rights performance. But why a double standard for leftish black Africa and rightish Latin America? Since it is hard to argue enlightened self-interest, the suspicion arises that ideological preferences at certain levels of the State Department now shape foreign policy, just as they did the speech at Lagos.●

## DEATH OF FORMER CONGRESSMAN J. HARDIN PETERSON, SR.

### HON. ANDY IRELAND

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. IRELAND. Mr. Speaker, I wanted to join with my colleagues from Florida in their sadness over the death of former Congressman J. Hardin Peterson, Sr.

Congressman Peterson represented the central west coast area of Florida for 18 years, spanning the time through the Great Depression and World War II. As chairman of the House Public Lands Committee, Mr. Peterson initiated the creation of the Everglades National Park, which has proved to be of immeasurable enjoyment not only to Floridians, but to all Americans.

Peterson also served as special counsel to the Territory of Guam; special counsel for the West Coast Inland Navigation District; and county solicitor and prosecuting attorney for Polk County.

He had also served as city attorney for the cities of Lakeland, Lake Wales, Frostproof, Hillcrest Heights, and Highland Park, Fla.

When he died, he left a wife, two children, grandchildren, and a record of long and devoted service to society.

The following article is a typical example of the esteem in which he was held in the area in which he served:

J. HARDIN PETERSON

The day J. Hardin Peterson died, the New York Times ran a major story on the strides Florida has made in protecting the environment.

Those two events Tuesday amount to something of an eerie coincidence—for Peterson was a recognized Florida environmentalist back in the days when that word wasn't in the dictionary.

James Hardin Peterson Sr. left Lakeland for Washington in 1933. He had just been elected Polk County's congressman in the U.S. House of Representatives. In those days, this was one of the country's largest congressional districts, stretching from Marion County in North Florida to the Dade County line in South Florida.

Polk County was no stranger to the halls of Congress when Peterson arrived. Herbert J. Drane of Lakeland—the man Peterson defeated by a mere 117 votes—had been a Congressman since 1917. Park Trammell of Lakeland, who had previously been governor, was serving as a United States senator.

Those were difficult times for the republic in '33. The depression was at its worst; banks were closing, the unemployed were standing in breadlines, and there was widespread despair that this country might never recover from its economic paralysis.

Under Franklin Delano Roosevelt's leadership, Peterson had a hand in shaping the eventual recovery from the depression—a feat in itself. But his singular achievement was the creation of the Everglades National Park, which had its beginnings in the House Public Lands Committee under Peterson's chairmanship. For his efforts on behalf of Florida's environment, he received a citation from the National Audubon Society, a Florida Wildlife Conservation Award, and was honored by the National Conference of State Parks.

Environment wasn't his only interest. He was a member of the House-Senate conference committee which drafted the GI Bill of Rights. He was a trustee of the National Trust of Historical Preservation, was board chairman of the Florida Heart Association, and served as special counsel to the Territory of Guam. Upon returning to Lakeland, he was involved in a myriad of civic pursuits.

During his later years, in his frequent addresses to local organizations, he would tell an opening story: "They've been recently repairing me. I have cataracts in one eye and have recently acquired a hearing aid. A few minutes ago the battery went out. But I was able to hear my introduction as a 'great statesman'."

To some, Peterson may have been a "great statesman." To others, he was merely a hard-working lawyer who served this district well in Congress for 18 years; who served his community for years thereafter.

When he died Tuesday, at the age of 84, he left what many men leave, a wife, children and grandchildren, and what most men don't leave—a record of service to his fellow humans.

But in leaving the Everglades National Park, J. Hardin Peterson belongs in the elite class which has given a lasting gift to generations to come.●

## ONE OF AVIATION'S REAL PAPPYS

### HON. DALE MILFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. MILFORD. Mr. Speaker, I would like to join the many friends of Pappy Spinks in wishing him a very happy 72d birthday.

Pappy is one of our Nation's true pioneers in Aviation and one of the most facinating and colorful aviators I know. A self-taught pilot and present owner of the Oak Grove Airport, Pappy has been flying airplanes since he was 16.

I share Pappy's interest in flying and building airplanes. I too have built my own airplane and can appreciate the success and satisfaction he must have felt as a teenage boy learning to fly an airplane he himself had built.

From his early barnstorming years in 1923, he has enjoyed an exciting career as an aviator. I place this article written by Barbara Holsomback of the Fort Worth Star Telegram in the RECORD at this point:

EARLY BARNSTORMING YEARS SHAPED FW AVIATOR'S CAREER

(Editor's note: This is "Pappy" Spinks' 72nd birthday. He was given a surprise party Sunday at Oak Grove Airport attended by friends from throughout the country. A helicopter towed a sign reading "Happy Birthday, Pappy" and he had a cake shaped like the airport.)

M. H. "Pappy" Spinks Sr. has a sign in his office at Oak Grove Airport that reads, "God does not deduct from man's allotted time the hours spent flying."

If God did, Spinks would have discovered the fountain of youth because he's been flying since 1922 when he was 16. It was that year Spinks soloed in the plane he built from junk parts of a Curtis Wright JN-4D (Jenny).

The wealthy Fort Worth aviator has had a flamboyance for controversy from the time he started smoking cigarettes at six until recently when the training of Ugandan pilots at his airport put him in the national spotlight.

Spinks got his first look at an airplane when pioneer aviator Cal Rogers landed his plane at a Fort Worth airport during a publicity tour for a soft drink company.

"When I saw the plane I ran to the airport," Spinks said. "My mother and father came after me in their horse and buggy. That day I told (my parents) I was going to be an airplane driver."

At the close of World War I, Spinks bought all the surplus airplane parts he could find, but there were not enough to construct a complete airplane. Undaunted, he obtained "Jenny" drawings from U.S. Army. "I won't say I got them legally or illegally," he said.

He started making plans to build an airplane half the size of a standard Jenny. His junior high school teacher let him work on the modifications in mechanical drawing class.

"I was learning far more from that than following the regular curriculum," he said. "All my life I was an extremely curious person, but never a good student. They (the teachers) went too slow for me."

While he was completing the airplane drawings he was "constructing the thing" at home in his barn. Spinks used hand tools and equipment he borrowed from school to shape exotic woods into the parts he was not able to get from the Army.

"My father objected (to the project), but my mother was for it and was my helper," he said. It took him one full year to finish. "After the plane was completed, my father put the wings in the hayloft and forbid me to use them."

But his father's efforts to stall his flying dreams were only successful for several months. At that time there were no manuals on flying. The Army provided the only schools. So Spinks started learning to fly by trial and error.

"I'd taxi the airplane around every weekend, after school or any time I wasn't in school. This went on until I'd flown the plane 200 hours. If I didn't have any money for gas, I'd drain some out of the cars at home."

Finally on a fall day in 1922 Spinks soloed 50 feet above the ground. He had not intended to fly so high, but lifted the plane skyward to avoid a fence, trees and houses. "I made a low circle and slowly descended to a landing," he said. "Once I got within a few feet of the ground I was in home territory because that's where I'd been flying all those months."

The teenager continued his flying until he tore up a wing by crashing into a car. "I never rebuilt it (the Jenny)," Spinks said. "But from that time until now I've never been without an airplane. I've been without an auto and food, but not an airplane."

At 17 he went into business at Aviation Gardens where he and his partners joined a growing number of barnstormers.

"We charged people $5 a head to take them for a ride, $2 if it was hard times," he said. "We'd cram two into an airplane at a time."

From then until World War II Spinks "worked all kinds of jobs," usually two or three at once. He purchased his first "modern aircraft," a Curtis Wright Pusher, in 1935 and was required by the Civil Aeronautics Administration to demonstrate his solo ability under the direction of a flight instructor.

It was in that airplane he hunted chicken hawks for ranchers around Abilene. "I charged a $1 bounty for each chicken hawk I shot with a shotgun," Spinks said. "When I'd shoot one I'd throw a yellow ribbon, tied to a rock, over the side of the plane. The ranchers counted the ribbons to see how much they owed me."

During World War II he taught aviation cadets to fly as a civilian instructor for the U.S. Army Corp civilian contract school. "I was too old to join the Army," Spinks said. "I never completed college, but I have passed tests to teach in universities."

He did just that during the war when he joined the physics department faculty at TCU. Through the years, Spink's reputation has grown in the aviation field and he stopped counting flying hours at 5,000.

In 1966, when he was 60, he became interested in aerobatics. "Aerobatics is the operation of an aircraft with high precision and at unusual altitudes," he said. "This is not an air show, but the pilot is graded on his ability to control the aircraft during predetermined maneuvers."

"I joined the Aerobatics Club of America when the U.S. Aerobatics Team was always down at the bottom in world competition. I got tired of us being the hindmost."

Within four years he became president of the aerobatics club and saw the U.S. team capture the world Aerobatic Championship, largely due to his efforts and after he built the Spinks Akromaster, a low-wing monoplane used in the aerobatics competition.

Today the father of a six-year-old son said, "I'm ready to retire." But if the number of phone calls coming into his office on the day he was interviewed by a Star-Telegram reporter is any indication, Spinks hasn't slowed down too much.

He not only owns Oak Grove Airport, but is chairman of the board of Spinks Industries.

"Crazy about the TV show 'Saturday Night Live,' " Spinks tapes each of those shows, works out in his gymnasium and has "really a little doctor's office" near his home. "These are my hobbies," he said.●

## COLUMNIST DISCUSSES MINNESOTA'S RECREATION AREA

### HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. OBERSTAR. Mr. Speaker, the Boundary Waters Canoe Area is currently the most widely discussed and controversial issue in my home State of Minnesota.

I expect that this House will shortly consider legislation providing for the future management of the area.

Outdoors Editor Hank Kehborn of the St. Paul Pioneer Press devoted his column last Sunday, April 9, 1978, to an analysis of the controversy and its impact on the people I represent in this House.

Hank's column is one of the best journalistic analyses of the issue I have seen. It expresses the sentiments of Minnesotans and of other Americans whose ways of life, economic welfare, and recreational opportunities are threatened by what Hank calls "absentee environmentalists and an absentee landlord—Uncle Whiskers."

The impact of eliminating current summer and winter recreational use of the BWCA will be enormous in both monetary and human costs. The additional layer of bureaucracy contained in legislation initially approved by a House subcommittee last week would impose an intolerable and unnecessary yoke on the people of the area.

Kehborn does not attempt to analyze the monetary cost, but he does offer an unusually sensitive understanding of the effect of this legislation on people. In that spirit, I commend Hank Kehborn's column to my colleagues:

ABSENTEES CALL SHOTS ON BWCA

If you have been following the Boundary Waters Canoe Area (BWCA) issue, it must be apparent by now northern Minnesotans don't know from borscht when it comes to wilderness areas.

It is obvious "wiser" heads prevail in such wilderness areas as the concrete canyons of New York City, Washington, D.C., St. Paul and Minneapolis and even Los Angeles.

Like it or not, the recreational future of the BWCA is in the hands of absentee environmentalists and an absentee landlord—Uncle Whiskers.

Like a doting parent, the absentees are determined to dictate the life-styles of residents, and visitors, to a 1,030,000 area of Minnesota which contains some 1,076 lakes and 1,200 miles of canoe routes.

Led by such veterans of the wilderness as Rep. Bruce Vento of St. Paul, Rep. Donald Fraser of Minneapolis and Rep. Phillip Burton of California, the absentees envision a private playground for the young of heart and strong of back.

This protectionist attitude eliminates the BWCA (Ban Woman, Children, Adults) from usage by the handicapped, the very young the aged and the weekend user.

There is no need to go into the economic impact.

That is for those who labor on the financial pages. However, it would be safe to say if protectionists have their way the BWCA will become an attraction as the nation's first wilderness ghetto.

It will become an isolated island despite Congressional hot air which promises a golden age because of compromise and promises of peripheral or portal privileges.

There is no such thing as compromise. It is a word often bandied about by politicans who suddenly find themselves on the hot seat.

The feeling is Burton-Vento-Fraser are very confused, not only about what wilderness is, but also about what Americans want in the way of outdoor recreational opportunity.

They seem to be unaware that designating lands as federal wilderness areas, and then filling the cup until it runneth over with restrictions, will not really increase the type of recreation they seem to seek.

Class legislation, opening the BWCA to young bucks with 75 pound packs and a canoe to match while shutting off all motors and closing resorts and homes, apparently is the answer to whatever these asphalt dwellers seek.

Yet, and this most certainly must hold true for the Burton-Vento-Fraser triumvirate, the word "wilderness" conjures up visions of virtually everything but true wilderness.

To many, Yellowstone National Park is a "true wilderness" despite the fact it does not fit any of the criteria for such a designation.

To be honest, most Americans are also confused, not only about what a wilderness is, but also about what most want when it comes to recreation.

The BWCA, left as it is, serves a purpose, for a wilderness is whatever an individual believes it is—an area which offers an opportunity to get away from the rat race.

To restrict this area to a "chosen few" because they are blessed with strong backs and sturdy legs is to deny the equal rights of thousands upon thousands of others less fortunate.

To many of us there was a time when a sojourn into BWCA country, laden with pack and canoe, presented no problem. It was a time when "living off the land" was a rugged and enjoyable challenge.

However, as the forest ages so do its inhabitants. The challenge is no longer attainable for some inhabitants. The forest, to be enjoyed, is still attainable.

But is it?

A visit to the BWCA today, because of the many restrictions, demands the use of a Philadelphia lawyer as a guide.

The one-time visitor is faced with a "long-term reservation system," filled-up entry points and disappointment during holiday weekends or more popular months of summer.

Perhaps that is as it should be. Control is the name of the game whenever Uncle Whiskers steps in to run the store.

However, it is time Uncle Whiskers and his clerks quit listening to powerful absentee environmentalists and permitted the local help to run the business—at least to some degree.

It is time to quit thinking total protection and give more thought to multiple use which will provide commercial and recreational opportunities compatible with wise land management.

Preservationists want all logging and mining stopped, all motors (outboard and snowmobile) banned, all resorts ad homes closed and all hunting halted.

Wiser, but not much wiser, heads have prevailed but only to the extent political reprisal lurks in the shadows.

There is no argument mining is compatible. It is not. It should be banned.

Outboard motors or snowmobiles?

Perhaps my hearing isn't what it used to be, but even in my younger days I cannot recall the sound of an engine, even on the most remote lake in the BWCA, ever shattering my serenity or whatever it was I was seeking back in the boonies.

Logging?

Preservationists are spouting a philosophy that favors natural processes, unaltered by man, to be superior to wise management, failing to recognize trees must be harvested for the benefit of man and wildlife.

Just how logging is to be controlled is open to debate but it is obvious to all but the preservationist we must retain variety and diversity and use our forests for the benefit of all.

Preservationists see nothing wrong with trees dying of old age or disease, or even being consumed by fire—as long as the tree's demise is by natural forces.

Some have even gone to the extreme of advocating natural fires be allowed to burn through thousands of acres of the BWCA without any attempt to stop it.

This, they say, is nature's way.

That may have been so when Columbus hit the beach but it would hardly be wise management today.

Although I may be persuaded to listen to arguments concerning commercial logging with its profit motivation, there is no reconciling another aspect of forest management—the perpetuation of habitat needed to sustain wildlife native to the BWCA.

There is universal agreement (except by preservationists) that deer cannot survive in a forest environment comprised mostly of old trees, where food has grown out of reach and a canopy prevents sunlight from reaching the forest ground to nurture young trees.

Obviously, preservationists do not fully comprehend what happens to the land—and the forests—and are unknowingly setting up a conflict which will ultimately destroy the things they profess to love most.

Regardless of what they preach, multiple-use management of the BWCA provides for recreational use and encourages wildlife habitat improvement, resulting in a happy marriage and a wise use of the environment.

Perhaps it is time our august legislators took a long, hard look at absentee environmentalists and their plans for Minnesota.

Minnesotans today—through the dictates of Uncle Whiskers' agents in that mausoleum called Congress—are already telling us where we can or cannot hunt ducks, harvest wild rice and even where to fish or not to fish.

It is even being suggested it is wrong to fish and hunt in wilderness areas because it "upsets the natural ecosystem."

The only thing this whole mess upsets is my stomach.

Don't write to me. Write to your Congressman.●

## FOOD, DRUG TESTS BECOME A BITTER PILL

### HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. CHARLES H. WILSON of California. Mr. Speaker, all of us are concerned that the food we eat, the medicines we use, and the substances we come in contact with, be free from hazardous side effects.

Yet, in determining what materials are safe, and which are not, the Federal Government has constructed a maze of regulatory agencies, which produce quite often, conflicting or contradictory conclusions.

Until uniform, responsible and realistic testing procedures are established, the public will continue to look in bewilderment at all the conflicting data available on the food, medicines and household products that all must use.

I submit for the RECORD a copy of a LOS Angeles Times article, "Food, Drug Tests Become a Bitter Pill." American industry has come a long way since the day when Theodore Roosevelt, after reading Upton Sinclair's "The Jungle," fought for the first pure food and drug laws. The responsibility for marketing safe products must not be lost in a maze of procedures.

FOOD, DRUG TESTS BECOME A BITTER PILL

(By Robert C. Toth)

WASHINGTON.—The American public shows signs of becoming as exasperated as the old Irish woman whose doctor took away one after another of her pleasures until she exploded: "Soon ye'll be taking away me dying!"

Saccharin, hair dye, cured meats like bacon, even drinking water have been cited within the last year as causes of cancer—at least cancer in small animals fed large doses of suspect chemicals.

The presumption is that these chemicals also cause cancer in humans when taken in normal doses. But there are two tenuous steps in that reasoning—going from large to small doses, and from lower to higher species. Moreover, the test animals used usually are chosen because they are cancer-prone.

But acting on presumption, government regulators move to ban or restrict such chemicals. The public—seeing familiar products taken off their tables or out of their medicine cabinets and being unpersuaded at best by the evidence—appears to have become increasingly skeptical and incredulous, particularly when test results and government actions cost consumers money and increase their anxiety, or worse.

Some horror stories:

In 1972 childrens' sleepwear was ordered treated with flame-retardant chemicals, raising sleepwear prices 20%. Last year the chemicals were banned because they can be absorbed through the skin and cause cancer.

Certain spray adhesives were banned when a researcher reported that their use by pregnant women could cause birth defects in babies. Seven months later the ban was rescinded. But in those seven months, some doctors said they recommended abortions to exposed women who were worried.

Two testing laboratories and a drug company were found to have distorted, even invented, test results. This "creative penmanship" included reporting that a larger number of animals were tested than actually were. Sometimes tests were designed to hide, rather than find, dangerous side effects of a drug or pesticide, according to reports to Congress by the Food and Drug Administration and the Environmental Protection Agency.

The first alarm of this kind, the Great Cranberry Scare of 1959, was blamed on the pesticide, amitrole, whose cancer-causing ability is still unproven, according to Edward W. Lawless, author of "Technology and Social Shock."

"The major evidence (of carcinogenity) is still a footnote in a preliminary report of a study," he writes, and is "still controversial."

There is no undisputed case in which a chemical was found to cause cancer in test animals and, when exposed human groups were examined, also was found to cause cancer in man. Saccharin may become the first if a recently announced $1.4 million 18-month study finds a correlation between bladder cancer and the sweetener's use. Several smaller-scale studies on man have been equivocal.

Observers, in and out of government, claim that the government's "bear-hug of protection" has become so stifling that reaction has set in. If so, that might help explain the defeat last week in the House of Representatives of a bill to create a new Consumer Protection Agency, atop the 33 existing agencies that have among them about 1,000 consumer-oriented programs.

Three years ago, Rep. John B. Anderson (R-Ill.) supported the measure, but last week voted against it. "The grass roots doesn't want it," he said. "They regard the government as a faceless bureaucratic intrusion in their lives."

Even the regulators admit they are in trouble. "There is a crisis of confidence in testing procedures and in regulation as well," said Dr. Donald Kennedy, the new commissioner of food and drugs.

Skepticism extends beyond the public into the ranks of experts. Dr. Emil M. Mrak, Chancellor Emeritus at UC Davis and an authority on food chemistry, was said to have bought huge jars of saccharin when the FDA moved against it so he would have an uninterrupted supply.

"Not true," Mrak said in a telephone interview. "I did that with cyclamate, the earlier sweetner, when FDA banned it in 1970. But I would have done it with saccharin, too."

Once a radical, Mrak is now viewed as a conservative in the field. He was among the first to urge tests on at least two different animal species, rather than just one, before a chemical or drug could be labeled safe for humans.

This concept was finally accepted "but now they call me an industry man because I think things have gone too far," Mrak said.

"We should apply more common sense in these cases, a better weighing of risks and benefits, fewer outright bans and more warning labels, perhaps."

Mrak and others believe there are thresholds below which chemicals do no damage or that any such damage is quickly repaired. But the government, partly because of the way the laws are written, operates as if there was no safety threshold.

Mrak also objects to testing with massive doses of chemicals and then extrapolating down to low dosages, as in the saccharin tests. In those tests, rats were fed diets consisting of 5 percent saccharin, a huge amount comparable to a man drinking 800 bottles of diet soda a day.

"You upset the whole metabolic process of the animal and weaken it with such doses," Mrak said. "It's almost bound to have some adverse effect."

FDA officials insist that large doses alone will not cause cancer in animals. Large doses may poison it but will not cause the genetic changes inside cells that are characteristic of cancer, according to several studies.

A test of 120 pesticides and industrial chemicals given to mice in large doses found that only 11 caused tumors, according to FDA science director Richard Bates. "And these chemicals were not randomly "selected," he emphasized. "The majority were picked (for testing) because they were already suspected of causing cancer."

Officials like Bates approach their regulatory responsibilities by seeking the most valid and practical scientific tests as the basis for their action.

To regulate the risks of food additives, drugs and environmental pollutants for humans, the most valid tests would be those done on humans. This is impossible for ethical reasons, but it also is impractical. Cancer takes as long as 40 years to show up. Many people might be dead from other causes before tests bore results.

Large primates like chimpanzees, even dogs and cats, would be next most suitable. But they cost too much to be fed and housed for their lifetimes.

So researchers favor rats, mice, hamsters and other small, short-lived, easily managed creatures that can be inbred to be genetically identical, generation after generation.

Still, it costs on average $750 to $1,000 per rodent per study. Each study requires at least 200 animals—half receive the chemical, half get identical treatment except no chemicals—and a full study costs at least $150,000. Hundreds, perhaps thousands of such studies are conducted each year.

To further cut costs, large doses of the chemicals are used rather than small natural occurring doses. With small doses, many thousands of animals would be needed to find one case of cancer. With saccharin, for example, 180,000 rats would have to be fed at a dose level comparable to one diet soda a day—rather than at the 800-a-day level of the test—to find one animal with bladder cancer.

And to increase the chances of finding carcinogens, the experiments use animals with a high natural cancer rate. (To use normal animals would risk missing a carcinogen, researchers say.) Such animals usually are prone to cancer in only certain organs, however, and are used for tests of chemicals that are suspected of causing cancer in other organs.

Thus, the National Cancer Institute's favorite mouse strain, B6C3F1, has an average spontaneous tumor rate of 15 percent in the liver of male animals. It would be used to test a chemical suspected of causing stomach cancer, and so forth.

The average natural cancer rate can vary greatly, however, according to Dr. Cipriano Cucto, a Cancer Institute toxicologist: The B6C3F1 mouse, with the 15 percent average, had shown a 55 percent spontaneous tumor rate at one time, he said. It is almost as if the strains are so highly inbred that they get cancer if looked at cross-eyed, he acknowledged.

Mathematics, however, compensate for using cancer-prone animals—or so it is believed. To obtain a real rather than chance result, statisticians insist that a test be 95 percent reliable—which means if it was repeated 100 times, the result would be the same 95 of those times.

This standard is very demanding. Consider test groups of 50 animals each. If three animals in the control group get cancer naturally, eleven in the group receiving the chemical must get cancer for the test result to be considered significant and real. Ten tumorous animals are not enough in this case. Obviously, much rides on whether one or two animals, more or less, get cancer out of a rather small test population.

Regulators would like to have more evidence than that on which to base policy decisions affecting hundreds of millions of people. If not more evidence, they would like more assurance that the evidence they have is valid.

To this end, at a former germ warfare arsenal in the rolling hills south of Little Rock, Ark., the National Center for Toxicological Research is completing a five-year, multimillion-dollar study to determine whether scientists can extrapolate from large to small doses, can use small test populations of animals and answer a host of other questions about testing procedures that disturb researchers as well as the public.

The center jokes about being "the biggest mouse factory in the world," and outside scientists refer to the study as a "megamouse"—meaning million-mouse—test. In fact, precisely 24,192 mice have been used, divided into 60 different groups of animals fed varying amounts of a chemical and sacrificed for examination over various periods up to a lifetime.

"It was the largest test ever done on dose-response relationships," Dr. C. D. Jackson, director of the Center's carcinogenesis division, said in an interview. "We looked at how soon tumors developed, whether we could sacrifice the animals early or had to let them live out their lives, and so on." Test results are expected later this year.

The center also is seeking other systems in which to test for chemicals that cause cancer, genetic changes, and birth defects. One possibility is a cell mixture which will undergo mutagenesis—genetic changes—in test-tube conditions. If it works, it could eliminate much of the costly animal testing.

But toxicology today is an imprecise science, and the suspicion is that politicians have been oversold, perhaps by themselves, on using it as the basis for regulating food additives, drugs, cosmetics, environmental pollutants and other chemicals affecting man.

Different chemicals are toxic to different degrees. Some are stronger carcinogens than others. Some endanger larger populations than others.

Saccharin is a weak carcinogen and if only a small population was exposed (say diabetics), the FDA would have had even a harder time explaining its action against the chemical sweetner.

Yet as the law is now written, the FDA has no authority to take into account the degree of risk or any countervailing benefit. The so-called Delaney Clause, added to the FDA's charter in 1958, states that "no (food) additive shall be deemed safe . . . if it is found . . . to induce cancer in man or animal."

"We are in a dilemma," acknowledged Steven D. Jellinek, assistant Environmental Protection Agency administrator for toxic substances. "We are at the cutting edge of science.

"If we wait 20 years for better test systems, lots of people may suffer. So we must act on the very inadequate science of the day, with the very inadequate statistics, to make the best decision we can on the evidence we've got at the time."●

## TRIBUTE TO LOUIS B. BERGNA

### HON. NORMAN Y. MINETA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. MINETA. Mr. Speaker, it gives me great pleasure to rise today to honor Mr. Louis P. Bergna, district attorney for Santa Clara County, who was honored with a testimonial dinner on April 12, 1978, by City of Hope, a private organization that conducts medical research on childhood diseases.

Lou is a native Californian. He received his undergraduate degree from Stanford University and his Juris Doctorate from the University of Santa Clara. After passing the bar in 1948, he went to work for the district attorney's office as a deputy and was appointed chief trial attorney in 1951. He returned to private practice in 1952 until he was appointed district attorney for Santa Clara County in September 1957.

In addition to his service as district attorney, Lou was an assistant professor at San Jose State University police school from 1949 to 1969. He represented California on President Kennedy's White House Conference on Narcotics and he was appointed by Governor Reagan to serve on the California Council on Criminal Justice in 1968. He is past president of the Santa Clara Bar Association and the California District Attorneys Association. During 1975–76 he was president of the National District Attorneys Association and is still an active member of that organization. He currently serves on the Regional Justice Planning Board.

Lou has been honored with the National District Attorneys Distinguished Service Award and the Distinguished Eagle Scout Award. And on April 12, 1978, Lou Bergna was awarded the Spirit of Life Award from City of Hope.

Mr. Speaker, I ask you and all my colleagues to join with me to say congratulations Louis P. Bergna for all his fine work. His contributions over the years have helped to make our valley a better place to live.●

## THE 75TH ANNIVERSARY OF ALHAMBRA, CALIF.

### HON. JOHN H. ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. ROUSSELOT. Mr. Speaker, this is a season of jubilant celebration in the city of Alhambra which is located in the beautiful valley of San Gabriel in the Golden State of California. The people of Alhambra are observing the 75th Anniversary of their city's incorporation. It gives me great pride and joy as the elected representative of California's 26th Congressional District which includes the city of Alhambra to offer this tribute to a sturdy city which has, through private enterprise, grown from a small community of 600 residents 75 years ago to a thriving, important municipality with a population of more than 62,000 people within the city limits. The mayor of Alhambra, Hon. J. Parker Williams, and other civil leaders have set up the Alhambra Diamond Anniversary Committee under which several community activities are scheduled where the notable event of the incorporation of the city of Alhambra will be officially recog-

nized. The members of the Alhambra Diamond Anniversary Committee are: Mayor Parker, former mayor and city councilman Steve Ballreich, executive manager of the chamber of commerce Jackson B. Kuehnle, Alhambra Community Hospital Administrator David Jacobson, Alhambra Post Advocate editor and publisher Warner Jenkins, Alhambra central business district manager Richard Nichols, and businessman Pete Letournea. The first event will be on April 22 when the Alhambra Jaycees will sponsor the annual Hi Neighbor Day Parade. Luis Brambila is chairman of this 34th annual parade, and George Ramos is general chairman and international vice president of the Alhambra Jaycees. I am honored to participate in this event and on this occasion I will present this insert from the CONGRESSIONAL RECORD noting that I have made the celebration of this significant event a permanent part of the record of the U.S. Congress. On July 11 the Historical Society of Alhambra will have a mock period dress celebration on the date of this city's incorporation. On September 24 the city will hold a community picnic with fireworks.

Mr. Speaker, I would like to insert the following information about the history of Alhambra, the city called the Gateway to the San Gabriel Valley, as it appears in a publication distributed by the Alhambra Chamber of Commerce:

The principal part of the land within Alhambra's present boundaries was included in the 1771 grant made to Mission San Gabriel, five years before the birth of our Nation. There were no orchards or vineyards in the San Gabriel Valley then, only dry, uncultivated fields broken by arroyos and lowlying hills from the Mission San Gabriel west to the small Indian village called "Yang-na," which later became Los Angeles. According to 1784 records of individual land grants made by the Spanish Government, at least a portion of the land on which Alhambra was built was once part of 300,000 acres grant to Manuel Nieto.

One of the early founders was Benjamin B. Wilson, a 29-year old Tennessean who later held several political offices and became a State Senator. "Don Benito," as he was familiarly called, married Ramona Yorva. Don Benito's eldest daughter, Maria, married a young engineer from Baltimore, James de Barth Shorb, and they were given a section of land adjoining the Wilson property as a wedding present. Shorb called in "San Marino," the name of his boyhood home in Maryland. The Huntington Library Art Gallery stands on the side of the Shorb home. Don Benito's wife died and he later married a widow, Mrs. Margaret Hereford, and this is significant because they had four children, one of which was Ruth Wilson who became Mrs. George Patton, mother of the famous General George Patton, Jr. In 1874 Don Benito bought the land between the Arroyo and the Old Mill Wash paying the State $2.50 an acre. He divided the tract into five and ten acre lots. Mrs. Patton and Mrs. Shorb who had been reading *Alhambra*, Washington Irving's book of the legend of the Moorish Palace in Spain, suggested that Wilson name his venture "The Alhambra" because it was so romantic. There were several other subdivisions of property, some of which bear names from Don Benito's family, one of which is Mount Wilson where the Observatory is located.

No better description has been given of Alhambra than that of Rufus Fiske Bishop who recalled on the 50th Anniversary of his arrival in the 1880's that "within what are now the city limits, there was not a schoolhouse, a store or a blacksmith shop. We saw a valley, wide and open, yellow with stubble, shimmering in the summer haze to the eastward, stretching from the blue mountains to the brown hills, with here and there a green splotch of young orchards and vineyard toward Pasadena or the foothills. That first spring we marvelled to see the slope (Altadena) ablaze with poppies and were told that ships steered their course by the bright color."

Mr. Speaker, I ask that you and my other colleagues in the House of Representatives join with me to offer our congratulations to the city of Alhambra on the occasion of their 75th anniversary.●

## CRIMINAL CODE REFORM ACT STILL WRONG

### HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. WEISS. Mr. Speaker, serious threats to the fundamental rights of Americans are contained in legislation now being considered by a House subcommittee. Known as the Criminal Code Reform Act, this legislation (S. 1437/H.R. 6869) would greatly expand the Federal criminal law and would also undermine civil liberties protections established in the Bill of Rights.

I have previously introduced a resolution (H. Res. 10666) urging the Judiciary Committee to disapprove H.R. 6869 and to undertake a careful and thorough study of criminal code revision.

An editorial appearing in the February 20 Syracuse, N.Y., Herald-Journal incisively explains some of the principal problems with the legislation and it urges the House to examine the bill "with a fine-tooth comb and eliminate every provision that would in any way infringe on the constitutional rights of law-abiding Americans."

I wholly concur with the Herald-Journal's position on this legislation, and I urge my colleagues to study the paper's editorial which is reprinted below:

CODE STILL WRONG

After 12 years of writing and rewriting the legislation, and two earlier failures, the Senate finally passed the latest version of the Federal Criminal Code Reform Act.

The bill now is being considered by the House of Representatives.

It should not have gotten past the Senate. It must not be passed by the House.

The need for revision and organization of our federal criminal code was never in doubt. Back in the Lyndon Johnson administration, the National Commission on the Revision of the Federal Criminal Law began its task—with "liberal" goals in mind.

During the "law and order" days of the Nixon administration, the commission reversed direction and the resulting legislation, which came to be known simply as S1, was so repressive it was allowed to die a quiet death in committee.

But the seeds for reform had been planted. Supporters of the bill put their heads together to produce a compromise measure, discarding the most offensive sections. But they didn't go far enough.

As it stands now the legislation (HR6869) puts dangerously subjective powers in the hands of federal law enforcement officials and could silence the voice of popular dissent.

And even though some of the bill's harshest provisions were extracted on its way to passage in the Senate, the new code still contains a number of hedges against the First Amendment right to a free press.

For instance, it would allow the government to hold a reporter in criminal contempt for refusing to disclose confidential news sources, even under an order subsequently ruled invalid.

The code, as now written, also would authorize the government to prosecute a news reporter for hiding his notes in an effort to protect the identity of a confidential news source suspected of committing a crime.

HR6869 is stacked heavily against political expression through assemblies, demonstrations and picketing.

Section 1861 (Public Safety) would make it unlawful to disobey an order of a law enforcement officer or a public servant assigned public safety responsibilities where the order is issued in response to a fire, flood or riot. OK, so far. But the law also would extend to any "other condition that creates a risk of serious injury to a person or serious damage to property."

The phrase, "other condition," would put into the hands of every federal law enforcement official the authority to disperse any assembly, parade or picket line—anywhere in the U.S.

There are other provisions which, in the wrong hands, could be used to stifle dissent and should be considered serious threats to our own civil rights.

Before this legislation is approved by the House of Representatives, the members of that body have an obligation they must not ignore, to go through the massive piece of legislation with a fine-tooth comb and eliminate every provision that would in any way infringe on the constitutional rights of law-abiding Americans.

Until this is done, the bill must not be approved.●

## INFACT DAY

### HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. VENTO. Mr. Speaker, there is increasing awareness within the United States and especially Minnesota of the dangers associated with the improper use of infant formula in developing countries. This is of particular importance to me, as well as to all of you here, because the promotion of infant formula is primarily directed by companies headquartered in developed nations.

I am concerned about the promotional practices of these corporations. Conditions necessary for the safe preparation of infant formula products are rarely available in these countries. These promotional practices put unfair pressure on women to use infant formula. This is extremely hazardous to the child's health when unsterile water, inadequate hygenic standards, and insufficient income exist.

It is my hope that your action today and other actions across the Nation will result in the companies' examining their marketing practices in terms of human suffering.

I would like to take this opportunity to recognize the efforts of the people of Minnesota on this issue. The Center for Corporate Responsibility and the Infant Formula Action Council have been instrumental in alerting people to this issue for several years. The State of Minnesota has declared today Minnesota Infact Day, and together with the University of Minnesota, has committed the shares of American home products stock to the shareholders' action. The city of St. Paul has also declared this Infact Day in St. Paul, and the DFL has officially supported the shareholders' action. We can all take pride in the knowledge that the citizens of Minnesota are leaders of this issue,

On the national level, I have sent a letter to the corporate officers of the major infant formula manufacturers. This letter, cosigned by 13 of my colleagues, calls for these companies to address responsibly the problems resulting from the aggressive promotion of their products.

As a Nation, we can take pride in our democratic traditions which have made ours the most free and open society in the world. These traditions can be only maintained when individuals and corporations take responsibility for their actions.

The Sunday, April 9, 1978, New York Times published an excellent article describing the shareholders' action, which follows:

INFANT FORMULA: A PROXY ISSUE

WASHINGTON.—Baby formula is becoming a controversial topic during the 1978 annual-meeting season, reflecting the increasing sophistication and aggressiveness of activist shareholders.

Although the Interfaith Center on Corporate Responsibility, a coalition of 20 religious groups, has attempted to use the proxy process for four years to change the sales-promotion practices in developing nations by the American Home Products Corporation and other producers of infant formula, its resolution on A.H.P.'s 1978 proxy cards represents the center's first nationwide proxy solicitation campaign to win support for its infant-formula resolution.

Specifically, the New York-based Interfaith Center is calling upon A.H.P. to establish an independent 15-member committee to review its marketing and promotional practices in the third world, where, it contends, the misuse of infant formula, a fortified product fed to babies in bottles to supplement or replace breast milk, has contributed to infant malnutrition, disease and death. Church groups have provided growing documentation that often in poor countries mothers overdilute the formula or mix it with impure water.

The church coalition, which controls 82,690 shares (valued at more than $2.3 million) of A.H.P.'s more than 158 million common shares, represents the largest group of church investors cosponsoring a single resolution to any company this year.

Leah Margulies, the Interfaith Center's coordinator of the campaign, said in an interview that the group had recently sent more than 500 institutional investors a four-page proxy solicitation.

A.H.P., in response, is digging in its heels and ardently opposing the resolution, although infant formula accounts for less than 2 percent of its earnings. Previously company officials met most of the church groups' demands for disclosure before the group needed to resort to proxy solicitations. But they have flatly rejected the groups' claim that the company, through questionable promotional practices, pushes infant formula instead of breast milk.

"We do not compete with breast milk only with less suitable, less nutritious products," said Steven Bauer, vice president of Wyeth International, A.H.P.'s subsidiary that manufactures the infant formulas, SMA, S26 and S28.

Last week the company mailed its own statement on the controversy to institutional and large individual investors, opposing it on several grounds:

To vote for it is to accept the groups' allegations of improper marketing.

A watchdog committee would be "intrusive, cumbersome, expensive" and unnecessary in view of the company's practices.

The review committee is actually a challenge to the company's ability to manage its own business affairs.

"It's a question of principle," said Carol G. Emerling, A.H.P. secretary. "If it only takes a tiny minority of the shareholders to call into question the company's management, we're no longer fully in charge of the Company."

The company's arguments do not impress the church groups.

As part of the campaign, the Infant Formula Action Coalition, known as Infact, a sometimes overlapping confederation of more than 40 groups nationwide that are also concerned with the health impact of bottle feeding in the third world, is trying to build support for the resolution among the nation's institutional investors. In Minnesota, home of one of Infact's most active chapters, proponents said they expected the Minnesota State Board of Investments, which owns 260,000 A.H.P. shares, to endorse the proposal soon. Last week, the Minnesota University Committee for Social Responsibility in Investments, which advises the university's Board of Regents, endorsed the proposal. New Jersey groups are also studying it.

In addition, Infact groups are promoting a national boycott of products made by the Nestlé Corporation, an international conglomerate based in Switzerland, the world's leading exporter of infant formula to poor nations. April 13 will be "Infact Day" in several cities where demonstrations are planned.

But the shareholder resolution is still the focus of the groups' campaign against misuse of infant formula, and its supporters say they have already made headway against A.H.P. and other infant formula producers.

David Liff, director of the Investor Responsibility Research Center's task force on infant formula, credits the proliferation of shareholder resolutions with prodding the industry into the formation of a trade association, which in late 1975, adopted an ethical code to curb formula misuse.

Church groups have also proposed a resolution to the Carnation Company, for the first time, seeking disclosure of sales and marketing information, but the Interfaith Center canceled plans for a resolution aimed at the Borden Company, after the company agreed to withdraw all advertising suggesting that Klim, a powdered milk, could be substituted for infant formula.

In another case, the Sisters of the Precious Blood sued Bristol-Myers Inc. in 1976, charging that statements made in its proxy material regarding the company's promotional practices were false and misleading. In what Miss Margulies calls an "important victory" for the infant-formula campaign, Bristol-Myers settled the suit last January, agreeing to mail shareholders a special report on the controversy stating both sides' views and to meet regularly with the groups to discuss marketing practices. In return the church groups agreed not to file a shareholder resolution with the company this year.

The Interfaith coalition sought and won similar disclosures from A.H.P. in 1975 and 1976 in exchange for the withdrawal of shareholder resolutions.

Last year, the church groups did propose a resolution that would have required A.H.P. to change certain marketing policies and practices. The resolution, which the S.E.C. approved for inclusion on the company's proxy statement, was supported by 2.92 percent of the shares voted at A.H.P.'s annual meeting—just short of the 3 percent the S.E.C. requires for the resolution to be reintroduced automatically. This year the coalition again won S.E.C. approval for its resolution, and separately won the commission's approval to wage the proxy-solicitation campaign. Everything mailed to shareholders relating to a proxy dispute must pass commission scrutiny. Last year the church groups avoided this costly process by simply meeting informally with large shareholders and leaving the resolution to stand on its own among others.

Members of the Interfaith Center are bitter about last year's proxy dispute, because shortly before the annual meeting, the company sent a second proxy card to shareholders who had voted for the resolution, asking whether they had intended to support the resolution. The move led some shareholders to change their ballots, the company agreed.

"It apparently was legal," said Miss Margulies, "but we feel it was certainly unethical, very dirty pool."

Company spokesmen say the shareholders were resolicited because the company had presented the resolution with a series of management-supported resolutions. Some shareholders might have been confused, as a result, they said, and voted for it with the others.

Both last year and this year the S.E.C. rejected the company's requests for permission to exclude the church groups' proposals from its proxy statements. In 1977, the staff ruled that the company could omit the resolution because it dealt with a matter relating to the "conduct of the company's ordinary business operations." In a highly unusual move, the commission reversed the staff's ruling and permitted it.

This year, the staff sided with the church groups; the decision was upheld in an appeal by the commission.

Miss Margulies will not predict whether the Interfaith Center's proxy solicitation campaign, which cost slightly less than $5,000, will win the 3 percent support needed to raise the issue again next year. But she believes that because the process raises interest in her group's cause, the proxy fight is well worth the effort.

JUDITH MILLER.●

## THE AMERICAN FOOD MACHINE AND PRIVATE ENTREPRENEURSHIP

## HON. CHARLES E. WIGGINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. WIGGINS. Mr. Speaker, the House has recently focused its attention on the Nation's farmers. Although the conference report on the Emergency Agricultural Act of 1978 was defeated, the debate on farm policy is far from over. It is therefore appropriate, as a contribution to that debate, that membership read the views of a man who served for 5 years as

Secretary of Agriculture, Earl Butz. The remarks, printed below, were delivered at Hillsdale College, in Hillsdale, Mich., as a part of the school's Ludwig von Mises lecture series.

THE AMERICAN FOOD MACHINE AND PRIVATE ENTREPRENEURSHIP

(By Earl L. Butz)

The modern American Food Machine is perhaps the greatest single source of strength undergirding the unparalleled level of American living. It is also our number one single source of foreign exchange. At the same time, it is one of the real power bases undergirding our foreign policy.

The first claim of any society upon its total production resources is to produce enough food to keep the population alive and to reproduce itself. This is so evident that it is axiomatic.

We do this in the United States with less than four percent of our labor force on farms and with perhaps no more than another 10 or 15 percent engaged in the agricultural infrastructure—making agricultural production inputs purchased by farmers, and processing and distributing food and fiber produced by farmers.

As recently as a third of a century ago, early in World War II, one worker on American farms produced enough food for himself and about nine other people. Today one farm worker produces enough for himself and some fifty other people. On our more efficient commercial family farms, one worker produces enough to feed over 100 other people.

This remarkable growth in the efficiency and productivity of American agriculture in the last generation forms the real basis for the general affluence we take for granted in America.

Even though the cost of food is a widespread source of complaint, the plain truth is that we Americans buy more food for a smaller share of our working day than ever before, and for less than any other nation.

And we eat better than our fathers did—and better than any other people, everything considered!

As a nation, we now get our food for a little less than 17 percent of our take-home pay. That's 17 percent of what's left after the bite taken by federal and state taxes. This compares with 24 percent of take-home pay required for food just a quarter century ago, when the real level of wages was substantially lower than it is now.

Moreover, that 17 percent of take-home pay for food now buys a lot more services and "extras" than in former years. It includes all the built-in "maid service" in our modern food supply—frozen TV dinners, oven-ready pastries and rolls, processed potatoes, delicatessen items from the supermarket, and so on. And these things don't come for free.

On top of that, the 17 percent includes over one-third of our meals eaten outside the home. When you go out for dinner tonight and enjoy a nice meal that costs, let us say, $6.00, just pause to think that in that restaurant if the waitress put an empty plate in front of you, it would probably cost $4.00. That's for service and overhead. Yet, all this is included in the 17 percent of take-home pay we spend for food.

Because we spend only 17 percent of take-home pay for food, by definition, we keep 83 percent to spend on something else or to save.

That's why it's possible in the U.S. for well over 90 percent of our families to have a TV set, and about half to have 2 sets; for some 85 percent of our families to have an automobile, and over 40 percent to have 2 cars; for nearly all of our families to have electricity, indoor plumbing, radio, and a host of other things and services that were anything but commonplace a generation ago.

Why did this phenomenon of food abundance and economy occur here? Why not in Argentina, where in another hemisphere they have the same good soil and favorable climate we do? Why not in Russia where they have vast land resources and lots of people? Why not in Europe?

A major reason is that the United States is a nation of family farmers, in business for themselves, with their own capital invested, their own family labor involved, trying to make a little money and save some of it.

The American family farm represents entrepreneurship at its best. It is here that we find a direct relationship between personal profit (or at least the hope of profit) and investment, innovation, risk-taking, and just plain old-fashioned hard work and enterprise.

I have seen Russian farm experts come to this country and visit successful American family farms. They have taken back to Russia our large power units, our combines and our pickers, our well-bred livestock, and our high yielding crop varieties. But they don't seem to work very well on the Russian farms, because our Russian visitors never saw that invisible cement that held it all together on the American farm—the farmer and his family in business for themselves, in pursuit of a little more profit than would come to average performance or would result from central governmental direction.

The American farmer hasn't learned yet to punch the clock at 40 hours. If it rains today, tomorrow he rides the tractor 14 hours, with no questions asked. And Mamma drives the truck right beside him.

He hasn't learned yet to go out to the cow stable and say, "Look bossie, I'm going to be gone over the weekend. Let's shut it off for three days."

And, most important of all, he hasn't learned yet to put two drivers in his tractor cab, like in that locomotive that goes through this town.

He can neither afford nor tolerate those slow-down tactics; he's in business for himself—trying to make a little profit. This is the strongest possible motivation for change, for new investment, for rapid adoption of new technology, for increased efficiency, and for expanded output.

How fortunate we are that this is true. How fortunate that this great power base is ours, here in the United States. We must use care not to hobble it, not to impair it, not to diminish it.

We must not panic in our national farm programs in reaction to a temporary surplus situation. Last year was the first in four years that total world grain production exceeded total world grain consumption. For three years before that, we were drawing down inventory. Last year nearly the entire world experienced relatively good growing conditions.

This is unusual. The usual is to experience a major stress area or two somewhere in the world. This year such an area apparently is in mainland China. They have contracted to purchase 11.6 million metric tons of wheat in the next year. They had to be in a serious internal food situation, or else they would not have committed so large a chunk of their precious foreign exchange for that purpose.

In the United States, in the early months of the 1977 crop year, there was widespread concern about the low moisture situation in the Corn Belt and in the Great Plains states. The potential was present for a serious yield-reducing drought right in the very breadbasket of America. Fortunately, the rains came, and 1977 production was good. But the weather margin for us last summer was a narrow one.

Much of the world's turmoil can be traced to man's quest for food and the quest for land on which to grow that food. Potential food shortages, within a quarter-century, could serve as the catalyst for man's final act of self-destruction. The way in which we view agricultural production today, the priorities the world places on food, will hold the answers.

Agricultural science and development, investment and innovation, profit and incentive can't be turned on and off, willy nilly, in response to the vagaries of weather and production from year to year. Remember, it has been less than three years since we were all stirred up about the "World Food Crisis."

We are now face-to-face with the fact that the world's number one problem is how to feed 80 percent more people in the next quarter-century. Or, to put it another way, allow for slight improvement in individual diets, and the job becomes one of learning in the next 25 years how to feed as many more people as we've learned to feed since the dawn of history.

We must find the answers to this problem at a time when we have no new western hemisphere to discover, no new prairie sods to plow, no more virgin woods in temperate climates to clear and convert into farmland. Indeed, we must double food production at a time when many nations are losing arable land to urban sprawl, highway construction, and recreation.

Demographers predict that in 25 years earth's human population will be 6.5 to 7.0 billion, compared with 4.0 billion today.

Can we feed those 7 billion people 25 years from now?

The answer is simple. Yes, we can—or they won't be here!

The question is not can we feed them, but can we feed them well. For that part of the world's population that often goes to bed hungry, can we make eating an exciting experience? Can we make eating something more than a mere exercise in sustaining life inside the human body?

Can we produce and distribute enough food to generate the sort of happiness and satisfaction that will promote peace?

The answer to all these questions is a resounding yes, if we take positive action on two important fronts:

1. Continue to emphasize agricultural research and technology, both public and private.

2. Continue and strengthen a system of individual freedom and incentives that reach each and every farmer willing to strive for them.

The first of these two will be the less difficult to attain, both here and abroad. Modern technology is transferable; research results can cross oceans and mountains overnight. Scientific developments that have taken 20 years to perfect can be transported to other countries in months.

But the maintenance of incentive systems for the farmer is far more difficult. Yet, it is just as crucial—perhaps more crucial. This is true both here and abroad. Too often we have believed that the road to more food for the developing countries is paved only with science and technology. Yet, those techniques, when transplanted, have sometimes withered on the vine, almost before our own technicians could get out of the field.

Why? There was no real incentive for the farmer to take the risk to change. There was no prospect for profit.

Too few national governments have made the commitment to assure that changes in techniques would provide real incentives to the individual farmer.

Too many nations including our own, have an underlying, but powerful, urge to pursue a cheap food policy—making it difficult for the man on the land to reap the reward for the innovations he makes.

Consumers the world around welcome such a cheap food policy—and politicians respond, whether they're capitalist or communist. As nations become less agricultural and more urban, the incentive base for the farmer becomes less certain. It becomes more susceptible to political pressures and special interest dealings.

Even in this highly literate nation of our own, we have seen repeated attacks on the incentive system for farmers. True, these attacks are most obvious when food prices are in an upward posture, but they none the less persist today. It has only been five months since we had a well publicized "meatless dinner" in the Roosevelt Room of the White House—and that's about as close to the Oval Office as you can get without actually entering it. And this dinner was attended by, among others, the secretary of agriculture and his assistant secretary of agriculture!

It has only been three years since we had such campaigns as the beef boycott, eat one less hamburger per week, or Meatless Tuesdays. It has only been four years since political pressures forced us into a system of federally imposed price ceilings on meats and other food products.

Most of us have forgotten that it has only been three years since the American Bakers Association whipped up a scare campaign that bread would go to a dollar a loaf unless we imposed export controls on wheat.

It was only two years ago that the longshoremen refused to load Gulf port grain that was destined for Russia—on the pretext of keeping living costs under control—while they did some fancy maneuvering of their own to increase shipping subsidies.

Almost unnoticed by most of our people during May-August, 1977 was the official pleasure in Washington as farm prices declined four straight months in a row. The four-month decline of 15.2 percent in farm prices was heralded each month as presaging *only* modest rises in retail food prices. And that in the face of escalating farm production costs.

The drop in farm prices masked the rise in nearly every other price category and permitted Washington price watchers to interpret a slowing of the overall price gain as evidence that inflation was coming under control.

The consuming public liked this interpretation. It was consistent with their general support of a cheap food policy.

At a recent meeting I addressed, I walked through a group of young protesters carrying placards reading "Food is for people, not for profit." That prompted me to remark to my audience—"I have a message for those misguided youngsters. If there's going to be no profit in food, ultimately, there will be no food for people".

In recent weeks our government itself has taken direct action to curtail output through a requested 20 percent set aside for wheat in 1978, and a probable set aside for feed grains. We are placing our grains into a massive governmental loan and storage program, as we move inexorably toward again making the U.S. a residual supplier in the world grain markets, a primary granary for the world's warehousing, and the residual production adjuster for the world.

The sad part is that these negative signals, these arbitrary restraints, didn't happen in some distant land. They didn't happen in a dictatorial society. They didn't happen in a communist state. They didn't happen under a government dedicated to suppression of human rights. They didn't happen under a political system based almost completely on central planning.

They happened in the United States.

They happened in the world's greatest democracy.

They happened in a nation whose hallmark is freedom of choice and freedom of action.

They happened in a nation whose level of economic literacy is perhaps the highest in the world. They happened in a country where the legislative body reputedly reflects the will of the people better than in any other nation.

Now, we must ask, have we learned any lesson from taking those negative acts? Have we learned that if the United States is indeed to use its great food productive capacity, then the individual farmer must be free to produce and market his crops as he sees fit?

We must not dampen the incentives that have made our farmers the producers that they are. We must not signal to them in the language of price—the language they understand best—that we want less, not more.

We must not constrain their access to markets, both domestic and foreign by politically inspired prices and production directives that create the illusion, even in the short run, that a government warehouse constitutes an enduring market.

Our nation—and indeed every nation of the world—must make the commitment to move agriculture and food to the front burner. It must be moved higher on the scale of priorities in both national policy and in capital allocation.

To do less will be to condemn hundreds of millions of people to such a substandard level of living in a few years that peace will be difficult, if not impossible.

Hungry people will not remain invisible or silent. No matter how remote their village, they now hear of the outside world on transistor radios. They see affluent travelers from North America, Europe and Japan. They now realize that a better life is indeed possible. Increasingly they will not settle for less. They see a ballet of affluence dancing all around them—and they dream of a piece of the action.

Hunger is the stuff out of which revolution is born. And revolutions, once started, have a tendency to spread. They are like a pebble dropped into the pond; there is no way of knowing where the ripple will hit the shore.

The oceans on either side of us are no insulation. Four times in my own generation, the United States has been drawn into conflict away from our shores. There is no way we can avoid it the next time.

That is why this nation's agriculture now commands such a strategic position. That is why it must be kept free and incentive-oriented. Other nations may have Petropower, but we have Agripower—and we have it in abundance. It is to our door that nation after nation will come for food and for the know-how to grow better food.

To the extent that we can respond to those needs, we will lay the foundations of peace. America must help the world learn to grow more food. We must use our Agri-power wisely and with strength.

We must not be lulled into believing that somehow we will be able to exist as an Isle of Affluence in a Sea of Human Misery. A hungry world will not allow it. We must make a stronger commitment than ever to keeping our own farmers healthy, and to helping others help themselves.

The best way to accomplish this is through a strong system of incentives for the only one who produces food—the farmer on the land.

There is a synonym for this:

The word is profit.●

## CONGRESS NEEDS TO LOOK AT KEY ISSUES IN TITLE I OF ESEA

### HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. TREEN. Mr. Speaker, one of the major issues facing the 95th Congress is consideration of the renewal of the Elementary and Secondary Education Act (Public Law 89–10). This measure, adopted in 1965, has become the major Federal aid-to-education program.

The key element in ESEA has been title I which provided funds for school districts based on the number of children from poor families in the school district. The proponents of this act automatically identified children in poverty as underachievers and we witnessed a great outpouring of money from U.S. taxpayers into compensatory education programs. We are being asked to pour more money into title I programs.

I have been a critic of the supposed accomplishments of the title I programs. I recognize it is difficult to assess the impact of title I programs. Programs goals may differ from one area to another. Variations may be found in the type of instruction presented, the qualifications of teachers, and the services schools provide. Problems arise for comparisons when there are different methodologies being used and different kinds of students in programs. Yet, despite the unsure and even uncertain results of compensatory education, we are asked not only to continue funding this program but to fund it at higher levels.

Health, Education, and Welfare Secretary Joseph A. Califano observed that the most substantial change financially in title I is a targeting provision in which President Carter is requesting $400 million—

* * * to target on those school children that have high concentrations of poor, disadvantaged children, in rural areas and in urban areas.

He observed that the test for this aspect of the program would be a school district either with 5,000 poor children or more in it or a school district in which 20 percent of the schoolchildren were poor. The Health, Education, and Welfare Secretary estimated that this proposed change would add between 600,000 and 900,000 children to the participants in title I programs. If this change occurs, we will have between 6.2 million and maybe up to 6.5 million children participating.

What has been the result of this effort over the past 12 years? Even Secretary Califano admits that many students are not mastering the fundamentals of education. Recently, the Washington Post carried a story that a group of prestigious education researchers had warned the Health, Education, and Welfare Secretary against giving national or statewide minimum competency exams for high school seniors since so many students would fail that it would be politically unacceptable.

Despite the funds spent on compensatory education, the results are less and less satisfactory.

I raised many of my concerns with the title I program when I testified before the Subcommittee on Elementary, Secondary, and Vocational Education of the House Committee on Education and Labor on March 6, 1978. I was pleased to see that some of my thoughts were reflected in a perceptive editorial in the Chicago Tribune entitled "Dollarship and Scholarship," March 9, 1978. My colleagues should read this editorial carefully and seriously consider the issues it raises before they vote for additional authorizations under title I of the Elementary and Secondary School Act.

The editorial follows:

DOLLARSHIP AND SCHOLARSHIP

President Carter was right when he said we must do a better job of teaching basic reading, writing, and arithmetic skills to all children. But he should do a little more homework himself if he thinks that the way to accomplish this is to spend 24 per cent more federal money on education—$12.9 billion in the 1979 budget—as he proposes.

Lack of money for schools is not why so many children are failing to learn to read, write, and calculate adequately. Schools, generally, are not lacking for well-paid teachers, classrooms, or instructional materials—the kinds of problems money can alleviate. Raising school budgets has rarely resulted directly in better performance by pupils.

It may sound useful to urge more money for reading, especially when some funds are to be earmarked for poor urban areas and some spent to encourage state and local demonstration projects. But before throwing more money at the reading problem, it may help to look at some of the reasons the problem exists:

(1) Some children have trouble learning to read because they are taught by inefficient methods which don't give them the modern phonetic tools they need to decode written words at the very start of instruction. Although the evidence is overwhelming, too many old-fashioned teachers textbooks still insist on inefficient look-say or "combination" methods.

(2) Some children are handicapped because they come from homes where parents rarely read themselves or to their children, where newspapers and books are not valued, where language may not even be spoken well. Research shows that early intervention programs—particularly "visiting teachers" and child-parent centers—can make marked and lasting improvements if begun well before children reach kindergarten age.

(3) Specific learning disabilities make it impossible for some children to learn to read easily and well in school. This problem is still not well understood, despite considerable progress in the last decade. While remedial programs help many of these youngsters, they are not completely effective for all. Such children are likely to find the going even tougher, thanks to new laws that require the handicapped to be "mainstreamed" into regular classrooms by next fall whenever possible and regardless of money available for special teachers and programs. Many of them may simply get lost in regular classrooms, where teachers have neither the time nor the training to give them special help.

(4) Basic education suffers in some schools because it loses out to other priorities. Shifting teachers and pupils to satisfy arbitrary racial goals can easily interfere with sound teaching programs, and produces no measurable improvements in learning. Besides, too many administrators are forced to spend their time complying with nitpicking federal and state regulations rather than on upgrading and monitoring the learning that is supposed to be occurring.

(5) Lastly and perhaps most importantly, too many schools are reluctant to insist that their children do learn. Often promotions are given to avoid hurting egos, or out of administrative laziness, thereby almost guaranteeing that the children promoted will be unable to keep up in the higher grades for which they are unprepared.

The few school districts which have set up firm standards for promotion and graduation, and have held both teachers and students to them, have shown a notable improvement.

How many of these problems can more federal money solve? Not many. If funds go for well planned early learning programs that involve parents, more money could help. But billions of federal dollars won't remedy every problem, especially reading, and Mr. Carter is naive if he assumes so.●

## CHELSEA VEHICLE MAINTENANCE FACILITY

### HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. WEISS. Mr. Speaker, the Postal Service Act of 1977 (H.R. 7700) which was approved by the House April 6 contains a provision of special importance to many people in my district, particularly those residing in the Chelsea community.

This legislation should generally improve postal services throughout the Nation, and the specific provision directly affecting Chelsea should likewise prove valuable.

Under section 11 of H.R. 7700, any Postal Service capital project expenditure exceeding $9 million will have to be submitted for review to the appropriate congressional committees. This section further stipulates that the project cannot be initiated until the committees have transmitted a report on it to the Postal Service within a 4-month period.

If and when H.R. 7700 is enacted into law, such a congressional review procedure will be most helpful in assessing the merits of a Postal Service plan to construct a large vehicle maintenance facility in the Chelsea neighborhood.

A number of my Chelsea constituents have objected to the proposed garage which would be built on a square-block site that has stood vacant for several years. The Chelsea community is united in its advocacy for housing at this location, but valid questions about the environmental suitability of the facility have been raised and have not been satisfactorily answered. There is a real possibility that this huge garage would seriously exacerbate the already unacceptable pollution and traffic levels in the area.

I therefore welcome the review mechanism that would be established by H.R. 7700. Should this measure become law, I will urge my colleagues on the appropriate House and Senate committees to undertake a thorough study of the vehicle maintenance project.

Alternative sites for the garage have been proposed, and these should be considered in any review of the project. A serious housing crisis exists in Chelsea and, in fact, throughout the 20th Congressional District and the Postal Service plan must be carefully evaluated to determine the prospects for housing construction.

Until the capital project review requirement becomes binding, I will continue to work with my Chelsea constituents in finding a suitable solution to the many problems raised by the Postal Service proposal.●

## SUCCESS IN THE CITIES

### HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Ms. MIKULSKI. Mr. Speaker, I take a personal interest in the following article which appeared in the Baltimore Sun on Tuesday, April 4. This article details the successful experience of Baltimore, Md., with a combination of grassroots involvement and local banking institutions in the area of housing. It has been my privilege to take part in such active and successful grassroots movements.

Unresponsive bureaucracy, lack of local input and control, and massive, wasteful spending are frequent outcries in reaction to many so-called Federal answers to the problems of urban America. One alternative that has proved effective in coping with urban housing problems across the country is the Neighborhood Housing Service organization. Many other cities, in addition to Baltimore, have found the NHS model useful in combining the resources of local businesses and citizens with minimum Federal money or interference. The principle involved can certainly be applied to other problems where the Federal Government now plays too prominent a role.

I insert this article in the RECORD for the benefit of my colleagues:

MIRACLE IN BALTIMORE

(By Neal R. Peirce)

After more than 30 years in a row house in southeast Baltimore's Patterson Park area, Matilda Koval was set to move out. The neighborhood was on the slippery slope to slumdom: There was a fire a week; rats were everywhere; the alleys were so strewn with debris that sanitation trucks couldn't make their way through. European ethnic families like her own were leaving in droves. In her immediate neighborhood alone, 40 to 60 houses were abandoned and boarded up.

That was four years ago. "But nothing can make me move now," says Mrs. Koval, a local legend for Ukrainian pastries and indefatigable organizing talents. The reason: Local residents, led by Mrs. Koval and others, were able to make common cause with Baltimore's banks and savings and loans and city government in a Neighborhood Housing Services organization. And the NHS is performing small miracles in turning a declining neighborhood around.

Since January, 1975, when the NHS opened its doors, the rate of home ownership in many blocks of Patterson Park has risen from as low as 20 per cent to as high as 75 per cent. Residents have gone on a spectacular paint-up, fix-up spree. Loans totaling $4 million have been secured for people to purchase and rehabilitate their homes. The share of houses

meeting housing code standards has gone from 40 to 80 per cent.

Buoyed by a fresh confidence in their neighborhood, residents have stopped their outward flow and new people, including many young professionals, are moving in. But by channeling the newcomers into larger homes needing major investment, the NHS has been able to keep smaller units for poorer residents and prevent their displacement as renewal proceeds.

The Baltimore NHS is not alone. The same concept, pioneered in Pittsburgh in the late 1960s, is being tried in 52 neighborhoods in 46 cities around the nation, from Chicago (which has four in operation) to San Antonio, from Tampa, Fla. to Oakland, Calif. Twenty-nine new NHSs are now in development. Under a bill passed by the Senate and now awaiting House action, the total would be raised to some 200 by 1981.

But except for technical advice and a minimum of start-up funding, the NHSs have not depended heavily on the federal support. Quite to the contrary, the programs have succeeded because the "feds" are only peripherally involved, because the approach is grass-roots based and free of the layers of bureaucracy and regulations which plague so many government housing efforts.

Up to now, federal guidance has come from the Urban Reinvestment Task Force, a joint effort of the federal financial regulatory agencies and Department of Housing and Urban Development. The pending legislation would create a permanent Neighborhood Reinvestment Corporation. But it too would be a very independent, quasi-public organization, and doubtless would continue under the guidance of William Whiteside, the genial, bearded Californian who has spread the NHS from coast to coast.

Local NHSs succeed because they are based on a partnership between groups often at loggerheads. The citizens of a neighborhood agree, at least within NHS, to forsake rough confrontation tactics; the city government to provide essential services; the lending institutions to make reasonable risk loans in an area they may have redlined before.

In Baltimore, it was Matilda Koval's block club, working with Baltimore's Southeast Community Organization, one of the country's most broad-gauged and activist local citizens' groups, that formed the nucleus of resident participation. Robert Embry, then Baltimore's housing commissioner (and now an assistant secretary of (SHUD), pledged the city's co-operation for necessary improvements in sanitation, lighting and code enforcement. The lenders, originally very special, were brought into camp by Howard Scaggs, president of Baltimore's American National Building and Loan Association.

But before the Baltimore NHS was launched, 40 community residents, lenders and city officials held a two-day workshop on neutral turf—in Easton, on Maryland's Eastern Shore. There, says Mr. Scaggs, they let out their antagonisms, identified Patterson Park's problems, and finally determined "we should collectively attack the problems instead of each other."

After that the Ford Foundation donated $100,000. Mr. Scaggs and his savings and loan associates raised $200,000. The Urban Reinvestment Task Force lent staff support. Mrs. Koval and her friends kept the heat on the city government—and on any laggard neighbors to fix up their properties, by some blunt peer pressure and housing code enforcement.

The NHS operates as a friendly all-around broker. Recognizing that many lower-income people don't know how to approach a banker about a loan, it counsels them on how to do that, helps them apply for urban homesteading or government-sponsored low-interest loans, or where all else fails, offers them extremely inexpensive loans from its own high-risk revolving loan fund.

How widely can NHS projects be extended around America? Mr. Scaggs believes all of Baltimore, even its most devastated neighborhoods, could one day be covered.

What is clear is that race doesn't make much difference to the program's success. Patterson Park is overwhelmingly white and Catholic—Polish, Ukrainian, Greek, German, Irish, plus a sprinkling of Orientals and Lumbee Indians, and only 10 per cent blacks. But nationwide, 52 per cent of NHS neighborhoods have more than 50 per cent black or Hispanic residents, some close to 100 per cent.

Mr. Whiteside has repeatedly warned that the NHS concept shouldn't be expanded too rapidly lest the quality of staff work and sensitivity in stimulating local initiatives be lost—a rare modesty and aversion to empire-building among bureaucrats.

But he is anxious to experiment increasingly with fresh strategies to preserve and restore neighborhoods. Five efforts in neighborhood commercial revitalization have been started. An apartment improvement program, begun in Yonkers, N.Y., and soon to be tried in Hartford, enlists lenders, property owners and tenants in a partnership to upgrade deteriorated multi-unit buildings.

On the drawing boards—or at least in the embryonic stage—are experimental strategies to manage and market vacant buildings, to cope with neighborhood crime, to bring the schools into a closer partnership in community revival.

With the average big federal department, one would have to shudder at such an ambitious agenda. But as long as Mr. Whiteside and his colleagues can grow slowly and remain insulated from the greater Washington bureaucracy, acting simply as catalysts for actions that local people themselves must launch and maintain, the dangers may be minimal. Indeed, this may be one of the very few federally inspired efforts in which more—not less—is better.●

## STATEMENT OF CHAIRMAN AL ULLMAN, COMMITTEE ON WAYS AND MEANS, WITH RESPECT TO THE RULE TO BE REQUESTED ON H.R. 6853, RELATING TO THE PAYMENT OF EXCISE TAXES IN THE CASE OF FISHING EQUIPMENT

### HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. ULLMAN. Mr. Speaker, the Committee on Ways and Means has ordered H.R. 6853 favorably reported to the House with amendments. The bill relates to the timing of excise tax payments on the sale of fishing equipment.

I take this occasion to advise my Democratic colleagues as to the nature of the rule that I will request for consideration of H.R. 6853 on the floor of the House. The Committee on Ways and Means specifically instructed me to request the Committee on Rules to grant a closed rule for consideration of H.R. 6853 which would provide for (a) committee amendments which would not be subject to amendment; (b) 30 minutes of general debate, to be equally divided; and (c) one motion to recommit with or without instructions.

The committee expects to officially report the bill and file its report by April 21. It is our intention to request a hearing before the Committee on Rules as expeditiously as possible.●

## THE BACKFIRE BOMBER ARGUMENT

### HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. SYMMS. Mr. Speaker, in today's Washington Post the highly respected columnist George Will addresses the issue of the Soviet Backfire bomber and how it is to be counted in the SALT negotiations. It is an acknowledged fact that the Backfire is a strategic aircraft—that is, it has the range and capability to attack the continental United States. It has been designed for in-flight refueling.

In 1976 the CIA commissioned performance analyses of the Backfire from the three U.S. aircraft companies that have extensive experience with bomber aircraft—Boeing Co., General Dynamics, and North American Rockwell. All three, in separate independent analyses, estimated the range of the Backfire to be between 5,200 and 5,600 miles.

Another point, Mr. Speaker, is that even if the present operational range of the Backfire were to be no more than 3,500 miles as Mr. Herbert Scoville would have us believe, any improvements that the Soviets made in jet engine technology in the future could result in a 35- to 50-percent increase in operational range without making modifications to the aircraft itself. This would be completely unverifiable by the United States.

I would like to include the George Will column in my remarks and commend him for his thoughtful analysis:

BACK TO THE BACKFIRE ARGUMENT

Lawyers have an axiom: If you have the law on your side, argue the law; if you have the evidence on your side, argue the evidence; if you have neither, pound the table. In an overwrought letter in response to my recent column on the Soviet Backfire bomber, Herbert Scoville pounds the table.

Scoville once was a government disarmament adviser, and his arguments are of interest, if only because they are, in primitive form, arguments the Carter administration will use in defense of the strategic arms limitation agreement it is negotiating. Scoville's ill-temperedness is understandable: He has the unenviable task of defending the administration's position that Backfire is not a strategic weapon and so need not count against Soviet strategic-arms limits.

Scoville's bald assertion that Backfire cannot return to Soviet bases after striking targets in the United States is misleading because Backfire can be refueled, and it is irrelevant because Backfire can strike the United States and land in a third country, such as Cuba. (Many U.S. strategic bombers counted in SALT also would land in third countries. No U.S. strategic bomber can return to the United States after a strike against the Soviet Union without refueling.)

Scoville challenges the statement that the administration has accepted 600-kilometer range limits on cruise missiles. In fact, the administration has accepted such limits on all armed ground-launched cruise missiles, all armed sea-launched cruise missiles, and all armed air-launched cruise missiles except those carried on "heavy bombers."

Because of President Carter's unilateral and unreciprocated decision to cancel the B1 bomber, the only heavy bombers the United

States will have for the foreseeable future are the aging B52s.

Scoville suggests that if the United States insisted that Backfire count against Soviet SALT totals, the Soviets would insist on counting U.S. F111s and F4s based in Europe and on carriers. But F111s and F4s are hardly comparable to Backfires: They have much less range and much lighter payloads than Backfires have.

Of course, if the Soviets want to count U.S. planes deployed to defend our allies, the Soviets should be willing to count the enormous and expanding systems with which they threaten our allies. And, of course, Scoville knows, but does not care to dwell upon, the fact that the Soviets are unwilling to do so.

To understand why the Soviets are unwilling, consider the most recent argument from Arthur Cox, whose ringing defense of the Soviets' position on Backfire started this agreeable tempest. Cox, who is a paid consultant to the administration, says that if the administration had insisted that Backfire count as a strategic weapon, then the Soviets would have insisted that FB111s count against U.S. totals. Cox notes that the Soviets have not "demanded" inclusion of FB111s in strategic totals.

Perhaps Cox thinks that is an example of Soviet magnanimity. On the other hand, it could have something to do with the fact that the Soviets soon will have nearly three times more Backfires than the United States has FB111s.

Cox also notes that the Soviets have not "demanded" that we include our fighter-bombers based in Europe, Asia and on carriers. But it would be startling indeed if they did demand that theater forces be included in the equation.

Here is how the balance looks for medium-range missiles: U.S., 0; U.S.S.R., 600 (SS4s, SS5s) *plus* the new SS20s being deployed. And medium bombers U.S., 60 (FB111s); USSR, approximately 600 (Badgers and Blinders).

As to other nuclear-capable aircraft of less than intercontinental range, the Russians also have an advantage. In Europe alone they have roughly 1,400 against the United States' 400. (These figures are from the 1976 annual report of the U.S. Arms Control and Disarmament Agency.)

Cox's most revealing argument consists of quoting the Soviet statement that "to raise such questions would lead matters to a situation where there will be no agreement at all." And there you have the administration's negotiating posture. The Soviets determine the agenda for negotiations and then the substance of agreements, because they know the administration believes that almost any agreement is preferable to no agreement.

The final argument that will be heard from the administration before the Senate rejects the SALT agreement will be: This is better than nothing.

By a considerable margin, the Senate will disagree.●

## THE AGRICULTURAL TRADE EXPANSION ACT

### HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. HAMILTON. Mr. Speaker, events of the past few years, especially of the last several months, have American farmers worried about what 1978 will bring. The agricultural strike has shown this concern in the Nation's Capital and many other communities across the land. A large number of farmers who have decided not to strike are nonetheless restless and discontent. My contacts and correspondence with ninth district farmers have convinced me that the malaise runs very deep indeed. There is among them a widespread feeling that American agriculture has been dealt a severe blow. They are fretting about low prices at market, soaring production costs, a decreasing share of the consumer food dollar, a declining farm population, rising farm imports and sagging farm exports. Pessimists are even talking about the demise of a way of life that is older than the Nation itself.

THE CONCERNS OF FARMERS

A brief look at the 1977 statistics on the finances of American agriculture reveals that there is cause for some alarm. Under the influence of slackening world demand for our food and fiber, national farm income slipped to about $20 billion, a mere 60 percent of the record $33.3 billion earned in 1973. When adjusted for inflation, the 1977 income figure was the lowest in over 40 years. Return on farm equity, which averaged 3.3 percent during the 1960's and 6 percent between 1972 and 1975, dropped to 2 percent. Farm debt reached $116 billion, up 15 percent from 1976 and double the level of only 5 years before. The prices of key commodities such as corn and wheat, which sold for up to $4 and $6 a bushel just a few years before, fell sharply with many farmers failing to break even on average per bushel production costs of $2.20 for corn and $3 for wheat. In the first 9 months of 1977 alone, overall farm costs rose 4 percent while prices fell 7 percent. Approximately 10 percent of all farmers were caught in a cost-price squeeze described by the experts as "dangers". These were generally newer farmers who purchased their land and equipment, or older farmers who expanded their operations, in the "boom years" of the 1970's. Other farmers were getting by, but the prosperity they recently enjoyed seemed long gone.

There are other matters of grave concern to our farmers beyond the current cost-price squeeze. Many of them fear the long-term effects of their inability to control their prices and costs. Our modernized, energy-intensive agriculture carries with it the potential to produce unbelievable quantities of food—and bin-busting surpluses with no market outlet. History shows that our efforts to reduce the output of this efficient industry have not always met with success. Our agriculture also requires a greater dependence on high-cost services and goods. Farm products move to market in a transportation system that is increasingly costly to operate and always susceptible to the actions of labor. Shipping and loading costs sometimes loom as large as the expenses of planting and harvesting. The trucker, the railman, and the dockworker have become as important to the farmer as the hired hand. In addition, the costs and availability of fertilizer, fuel, machinery, and pesticides make long-range planning difficult. The only certainty is that these items will be more scarce and higher priced in future years. Farmers, just as many other businessmen, are now captive to the decisions of corporate managers, labor leaders, and oil ministers. Farming is no longer the free-standing, self-sufficient enterprise it once was.

Another issue of concern to our farmers is their decreasing share of the consumer food dollar. Many ninth district farmers have complained to me about the ever-increasing bite of the middlemen who stand between them and consumers. There can be no doubt that the middleman's share is enlarging at the expense of the farmers because there is no other way to explain the fact that prices in the supermarket have risen while prices on the farm have stabilized or fallen. The recent statistics are clear enough. Last year, personal food expenditures by Americans reached $218 billion. The farmer's share of the total was about $56 billion, or 30 percent. However, the share of the total that went to pay the labor costs of marketing was about $58 billion, or 31 percent. It has been pointed out that 1977 was the first year in which the farmer's share was smaller than the share of marketing labor. Should this trend continue, the farm-product component of food costs could become so insignificant that even the greatest changes in producer prices would have little effect on consumer prices. We do not need to be told about the ultimate consequences of dealing the farmer out of the free-market game of supply and demand. Suffice it to say that they would be dangerous for farmers, middlemen, and consumers alike.

Still another problem for our farmers is the declining farm population. According to figures based on regular surveys taken by the Bureau of the Census, farm population dropped by 1.4 million, or 14 percent, between 1970 and 1976. In the latter year it reached a new low of 8.3 million persons. Thus, fewer than 1 in every 25 Americans now lives on a farm, as opposed to one in every four in 1935, when the farm population numbered 30.5 million persons. The number of farms in the United States has fallen as well, from 6.8 million in 1935 to 2.8 million in 1976. The problem of fewer farmers and farms is not really one of production. The output of crops and livestock has actually climbed 20 percent since 1970. Rather, it is a problem of "political clout." Secretary Bergland, himself a former Member of Congress, is fond of remarking that the American farmer is outgunned 400 to 35 in the House of Representatives. Of course, less farm strength in the halls of Congress means that farmers have less opportunity to promote the legislation they need and less chance to block the legislation they do not want. Some observers have cited the meat price controls of 1973 and the various farm export restraints of 1973–75 as actions of an urban-oriented Congress too sensitive to food prices and not sensitive enough to farm problems. They believe that such controls and restraints could not have been put into effect when farmers were better represented.

A further difficulty faced by our farmers is the agricultural produce being im-

ported into the United States from abroad. Although many of the imports—such as coffee, cocoa, tea, spices and tropical fruits—are not produced in commercial quantities here at home, others—such as meat and meat byproducts—are. The import market thus reflects a consumer demand for foods and food preparations that could be satisfied at least in part by American farmers without any change in consumer preferences. The value of agricultural imports rose from $11 billion in 1976 to $13.5 billion in 1977. Much of the increase was due to higher unit prices, not greater volume, but there is little consolation in that fact since every consumer dollar committed to the purchase of imported food is a consumer dollar which escapes the grasp of our farmers. Because our market is one of the freest and most open in the world, the prospect is that agricultural imports will continue to climb in value.

THE PROBLEM OF FARM EXPORTS

A final concern of farmers is the uncertain export market for their produce. While the value of farm exports was up 5 percent in 1977 to $24 billion, volume was down 4 percent to 100 million metric tons. An export price index that averaged above its 1976 level accounted for the contrary trends. Besides lower export volume, farmers were troubled by the slippage of certain key commodities. The value of wheat exports plummeted 28 percent to $2.9 billion, with volume declining 8 percent to 25.5 million tons, the lowest volume since 1972. The average export unit value of wheat ($115 per ton) was more than one-fifth below its 1976 level. Exports of feed grains fell 19 percent in value to $4.9 billion, with volume down 6 percent to 48.5 million tons and average export unit value ($101 per ton) off more than one-tenth. Also, the value of exported vegetables and meats dropped 6 percent and 1 percent, respectively, to earnings of $674 million for vegetables and $617 for meat. As these statistics show, wheat and feed grains are the sore spots.

There can be no denying that the world grain situation has changed. The chronic shortfalls of the recent past have given way to huge surpluses. World production of wheat and coarse grains will probably reach 1.1 billion tons this year, only 4 percent below the record harvests of last year. This bounty comes at a time when immense stocks of these commodities are already on hand. By the end of this year, there should be about 165 tons of wheat and coarse grains in storage, enough to satisfy about 15 percent of world need. The United States will be holding about 45 percent of the surplus, but much of the remainder will be concentrated in the developing nations where grain deficits have been traditional. The case of India is a helpful illustration. Two favorable monsoons have boosted grain production to such an extent that government-held stocks are approaching 20 percent of annual consumption. Indian agricultural experts have considered the option of making India a grain exporter. It is apparent that the abundance of grain in India and other developing nations has closed those markets to the American grain farmer, at least in the short term.

The problems of the would-be grain exporter are especially acute, but we should not overlook the problems of exporters of other agricultural commodities. Farmers today are facing the prospect of increased competition in most world food markets. The chaotic fluctuations in supply and demand of the past few years are yielding to more stable conditions in which nations worry less about food shortages. Total world output of food in 1977 was up 1 percent over the previous year and per capita food production was only slightly below the 1976 record. Total output and per capita production were up 14 and 6 percent, respectively, over the critically low levels of 1972. Such prosperity in successive years is bound to complicate the life of the exporter. Many experts have forecast a mixed farm export scenario for 1978. The value of farm exports this year will range from $22 to $24 billion, either equal to or below last year's value. On the other hand, the volume of farm exports will be about 110 million tons, a 10-percent increase.

THE IMPORTANCE OF AGRICULTURE AND FARM EXPORTS

During one of my recent visits to the ninth district, a well-intentioned urban constituent asked me why there is so much talk about the farmer. "I know we couldn't eat without him," he said, "but every time I turn around the Congress is looking at another farm bill." This puzzled constituent failed to take account of the enormous economic significance of American agriculture. Like so many other people, he was thinking of how few farmers there are, not how much those few do. Farming, the largest American industry, is in fact the backbone of the national economy. Our 4.4 million farmworkers make up one-fifth of all private business in the United States. Last year farmers spent $40 billion to live and another $85 billion on agricultural production. In 1975, farmers spent $2.4 billion on tractors, $1.2 billion on cars and trucks for business use and $5.2 billion on other machinery and equipment alone. They maintain assets of $730 billion and pay interest on their substantial debt. This economic vitality is not limited to the farm itself. In one way or another, farmers provide a living for millions of merchants, bankers, schoolteachers, and others who serve the farm community. Also, the production, processing, and distribution of food account for one-fifth of the gross national product and employ more than 15 percent of the total civilian work force. Simply put, it is not possible to overestimate the economic importance of farming.

If agriculture is the backbone of the national economy then exports are the backbone of agriculture isasmuch as they provide the farmer with a good share of his market. Exports have other benefits, too. They reduce the trade deficit, stimulate growth in the agricultural sector and help the American consumer. Perhaps we can better understand our farmers' worries about exports if we consider briefly the various contributions that exports make.

Those who know agriculture well know that it depends on exports to sustain its production. Without exports farmers would constantly face the grim dilemma of staggering surpluses or drastic cutbacks in production. It is a truism that the American agricultural machine is much too efficient to be contained within the limits of the domestic market alone. In 1976 over 337 million acres were harvested—the most in two decades—and about 100 million of those acres produced for export. The latter figure represents twice the export acreage of the 1950's and half again that of the 1960's. Many farmers dedicate far more than this average ratio of land to export. For example, those who market wheat and soybeans export over half their produce. In cotton and rice the figure is over 40 percent. Sizable portions of other commodities—such as tobacco and feedgrains—also go abroad. All in all, today's farmer receives about one-fifth of his income from sales overseas. The view from Europe, Asia and South America is just as impressive. The American farmer is supplying about 16 percent of the value of all agricultural commodities that move in world trade, up from 12 percent in 1971. The breakdown of this percentage is striking. Of the major commodities being sold around the world, three-fourths of the soybeans, half the wheat, one-third the cotton and one-fifth the vegetable oils are American-grown. In addition, about 70 percent of all food aid originates on our shores. There can be no question of the great reliance of many nations on our high-quality farm products.

A second benefit of agricultural exports is the positive contribution they make to America's international trade account. Agriculture, which has contributed a surplus to that account every year since 1960, enables the country to import everything from oil and strategic raw materials to fully manufactured consumer items. The dollar would face disaster in international money markets and our rôle in the world economy would be compromised if we could not finance these imports properly. Of course, most people are well aware that our trade position has been deteriorating. The rapid rise in oil imports, our own economic expansion and the slower growth of the economies of our major trading partners resulted in $27 billion worth of red ink in 1977 and may be followed by a $25 billion to $30 billion shortfall this year—levels nearly triple the 1976 deficit of $9.2 billion. Our trade position is bad, but there is no telling how much worse it would be without the usual surplus of $10 billion or more registered by our farmers. It is apparent that we will continue to need all the "trade relief" we can get from the agricultural sector.

I have already mentioned that exports provide the farmer with a good share of his market. It should come as no surprise, then, that a third benefit of agricultural exports is the positive effect they have on the farm economy. Economists have taken note of the salient features of this

"export stimulus." The dollar that the farmer earns abroad moves quickly through the economy. Every such dollar he returns to the farm sector is more than doubled in the economy. The consequences for business activity and employment are quite remarkable. As concerns business activity, farm exports created nearly $50 billion worth as early as 1975—$30 billion in the agricultural sector itself and $20 billion in the support sectors of food processing, transportation, warehousing, wholesaling, retailing, and so forth. As concerns employment, about one-half million farmworkers are required to produce for export. Another half million people have jobs in the support sectors that are dependent on farm exports in one way or another. Farm sales in foreign countries are now, and will continue to be, the economic engine that drives rural America.

Expert commentators on the farm scene will go on and on where talk turns to the benefits of exporting American agricultural products. Beyond the three obvious benefits I have discussed, there are scores of additional ones. Farm exports make the American consumer one of the best fed in the world. Contrary to the popular belief that exports drive food prices up and despite a twofold increase in exports since 1970, the disposable income left over after food purchases has inched up—not down—to 83.1 percent of income since 1970, a rise of four-tenths of 1 percent. This means that the average American still spends more on his car than on his groceries. The economic mechanism at work here is no mystery: consumers benefit from exports because the exports allow farmers to be more efficient by maintaining full production at the lowest possible unit cost. Farm exports also carry tremendous weight in our foreign relations. Our food aid programs—especially those commonly called "concessional"—have helped countries to build their economies, to feed millions of hungry after devastation and to offset the detrimental effects of skyrocketing populations. Such generosity is not often forgotten, even in times of political turmoil and change in the recipient nations. Finally, farm exports save the taxpayers money because the farmer can depend on a market and not on the Government for his income. Although it is difficult to say just how much the Federal farm budget has been reduced by exports, there is general agreement that the reduction in the cost of the subsidy programs has been sharp.

The more we think about farm exports, the more important they seem to be. On a recent visit to the ninth district I watched a Hoosier farmer hard at work in his fields. It occurred to me that he might not realize just how indispensable he had become to people all over the world. The cares of the international community—peace and economic development—seemed very far away, but they were being decided right there where a plow cut the earth and a man cast an occasional glance toward the sky. Those of us who deliberate on policy would do well to ponder carefully what we can do to stabilize and encourage the export of our farm produce. This is an age of superlatives, but it is exaggeration to say that there are few issues of greater urgency.

WHY FARM EXPORTS HAVE GROWN

To better understand what we should do we must first understand why agricultural exports have assumed a central place in our economy. They have not always occupied such a place. Late in 1972, however, there began an "export surge" unprecedented in our history. A number of factors paved the way for it. Consider both the factors that are beyond our reach and those that we can control.

Bad weather in many parts of the globe was one of the forces behind the export surge. Drought and cold devastated crops and led to meager harvests in nations that traditionally produced enough to make farm imports incidental. In 1972, adverse weather in the Soviet Union and China sharply increased our farm exports to those countries through 1974. Similarly, poor weather on the Asian subcontinent in 1973 boosted our exports of rice and wheat to that region through 1975. Bad weather struck here at home in 1974, keeping the value of our exports up. The following year brought another marginal Soviet crop, and a severe drought hit Europe in 1976. Last year saw adverse weather in China, North Africa, and Asia. The weather has certainly been a key to the new found international stature of the American farmer. He is one of the few with sufficient strength to keep the crops growing and the exports flowing even when the weather would have it otherwise. Immense productivity may sometimes be a curse, but it may also be a blessing in disguise.

A second factor in the export surge was rising income and hope for a better life in much of the world. In the developed countries, average per capita income is expected to reach $4,000 per year in 1980, up 22 percent from the 1970 figure of $3,100. The large income gap between rich and poor shows few signs of narrowing, but the group of so-called middle-income developing nations—in North Africa, the Middle East, the Far East, and Latin America—has an average per capita income of $900 per year that has recently been increasing by as much as 4 percent to 6 percent annually. The 1 billion inhabitants of these nations are noticeably better off than they were just a few years ago. In addition, the developing world as a whole has an average per capita income that is growing about one-third faster than that of the industrial countries at a comparable stage of their development. Recent growth rates of developing countries have also been higher than in the developed world. Of course, the American farmer has benefited from these trends. More and better food is one of the first items on the "shopping list" of a family just beginning to enjoy some small increase of prosperity.

A final factor behind the export surge was our agricultural policy. By general consensus, our domestic farm programs of the past decade—unlike those, for example, of the protectionistic European Community have been sensitive to conditions of international trade and consequently have served to keep American farm commodities competitive in world markets. At the international level itself, the devaluation of the dollar, the existence of a foreign marketing base laid down in the 1960's, major trade negotiations and the opening of trade relations with Eastern Europe, the Soviet Union, and the People's Republic of China have all played a positive role. Trade relations with the non-market-economy nations are especially noteworthy since the United States in general—and American agriculture in particular—have been primary beneficiaries of the East-West link. In the period from 1970 to 1976, total trade between East and West almost quadrupled in value from $13 billion to $48 billion. Our entry into these previously untapped markets expanded our export volume and helped to move our trade account toward balance. As might have been suspected, the East-West link brought on massive growth in our farm exports to the East. Between 1970 and 1976, our farmer's shipments to the non-market-economy nations jumped in value from $210 million to $3 billion. In terms of "export mix," the agricultural share of our total exports to the East climbed from 50 percent in 1970 to 62 percent in 1976. Filling a void that these nations could not fill themselves was certainly in the best interests of our farmers. That it may also have been in the best interests of those who received our food is consistent with the spirit of détente.

THE FUTURE OF FARM EXPORTS

What does the future hold for the American farmer? We must be very concerned with his well-being this year, but we should not let the crush of present circumstances blind us to events a few years down the road. One of the most pressing questions in the longer term is clear enough: Will the farmer's export market expand or contract? That is, will farm exports continue the general upward movement that began late in 1972 or will they drop down toward the levels we knew before the surge? The answer is of critical importance because, as we have seen, exports are so essential to the farm economy. My survey of the literature on the future of agricultural exports convinces me that there are several factors which may prompt ever greater exports in the future. Again, some of these factors are beyond our reach while others can be controlled. Let us consider what they are.

The uncertainty of the weather must loom large in any consideration of the future of farm exports. Most meteorologists believe that the relatively good weather of the past few years cannot continue. They point out that such regions as the Asian rice bowl and the Russian wheatlands are places where bad weather tends to be the rule rather than the exception. A long drought in the former or a sudden freeze in the latter—events which have happened so many times before—could occur again, wiping

out the food reserves we think so large and putting a strain on the unparalleled productivity of the American farmer. In fact, many experts who have studied the matter must be described as quite pessimistic. They say that altogether probable variations in weather are bound to cause severe food shortages simply because the world supply is so precariously balanced. They caution us to base our agricultural policies on the possibility of weather extremes in any locale, not on optiumum growing conditions. Some of the experts have even gone so far as to predict long-range changes in climate—that is, changes in overall weather patterns—that could make American agriculture the permanent mainstay of the world food economy and the only hedge against starvation on a global scale. While we can only pray that such predictions are wrong, we should help our farmers prepare for the challenge that may lie ahead. What these experts are suggesting our farmers have known for sometime: Weather and climate can often mean more than all the agricultural policies of the world combined.

Any assessment of the future of farm exports must take into account the burgeoning world population. In this regard, the problems to be weighed are really two—food distribution and food production—though the former is the more immediate one. By most estimates the world already produces enough food to provide the entire human race with a nutritionally balanced diet of 65 grams of protein and 3,000 calories daily. The twin specters of malnutrition and starvation continue to stalk a quarter of the world's four billion inhabitants because the mechanisms to distribute the oversupply of food are not adequate to the numbers to be fed. However, this ironic situation will become worse before it becomes better. The more serious problem of food production may be upon us sooner than we think. With it may come difficulties in food distribution that would make our present mechanisms seem efficient. Many demographers anticipate that by the year 2000 the world's population will approach 6.5 billion. If certain of their fundamental assumptions are only slightly off, the population could reach a full 7 billion—as many as 2 billion more than were expected just a decade ago. World food needs will probably have doubled by the year 2010. Moreover, some 50 percent of all people will be living in cities more or less remote from the sources of food supply. The comparable figure today is 39 percent. The impending "food crisis" may make the energy crisis seem pale by comparison. In any case, the American farmer will certainly be called upon to step into the breach.

The recovery of the world economy from the 1974–75 recession is, despite its slow and painful character, another sign that our farm exports may pick up in the coming years. The pressure of double-digit inflation has eased to more acceptable levels and unemployment is beginning to edge down. Reasonably encouraging growth targets (4.5 percent for the Economic Community, 4.5 percent to 5 percent for the United States, and so forth) are being set. Resulting higher personal income abroad should attract our farm exports as foreign consumers choose to improve their diets. However, in our enthusiasm for better economic conditions we should not ignore the serious troubles that remain. Staggering balance-of-payments problems, brought on in large measure by costly oil imports, are causing national economic planners to proceed with caution. Many nations are reluctant to prime their economies for expansion out of fear of renewed inflation. World economic growth is not as strong as we would prefer since it is substantially below its prerecession levels, but a "growth recession" (as some economists have termed it) is better than a plain recession. It is hoped that policies of patience and prudence will pay off in the long run.

A fourth factor likely to affect our farm exports is the current round of trade negotiations—the so-called Tokyo round underway in Geneva. These negotiations, now in their final stages, are intended to free up world trade by reducing national trade barriers. Reductions in tariffs and nontariff barriers such as quotas are under consideration. Under a timetable agreed to last summer, major participants are aiming to reach a broad consensus this summer on the elements to be contained in a package of new multilateral trade agreements. The package may contain:

General tariff reductions of up to 40 percent to be phased in over a period of 8 to 10 years;

Agricultural trade rules to provide for greater market access, supply and price stability and safeguards against world famine;

Improved rules governing the use of temporary import relief;

New limits on the use of export subsidies and measures to counteract export subsidies;

Uniform customs valuation systems and tighter controls on quotas and licensing systems; and

A new "code of conduct" to prevent the abuse of anticompetitive domestic policies that affect exports.

Our farmers have a critical stake in these negotiations. It is essential that their export interests not be sacrificed in an attempt to gain trade advantages for other less efficient American industries. It is also essential that the protectionism of the large agricultural markets—the European Community and Japan, to name just two—be lessened. Our farmers will surely benefit from fairer international commerce. Their productivity alone gives them the power they need to compete head-to-head with any of the world's agricultural producers.

Yet another factor which will determine the future of our farm exports is our marketing policy. In today's competitive environment, an aggressive, well-funded policy is what we need. Our agricultural products will not sell themselves. On the contrary, they must be sold in conditions where buyers have a wide range of choices before them. This means that our marketing policy must be double edged; improved market development must go hand-in-hand with improved marketing technique. In the area of marketing policy we have some fierce competitors. Argentina, Australia, Brazil, Israel, South Africa, and other leading agricultural producers together spent more than $146 million on the promotion of farm products in 1976, a gain of 3.5 percent over the previous year and 56.9 percent over 1966. Leading the way were Israel (1.54 percent of export earnings spent) and Australia (1.1 percent of export earnings spent). By comparison, the United States spent $21.6 million for the promotion of farm products in the same year, 5 percent less than a year before and only 4 percent more than in 1970. This expenditure equaled a mere 0.1 percent of export earnings. There is ample room for improvement here.

A sixth item in the future of our farm exports is our relationship with the nonmarket-economy nations—specifically, the countries of Eastern Europe, the Soviet Union, and the People's Republic of China. As I mentioned before, American agricultural trade with these nations has increased dramatically in this decade. Eastern Europe bought American farm products valued at $1.2 billion in 1977, up from $100 million in 1969. Preliminary estimates put the 1977 value of our farm exports to the Soviet Union at $1.1 billion, up from $11.6 million 8 years before. China imported about $625 million worth of our farm products in 1973 and 1974, after which it ceased to be a significant market for us. However, it returned to the American farmer last year to purchase $66 million in soybeans and cotton. Summing these figures, we find that these non-market-economy nations made up 12.5 percent of our 1977 farm export market. Aside from the traditional factors that influence trade among nations, an increase of our farm sales in the East awaits change in two additional areas: improvement in overall diplomatic relations and removal of ideologically motivated barriers to trade.

The advent of détente, with its better East-West commercial relations, has done much to confirm the belief that trade fluorishes when mistrust and hostilities are reduced. Consequently, additional efforts to find points of accommodation with the Soviet Union and its Eastern Europe neighbors should provide positive results for our farmers. As we look forward to further trade benefits of diplomacy, however, our relationships with China stands out. If the diplomatic progress already made could be consolidated and momentum toward normalization recaptured, there would be a strong probability of large farm exports to that nation. China alone numbers among its population one-fourth of the world's inhabitants. Its desire to raise the standard-of-living of its people has been translated into purchases of wheat abroad. Annual import volumes of 9 million tons may be registered, but this wheat will come from Argentina, Australia, and Canada—not from the United States.

The removal of ideologically motivated barriers to trade with the East is just as important as an improvement in overall diplomatic relations. From the standpoint of the enterprising businessman, such impediments to trade can be more chilling than Government overregulation. One of the more prominent of these barriers is title IV of the Trade Act of 1974, a provision of law which prohibits the granting of most-favored-nation status and the issuing of Government credits to most Communist countries. At the present time, these restrictions are in effect for all Communist nations except Poland, Romania, and Yugoslavia. Thus, the nonmarket-economy giants—the Soviet Union and China, as well as some of the industrialized nonmarket-economy states, East Germany and Czechoslovakia—are denied full access to our markets and are kept from making credit purchases of our goods. The latter restriction hurts our farmers directly since credit sales cannot be made. The former hurts them indirectly since international traders who do not open their own markets cannot expect to find every market open to them. When all is said and done, trade is a two-way street.

The seventh, and final, item in the future of our farm exports is the condition of our Government credit programs. One of the principal initiatives—food for peace—has been used for more than 23 years to provide food and fiber to developing countries that do not have the funds on hand to pay cash. Under food for peace, American farm products are sent abroad on "concessional" credit extended for 20 to 40 years, in most cases at 3 percent interest. In all, some $26 billion worth of farm products have been shipped out bearing the food-for-peace emblem. Current volume is running at about 6.5 million tons per year. Although food for peace is intended primarily to alleviate hunger and reduce farm surpluses, another of its aims is economic development. The idea is to help a recipient nation so that it can eventually "graduate" from concessional food purchases to commercial ones. Boosters of the development aspect of the program point out that among the early recipients were post war Japan and 17 war-scarred nations of Europe, all of which became commercial importers by 1969. Those who are skeptical of this development aspect contend that the track record of the developing nations in the Third World is not nearly so strong.

The other principal initiative—the Commodity Credit Corporation export credit sales program—was designed to help the United States maintain its share of traditional markets and establish new outlets for farm products. This program provides short-term commercial credit to countries willing to buy American food but unable to put down cash. The normal term of credit is 1 year, though a 3-year period is allowed. Rates of interest have varied from 6.5 to 12 percent in recent years. Also, the supply from which the commodity is to be bought must be in excess of American domestic needs and export requirements, and the sale of the commodity must not displace normal commercial sales. From 1964 to 1974 the program accounted for 4 percent of all our farm exports. Its budget peaked in 1973 at over $1 billion, plunged sharply through 1975 and recovered after that. Credit totaling $1.7 billion will be available this year, a new record.

THE AGRICULTURAL TRADE EXPANSION ACT

As I have noted, the future of our farm exports will be determined to some extent by factors beyond our control. There are, however, things we can and should do to help insure that our farmers remain a potent force in world agricultural markets. Therefore, it is with great pleasure that I join my distinguished colleague from Illinois, Representative PAUL FINDLEY, and other Members of Congress in sponsorship of the Agricultural Trade Expansion Act. I am certain that this reasonable, measured response to the problem of farm exports would do much to keep the agricultural sector healthy in these trying times.

The first major provision of the bill would allow the Commodity Credit Corporation to extend credit over periods of 3 to 10 years to willing buyers of our farm products. This new "intermediate" credit initiative would bridge the gap between the generous concessional terms of Food for Peace and the strict commercial terms of the export credit sales program and would prompt more nations to graduate from concessional to commercial food purchases. Many countries might make such a move, but the most likely candidates for graduation would include nine concessional credit recipients with an annual per capita gross national product of more than $550: Israel, Jamaica, Jordan, Korea, Lebanon, Peru, Portugal, Syria, and Tunisia. Also, nations which were too rich to buy on concessional terms but too strapped to buy on present commercial terms would be encouraged to seek our farm export credit. Finally, an intermediate credit initiative would bolster our sales position by allowing the Commodity Credit Corporation to compete more evenly with such nations as Argentina, Australia, and Canada—all of which are able to provide farm export credit over a period of more than 3 years.

The second major provision of the bill would remove restrictions on the granting of Government farm export credit to nonmarket-economy nations. This new access to our capital would undoubtedly provide encouragement to those countries to buy our farm products, especially in times of oversupply. The export credit sales program has already met with success in Eastern Europe. Because three Eastern European states are exempt from the restrictions, short-term commercial credit granted in that region reached $250 million just 2 years ago. Potential for continued sales there is good because the traditional supplier—the Soviet Union—is not nearly as reliable as the United States. Of course, the huge economies of the Soviet Union and China and the industrialized economies of East Germany and Czechoslovakia have an even greater potential to absorb our farm products. I should point out that the extension of farm export credit to Communist nations—already a part of our policy—does not give those nations a "free ride" at our expense. They must meet high standards of credit worthiness just as other customers do. I should also point out that there is no law of politics to the effect that the best interests of traditional adversaries cannot sometimes be served together. In the final analysis, our failure to enter the food markets of the populous Communist nations is a disservice to ourselves alone. They will get the food they want from suppliers in the West, but we will not get their business.

Mr. Speaker, we know how important farm exports are and what must be done to increase them. The Agricultural Trade Expansion Act addresses a geninue need in a straightforward way. I commend the bill to the attention of my colleagues. I urge that you consider it carefully.●

## WYDLER FORECASTS "ATOMIC SPUTNIK"

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. TEAGUE. Mr. Speaker, the distinguished gentleman from New York (Mr. WYDLER), ranking minority member of our Science and Technology Committee, recently had discussions on nuclear energy with leading Soviet experts in Moscow and Kiev.

Upon his return, Mr. WYDLER wrote President Carter of his concern that this country has fallen behind in breeder reactor development and is slipping into second place in the nuclear club behind the U.S.S.R.

Although Mr. WYDLER and I do have some differences of opinion on what constitutes a strong breeder program, I feel that his letter makes for valuable reading. It is important that all the Members of the House have the benefit of Mr. WYDLER's perspective as the Congress prepares once again to vote on funding for nuclear technology development.

Therefore, Mr. Speaker, I submit Mr. WYDLER's letter to the President for the RECORD, as follows:

COMMITTEE ON SCIENCE
AND TECHNOLOGY,
*Washington, D.C., April 4, 1978.*

The PRESIDENT,
*The White House.*

DEAR MR. PRESIDENT: Today I am writing you from the perspective of a series of international energy discussions which I have just had with the Soviets. It is no exaggeration to say that we are on the verge of an "Atomic Sputnik" in terms of our nuclear policy vis-a-vis the Soviets. They are rapidly moving to build breeder reactor plants and deploy light water nuclear power plants so as to put us clearly in second place in the nuclear league. In particular, I discussed the status of breeder reactor development with Mr. Igor Morozov, Deputy Chairman of the Soviet State Committee for Atomic Energy. As you know, the critical question of which direction the U.S. Breeder program will take is before our Science and Technology Commit-

tee this week. I hope this letter will provide you additional insight on why our Committee is still concerned about the absence of a strong commitment in the U.S. program.

I am pleased that you have initiated an effort to come to some accommodation with the Congress on the breeder program and the Clinch River Reactor Project in particular. I share your view, as Secretary Schlesinger has related it, that continued confrontation on this issue is not in the best interest of the country. Chairman Teague has told me that you do feel that our nation needs a strong breeder program.

The fact is, however, that our program cannot really be strong without a demonstration of fast breeder technology in an operating plant. This plant does not have to be the one currently planned for Clinch River, but could incorporate more advanced breeder technology. However, until we make a larger commitment, we must keep the Clinch River Plant option open!

I have come to this conclusion about the breeder after my discussion last week with the Soviets in Moscow. I have also had extensive discussions with the International Atomic Energy Agency in Vienna and the French Atomic Energy Commission, all within the past year. In all cases the evidence is irrefutable. Other major developed nations are far ahead of us in breeder development. Our continuing technology program is simply not sufficient to keep this energy option open to the United States in a timely manner!

The Russians have no intention of slowing their already ambitious breeder program. They have been operating a 350 Megawatt plant on the Caspian Sea; this "Clinch River" plant has been on line for over 3 years. They plan to complete and begin operation of a 600 Megawatt plant in 1980. Thus within the next several years they will have accumulated operating experience of 6–8 years on two different breeder plant designs. Mr. Morozov told me that design of a 1600 Megawatt plant is about to begin and construction will start in the next few years. The Soviets expect that it will take only 7 years to build this commercial-sized plant!

Mr. President, I think you will agree that the Soviets are much farther down the road toward the breeder option than ourselves particularly when one considers the stringent U.S. requirements on breeder licensing. I'm afraid our fall-back position of an R. & D. Program is simply not enough. As we found in our space program, it is not enough to merely design successively more powerful rockets—one must build and fly them as well. We must tell the world we are a strong player in breeder development, and the only convincing way to do that is to build a plant and make a visible national commitment. The Russians' timetable calls for operation of a commercial size breeder reactor by as early as 1987. We cannot guarantee operation of the Clinch River Plant, which is far from commercial, by that date even if we "pulled out all the stops" on that project.

It is necessary, but not sufficient, to merely say that the United States will pursue a strong breeder program. That is a commitment to nothing. We cannot expect the Russians, French, British, Germans or Japanese to take it seriously. Mr. President, we either play the breeder ball game or become a spectator. What we have now, even if we keep the Clinch River team together, is only "half a program."

I think it is also important to tell you something about the Soviet commitment to light water reactor technology. The Soviets have decided to build and rely completely on nuclear-electric plants west of the Urals in the European sector of the USSR. This decision is based on the fact the Soviets are running out of oil, gas and good coal. Dr. Stanovmik of the Economic Commission of Europe said the Soviets have informed Eastern Bloc nations that they cannot count on any oil, and only on limited amounts of gas from the USSR. If one looks at Siberia as having potentially more resources than Alaska, I think it is inescapable to conclude that we face even a bleaker future than the Soviets for fossil fuel supplies. Yet we are limping indecisively on the nuclear option.

The Supreme Soviet of the Ukraine told me in Kiev that they will complete six large nuclear power plants in the next five years or so. The first unit is already on-line and facilities will be completed to reprocess nuclear fuel on-site to recover the precious energy stored in the uranium and plutonium.

I understand that you plan to make a strong public statement on the need to speed the deployment of light water reactors. I urge you to do so in the very near future so as to improve the climate for public acceptance of nuclear power. Your licensing bill was an important first step in this direction and I applaud you for it. I hope that you can accelerate a nuclear waste management program in the light of the recent DOE report on this issue. The technology for safe disposal of waste exists; the country is waiting for a program which matches the technology.

It seems to me, Mr. President, that you have brought about solidly constructive evaluation of the real concerns about nuclear weapon proliferation since last April. However, I believe that two basic facts remain unchanged. First, our cutback of the breeder program and lack of commitment to build a fast reactor plant is a clear signal to other nations that we are not serious about preserving this long-term option. Second, this country's indication that nuclear power is "a last resort" has undermined our credibility abroad and made us an unreliable nuclear partner. I think it has become clear that it should not require the arresting of our technology development to address your proliferation concerns.

The Soviets contend that they are just as serious as the United States about preventing the proliferation of nuclear weapons but "collective decisions" must be made on safeguards.

The CIVEX process appears an attractive route to blunting the terrorist threat for atomic weapons by a diversion-resistant fuel cycle for breeders. Reprocessing of light water reactor fuel could proceed in the near future under strict U.S. safeguards. Such activity could serve as a demonstration of U.S. concerns to the International Atomic Energy Agency (IAEA) and a basis for international safeguards agreements.

The Soviets clearly recognize the urgency of pursuing the breeder option based on world uranium reserves, common sense economics and the need for some degree of energy independence from fossil fuels. However, their goals for nuclear power go beyond the generation of electricity. The Soviets intend to satisfy one-third of all their energy requirements for heat and electricity thru nuclear power by the end of the century. They feel so confident about this that they are promising Eastern European nations all the electricity that these countries will require for future decades. The ambitious building program for atomic plants in the Ukraine is dramatic evidence of this commitment. I think you will agree that our own program pales beside the Soviets despite our clear need and technological edge. It is frightening to speculate on the degree of control of the world market they might achieve by implementing this program.

Mr. President, I think it is time we moved ahead on the nuclear option. We have spent the last year rethinking our nuclear future. We must now commit strongly to breeder technology including a demonstration plant to get valuable operating experience. We must also get many more nuclear power plants in place so that coal can be converted to critically needed liquids and gas. I hope you will move ahead boldly on both these fronts.

Sincerely yours,

JOHN W. WYDLER,
*Ranking Minority Member, Committee on Science and Technology.*●

## LOUIS SIDOLI—CITIZEN OF THE YEAR

### HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. SARASIN. Mr. Speaker, community involvement and public participation are the cornerstones upon which democracy stands and upon which our quality of life and social development depend. If anyone personifies these two qualities it is Mr. Louis Sidoli of Hamden, Conn., who is being named by the Hamden Italian-American Independent Club as its 1978 "Citizen of the Year." It is with great pride and appreciation that I join them in recognizing this fine community leader for his many outstanding contributions and endless generosity to the New Haven area for over 50 years.

A native of New York City, Mr. Sidoli attended the Seminary College, Bedonia, Parma, Italy, for 4 years. He was active in the wholesale beverage business from 1933 to 1962 and in 1965 became a director of the Hamden National Bank under its 1964 charter. He currently serves as director and consultant to that bank, which is now known as the American National Bank.

Over the years Mr. Sidoli has left a trail of accomplishments behind him and has received innumerable awards and citations from various civic, business, and educational organizations. His good will spread throughout the world and in 1954 he was made a Knight Commander in the Order of St. Sylvester. He was accorded this honor by the late Pope Pius XII for his many efforts and contributions toward the establishment of a home for the aged and orphans in Bedonia, Italy, near Parma, the home of his parents.

In 1957 he was the recipient of the Star of Solidarity from the Italian Government, followed by the Charles Carroll of Carrollton Award in 1958 from the John Barry General Assembly, 4th Degree, Knights of Columbus. He was again recognized in 1961 by the Italian Government when he was named Knight Commander of the Order of St. Agatha, San Marino, Italy, and was decorated a Knight, order of Merit by the Government.

His work in the community continued to receive acclaim throughout the sixties as he received the Veritas Award in 1965 from the Providence College New Haven Alumni Club and made a grand officer

for the Holy Sepulcher of Jerusalem, as well as a Knight Commander of the Italian Republic. Notre Dame University paid tribute to his service by awarding him the Golden Dome Award, and he was later named "Man of the Year" by the New Haven Evening Lions and the Humanitarian Award from the Knights of St. Patrick.

Mr. Sidoli remains active in the New Haven community and is presently State deputy of the Knights of Columbus, having served as their State treasurer and secretary. He is also a charter member and one of the founders of the Carmel Council of the Knights of Columbus in Hamden and assistant venerable of the New Haven Lodge No. 37, Sons of Italy. In addition, he is a former chairman of the Hamden Board of fire commissioners, and member of the board of finance of the State Labor Department's employment security board of review. He has also served St. Raphael's Hospital, Albertus Magnus College, Quinnipac College, Sacred Heart Academy, the Boys Town of Italy, and the Italian Legion of Merit in various capacities.

Indeed, it is rare in life that you find one who so selflessly gives of himself for the betterment of others. In a well-deserved tribute the community of Hamden is recognizing this gentleman, and it is with pleasure that I join them in applauding his commendable efforts.●

## HOW UNITED STATES IS HELPING IN HUGE ARMS BUILDUP BY SAUDI ARABIA

### HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. ROSENTHAL. Mr. Speaker, the United States is helping transform Saudi Arabia into "one of the leading military powers in the entire Middle East," according to an article in the April 17 issue of U.S. News & World Report.

Dozens of American corporations, hundreds of U.S. Government employees, and thousands of American civilian technicians are conducting this transformation, on which the Saudis may be spending as much as $30 billion or more by the mid-1980's.

Northrop Corp. is, in effect, operating the Royal Saudi Air Force; Raytheon Co., the missile air defense system; Avco Corp., the Saudi Coast Guard; Bendix, the Ordnance and Transport Corps; Vinnell Corp., the Saudi National Guard; and, of course, the U.S. Army Corps of Engineers is in charge of billions of dollars worth of military, military-related, and civilian construction.

We are building not only a viable military force for the Saudis but a national infrastructure as well. And it is being financed by our purchases of oil, which the Saudis have quadrupled in price over the past several years.

America has an important national interest in good relations with its leading source of foreign oil, but I have serious questions about the nature of that relationship. I do not believe it is in our best interest or the Saudis' best interest to see that nation transferred into a military power. It is one thing to protect an immensely valuable natural resource, but it is another matter to help change a country from backbench cheerleader and financier to frontline confrontation state in the Arab-Israeli conflict.

Saudi Arabia has never been a significant participant in previous Arab-Israeli wars, though it has sent soldiers and equipment. But with the multibillion influx of U.S. arms, it will be difficult if not impossible for the Saudis to stay out of any future wars.

At the very least, the Saudi role would be similar to that suggested in the U.S. News article:

. . . it could well play a key role as armorer for the Arabs who will have to shoulder the burdens of any fighting.

In my opinion, however, Saudi Arabia will have a difficult task confining its role solely to being the Arab arsenal. I suspect it will have a much larger role, whether it wishes to or not, particularly for its air force.

Saudi Arabia is not a tiny nation. It has more than double the population of Israel, its land mass is nearly 80 times larger, and its wealth is immensely greater.

Now the administration wants to sell Saudi Arabia 60 of our finest first-line advanced fighter aircraft—the F–15. These are to replace 37 British Lightning interceptors. A Pentagon study originally recommended selling only 40 replacement aircraft, and the Saudis agreed, asking for F–15's. The request was later increased, however, to 60 planes, and the administration accepted it. That number is 50 percent more than the amount of F–15's Israel would be permitted to purchase after the administration reduced Israel's request.

The Saudi Air Force does not need the F–15. This sale, in light of the across-the-board Saudi military buildup in general and the expansion of its air bases near Israel in particular, further threatens to alter significantly the balance of power in the Middle East and increase the danger to Israel. It raises important questions about the feasibility of Israeli withdrawal from its Sinai air base near Eilat at a time when Saudi Arabia is enlarging its own air base at Tabuk only a few minutes flying time to the southeast.

I am inserting in the RECORD at this point the U.S. News & World Report article on the Saudi buildup. This information should prove useful in the coming debate over the administration's Middle East aircraft sales proposals:

HOW UNITED STATES IS HELPING IN HUGE ARMS BUILDUP BY SAUDI ARABIA—A GROWING POWER

GUNS, PLANES AND TANKS MADE IN THE UNITED STATES FORM THE MILITARY MUSCLE, BUT THAT'S ONLY PART OF AMERICA'S OVERALL ROLE

DHAHRAN, SAUDI ARABIA.—An impressive combination of U.S. weapons and American know-how is helping turn this thinly populated kingdom into one of the leading military powers in the entire Middle East.

Billions of dollars' worth of U.S.-built planes, tanks, guns and other equipment are providing a much needed punch to a Saudi military machine charged with defending a country of about 7.5 million people in an area the size of the United States east of the Mississippi River.

The flow of military purchases from the U.S.—which could cost as much as $10 billion dollars during the decade that will end in 1984—is only part of the American connection here.

Hundreds of U.S. military advisers and thousands of civilians on the scene are engaged in a massive effort to modernize the Saudi armed forces.

Behind the tremendous push to develop a modern military force:

The conservative and firmly anti-Communist Saudis consider it necessary to keep pace with potential rivals in the Persian Gulf area—notably Iraq, ruled by radicals, and Iran, governed by a conservative Shah now but with an unpredictable future.

The Saudis also keep a wary eye on the Arab-Israeli conflict. Riyadh's direct involvement in possible future wars is considered unlikely, but it could well play a key role as armorer for the Arabs who will have to shoulder the burden of any fighting.

Finally, the Saudis are deeply concerned about Soviet activities in areas close to this kingdom. Moscow's decision to pour millions of dollars in arms into Ethiopia for a war with Somalia, plus the Cuban involvement in the fighting are cited here as evidence of the need to stay on guard against Communist expansion in the region.

However, the Defense Minister, Prince Sultan ibn Abdul Aziz, says Saudia Arabia has no intention of creating a large military establishment. That would hardly be feasible in a country with such a small population. The Army now numbers only 40,000.

What the Saudis are actually planning to build is a highly mobile Army with a strong mechanized and airborne capability. They also envisage a powerful Air Force and a sophisticated missile-defense system.

Currently, the Army consists of a single armored brigade, four infantry brigades and three artillery battalions, backed up by 300 AMX–30 French tanks and 250 American M–60 tanks. The Air Force has 110 Northrop F–5E's and 37 obsolete British Lightning interceptors. It hopes to augment those squadrons with 60 highly sophisticated U.S.-built McDonnell Douglas F–15s in the early 1980s.

CRITICS IN CONGRESS

There are serious doubts, as of now, whether Congress will O.K. the F–15 deal even though President Carter has given the green light. Congressional critics fear the new aircraft could tilt the military balance against Israel in the future.

Heart of the American military presence in Saudi Arabia is the mission headed by Air Force Brig. Gen. Carl H. Cathey, Jr. Some 250 uniformed U.S. advisers are training Saudi officers in a wide range of activities—from converting infantry to armor, to instructing combat pilots.

The mission includes another 750 Department of Defense civilians who train Saudis in the use and maintenance of the M–60 tanks. Naval officers also are assisting in the development of a 2,000-man, 28-vessel Navy.

The mission is only part of the total American involvement in the country's military buildup. In all, there are more than 6,000 U.S. civilian contract workers here engaged in a variety of assignments. For example:

More than 1,000 Northrop Corporation personnel help support the F–5E aircraft program. Raytheon Company assists in the deployment of the Hawk surface-to-air missile system.

Lockheed Aircraft Corporation is prime adviser on radar. Avco Corporation is working with the Coast Guard, Bendix Corporation with the Ordnance and Transport Corps.

Vinnell Corporation of California has contracts for one of the larger operations—a 77-million-dollar effort to strengthen the 26,000-man National Guard, the internal-security force responsible for protecting the oil fields and the royal family.

ENGINEERING EXPERTISE

The largest venture of all may be the huge construction program for which the U.S. Army Corps of Engineers is responsible. Total outlays for corps-directed projects could run as high as 17 billion dollars over a 10-year span.

Some 82 Army engineers and about 800 civilians—all paid by the Saudis—comprise the engineering contingent. In addition, the corps is responsible for subcontracting projects to civilian firms such as Bechtel Corporation, Fluor Corporation, Santa Fe Engineering, Lockheed, Raytheon, J. A. Jones, Blount Brothers and Aramco. To date, American companies have won some 43 percent of the contracts.

Actually, much of the work overseen by the corps is military only in a technical sense.

Morrison-Knudsen, for example, is helping to build a cantonment at Al Batin, northwest of Dhahran. The project calls for construction of facilities for 6,500 troops and their families, including schools, hospitals, mosques and markets. Eventually, Al Batin is expected to grow into a community of 70,000, with total construction costs running up to 7 billion dollars.

The U.S. is not the only Western power that the Saudis are calling on for help. France and Britain also have training missions here. But they are small compared with the tremendous American presence that shows every sign of becoming even larger in years ahead.●

## HOW OUR POLICY TOWARD NUCLEAR POWER BENEFITS THE KREMLIN

### HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. SYMMS. Mr. Speaker, the lack of a firm policy toward nuclear power by the United States and the attempts to somehow try and prevent other nations from developing nuclear power technology indirectly benefit the Soviet Union. This was discussed in the Evans and Novak column in the Washington Post today. It is pointed out that the formidable, richly financed anti-nuclear lobby (with its agents deeply ensconced inside the Carter administration) may cause the West to fall permanently behind the Communist bloc in nuclear power development.

The column reads as follows:

HOW OUR NUCLEAR POLICY BENEFITS THE KREMLIN

Partly obscured behind the shock waves of President Carter's neutron "bomb" decision, a crisis on nuclear power is building in the Western alliance over the creeping U.S. embargo against export of raw material for nuclear power plants, with the Soviet Union benefiting directly.

The limit on exporting U.S.-produced enriched uranium comes out of the new Nuclear Nonproliferation Act, with this unintended result: Soviet nuclear power becomes preeminent, Since breeder-reactor technology is regarded by oil-starved Europe as vital to future energy needs, our European allies may turn eastward for their enriched uranium and technology exchange.

Even without the new act, the president's abhorrence of the breeder reactor points to Soviet domination—as was pointed out in a confidential letter delivered to Carter April 4 from Rep. John W. Wydler of New York. The senior Republican on the House Science Committee, Wydler warned the president that "it is frightening to speculate on the degree of control of the world market [for breeder-produced nuclear power] that the Soviet Union might achieve by implementing" its fast-moving nuclear power program.

Economic and political stakes in the rush for nuclear energy by the Western democracies and Japan are awesome. Considering that, the Carter administration's nuclear nonpolicy could contribute to another global victory for the expansive masters of the Kremlin.

The Nuclear Nonproliferation Act, signed into law March 10 by Carter, adds to the danger. It gives the nine Western European countries who belong to EURATOM 30 days to start negotiations with the United States. The law bans U.S. exports of enriched uranium to Western Europe unless EURATOM agrees to U.S. control over spent fuel manufactured in European plants.

That is vitally important, giving Washington veto power over reprocessing spent fuel and, hence, over Europe's power to build breeder nuclar power plants. The breeder, making its own fuel as it manufactures power, is nearly indispensable to Europe's future power needs.

This unilateral change in existing agreements dating back to the mid-'60s infuriated the European nations. Forced to play the high-stakes nuclear power game the Washington way, their first reaction was symbolic retaliation. With the French taking the lead, they simply ignored the provision in the new U.S. law giving them 30 days to start negotiations for new licenses to import enriched uranium.

The EURATOM nations will surely agree, probably soon, to negotiate new enriched-uranium contracts. But thumbing their noses at starting the talks within the 30 days is a symbol of their anger.

Carter's deeply rooted fear is that reprocessed fuel—which is weapons-grade fuel—could be turned illegally into bombs. That is understandable when considered in a political vacuum. Unfortunately, however, the Soviet Union has no parallel concerns. The Soviets are far ahead of the breeder reactor curve today and picking up ever more speed.

Rep. Wydler drafted his warning to the president after talks with the International Atomic Energy Agency in Vienna, the French Atomic Energy Commission and finally with the Russians in Moscow last month. A congressional expert on nuclear power, Wydler predicted to Carter that we are "on the verge of an atomic Sputnik"—a sudden Soviet advance.

He warned the president that his opposition to the Clinch River experimental breeder reactor signals all other nations that the United States is not serious about preserving the breeder as a long-range option; that has undermined U.S. nuclear power credibility abroad "and made us an unreliable nuclear partner."

Over Carter's protest, Congress has kept the Clinch River "breeder" from dying a premature death. But that does not relieve the president from getting his act together and taking on the formidable, richly financed anti-nuclear lobby (with its equally formidable agents ensconced as officials deep inside his administration). Otherwise, the West may be doomed to fall behind the communist bloc, never to recover.

For example, the Soviets now operate a 350-megawatt experimental "breeder" on the Caspian Sea and will complete a 600-megawatt plant in 1980. Design is beginning for a 1,600-megawatt plant, which the Russians told Wydler would take only seven years to build.

No wonder, then, that the new law limiting export of U.S. enriched uranium is creating consternation. Following EURATOM's symbolic refusal to start new talks within the 30-day period, West Germany will soon increase its purchase of enriched uranium from the Russians. More attacks on the exposed flank of President Carter's nuclear power policy will surely follow.●

## THE B–1 GHOST; THE MISTAKE WHICH WILL COME TO HAUNT THE CONGRESS

### HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. CHARLES H. WILSON of California. Mr. Speaker, the President and, now, unfortunately, the Congress have made a serious mistake in halting the B–1 program.

I could accept the decision to terminate the B–1 program, if in fact, there were more cost-effective alternatives. My difficulty is in finding a single defense witness who will testify that this is the case. In the Department of Defense Bomber Modernization Study of April 29, 1977, the alternatives to the B–1 are described at length. Adding up the cost of these alternatives—the B–52 modernization program, the FB–111H, the cruise missile carrier and its complement of cruise missiles—you arrive at a grand total of nearly $26 billion. Each of these alternatives has been presented to the Congress as viable programs for which funding has been requested by the Department of Defense. I ask my colleagues to recall the fact that the total cost for completion of the entire B–1 program was about $18 billion. These "more cost-effective" alternatives will cost the American taxpayer about $10 billion more than the total cost of the B–1 program.

The evidence is rather clear that we will be building a follow-on manned strategic aircraft in the coming years. To date, we have spent over $7 billion developing a follow-on to the B–52, an aircraft described by the then Secretary of the Air Force, Harold Brown, on January 25, 1966, as a bomber which would be obsolete by 1975. Most importantly, if we initiate another research and development program to build a follow-on bomber, we will place a burden of some $5 billion or more on the American taxpayers and produce an aircraft that is identical to the B–1 in design and performance.

I submit for the RECORD, a copy of a letter recently received from Mr. Bob Anderson, president, Rockwell International, detailing the testing of the already built B–1 aircraft, and second, describing the additional layoffs necessitated by the decision of the House to halt work on aircraft No. 5 and No. 6.

Copy of letter follows:

ROCKWELL INTERNATIONAL,
*April 3, 1978.*

Hon. CHARLES H. WILSON,
*House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSMAN WILSON: We at Rockwell International Corporation have appreciated your support for the B–1 program during these past seven years of development and want to thank you for your efforts to retain aircraft No. 5 and No. 6 in the flight test program.

Because of the House vote on February 22 the Los Angeles Division was forced to lay off 750 employees immediately. Lay off of an additional 2,250 will occur during the rest of the year as completion of the fourth B–1 nears in Palmdale, reducing employment at the Los Angeles Division to 3,500 by the end of the year. We have established a vocational counseling and job relocation center at the Rockwell Recreation Center in Los Angeles to assist those laid off in securing other employment.

I continue to believe that B–1 is the key to the perpetuation and modernization of the manned penetrator as the third leg of the TRIAD. We look forward to continuing the four aircraft research and development program through 1983. At the Los Angeles Division, to date, aircraft No. 1 through No. 3 have flown a total of 950 hours. We have completed six inert and two live SRAM launches and met or exceeded Air Force specifications in every instance. We expect to complete aircraft No. 4 early next year and begin its flight testing. Aircraft No. 4 will demonstrate and flight test the most complete and up-to-date offensive and defensive avionics systems in existence.

Both Buz Hello and Doc Blalock have asked me to convey to you their appreciation for your strong endorsement of the B–1 program in the past. We hope we can continue to count on your support for the four aircraft B–1 research and development program this year and in the future.

Sincerely,

ROBERT ANDERSON,
*President, Rockwell International.*●

## "DIRTY DOZEN": A DISCREDITED RATING SYSTEM

### HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, April 13, 1978*

● Mr. RHODES. Mr. Speaker, it is that time of the year again when various groups begin to issue ratings of Members, based on selected votes. These ratings can be very important for a Member because of the image they can convey to constituents and supporters, and because of the usually uncritical manner in which the media accepts and plays up these ratings.

No Member will object to a rating that is an accurate portrayal of a legislative record, and is based on appropriate votes. Unfortunately, however, some groups seem more interested in enhancing or damaging certain Members and so seek votes that will support their particular political bias without much regard for the accuracy of the image portrayed.

One such group is Environmental Action, which, as you know, has tried to do a job on me, as well as on a number of other Members. Last Saturday the Washington Post published an article by my good friend and distinguished colleague from New Hampshire (Mr. CLEVELAND), in which he very cogently describes the blatantly political manner in which this group develops its ratings.

He also describes the manner in which the media have swallowed virtually whole the propaganda of this group without questioning the way in which its ratings are developed.

JIM CLEVELAND's article is eloquent testimony to the need for someone to ask "who is rating the raters?" I commend it to my colleagues for their reading and ask that it be inserted in the RECORD.

[From the Washington Post, Apr. 8, 1978]

"DIRTY DOZEN": A DISCREDITED RATING SYSTEM

(By James C. Cleveland)

A group known as Environmental Action will soon issue its 1978 "Dirty Dozen" list of House members whose defeat it seeks on allegedly environmental grounds. Response by the press, if it repeats past performance, will be mixed. Most reporting will serve as the uncritical conduit for the charges, while some will provide probing news coverage and commentary discrediting the accusations and their source.

I observed both varieties of coverage as a member of the Dirty Dozen in 1976, which leads me to suggest that, next time around, the press stiffen its skepticism in handling political material from Environmental Action.

After the last election, National Journal's Michael J. Malbin examined charges by House Minority Leader John J. Rhodes (R-Ariz.), also on the 1976 hit list, that rating procedures of most groups were unfair and Environmental Action was the worst offender. Reviewing materials assembled by the Fair Campaign Practices Committee for a symposium on political rating groups, he concluded that they tend to support Rhodes' charges."

As to the press, Malbin observed, "the problem with all this is that it is easy in the heat of a political campaign for an opponent—or the news media—to latch onto a label and assume that there is something solid behind it." Added Chris Black, Washington correspondent of the Lowell (Mass.) Sun:

"The 'Dirty Dozen campaign' plays upon institutional weaknesses in the press. The gimmicky charge receives page-one play but the denial is buried on the obituary page. And the group uses the widespread assumption that environmental groups are somehow above politics and reproach, although Dirty Dozen proved to be quite different from this perception."

Unintended distortion came with initial coverage strongly suggesting that the 12 on the list were selected on the basis of their environmental voting records. That impression was conveyed by AP, UPI, The Washington Star and particularly The Post which plugged that line in its headline and lead paragraph. Yet those vote rankings were absolutely meaningless in Environmental Action's own selection process. I made the list although more than 100 others voted equally "wrong" or worse on the votes used. Environmental Action itself concedes that other factors are considered, a fact scarcely alluded to in Washington coverage.

A key factor was vulnerability. Environmental Action argued that it didn't waste time going after occupants of safe seats. But had reporters examined that factor, they would have learned that eight members of the 1976 list won elections in 1974 with a scant 53 percent of the vote or less; one won his 1974 primary with only 55 per cent of the vote and the general election with 53 percent, and faced another tough primary in 1976. Those members aren't just unsafe; they're the walking wounded.

Rhodes blasted the ratings, requesting the Fair Campaign Practices Committee to monitor and expose the unfairness involved. That received prominent, fair and balanced coverage in Washington and presumably elsewhere. Later, the press here and across the country gave good exposure to a study entitled "The Rating Game," by the House Republican Research Committee, which for all its overtly partisan origin was an excellent critique of rating groups in general and Environmental Action in particular.

Meanwhile, one of the most perceptive pieces I saw on an individual member was done by Paul Houston of the Los Angeles Times in the case of Burt Talcott (R-Calif.). He found "considerable evidence that, in placing Talcott on the list, Environmental Action had accused Talcott wrongly on several points." Houston added that "there is some merit to his claim that his low Environmental Action rating, which was based on 14 selected votes among dozens last year, distorted his record." (Talcott lost anyway, one of the three on the list to do so.)

Easily the worst in terms of swallowing Dirty Dozen propaganda whole were a patty-cake piece in The New Yorker and a column by Clayton Fritchey, appearing in The Post, which rhapsodized that the Dirty Dozen gimmick ought to be adopted by other interest groups.

In New Hampshire, my designation as one of the Dirty Dozen received prominent play that ultimately proved not damaging. Three solid editorials in New Hampshire dailies bracketing the political spectrum denounced my selection as a dirty deed. Then Chris Black of the Lowell Sun exposed the fact that the Dirty Dozen campaign coordinator had worked for my opponent-to-be in a McGovern campaign. They had discussed the list at least a month before it was issued with the general understanding that I would be included only if he were likely to run. Environmental Action claimed it was misquoted.

My opponent made no issue of the Dirty Dozen or my environmental record in the campaign; he walked away from the issue, saying the Dirty Dozen Campaign Committee was doing its own thing. (I later won with 61 percent of the vote).

In New Hampshire, Environmental Action's remaining credibility died. The group claimed to have enlisted a number of environmental organizations against me. That made headlines, as did subsequent disclosure that the claim was phony. (Environmental Action again claimed it was misquoted.)

Environmental Action seeks to be a continuing and credible presence on the scene, though it consists mainly of a magazine staff of roughly a dozen, lobbies sporadically and ineffectively, and has no membership. Its political operation is a floating media event. It thus deserves scrutiny in its own right in the interests of a cleaner political environment.●

# HOUSE OF REPRESENTATIVES—*Monday, April 17, 1978*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

*The fruit of the Spirit is in all goodness and righteousness and truth.*—Ephesians 5:9.

O God, our Father, the strength of Your people in periods of prosperity and their refuge in times of trouble to You do we come committing our lives to Your sustaining spirit. We have erred and strayed from Your ways like lost sheep. We have done those things which we ought not to have done and we have left undone those things we ought to have done. Forgive us, we pray, help us to amend what we are and by your spirit direct what we shall be that touched by You we may live a sober, righteous life filled with good will.

Give to each one of us a sense of purpose. Lead us to help those in need, to go the second mile, to obey the Golden Rule, and to enlarge the horizon of our lives that every barrier of color, creed, and culture shall be pushed aside before the claims of our brotherhood in You—to whom be glory forever and ever. Amen.

## THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

## COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C., *April 14, 1978.*

Hon. THOMAS P. O'NEILL, Jr.,
*The Speaker, House of Representatives, Washington, D.C.*

DEAR MR. SPEAKER: Pursuant to the permission granted on April 13, 1978, the Clerk has received this date the following message from the Secretary of the Senate:

That the Senate passed without amendment H.J. Res. 770, Education Day, U.S.A.

With kind regards, I am,

Sincerely,

EDMUND L. HENSHAW, Jr.,
*Clerk, House of Representatives.*

## ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to make an announcement. Pursuant to the authority granted the Speaker on Thursday, April 13, 1978, he did on Friday, April 14, 1978, sign the following enrolled bills:

H.R. 7744. An act to amend the acts of August 11, 1888, and March 2, 1919, pertaining to carrying out projects for improvements of rivers and harbors by contract or otherwise, and for other purposes; and

H.J. Res. 770. A joint resolution to authorize and request the President to issue a proclamation deignating April 18, 1978, as "Education Day, U.S.A."

## CONSENT CALENDAR

The SPEAKER. This is Consent Calendar day. The Clerk will call the first bill on the Consent Calendar.

## AUTHORIZING RETIREMENT OF CERTAIN RESERVE ENLISTED MEMBERS

The Clerk called the bill (H.R. 10341) to amend title 10, United States Code, to authorize Reserve enlisted members of the Army and the Air Force to retire with 20 years of service.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. NICHOLS. Mr. Speaker, I ask unanimous consent that the bill, H.R. 10341, be stricken from the Consent Calendar.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

## RECALCULATING RETIRED PAY OF CERTAIN SENIOR ENLISTED ADVISERS OF THE MARINE CORPS

The Clerk called the bill (H.R. 10343) to provide for recalculation of the retired pay of individuals who served as sergeant major of the Marine Corps before December 16, 1967.

The SPEAKER. Is there objection to the present consideration of the bill?

Ms. MIKULSKI. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentlewoman from Maryland?

There was no objection.

## CONVEYING U.S. INTERESTS IN ALASKAN LANDS TO FAIRBANKS NORTH STAR BOROUGH

The Clerk called the bill (H.R. 6997) to authorize the Secretary of the Interior to convey all right, title, and interest of the United States in and to a tract of land located in the Fairbanks Recording District. State of Alaska, to the Fairbanks North Star Borough, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

H.R. 6997

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Interior is authorized to convey all right, title, and interest of the United States in and to the following described real property, located in the Fairbanks Recording District, to the Fairbanks North Star Borough without payment of consideration:

THE WEST PORTION OF BLOCK 209

A tract of land situated in the northwest quarter, section 15, township 1 south, range 1 west, F.B. and M., also known as United States Survey 849 of the Homestead Claim of Stacia Rickert described as follows:

Commencing at corner north 3, United States Survey Numbered 849, thence south 89 degrees 57 minutes 14 seconds east, a distance of 2,300 feet, more or less; along a southerly line of said survey numbered 849 which lies between corners numbered 2 and 3; thence south 89 degrees 57 minutes 09 seconds east, a distance of 30 feet, more or less; thence north 0 degree 56 minutes 34 seconds west, a distance of 10 feet, more or less; to the true point of beginning; thence north 0 degree 56 minutes 34 seconds west, a distance of 337 feet, more or less; thence south 89 degrees 52 minutes 43 seconds east, a distance of 518 feet, more or less, thence south 0 degree 07 minutes 17 seconds west, a distance of 337 feet, more or less; thence north 89 degrees 57 minutes 09 seconds west, a distance of 510 feet, more or less, to the true point of beginning, and containing 173,218 square feet, more or less.

With the following committee amendment:

Committee amendment: Page 2, line 6, strike the word "north" and insert in lieu thereof the word "number".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

## PROVIDING THAT CERTAIN LAND IN PINAL COUNTY, ARIZONA, BE DECLARED PART OF PAPAGO INDIAN RESERVATION

The Clerk called the bill (H.R. 8397) to provide that a certain tract of land in Pinal County, Ariz., held in trust by the United States for the Papago Indian Tribe, be declared a part of the Papago Indian Reservation.

There being no objection, the Clerk read the bill, as follows:

H.R. 8397

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the following described tract of land located in Pinal County, Arizona, and held in trust by the United States for the Papago Indian Tribe, is hereby decared to be an addition to and a part of the Papago Indian Reservation:

Beginning at the northeast corner of parcel numbered 1 within section 3, township 5 south, range 9 east, Gila and Salt River meridian, Arizona, described as follows:

line AP 1—AP 2 south 81 degrees 55 minutes west, 2.443 chains,

line AP 2—AP 3 south 20 degrees 35 minutes east, 0.800 chains,

line AP 3—AP 4 south 66 degrees 31 minutes east, 1.434 chains,

line AP 4—AP 5 south 0 degrees 55 minutes east, 3.030 chains,

line AP 5—AP 6 south 89 degrees 05 minutes west, 2.879 chains,

line AP 6—AP 7 north 0 degrees 55 minutes west, 4.212 chains,

line AP 7—AP 8 south 74 degrees 10 minutes west, 3.036 chains (end of course, intersect the north and south centre line of the southeast quarter of section 3),

line AP 8—AP 9 (on the north and south center line of the southeast quarter) south 0 degrees 39 minutes east, 32.10 chains (end

of course, the east 1/16 section corner of sections 3 and 10),

line AP 9—AP 10 (between sections 3 and 10) north 88 degrees 55 minutes east, 6.69 chains,

line AP 10—AP 1 north 0 degrees 42 minutes west, 33.33 chains (end of course, the place of beginning); consisting of 20 acres.

In accordance with applicable Federal law and regulations, these lands, which were conveyed to the United States in trust for the Papago Indian Tribe under the provisions of section 5 of the Act of June 18, 1934 (48 Stat. 985), are to be treated as and receive the same benefits and protection as other tribal trust lands within the boundaries of the Papago Indian Reservation.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

## PROVIDING FOR EXTENSION OF FEDERAL BENEFITS, SERVICES, AND ASSISTANCE TO PASCUA YAQUI INDIANS OF ARIZONA

The Clerk called the bill (H.R. 6612) to provide for the extension of certain Federal benefits, services, and assistance to the Pascua Yaqui Indians of Arizona, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

H.R. 6612

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) the Pascua Yaqui Indian people who are members of the Pascua Yaqui Association, Incorporated, an Arizona corporation, are hereby recognized as, and declared to be, eligible for the services and assistance provided on and after the date of enactment of this Act to Indians because of their status as Indians by or through any department, agency, or instrumentality of the United States, including the Bureau of Indian Affairs in the Department of the Interior, or under any statute of the United States: *Provided,* That such Pascua Yaqui Indians shall not be eligible for the services or assistance provided to Indians because of their status as Indians by or through the Surgeon General of the United States Public Health Service or the Secretary of Health, Education, and Welfare under the Act of August 5, 1954 (68 Stat. 674; 42 U.S.C. 2001–2004), as amended, or any other statute of the United States, or for any other health services or assistance provided by or through Indian Health Service of the Department of Health, Education, and Welfare to Indians because of their status as Indians.

(b) The provisions of the Act of June 18, 1934 (48 Stat. 484), as amended, are extended to the Pascua Yaqui Indians as described in subsection (a) hereof, and such Indians shall be deemed to be Indians as such term is defined in section 19 of said Act.

(c) The Secretary of the Interior is directed, upon the request of the Pascua Yaqui Association, Incorporated, and without monetary consideration, to accept on behalf of the United States in trust for the Pascua Yaqui Indians, as described in subsection (a) hereof, the title to the real property conveyed by the United States to such association under the Act of October 8, 1964 (78 Stat. 1196), and such trust land shall be the reservation of the Pascua Yaqui Indians.

(d) The minerals identified in section 3 of the Act of October 8, 1964 (78 Stat. 1197), and owned by the United States are hereby declared to be held in trust for the Pascua Yaqui Indians, subject to all valid rights in existence on the date of enactment of this Act, and effective upon the date of the transfer of title provided for in subsection (e) hereof.

(e) Section 4 of the Act of October 8, 1964 (78 Stat. 1197), is hereby repealed.

With the following committee amendment:

Committee amendment: Page 1, beginning on line 3, strike out all after the enacting clause and insert in lieu thereof the following:

That (a) the Pascua Yaqui Tribe and its members, as determined pursuant to section 2 of this Act, are hereby recognized as eligible for the services and assistance provided to Indians because of their status as Indians by or through any department, agency, or instrumentality of the United States or under any statute of the United States. For purposes of section 2 of the Act of August 16, 1957 (71 Stat. 371; 42 U.S.C. 2005a), the Pascua Yaqui Indians are to be considered as if they were being provided hospital and medical care by or at the expense of the Public Health Service on August 16, 1957.

(b) Section 4 of the Act of October 8, 1964 (78 Stat. 1197), is hereby repealed.

SEC. 2. (a) For the purposes of section 1 of this Act, membership of the Pascua Yaqui Tribe shall consist of—

(A) the members of the Pascua Yaqui Association, Inc., an Arizona corporation, as of the date of the enactment of this Act;

(B) all those persons of Yaqui Indian blood who, within one year from the date of enactment of this Act, apply for, and are admitted to, membership in the Association pursuant to article VII of the Articles of Incorporation of the Association; and

(C) direct lineal decendants of such persons, subject to any further qualifications as may be adopted by the Association.

(b) Within eighteen months after the date of enactment of this Act, the Secretary of the Interior, in cooperation with the Association, shall compile a membership roll pursuant to the terms of subsection (a) of this section and shall publish such roll in the Federal Register. Publication of such roll shall not affect or delay the immediate eligibility of the members of the Association under section 1 of this Act.

SEC. 3. Solely for the purpose of this Act, the Pascua Yaqui Association shall be deemed an Indian tribe recognized by the United States and the lands conveyed to the Association by the Act of October 8, 1964 (78 Stat. 1196), subject to a restriction against alienation imposed by the United States, shall be deemed a Federal Indian reservation.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The SPEAKER. That concludes the call of eligible bills on the Consent Calendar.

## PERSONAL EXPLANATION

Mr. LEDERER. Mr. Speaker, on rollcall No. 208, I voted "nay" when I intended to vote "yea." I ask that my statement appear in the permanent RECORD.

## ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. Pursuant to the provisions of clause 3(b) of rule XXVII, the Chair announces that he will postpone further proceedings today on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule XV.

After all motions to suspend the rules have been entertained and debated and after those motions, to be determined by "nonrecord" votes have been disposed of, the Chair will then put the question on each motion on which the further proceedings were postponed.

## MERCHANT MARINE ACADEMY NOMINATIONS

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3489) to amend section 216(b) of the Merchant Marine Act, 1936, to entitle the Delegates in Congress from Guam and the Virgin Islands to make nominations for appointments to the Merchant Marine Academy, as amended.

The Clerk read as follows:

H.R. 3489

*Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled,* That section 216(b) of the Merchant Marine Act, 1936 (70 Stat. 25; 46 U.S.C. 1126(b)), is amended as follows:

(1) The second sentence of paragraph (1) is amended by striking out ", Guam, American Samoa, and the Virgin Islands, and the Commissioners of the District of Columbia." and inserting in lieu thereof "and American Samoa.".

(2) The third sentence of paragraph (1) is amended by striking out "one vacancy each shall be allocated each year to Guam, American Samoa, and the Virgin Islands, to be filled by qualified candidates nominated by the Governors of Guam, American Samoa, and the Virgin Islands, and four vacancies shall be allocated each year to the District of Columbia, to be filled by qualified candidates nominated by the Commissioners thereof" and inserting in lieu thereof "one vacancy each shall be allocated each year to Guam, American Samoa, and the Virgin Islands, and four vacancies shall be allocated each year to the District of Columbia".

(3) Paragraph (5)(a) is amended by striking out "Alaska and Hawaii" and inserting in lieu thereof "the District of Columbia, Guam, and the Virgin Islands,".

(4) Paragraph (5)(b) is amended by striking out "the Territories of Alaska and Hawaii,".

The SPEAKER. Is a second demanded?

Mr. RUPPE. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER. The gentleman from New York (Mr. MURPHY) and the gentleman from Michigan (Mr. RUPPE) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 3489, which was introduced by Mr. DE LUGO, is to allow the Delegates from Guam and the Virgin Islands, instead of their Governors, to nominate candidates for admission to the U.S. Merchant Marine Academy. The committee amendment also amends the law to specify that the Delegate from the District of Columbia, rather than the "Commissioners of the

District of Columbia," is to make nominations for the District of Columbia.

Prior to 1956 there were no congressional nominations involved in admission to the Merchant Marine Academy. In that year, the Congress amended section 216(b) of the Merchant Marine Act, 1936, providing that each Representative and Senator could nominate up to 10 candidates for admission to the academy, and requiring that the actual admission decisions be made on a competitive basis from among the nominees. The 1965 law gave the Resident Commissioner of Puerto Rico and the Delegates from Alaska and Hawaii the same ability to nominate candidates for admission to the academy as it gave to all other Members of the Congress.

In 1958, this section of the law was amended to allow nomination of candidates for admission to the Academy from the Canal Zone, Guam, American Samoa, the Virgin Islands, and the District of Columbia. Since none of them had representation in the Congress at that time, the 1958 amendment gave the nominating authority to their executive officials—the Governor in each case, except the District of Columbia, where the executive authority was exercised by Commissioners.

Since 1958, several events have taken place which necessitate the updating of section 216(b):

Alaska and Hawaii gained statehood;

The title of the chief executive officials of the District of Columbia changed twice; and

Guam, the Virgin Islands, and the District of Columbia all gained the authority to send Delegates to the Congress.

Since Alaska and Hawaii became States, their Representatives and Senators have been able to make nominations under the general provisions which apply to all States, and the references to the "Territories of Alaska and Hawaii" have been ignored. Although implementing regulations still place nominating authority for the District of Columbia in its Mayor, through on informal agreement the nominations have been made in fact by the Delegate from the District of Columbia in recent years. No such informal agreement exists for Guam and the Virgin Islands, however. So the law must be changed if the Delegates from Guam and the Virgin Islands are to have the nominating authority for the Merchant Marine Academy which was originally intended to be exercised by all Members of the Congress.

H.R. 3489, as amended, updates section 216(b) of the Merchant Marine Act, 1936, with respect to Alaska, Hawaii, the District of Columbia, Guam, and the Virgin Islands. In so doing it clearly authorizes the Delegates from Guam, the Virgin Islands, and the District of Columbia to nominate candidates for admission to the Merchant Marine Academy. The bill was ordered reported by a unanimous voice vote of the Committe on Merchant Marine and Fisheries, and I urge its passage.

Mr. RUPPE. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 3489. This is a simple bill which will bring the Merchant Marine Act of 1936 up to date in several respects.

First, it will allow the Delegates in Congress from Guam and the Virgin Islands to make nominations for appointment to the U.S. Merchant Marine Academy. At the present time, this nominating authority is entrusted to the Governors of Guam and the Virgin Islands. The bill will also allow the Delegate in Congress from the District of Columbia—instead of the Commissioners of the District of Columbia—to nominate candidates for admission to the Academy.

These changes are long overdue. In January 1973, the first popularly elected Delegates from Guam and the Virgin Islands took their places in Congress. At that time, the rules of the House were amended to give these Delegates the same rights and obligations enjoyed by their colleagues, with the exception of voting on the floor of the House. Since that time, one of the responsibilities of these Delegates has been to seek amendments to existing laws to reflect the change in territorial representation which put them in Congress. This bill is a part of that process.

Second, this bill removes several outdated references to the "territories of Alaska and Hawaii" from the Merchant Marine Act of 1936.

As I have said, these changes to the Merchant Marine Act are long overdue. This bill will make the act consistent with the present system of congressional representation for the citizens of the Virgin Islands, Guam, and the District of Columbia. I would like to respectfully urge my colleagues to support this measure.

● Mr. DE LUGO. Mr. Speaker, I rise in support of H.R. 3489, which would give the Delegates from the Virgin Islands, Guam, and the District of Columbia the authority to make nominations to the Merchant Marine Academy.

Prior to my arrival as the first popularly elected Delegate from the Virgin Islands in 1973, there was no direct representation of the islands in Congress. Thus, many of the powers which would normally be vested in the Representative, such as appointment powers, were given to the local government. This was true for Guam and the District of Columbia as well.

Since my arrival, part of my job has been to amend these laws to bring them into accord with the new realities of territorial representation. This bill is part of that process.

In 1956 the Merchant Marine Act was amended to allow the Senators and Representatives to make nominations to the Academy. In 1958 slots were made available to qualified young men and women from the U.S. territories. However, lacking a Representative in Congress, this power was vested in the Governor of the territory, and, in the case of the District, what later became the Mayor's office. It is clear, however, that the intent of Congress is to place this power with the Representatives.

In 1971, our distinguished colleague, WALTER FAUNTROY, took his place as the first popularly elected Delegate from the District. In 1973, he was joined by my good friend from Guam, TONY WON PAT. Now that all three jurisdictions have representation in Congress, I believe it is time to amend the Merchant Marine Act to fully carry out the intent of Congress.

Therefore, I urge my colleagues to pass this bill.●

● Mr. DERWINSKI. Mr. Speaker, I rise in support of H.R. 3489, which provides for a practical adjustment in the nominations system for the Merchant Marine Academy. I urge my colleagues to give it their support as well.

In the 20 years I have served in Congress, the privilege of designating young men as nominees for possible appointments to the service academies is something that I have treated with special consideration. Over the years, I have been proud of the young men, and now young women, from my district that have been appointees to the academies. I believe the system has worked well for the three service academies and the Merchant Marine Academy. The quality of cadets and midshipmen and their true diversity in coming from all parts of the country have been one of the very positive factors in the academies' turning out the caliber of leaders that they have.●

Mr. MURPHY of New York. Mr. Speaker, I have no requests for time.

The SPEAKER pro tempore. (Mr. MURTHA). The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 3489, as amended.

The question was taken.

Mr. MOTTL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3 of rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

## NATIONAL SEA GRANT AUTHORIZATION ACT OF 1978

Mr. MURHPY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 10822) to improve the operations of the national sea grant program, to authorize appropriations to carry out such program for fiscal years 1979 and 1980, and for other purposes, as amended.

The Clerk read as follows:

H.R. 10822

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the title heading of title II of the Marine Resources and Engineering Development Act of 1936 (33 U.S.C. 1101 et seq.) is amended to read as follows:

"TITLE II—NATIONAL SEA GRANT COLLEGE PROGRAM".

SEC. 2. (a) Section 201 of the National Sea Grant Program Act (33 U.S.C. 1121) is amended by inserting "College" immediately before "Program".

(b) Sections 202(a)(3), 203(3), 204, and 211 are each amended by striking out "national sea grant program" each place it appears therein and inserting in lieu thereof "national sea grant college program".

(c) The section heading of such section 204 is amended to read as follows:

"SEC. 204. NATIONAL SEA GRANT COLLEGE PROGRAM."

SEC. 3. The National Sea Grant College Program Act (as redesignated by section 2 of this Act) (33 U.S.C. 1121–1131) is amended—

(1) by amending section 204(d)—

(A) by striking out "and" at the end of paragraph (5),

(B) by redesignating paragraph (6) as paragraph (7), and

(C) by inserting immediately after paragraph (5) the following new paragraph:

"(6) accept funds from other Federal departments, agencies (including agencies within the Administration), and instrumentalities to pay for grants made, and contracts entered into, by the Secretary under section 205(a); and";

(2) by striking out the period at the end of the last sentence of section 205(a) and inserting in lieu thereof the following: ": except that this limitation shall not apply in the case of grants or contracts paid for with funds accepted by the Secretary under section 204(d)(6).";

(3) by amending the first sentence of section 206(c) to read as follows:

"There are authorized to be appropriated for purposes of carrying this section not to exceed the following amounts:

"(1) $5,000,000 for each of fiscal years 1977, 1978, and 1979.

"(2) $6,000,000 for fiscal year 1980.";

(4) by amending section 211—

(A) by striking out "ANNUAL" in the section heading and inserting in lieu thereof "BIENNIAL",

(B) by amending subsection (a) to read as follows:

"(a) BIENNAL REPORT.—The Secretary shall submit to the Congress and the President, not later than February 15, 1980, and not later than February 15 of every even-numbered year thereafter, a report on the activities of, and the outlook for, the national sea grant college program.";

(C) by amending the last sentence of subsection (b) to read as follows: "Such material shall be submitted to the Secretary not later than February 1 of the year in which the report concerned is to be submitted under subsection (a), and the Secretary shall cause it to be published as a separate section in such report."; and

(5) by amending the first sentence in section 212 to read as follows:

"There are authorized to be appropriated for purposes of carrying out the provisions of this title (other than section 206) not to exceed the following amounts:

"(1) $50,000,000 for each of fiscal years 1977 and 1978.

"(2) $55,000,000 for each of fiscal years 1979 and 1980.".

SEC. 4. Section 3 of the Sea Grant Program Improvement Act of 1976 (33 U.S.C. 1124a) is amended—

(1) by striking out "National Sea Grant Program Act" each place it appears therein and inserting in lieu thereof "National Sea Grant College Program Act";

(2) by amending subsection (a)(2) to read as follows:

"(2) promote the exchange among the United States and foreign nations (including, but not limited to, developing foreign nations) of information and data with respect to the assessment, development, utilization, and conservation of such resources."; and

(3) by amending the first sentence of subsection (c) to read as follows:

"There are authorized to be appropriated for purposes of carrying out this section not to exceed the following amounts:

"(1) $3,000,000 for each of fiscal years 1977, 1978, and 1979.

"(2) $3,600,000 for fiscal year 1980.".

The SPEAKER pro tempore. Is a second demanded?

Mr. RUPPE. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) and the gentleman from Michigan (Mr. RUPPE) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I strongly endorse passage of H.R. 10822, a bill to authorize appropriations for the national sea grant college program in fiscal years 1979 and 1980.

Sea grant is an integral part of this Nation's ongoing effort to improve mankind's understanding of the many vital processes that occur in the waters covering three-fourths of the Earth's surface. The value of this improved understanding will ultimately manifest itself in increased world supplies of food, energy, and minerals that can be expected from knowledge about how to explore, more efficiently develop, and better protect the complex ocean environment.

I might add that this kind of research money represents Federal spending that complements, rather than competes with, spending by private industry. Sea grant has worked closely with many elements of industry and has played a vital role both in increasing the productivity of existing marine industries and in launching highly innovated and highly competitive new commerce. I fully expect Sea grant's success in these endeavors to be even greater in the future and, in this light, find the authorization levels of $63 million for fiscal year 1979 and $64.6 million for fiscal year 1980 to be eminently justified.

Mr. RUPPE. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 10822, which authorizes appropriations to carry out the national sea grant program. The national sea grant program is a unique Federal-State-university partnership which focuses upon research, education, and advisory services. The sea grant concept was patterned after the land grant college system, which was established in 1862, and has provided the basis for one of the most advanced agricultural production systems in the world. Through agricultural experiment stations and experiment services, in cooperation with many State universities, including Michigan State, which was one of the leaders, the land grant program was able to foster sustained economic development and technological innovation in the agricultural sector. Based on the hearings before the Oceanography Subcommittee this year, similar long-term contributions of the sea grant program in the area of marine research and development are becoming increasingly visible.

This authorization bill provides $55 million for fiscal years 1979 and 1980 for the basic matching program. The national projects program, which does not require matching funds from the States, is authorized at $5 million for fiscal year 1979 and $6 million for fiscal year 1980. And finally, the international cooperation assistance program is authorized at $3 million for fiscal year 1979 and $3.6 million for fiscal year 1980. I feel that these are responsible increments in the authorization levels, given the high expectations for the sea grant program in the years ahead, as this Nation looks increasingly toward the oceans for food, minerals, and energy.

H.R. 10822 also authorizes the National Sea Grant Office to act as an agent in applying nonmatching funds to marine-related problems which have been identified by other Federal mission-oriented agencies. The authorization bill also provides for a biennial report rather than an annual report, and amends the international cooperative assistance program to include developed countries as well as developing countries in the exchange of information relating to marine research and conservation and development.

Although this program is primarily aimed at increasing cooperation between U.S. marine scientists and many developing coastal nations, it was also felt that we should not preclude cooperative efforts with developed countries as well. It is hoped that this program will lead to strong multilateral marine research efforts.

Mr. Speaker, I strongly recommend the passage of this legislation, which establishes a strong marine research and development program based upon what I feel is a unique extension of a system which has provided for the efficient development of land resources to many natural resources of the future which will increasingly be found in the oceans.

● Mr. BREAUX. Mr. Speaker, I strongly support passage of H.R. 10822, a bill to authorize the national sea grant college program for $63 million in fiscal year 1979 and $64.6 million in fiscal year 1980.

I think that if we examine the recent history of the United States we find that one of the things that has made this Nation great is its willingness to pursue knowledge in all fields of science. Scientific research and development is an investment in the future welfare of the Nation and its importance is all too frequently underestimated—sea grant has been no exception in this regard.

The national sea grant program is much more than just another research program. It is an attempt to get the scientists who are doing the research together with the beneficiaries—the fishermen, the ocean farmers, or other entrepreneurs—and keep them communicating. The result has been research focused on the problems actually encountered in the field and increased productivity in many of the industries encountering these problems. The hearings we held in February demonstrated

to my satisfaction that the people administering the program have perceived that there is room for improvement and that these improvements are being pursued. I expect sea grant to ultimately evolve into a truly excellent program and one we can all be proud of.

Finally, we did make two changes that I feel will have payoffs in terms of program quality. The first allows funds appropriated to other Federal agencies for marine research pertaining to their missions to pass through the Office of Sea Grant free of sea grant's matching requirements. It was never intended that funds not specifically appropriated to sea grant be subject to the 66⅔-percent Federal ceiling. The change we have made clarifies this point and will encourage other Federal entities to make use of sea grant's expertise when allotting their own mission-oriented research funds.

The other change removes the implied prohibition against participation in international marine research projects that include developed foreign nations by U.S. scientists operating under the auspices of the sea grant international program. The original intent of this program was to foster goodwill in developing nations of the world and thereby lessen opposition against access to their coastal waters for purposes of marine research. It was never intended to be an aid program, nor is it clear that developing nations are the only nations where the United States must spread goodwill in order to gain access to coastal waters. Allowing developed nations to participate on a quid pro quo basis will both increase the program's cost effectiveness and insure that the goodwill of the United States may be spread to all the nations of the world.

I urge your support for this authorization bill.●

● Mr. ROGERS. Mr. Speaker, I rise in support of this legislation to extend the National Sea Grant Program Act through fiscal year 1980. Since 1966 when the legislation which Senator CLAIBORNE PELL of Rhode Island and I introduced to create the sea grant program was signed into law, I have remained a steadfast supporter. The sea grant program, patterned after the land grant college system, has an outstanding 12-year history of promoting the study leges and universities.

Now that our Nation has expanded its fishery conservation zone out to 200 miles and there is greater recognition than ever before of the potential benefits of aquaculture, it is imperative that a sound program of research, education, and advisory services be maintained. of marine resources by the Nation's col-

The national sea grant program is a Federal-State-university partnership. It encompasses all three functions of American universities: Research, education, and advisory services. The present funding mechanism provides Federal funding in the form of grants to provide up to 66⅔ percent of the total cost of the project to universities, colleges and private organizations and the remaining one-third is matched by State or local sources.

The sea grant program is a valuable component of our oveerall national program for dealing with marine science and technology and marine resources. Although entirely domestically oriented to date, sea grant contributes materially to the foremost position the United States holds internationally in these fields. A study conducted in 1975 concluded that a $5 to $10 million investment in the sea grant program would yield $122 million in sales in 1980. Such significant commercial results point up the economic advantages of this program, which are complemented by the continuing advances in the marine science field.

With these facts in mind, it is certainly regrettable that actual appropriations have lagged far behind the authorizations that the House Merchant Marine and Fisheries Committee has sought to obtain for this vital program.

It is my belief that sea grant has continued to live up to its original purposes and I recommend passage of the national sea grant program authorization to my colleagues at this time.●

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 10822, as amended.

The question was taken.

Mr. MOTTL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

---

## NACOA AUTHORIZATION FOR FISCAL YEAR 1979

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 10823) to amend the National Advisory Committee on Oceans and Atmosphere Act of 1977 to authorize appropriations to carry out the provisions of such act for fiscal years 1979 and 1980, and for other purposes, as amended.

The Clerk read as follows:

H.R. 10823

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the National Advisory Committee on Oceans and Atmosphere Act of 1977 (33 U.S.C. 857–13—857–18) is amended—

(1) by striking out "except that" and all that follows thereafter in section 3(b) and inserting in lieu thereof "except that of the original appointees, 6 shall be appointed for a term to expire on July 1, 1979, 6 shall be appointed for a term to expire on July 1, 1980, and 6 shall be appointed for a term to expire on July 1, 1981."; and

(2) by striking out "1978." in section 8 and inserting in lieu thereof "1978, and $572,000 for the fiscal year ending September 30, 1979.".

The SPEAKER pro tempore. Is a second demanded?

Mr. RUPPE. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) will be recognized for 20 minutes, and the gentleman from Michigan (Mr. RUPPE) will be recognized for 20 minutes.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 10823 as amended by the Committee on Merchant Marine and Fisheries. H.R. 10823 will provide necessary support to the National Advisory Committee on Oceans and Atmosphere (NACO).

The Merchant Marine and Fisheries Committee feels that NACOA serves a vital role both to the Congress and the executive branch. As required by law, NACOA is directed to:

First. Continuously review the Nation's marine and atmospheric policies and programs;

Second. Report to the President and the Congress annually and upon request; and

Third. Advise the Secretary of Commerce with respect to the National Oceanic and Atmospheric Administration.

In addition, because its membership is composed of individuals from outside the Federal Government, NACOA provides a valuable information link between the public and private sectors with respect to oceanic and atmospheric matters.

Last year Congress passed H.R. 3849 which abolished and then re-created NACOA with new membership. This act, which was signed into law on July 5, 1977, includes language that will insure that the membership of NACOA will be of the highest quality.

The new membership, appointed by the President in late January of this year, is composed of distinguished individuals representing a diversity of marine and atmospheric fields. NACOA members come from industry, academia, and State and local government. They comprise a body of wide geographical representation.

H.R. 10823, as amended, authorizes up to $572,000 to be appropriated to NACOA for fiscal year 1979. This level of funding is necessary to insure the effective continuation of this important advisory committee. I urge your support of this bill.

Mr. RUPPE. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 10823, a bill which would authorize appropriations in the amount of $572,000 for the National Advisory Committee on Oceans and Atmosphere for fiscal year 1979. This amount exceeds the administration's request by $88,000. I feel that this is a responsible increment in NACOA's budget authority which accounts for increased costs due to inflation and a commitment to more frequent and timely NACOA action in the development of a national oceans policy.

H.R. 10823 also extends by 1 year the termination dates of the NACOA members appointed by the President in January 1978. Due to a 6-month delay in the

appointment process, it is necessary to extend this date in order to allow the 1-year appointees to become acquainted with and serve NACOA as intended by the act.

After hearing from the Chairman of NACOA of his plans for the establishment of subpanels which will address specific marine issues and report to the Congress and the President in a more timely manner, I am very encouraged that NACOA will play an important role in the development of marine and atmospheric science policy as we encounter several conflicts and controversial issues in these areas in the years ahead. The members of NACOA represent several disciplinary and geographical areas and will be able to provide decisive commentary and analysis on oceans and atmosphere issues as they arise in Congress and within the administration.

Mr. Speaker, I strongly support this legislation and the authorization level which is necessary for the effective operation of NACOA in the upcoming fiscal year.

● Mr. BREAUX. Mr. Speaker, I am in support of H.R. 10823. The National Advisory Committee on Oceans and Atmosphere—NACOA—serves an important function both to the Congress and the executive branch by providing advice and reports on issues concerning atmospheric and marine affairs.

The Stratton Commission back in the late 1960's conducted a comprehensive review and evaluation of this Nation's ocean and coastal programs. In its final report, "Our Nation and the Sea," the Commission strongly urged the creation of an advisory committee which would be composed of individuals from outside the Federal Government to monitor and evaluate the Federal Government's marine programs.

When Congress first created NACOA back in 1971, it perceived NACOA as being a vital complement to the National Oceanic and Atmospheric Administration and, therefore, atmospheric affairs was added to NACOA's purview.

NACOA's role has been enhanced since the enactment of H.R. 3849 last year by Congress. This act, which was signed into law on July 5, 1977, abolished the original NACOA and recreated it with 18 members. The new membership of NACOA is composed of outstanding individuals with expertise in a broad range of fields relating to atmospheric and marine affairs. The new Chairman of NACOA, Dr. Donald McKernan, has outlined a prodigious work schedule for the upcoming year. Operating under a different format, NACOA should be able to respond in a more timely manner on many issues of importance to the Congress relating to marine and atmospheric affairs.

Mr. Speaker, the bill under consideration today will help NACOA to carry out its important statutory responsibilities in two ways:

First, it will extend by 1 year the terms of the current NACOA members. As the law now reads, the terms of 6 of the 18 NACOA members will expire on July 1 of this year. The new NACOA members, however, were not officially announced by the President until January of this year. Thus, unless their terms are extended, one-third of the advisory committee's membership will be able to serve less than 5 months which leaves them little opportunity to fully participate in the work of the committee. The authorization bill supports this program.

Second, H.R. 10823 will authorize funding for NACOA for fiscal year 1979. The bill includes an authorization level of $572,000, an amount necessary to insure the effective operation of NACOA in the next fiscal year.

Mr. Speaker, NACOA is an important advisory committee and H.R. 10823 will insure that NACOA will continue to make a valuable contribution in helping to shape marine and atmospheric policies and programs. I urge your support of this bill.●

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 10823, as amended.

The question was taken.

Mr. MOTTL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

## COAST GUARD AUTHORIZATION—FISCAL YEAR 1979

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 11465) to authorize appropriations for the U.S. Coast Guard for fiscal year 1979, and for other purposes, as amended.

The Clerk read as follows:

H.R. 11465

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That funds are hereby authorized to be apropriated for necessary expenses of the United States Coast Guard for fiscal year 1979, as follows:

(1) For the operation and maintenance of the Coast Guard, including expenses related to the Capehart housing debt reduction: $958,186,000;

(2) For the acquisition, construction, rebuilding, and improvement of aids to navigation, shore facilities, vessels, and aircraft, including equipment related thereto: $379,954,000 to remain available until expended;

(3) For the alteration or removal of bridges over navigable waters of the United States, constituting obstructions to navigation: $34,603,000, to remain available until expended; and

(4) For research, development, test, and evaluation: $25,000,000, to remain available until expended.

SEC. 2. For fiscal year 1979, the Coast Guard is authorized an end of year strength for active duty personnel of 39,331: *Provided,* That the ceiling shall not include members of the Ready Reserve called to active duty under the authority of section 764 of title 14, United States Code.

SEC. 3. For fiscal year 1979, average military training students loads for the Coast Guard are authorized as follows:

(1) recruit and special training: 3,962 students;

(2) flight training: 95 students;

(3) professional training in military and civilian institutions: 436 students; and

(4) officer acquisitions: 952 students.

SEC. 4. The Coast Guard is authorized to enter into a long-term lease in excess of one fiscal year for the purpose of acquiring a site on the Quillayute Indian Reservation in the State of Washington so that the Quillayute River Coast Guard Station may be relocated: *Provided,* That any such agreement entered into pursuant to this section shall be effective only to such extent or in such amounts as are provided in advance in appropriation Acts. The Coast Guard is also authorized to expend, commencing with fiscal year 1979, appropriated funds for the construction of fixed facilities and improvements on such land leased from the Quillayute Indians.

The SPEAKER pro tempore (Mr. MURTHA). Is a second demanded?

Mr. RUPPE. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) will be recognized for 20 minutes, and the gentleman from Michigan (Mr. RUPPE) will be recognized for 20 minutes.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise to urge the passage of H.R. 11465, as reported by the Committee on Merchant Marine and Fisheries. This bill authorizes appropriations for the Coast Guard for fiscal year 1979.

In performing its annual review of the Presidential budget request for Coast Guard programs, the committee has run into the same problem that it has faced in each of the last several years. That problem relates to the adequate funding of the Coast Guard, funding sufficient in amount to enable the service to perform all the many duties which have been placed upon it.

Once again, the committee has noted that the budgetary request is not reflective of what the committee considers the Coast Guard's needs. As I have said before, as have other committee members, the Congress in recent years has imposed many new responsibilities on the Coast Guard, without guaranteeing the necessary additional resources to perform those responsibilities efficiently and effectively.

In addition to the traditional responsibilities for maritime search and rescue, the maintenance of aids to navigation systems, and the supervision of commercial vessel construction, the Coast Guard in recent years has been charged with new duties with respect to the enforcement of the Fisheries Conservation and Management Act, the Ports and Waterways Safety Act, the Federal Water Pollution Control Act, and amendments to the Tank Vessel Act.

Shortchanging Coast Guard needs has been standard practice. Despite some recent improvements—many of which have been initiated by the Congress, the Coast Guard is still flying planes of Korean

war vintage and operating vessels built prior to World War II. The number of personnel available to carry out its many duties has been continually constrained, and it's a wonder to me that the service has been able to accomplish as much as it has.

The bill before us today authorizes the appropriation of approximately $960 million for operating expenses—approximately $380 million for the acquisition and improvement of vessels, aircraft, and shore facilities—$34.6 million for the alteration or removal of obstructive bridges—and $25 million for research and development.

The total authorization in the four categories involved amounts to $1,397,743,000.

In reviewing the authorization legislation, the committee was interested to note exactly what the country is receiving for its expenditures. As an example, in fiscal year 1977—the last year for which a complete statistical compilation has been published—the Coast Guard:

Responded to 79,000 search and rescue cases;

Saved over 3,000 lives of persons actually in danger; and

Prevented 5,000 additional possible deaths of persons not already in danger.

Property loss prevention was calculated to be $285 million.

In the aids to navigation program during the same year, the Coast Guard maintained 59,000 fixed and floating aids, and provided navigational electronic coverage for 17 million square miles.

In the marine safety area, the Coast Guard:

Reviewed 15,000 casualty reports;

Processed 50,000 seamen's documents;

Supervised the construction of 600 commercial vessels;

Inspected 11,000 existing U.S.-flag vessels and 3,500 foreign-flag vessels;

Conducted 325,000 courtesy motorboat examinations;

Boarded 30,000 recreational vessels;

Inspected 92,000 waterfront facilities;

Supervised 2,400 loadings of hazardous cargoes;

Boarded 53,000 vessels and barges underway; and

Conducted 93,000 harbor safety patrols.

In the field of marine enforcement protection, the Coast Guard:

Conducted 1,200 aerial pollution patrols;

Processed 13,000 spill reports;

Conducted 8,000 pollution investigations;

Monitored 20,000 transfer operations;

Conducted 1,300 ocean dumping surveillance missions; and

Initiated 3,700 pollution removal opertions.

In maritime law enforcement, the Coast Guard:

Boarded 1,800 foreign fishing vessels;

Operated vessels on enforcement missions, for a total of 100,000 operating hours;

Conducted enforcement flights of aircraft of 13,000 hours duration; and

Seized 30 foreign violators.

In addition to the other activities, the Coast Guard:

Furnished 14,000 hours of domestic icebreaking assistance to over 3,000 vessels;

Supported polar ice operations;

Conducted the international ice patrol; and

Maintained its various units in a readiness posture by participating in Navy refresher training exercises and conducting over 20,000 independent exercises of its own.

As impressive as they may appear, statistics of this type mean little unless they are related directly to needs. In that connection, the Coast Guard admits that it cannot live up to the mission standards which it has established.

Recognizing that those standards are, in many cases, based on subjective reasoning, it still should cause major concern to this House—as it does to the Merchant Marine and Fisheries Committee—to know that the personnel and equipment available permits the Coast Guard to conduct only approximately 75 percent of the needed surveillance patrols—only approximately 80 percent of the needed vessel boardings—and only approximately 50 percent of the facility inspection goals.

The Committee on Merchant Marine and Fisheries is convinced that there are insufficient personnel in the Coast Guard to do all the things it should do. Despite a Coast Guard request for an increase of personnel to the level of 40,000 for fiscal year 1979, the Department of Transportation approved only 38,420 personnel as an end-of-year strength—and, in fact, directed the Coast Guard to reduce its existing personnel strength by almost 300.

DOT sent forward in the budget that reduction item, reflecting a savings of $5 million, and describing the reduction as "management efficiency." Why, may I ask, did they not propose the reduction of twice as many people, save $10 million, and be twice as efficient?

The Committee on Merchant Marine and Fisheries simply could not accept such an unjustified and arbitrary level for personnel strength. It has, therefore, authorized sufficient funds to restore the proposed reduction of 278 personnel and, in fact, added an additional 633 personnel, for a total personnel level of 39,331—approximately half-way between the Coast Guard's original request and the Department's decision.

In general, the increase of some $13 million in operating expense authorization above the presidential request reflects the money to pay those additional personnel who would be available to the Coast Guard to improve its activities in the fields of search and rescue, marine environmental protection, marine safety, and port safety.

In the acquisition, construction, and improvement item, the committee added approximately $100 million to the Presidential budget request. The greatest part of this addition reflects the committee's determination that the Coast Guard should move promptly toward the design and replacement of one of the existing icebreakers stationed on the Great Lakes—in order to provide for the necessary icebreaker escort assistance on the lakes during the winter navigation season—enabling that important segment of the national economy to operate at its maximum level.

The committee recognizes that this issue is one which is still pending in the fiscal year 1978 authorization, and it may well be that consideration being given in the Appropriations Committee of the other body will result in resolving that problem this year. This authorization for $60 million is included, however, should the present efforts not reach fruition prior to September 30, 1978.

The other features of the A.C. & I. item are really "bare bones" replacement items for aging and inefficient vessels and aircraft—many of which are rapidly approaching the end of their useful service life.

I urge the Members of the House to respond to this very conservative bill, reported by the Merchant Marine and Fisheries Committee. We might well have justified twice as much addition as we actually recommended, but we realize that—in the present state of inflationary pressures and needs to restrain Federal expenditures—we must be realistic and overcautious in our recommendations.

I can assure this House that, on a dollar basis, the taxpayer receives from the Coast Guard much more in benefits than he lays out in funds. This authorization bill deserves the support of every Member of the House, and I seek that support at this time.

I will now yield such time as he may consume to the chairman of the Subcommittee on Coast Guard and Navigation, the Honorable MARIO BIAGGI.

Mr. BIAGGI. Mr. Speaker, I thank the distinguished gentleman from New York (Mr. MURPHY) the chairman of the Committee on Merchant Marine and Fisheries, for yielding me this time.

Mr. Speaker, I rise in support of H.R. 11465 and urge its passage by the House, as reported by the Committee on Merchant Marine and Fisheries.

The bill authorizes appropriations for the U.S. Coast Guard for fiscal year 1979—

For the operation and maintenance of the Coast Guard;

For acquisition, construction, and improvement of vessels, aircraft, and shore facilities;

For the alteration or removal of bridges determined to be obstructions to navigation;

For research, development, test, and evaluation;

For authorized end-of-year military personnel ceilings; and

For necessary average military student training loads.

It also specifically authorizes the Coast Guard to enter into a long-term lease with the Quillayute Indian Tribe in the

State of Washington, to permit the relocation of a Coast Guard facility on the Indian reservation.

Before discussing the levels of the proposed authorization, there is an urgent matter of utmost concern that compels me to digress for a moment from the cold realities of budgetary figures in a ledger. That is, the inevitable, cumulative effects of continued underfunding of Coast Guard programs.

It is a natural human tendency to develop unrealistic expectations from a labor-intensive service organization like the Coast Guard which is so closely associated with the "can do," uniquely American frontier spirit. However, in the time I have been chairman of the Coast Guard Subcommittee, I have seen firsthand the effects of these stresses and strains reflected in Coast Guard hardware and personnel.

The causes of these are numerous—funding deferrals, service life extension programs, and acquisition stretchouts delaying replacement of aging equipment.

In personnel, the cycle begins with arbitrary ceilings imposed at prior-year levels—disguised "reductions to base" styled "management efficiency moves," with bureaucratic immunity forgetting those in travel, transfer, leave, or illness status—prolonged excessive overtime requirements—inadequate training programs (even in the fundamentals of seamanship)—the heart and soul of a seagoing regulatory agency—and chronic undermanning.

The effects are inevitable and can only result in reduced operational effectiveness.

This already deplorable situation snowballs as older equipment requires additional spare parts and more shipyard time (29 percent of the Coast Guard Fleet is 30–35 years old). Overworked and delapidated shore facilities, deteriorating military benefit packages, and extended at-sea periods due to ship retirements lead inexorably to personnel retention problems. (The Coast Guard has attempted in vain to reduce average search and rescue workloads from 80 hours to 68 hours, against an ever-constant tide of an annual 6 percent rise in case loads.)

Exacerbating this condition are the new programs (unavoidably favored in the ever-shifting allocation of resources by the agency): The 200-mile fishing conservation zone—pollution enforcement—deepwater ports. . . . I could go on ad infinitum. New programs require reprograming of funds originally slated to carry on existing responsibilities.

Research and development suffers. We mortgage tomorrow's mix of missions and hardware to accomplish them—to pay today's operating expenses—"robbing Peter to pay Paul." I have personally seen this sequence of events occur in New York City. I see it being repeated in the Coast Guard of today.

The "can do" spirit can only stretch overworked bodies so far until it threatens the safety of the rescuers themselves. The subcommittee has heard poignant testimony of Coast Guard personnel assisting in fighting marine fires (only a backup responsibility for them at all), without protective clothing and absent adequate pumping capability. This continued risking of lives only courts catastrophe—as may have occurred in the "Pearl C" disaster in Oregon.

Confronted with this responsibility, the subcommittee was faced with a choice. Should we restore the Coast Guard budget to realistic levels, indicating our priorities, aware of the pitfalls of earmarking expenditures—or should we simply endorse the decisions of OMB—decisions which do not adequately provide for sufficient resources to enable the Coast Guard to function in the effective manner which the Congress expects, and which the public interest demands?

Faced with this decision, the subcommittee deliberated with a mixture of restraint and resolve, and finally added resources in the two most critical budget items—with promise of the highest payoff for the investment of taxpayer funds.

These additions involved raising the authorization for personnel strength and for research and development funding. This mixed strategy is designed to accomplish today's many requirements while—in some measure—anticipating tomorrow's new demands which are likely to be placed upon the Coast Guard.

The administration requested an authorization for operating expenses in the amount of $944,800,000. The committee has added $13,386,000—for a total of $958,186,000. . . . reflecting additional personnel in the critical areas of marine safety—environmental protection—law enforcement—and search and rescue—plus additional personnel to man the cutter *Duane* to be maintained in active service throughout fiscal year 1979 while engaged in the all-important fisheries law enforcement.

Reduction of the general detail (those personnel budgeted over and above minimum manning levels to provide for absences for a variety of reasons) would only result in additional "hidden costs" in the reduction of necessary services or increased workloads for other personnel. Consequently, the committee raised authorized limits to replenish this personnel pool. Additional personnel were added to assure adequate safety inspection of offshore oil operations, particularly in frontier areas.

In the authorization for acquisition, construction, and improvement of vessels, aircraft, and shore facilities, the President requested $279,208,000. The committee increased that figure to $379,954,000. A major part of the increase is attributable to a one-time acquisition of a replacement icebreaker for the Great Lakes.

The committee was of a single mind that the congressional authorization last year should be insisted upon in order to provide for the construction of a new full-capability icebreaker for the Great Lakes—to guarantee extended navigation season requirements in that region, and permit winter navigation to be extended seaward through the St. Lawrence Seaway.

This repetition of last year's authorization is necessary in the event that the present action being considered for a supplemental appropriation for this project is not completed before the end of the present fiscal year.

In addition, the committee authorized the construction of a third medium-endurance cutter, cut from the Coast Guard's original request due to escalated acquisition costs. The acquisition of this vessel now would result in overall procurement savings.

Additional moneys were included for fast-current oil pollution recovery devices—Coast Guard air station fire protection systems—the completion of the Houston vessel traffic system—for additional radio beacons to aid small boaters—and to acquire presently leased land at Bates Field, Mobile, Ala.

For alteration or removal of bridges over navigable waters, the administration requested funding for completing two programs and for undertaking three new projects at a level of $34,603,000—and the committee concurred in that request.

In research, development, test, and evaluation, the committee added $5 million to the President's request of $20 million, still $15 million below the original Coast Guard request. Even this figure places the Coast Guard in the lowest relative position within the Department of Transportation in the ratio of research and development to operational costs, or to total obligating authority.

This increase would chiefly benefit the acceleration of research into high seas oil spill cleanup and containment capability, tragically highlighted in recent days with the grounding and breakup of the *Amoco Cadiz* on the coast of France.

The total authorization is for $1,397,743,000—which includes $958,186,000 for operating expenses—$379,954,000 for acquisition, construction, and improvement—$34,603,000 for bridge alteration—and $25,000,000 for research, development, test, and evaluation.

I will not reiterate my earlier remarks on the manifest need for these resources to enable the Coast Guard to perform the diverse range of missions which we, the Congress, have required of the service. The Coast Guard is the peacetime protector of the safety of our vital sealanes of commerce—while standing ready to assume a similar but expanded role in wartime.

While imported oil and exported wheat are vital to our national economy, and while more than 50 million of us take to the waterways seeking refuge from the complexities of today's living, we must not forget the vigilant who watches out for the watchman to insure that he is present, adequately equipped and ready to respond when he is neded? If not we, then who?

Mr. RUPPE. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of H.R. 11465, the Coast Guard authorization of

appropriations for fiscal year 1979. The bill would authorize $1,397,743,000 for the U.S. Coast Guard for the next fiscal year so that the service can properly carry out the duties and responsibilities assigned by law.

I have voiced my concern with respect to the inadequacy of the Coast Guard budget for years. It seems to me, and to others, that the executive branch has, in large measure, ignored the fact that over the past few years the Congress has greatly increased the missions of the service. In 1976, for example, the Coast Guard was vested with the enforcement responsibility of the 200-mile exclusive fishery zone. The administration has also ignored the fact that equipment necessary to perform the traditional responsibilities of the Coast Guard, such as search and rescue, becomes outmoded and must be replaced.

This year's budget review conducted by the Coast Guard and Navigation Subcommittee under the leadership of our colleagues, MARIO BIAGGI and DAVID TREEN, has been particularly thorough. This review again documented the inadequacy of the amounts contained in the President's budget request. Thus, the committee felt compelled to increase the amounts authorized to be appropriated to the Coast Guard by approximately $120 million.

Let us then examine some of the areas where the committee bill would authorize moneys in excess of those sought by the administration. First, in the area of operation and maintenance, the legislation authorizes $958,186,000. This is an increase of $13,386,000 over the President's request. The increase provides increased funding to allow the Coast Guard to inspect all manned fixed oil and gas offshore structures; increased personnel to perform search and rescue, port safety, marine safety, boatswain mate training, vessel traffic service, and pollution law enforcement tasks; and personnel to man the Cutter *Duane* through fiscal year 1979. This ship is needed for fisheries law enforcement.

Second, in the area of acquisition, construction, and improvement of facilities, the bill authorizes appropriations of $379,954,000. This represents an increase of $100,746,000 over the administration's request. The increase provides funding for the continuance of the medium endurance cutter, small boat, short range recovery helicopter, and medium surveillance aircraft programs. The $60 million authorized in fiscal 1978 for a replacement Great Lakes icebreaker is continued in the authorization for fiscal year 1979.

As to the icebreaker, I want to stress the committee's intention that this ship is to be designed and constructed for maximum efficiency in Great Lakes operations. The committee has, as in the past, adhered to the provisions of the Buy American Act in this procurement authorization. I also note the recent statement of Dr. William J. Perry, Under Secretary of Defense, in which he says that, with respect to our NATO allies. defense equipment design and procurement needs to be more of a two-way street and so the administration expects to introduce legislation that would waive the restrictions on the foreign construction of naval vessels. Adherence to the provisions of the Buy American Act are, in my judgment, consistent with that statement.

The Coast Guard has been developing plans for a major additional Great Lakes icebreaker. Based upon earlier projections of commercial vessel traffic, construction would have to begin in 1981, with a new vessel on scene in 1985. But time and events do not stand still in an area where productivity is absolutely essential to the economic well-being of the entire country. Almost in a state of emergency, some 30 vessels carried cargoes to various steel mills during this past winter. Advancing technology and the need to maximize productivity with reductions in cost demand that we keep pace with the times and advance the icebreaker construction schedule, as reflected in the bill before us today.

I congratulate the attention my committee colleagues have given to this legislation that is so vital to the maritime community of both the Great Lakes and other regions of the country. Accordingly, I urge passage of H.R. 11465.

Mr. Speaker, I yield such time as he may consume to the ranking minority member of the subcommittee, the distinguished gentleman from Louisiana (Mr. TREEN).

Mr. TREEN. Mr. Speaker, I thank the gentleman for yielding this time to me.

First, I wish to commend my good friend, the Chairman of the Subcommittee on Coast Guard and Navigation, the gentleman from New York (Mr. BIAGGI), for his leadership and his diligence in all of the matters involved in this authorization bill, and I rise in support of the bill.

Mr. Speaker, I would like to join my colleagues in supporting H.R. 11465, the Coast Guard authorization bill for fiscal year 1979. This bill authorizes appropriations for the operation and maintenance of the Coast Guard; for the acquisition, construction and improvement of vessels, aircraft, and facilities; for the alteration or removal of obstructive bridges; and for research, development, test, and evaluation. It authorizes military personnel ceilings and necessary average student training requirements.

The bill also authorizes the Coast Guard to enter into a long term lease agreement with the Quillayute Indian tribe for the purpose of relocating a Coast Guard station on the Quillayute Indian reservation, and for the expenditures of funds to construct fixed facilities and improvements on that land.

The Coast Guard's role in the area of marine safety and pollution prevention has been greatly expanded. In addition to its traditional functions of search and rescue, aids to navigation and marine and port safety, the Coast Guard has been charged by Congress with diverse responsibilities as: enforcement of marine pollution laws: oil and hazardous substance spill coentainment and clean up; enforcement of the 200-mile fishery conservation zone; and licensing of deep water ports. This bill provides the Coast Guard with the authorization necessary to meet these ever-increasing responsibilities.

The authorization includes a continuance of the medium cutter, small boat, short range recovery helicopter, and medium surveillance aircraft programs. It also reauthorizes the $60 million authorized in fiscal year 1978 for a replacement icebreaker for the Great Lakes.

The principal changes made to the administration's original request by the Committee on Merchant Marine and Fisheries involved increased funding to allow the Coast Guard to inspect all manned fixed oil and gas offshore structures; increased personnel to perform search and rescue, port safety, marine safety, bosun mate training, vessel traffic service, and pollution law enforcement tasks; and personnel to man the Coast Guard Cutter *Duane* through fiscal year 1979 to engage in fisheries law enforcement. The committee also increased the research and development funds by $5 million principally for the acceleration of research into high seas oil spill containment equipment.

I believe this bill provides the necessary personnel and equipment to enable the Coast Guard to carry out its enormous responsibilities. I urge your support of its passage.

Mr. BIAGGI. Mr. Speaker, will the gentleman yield?

Mr. TREEN. I yield to the gentleman from New York.

Mr. BIAGGI. I thank the gentleman for yielding.

Mr. Speaker, I would like on this occasion to commend my colleague, the gentleman from Louisiana (Mr. TREEN), for his diligence, his commitment, his very substantial contribution in the deliberations of this authorization bill, and all of the other members of that subcommittee who worked long and hard.

Mr. Speaker, I would like to make this observation:

Bearing in mind that the Coast Guard has a spartan attitude with relation to its budget request, the Coast Guard's original request was $1,485,906,000. The administration's request was $1,278,611,000. The committee request was $1,397,743,000, which was $88,163.000 less than the Coast Guard's original request. We added $119,132,000 because we try to comply with the administration's attitude of staying within the budget and being a little more frugal. But the areas in which we added the additional funds were, in our minds, critical.

Mr. HUGHES. Mr. Speaker, I rise in support of this legislation.

I would like to use this opportunity to comment on the $25 million authorized by this bill for the Coast Guard's research and development programs.

The Coast Guard, in its budget submission to the Congress, requested an authorization of only $20 million for its research program. In a broad overview, this amount represents only 2.1 percent

of the Coast Guard's operational budget. Research budgets for the other divisions of the Department of Transportation average nearly 13 percent of their operational budgets.

In all candor, this level of funding is simply inadequate. It would make it impossible for the Coast Guard to conduct vital research and development programs. Ultimately, it will waste the taxpayers' money in the future when the Coast Guard will not have the technology necessary to carry out the programs mandated by the Congress.

Consequently, the committee wisely decided to add $5 million to the Coast Guard's research authorization.

In adding this $5 million, the committee specifically made clear its serious concern over the Coast Guard's current lack of technology to handle oil spills in rough seas, such as are often found in the Mid- and North Atlantic. I want to emphasize that the committee expressly intends that Coast Guard use this added funding to develop more effective technology to clean up oil spills on the high seas. The Coast Guard is to give this project the highest priority.

As my colleagues know, the Federal Government has decided to permit the major oil companies to undertake full-scale development of the oil and gas reserves on the Outer Continental Shelf. The oil companies have recently begun operations in the Atlantic, where harsh weather and heavy seas are often the rule rather than the exception. The Government has sold several leases in the Mid-Atlantic region, and exploratory drilling is now being conducted approximately 60 miles off the shores of South Jersey, the area I am privileged to represent in the Congress. The government plans additional lease sales in the near future for the Georges Bank area in the North Atlantic and for areas off the Carolina coast.

In spite of this Government program to move ahead with OCS development in the Atlantic, our committee has discovered the Coast Guard does not have the technology to contain a major oil spill in heavy seas. In our hearings on its authorization, the Coast Guard testified that its current technology can handle spills only in seas of 5 feet with winds of 20 knots. My colleagues from the Atlantic Coast are fully aware that our weather is frequently much rougher than this.

In my own district, a major oil spill from the OCS development activities could be disastrous to the two mainstays of the economy: tourism and fishing. I am certain that I do not have to describe in detail the devastation that can follow from a major oil spill. For that, one need only to look to the massive pollution that resulted recently from the breakup of the Amoco Cadiz off the coast of France.

The Coast Guard, I am confident, can develop the necessary oil-containment technology, if it makes the immediate, top-priority effort mandated by this legislation. In the past, the Coast Guard had made major advances in oil spill containment technology. It has developed the ADAPTS system, which enables the Coast Guard to remove oil from grounded tankers and barges in ocean conditions of 5-foot seas and 20-knot winds. It also has developed a device to recover oil spilled on rivers and other inland waterways with currents of up to 10 knots.

I am hopeful that the development of a high seas oil-containment technology will meet with the same success.

Mr. RUPPE. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 11465, as amended.

The question was taken.

Mr. MOTTL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

## ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Debate has been concluded on all motions to suspend the rules.

Pursuant to clause 3, rule XXVII, the Chair will now put the question on each motion on which further proceedings were postponed in the order in which that motion was entertained.

Votes will be taken in the following order:

H.R. 3489, H.R. 10822, H.R. 10823, and H.R. 11465, on which the yeas and nays were ordered.

The Chair will reduce to 5 minutes the time for any electronic votes after the first vote in this series.

## MERCHANT MARINE ACADEMY NOMINATIONS

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill H.R. 3489, as amended.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 3489, as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 357, nays 1, not voting 76, as follows:

[Roll No. 224]

| Conyers | Mann | Whitley |
| Crane | Moffett | Wiggins |
| de la Garza | Panetta | Wydler |
| Dodd | Pepper | Young, Tex. |
| Eilberg | Pressler | |

The Clerk announced the following pairs:

Mr. Thompson with Mr. Anderson of Illinois.

Mr. Thornton with Mr. Bafalis.

Mrs. Burke of California with Mr. Fraser.

Mr. Richmond with Mr. Wydler.

Mr. Rahall with Mr. Tucker.

Mr. Jenrette with Mr. Rose.

Mr. Gammage with Mr. Holland.

Mr. Howard with Mr. Andrews of North Carolina.

Mrs. Boggs with Mr. Gudger.

Mr. Byron with Mr. Frey.

Mr. Eilberg with Mr. Krueger.

Mr. Jones of North Carolina with Mr. Butler.

Mr. Whitley with Mr. Long of Louisiana.

Mr. Teague with Mr. Goldwater.

Mr. Runnels with Mr. McCloskey.

Mr. Rodino with Mr. Livingston.

Mr. Ambro with Mr. Stockman.

Mr. Ashley with Mr. Ashbrook.

Mr. Breckinridge with Mr. Wiggins.

Mr. Jacobs with Mr. Pressler.

Mr. Kazen with Mr. Thone.

Mr. Mann with Mr. Stanton.

Mr. Panetta with Mr. Quie.

Mr. Moffett with Mr. Aspin.

Mr. Pepper with Mr. Don H. Clausen.

Mr. Roncalio with Mr. Lundine.

Mr. Applegate with Mr. Cochran of Mississippi.

Mr. Stokes with Mr. Shuster.

Mr. Traxler with Mrs. Collins of Illinois.

Mr. Waxman with Mr. Dodd.

Mr. Tsongas with Mr. Cohen.

Mr. Harrington with Mr. Conyers.

Mr. Garcia with Mr. Conable.

Mr. Ford of Michigan with Mr. de la Garza.

Mr. Alexander with Mr. Fish.

Mr. Clay with Mr. Crane.

Mr. Sarasin with Mr. Sawyer.

Mr. BROWN of Michigan changed his vote from "nay" to "yea."

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The result of the vote was announced as above recorded.

The title was amended so as to read: "A bill to amend section 216(b) of the Merchant Marine Act, 1936, to entitle the Delegates in Congress from the District of Columbia, Guam, and the Virgin Islands to make nominations for appointments to the Merchant Marine Academy, and for other purposes."

A motion to reconsider was laid on the table.

## PERSONAL EXPLANATION

Mr. PEPPER. Mr. Speaker, I was unavoidably detained at a meeting and missed the vote on H.R. 3489. If I had been present I would have voted "yea."

## NATIONAL SEA GRANT AUTHORIZATION ACT OF 1978

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill H.R. 10822, as amended.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 10822, as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 341, nays 23, not voting 70, as follows:

The Clerk announced the following pairs:

Mr. Breckinridge with Mr. Ammerman.
Mr. Howard with Mr. Butler.
Mrs. Burke of California with Mr. Don H. Clausen.
Mr. de la Garza with Mr. Dellums.
Mr. Eilberg with Mr. Frey.
Mr. Jenrette with Mr. Andrews of North Carolina.
Mr. Jones of North Carolina with Mr. Ford of Michigan.
Mr. Whitley with Mr. Goldwater.
Mr. Krueger with Mr. McCloskey.
Mr. Long of Louisiana with Mr. Quie.
Mr. Mann with Mr. Cochran of Mississippi.
Mr. Panetta with Mr. Pressler.
Mr. Rodino with Mr. Ashbrook.
Mr. Rose with Mr. Gudger.
Mr. Runnels with Mr. Jeffords.
Mr. Teague with Mr. Sarasin.
Mr. Stokes with Mr. Cohen.
Mr. Thornton with Mr. Thone.
Mr. Thompson with Mr. Kazen.
Mr. Tsongas with Mr. Tucker.
Mr. Rahall with Mr. Sawyer.
Mr. Gammage with Mr. Wiggins.
Mr. Conyers with Mr. Conable.
Mr. Clay with Mr. Bob Wilson.
Mr. Byron with Mr. Wydler.
Mr. Ashley with Mr. Stanton.
Mr. Aspin with Mr. Stokes.
Mr. Jacobs with Mr. Crane.
Mr. Fraser with Mr. Roncalio.
Mr. Alexander with Mr. Stockman.
Mr. Holland with Mr. Lundine.

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. BIAGGI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bills H.R. 3489, H.R. 10822, H.R. 10823, and H.R. 11465.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no obection.

## PROVIDING FOR EXTENSION OF CERTAIN FEDERAL BENEFITS, SERVICES, AND ASSISTANCE TO THE PASCUA YAQUI INDIANS OF ARIZONA

Mr. UDALL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate bill (S. 1633) to provide for the extension of certain Federal benefits, services, and assistance to the Pascua Yaqui Indians of Arizona, and for other purposes, a bill similar to H.R. 6612 which passed the House earlier today on the Consent Calendar.

The Clerk read the title of the Senate bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

There was no objection.

The Clerk read the Senate bill, as follows:

S. 1633

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) the Pascua Yaqui Indian people who are members of the Pascua Yaqui Association, Incorporated, an Arizona corporation, or who hereafter become members of the Pascua Yaqui Tribe in accordance with section (e) of this Act, are recognized as, and declared to be, eligible, on and after the date of the enactment of this Act, for the services and assistance provided to Indians because of their status as Indians by or through any department, agency, or instrumentality of the United States, or under any statute of the United States. For purposes of section 2 of the Act of August 16, 1957 (71 Stat. 371; 42 U.S.C. 2005a), the Pascua Yaqui Indians are to be considered as if they were being provided hospital and medical care by or at the expense of the Public Health Service on August 16, 1957.

(b) The provisions of the Act of June 18, 1934 (48 Stat. 484), as amended, are extended to such members described in subsection (a).

(c) The Secretary of the Interior is directed, upon request of the Pascua Yaqui Association, Incorporated, an Arizona corporation, and without monetary consideration, to accept on behalf of the United States and in trust for the members described in subsection (a), the title to the real property conveyed by the United States to such association under the Act of Ocober 8, 1964 (78 Stat. 1196), and such trust land shall be the reservation of such Pascua Yaqui Indians and shall be held as Indian lands are held.

Consent of the United States will be given to the exercise of criminal and civil jurisdiction by the State of Arizona pursuant to sections 1321, 1322, of title 25, United States Code: *Provided,* That the United States may effect a complete or partial retrocession within two years of enactment of this Act upon request of the Pascua Yaqui Tribe in consultation with the Governor of the State of Arizona: *Provided,* That acceptance of retrocession of all or any measure of civil or criminal jurisdiction, or both, by the United States, shall be effected by publication in the Federal Register which shall specify the ju-

risdiction retroceded and the effective date of retrocession.

(d) Section 4 of the Act of October 8, 1964 (78 Stat. 1197), is hereby repealed.

(e) Within one year from the date of enactment of this Act, the Pascua Yaqui Tribe shall adopt a constitution and bylaws or other organized governing documents and membership role. The Secretary of the Interior shall review such documents to insure that they comply with the provisions of this Act.

The membership of the Pascua Yaqui Tribe shall consist of—

(1) (A) All present members of the Pascua Yaqui Association who apply for membership within one year from the date of enactment of this Act, pursuant to the membership criteria and procedures provided for in the official documents of the Pascua Yaqui Indian Tribe.

(B) The direct lineal descendants of any person hereafter on the official Pascua Yaqui tribal membership role.

(2) Persons of Pascua Yaqui blood who are citizens of the United States who have demonstrated a significant relationship with the Pascua Yaqui Tribe in their application for membership as provided for in the official governing documents to be adopted by the Pascua Yaqui Tribe under authority of this Act.

MOTION OFFERED BY MR. UDALL

Mr. UDALL. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. UDALL moves to strikeout all after the enacting clause of the Senate bill S. 1633, and to insert in lieu thereof the text of H.R. 6612, as passed by the House as follows:

That (a) the Pascua Yaqui Tribe and its members, as determined pursuant to section 2 of this Act, are hereby recognized as eligible for the services and assistance provided to Indians because of their status as Indians by or through any department, agency, or instrumentality of the United States or under any statute of the United States. For purposes of section 2 of the Act of August 16, 1957 (71 Stat. 371; 42 U.S.C. 2005a), the Pascua Yaqui Indians are to be considered as if they were being provided hospital and medical care by or at the expenses of the Public Health Service on August 16, 1957.

(b) Section 4 of the Act of October 8, 1964 (78 Stat. 1197), is hereby repealed.

SEC. 2 (a) For the purposes of section 1 of this Act, membership of the Pascua Yaqui Tribe shall consist of—

(A) the members of the Pascua Yaqui Association, Incorporation, an Arizona corporation, as of the date of the enactment of this Act;

(B) all those persons of Yaqui Indian blood who, within one year from the date of enactment of this Act, apply for, and are admitted to, membership in the Association pursuant to article VII of the articles of incorporation of the association; and

(C) direct lineal descendants of such persons, subject to any further qualifications as may be adopted by the association.

(b) Within eighteen months after the date of enactment of this Act, the Secretary of the Interior, in cooperation with the association, shall compile a membership roll pursuant to the terms of subsection (a) of this section and shall publish such roll in the Federal Register. Publication of such roll shall not affect or delay the immediate eligibility of the members of the association under section 1 of this Act.

SEC. 3. Solely for the purposes of this Act, the Pascua Yaqui Association shall be deemed an Indian tribe recognized by the United States and the lands conveyed to the association by the Act of October 8, 1964 (78 Stat. 1196), subject to a restriction against alienation imposed by the United States, shall be deemed a Federal Indian reservation.

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 6612) was laid on the table.

## FAA RESEARCH AND DEVELOPMENT AUTHORIZATION ACT OF 1979

Mr. DODD. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1100 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1100

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11495) to authorize research, development, and demonstration projects relating to aviation, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER pro tempore. The gentleman from Connecticut (Mr. DODD) is recognized for 1 hour.

Mr. DODD. Mr. Speaker, I yield 30 minutes to the gentleman from California (Mr. DEL CLAWSON), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1100 provides for the consideration of H.R. 11495, the bill authorizing appropriations to the Federal Aviation Administration for research and development. This resolution provides for an open rule with 1 hour of general debate to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology. It provides for one motion to recommit.

Mr. Speaker, H.R. 11495 would authorize $78.5 million in fiscal year 1979 appropriations from the airport and airway trust fund for FAA research, development and demonstration projects. The major part of that appropriation, $58.9 million, would be authorized for air traffic control projects, while $14 million would be authorized for navigation projects. The remainder of the appropriation would fund aviation weather and medicine projects and a technical advisory committee.

The FAA's original appropriations request would be increased $3.1 million by H.R. 11495. The Committee on Science and Technology unanimously agreed that a $3 million appropriation was necessary to pursue research and analyzation of the Navstar global positioning system (GPS) currently being developed by the Defense Department. There has been a lack of coordinated effort to examine the potential for GPS civilian application. This $3 million appropriation would accelerate the development of what promses to be a very beneficial navigational system for civilian transportation.

An additional $100,000 would be authorized above the original FAA request to fund a technical advisory committee which would establish a vehicle for user input in the FAA research and development process.

Mr. Speaker, despite the $3.1 million addition to the FAA request, the $78 million appropriation authorized by H.R. 11485 is still $6.5 million less than the fiscal year 1978 authorization.

H.R. 11495 would terminate the open-ended authorization and institute an annual authorization request for FAA research and development programs. This will give the Congress an opportunity to assess the progress and benefits realized from the FAA projects and to determine if they are worthy of continued funding.

Mr. Speaker, H.R. 11495 would authorize appropriations for research and development which will contribute to the safety of our transportation systems. I request that we adopt House Resolution 1100 so that we may proceed to the consideration of the bill.

Mr. DEL CLAWSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1100 provides for the consideration of H.R. 11495, which authorizes appropriations to the Federal Aviation Administration. This is an open rule providing for 1 hour of debate to be controlled by the chairman and ranking minority member of the Committee on Science and Technology. The bill will then be open to amendment under the 5-minute rule. No waivers are contained in the rule.

Mr. Speaker, H.R. 11495 authorizes $78 million from the airport and airway trust fund for research and development projects. Five major areas of the FAA would be funded in fiscal year 1979. The major portion, $59 million, would be applied to air traffic control which seeks to improve the current airways system toward the dual goals of increased safety and efficiency; $14 million would be authorized to the second area, navigation. This program provides for the modernization, expansion and improvement of navigational systems in the United States and abroad. Development of various landing systems is also included.

The following three areas are designated to receive smaller portions of the authorized funds: Aviation weather, $4 million for a comprehensive weather information program in coordination with

NASA and the Departments of Commerce and Defense; aviation medicine, $800,000 to focus on the physical and mental health of air traffic control operators; and finally, $100,000 would be authorized to establish a technical advisory committee to allow greater user input into the FAA's overall R. & D. process.

The bill also contains a provision to change the process by which the FAA programs are funded. It would establish an annual authorization requirement and abolish the previously open-end authorization.

Mr. Speaker, I am aware of no opposition to the rule and recommend its adoption.

Mr. Speaker, I have no further requests for time.

Mr. DODD. Mr. Speaker, I have no further requests for time.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. FUQUA. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11495) to authorize research, development, and demonstration projects relating to aviation, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Florida (Mr. FUQUA).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11495, with Mr. BENJAMIN in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Florida (Mr. FUQUA) will be recognized for 30 minutes, and the gentleman from Kansas (Mr. WINN) will be recognized for 30 minutes.

The Chair now recognizes the gentleman from Florida (Mr. FUQUA).

Mr. FUQUA. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, this bill, H.R. 11495, authorizes research and development to the Federal Aviation Administration for fiscal year 1979.

The bill is a result of numerous hearings, briefings, and studies conducted by the Committee on Science and Technology, and more specifically, by the Subcommittee on Transportation, Aviation, and Weather, chaired by the gentleman from Texas (Mr. MILFORD).

I would like to congratulate the gentleman from Texas (Mr. MILFORD) and his subcommittee members for a job well done. In particular, I would like to thank the ranking minority member of the committee, the gentleman from New York (Mr. WYDLER), for his tireless efforts and fine contributions to the bill.

Mr. Chairman, because of the hard work done by Mr. MILFORD, Mr. WYDLER, and the subcommittee members, H.R. 11495 was reported out of the committee unanimously.

With this brief introduction, I would now yield to the gentleman from Texas (Mr. MILFORD) to explain the specifics of the bill.

Mr. MILFORD. Mr. Chairman, H.R. 11495 authorizes $78,473,000 from the airport and aviation trust fund to the Federal Aviation Administration for fiscal 1979 for research and development purposes.

This amount is $6,527,000 or 8 percent less than the $85 million recommended by the committee and authorized by the House last year.

While this authorization is very lean, it provides the funds necessary for the FAA to carry out a sound and balanced R. & D. program.

In order to insure such a solid, balanced program, the committee found it necessary to make certain changes to the FAA budget proposal.

The FAA request was $75,373,000. Of this amount, $58,949,000 was requested for air traffic control, $11,097,000 for navigation, $4,527,000 for aviation weather and $800,000 for aviation medicine.

The committee added $3.1 million to this request. Three million dollars was added to the navigation line item, bringing that total to $14,097,000, and $100,000 was added as a new line item to establish a technical advisory committee.

I would like to briefly explain the reasons for these actions:

The committee received a great amount of information in our air traffic control and FAA budget hearings supporting the civilian application of the NAVSTAR global positioning system (GPS) currently being developed by the Defense Department.

The FAA is currently examining NAVSTAR for potential civilian use, but tells us that they would not arrive at a decision in this area until 1982.

Just about every expert witness that we have had believes that this will be too late—that we need a decision in 1979.

If we wait until 1982, it will be too late to optimize the system for civilian aviation. In addition, by not thoroughly examining the potential of NAVSTAR, we may become locked into an inferior system or systems of navigation that would prohibit civil aviation from switching over to a more accurate and cost-effective NAVSTAR system.

It makes much more sense to invest a little seed money now to examine this potential of NAVSTAR.

Therefore, the committee added $3 million to accelerate NAVSTAR's efforts.

This money will be applied toward studying alternative system configurations of NAVSTAR for civilian use. The FAA will fund the studies; OMB and OTP will manage them. At least one study will be conducted by DOD, which has the most experience with the NAVSTAR configuration. Two other studies will be conducted by independent, private contractors.

Another study or group of studies will be directed toward a cost analysis of various navigation system mixes. Once again, FAA will fund these studies; OMB and OTP will manage them. Two or more independent, private contractors will conduct separate studies, looking at various civilian and military navigation systems from a cost-effectiveness as well as an accuracy standpoint.

These studies will be completed by September 30, 1979.

As I have noted, the committee also recommended $100,000 for the establishment of a Technical Advisory Committee.

The reason for the establishment of a Technical Advisory Committee is to create a better channel for used input and to therefore achieve a better balanced FAA R. & D. effort.

This is something that has been needed for quite some time.

Unfortunately, there have been many stumbling blocks in this effort. The administration have dragged their feet in this area leaving us no other choice but to legislate the establishment of this committee, and to specifically authorize funds for it.

Mr. Chairman, that completes my summary of the funding details of the bill. I would now like to elaborate upon two language sections in the bill.

Section 3 of the bill requires the FAA to submit quarterly progress reports to Congress concerning the microwave landing system (MLS) and the update of the national plan for MLS development by June 30, 1978.

We are requiring the FAA to do this, because of the difficulty some Members have experienced in seeking prompt and complete information from the FAA on the microwave landing system program.

Mr. Chairman, the MLS program has endured a long, difficult, and often bitter struggle.

The FAA has invented 10 years and $100 million in developing MLS. The FAA version of MLS, known as the time reference scanning beam—TRSB—has met with approval here in the United States and in the technical arm of the International Civil Aviation Organization (ICAO), ICAO is currently meeting in Montreal to examine the report of its technical panel and to make a selection of MLS.

Unfortunately a British manufacturer, Plessey Corp., which has repeatedly lost in the MLS competition, has decided to make a last-ditch effort to secure selection of its system to defeat the U.S. proposal.

Now, I can understand the determination of a manufacturer to win at all costs. And I can almost understand how such a zeal can drive them to attempt to undermine the ICAO deliberations, and to employ a lobbyist to spread half truths and total distortions in the U.S. Congress. But I certainly cannot and do not approve of such tactics.

These tactics, however, proved to be effective. By spreading one side of the MLS story, and by distorting technical details, the Plessey lobbyist was able to

cause a good deal of confusion among us laymen. To give himself an aura of respectability, he would try to convince uncommitted Members that he and Plessey had an altruistic motivation—that they were interested only in the cause of aviation and not the economic advantages that would accrue to the winner of the MLS selection process.

Try as I can, I have great difficulty in swallowing that.

If that were the case—if they indeed were interested in what was best for aviation, then why not support the system that was:

Selected by the ICAO technical panel in 1975;

Supported by the research arm of DOD;

Supported by NASA after test and examination;

Found to be superior in simulation tests run by MIT Lincoln Laboratory—tests that were verified here in the United States by Calspan and in Plessey's own country, England, by the Royal Aircraft Establishment.

The system that I am talking about, the one receiving this overwhelming technical support, is our own U.S. system.

Yet, this is the system that is "altruistically" being attacked by a highly paid lobbyist—a lobbyist who made a vaguely veiled threat to the head of our delegation at ICAO, who wildly tried to link the United States and Russia in a MLS espionage plot, who knowingly misinformed U.S. officials, who admitted before a congressional committee that his actions were "stupid, desperate, and exaggerated," and who is currently the subject of a Justice Department investigation.

When I am faced with the choice of believing such a lobbyist on the one hand, or the FAA, DOD, NASA, MIT, Calspan, the RAE, and the ICAO technical panel on the other, my decision is quite easy.

I am sorry for taking so much time on this subject, Mr. Chairman, but I believe that it is extremely important.

ICAO is presently making its first attempt ever to select a worldwide aviation system that has not already been implemented. I hate to see this bold effort go down the drain, because of the irresponsibility of a few individuals.

I think it is important to go on the record now that I and many other Members of Congress support the ICAO effort. We understand that difficulties are to be expected in such a precedent-setting effort. However, we should make very clear that the activities that we have witnessed—that of a losing company skirting ICAO procedures and trying back-door methods to overthrow the ICAO process—will only serve to harm and perhaps destroy the good intentions of ICAO.

Mr. Chairman, I have one final item to discuss. Section 4 of the bill establishes an annual authorization for FAA R. & D. programs. Because technological progress is so rapid in our society today, it is necessary for Congress to keep a much tighter grip on the R. & D. functions of the governmental agencies.

Presently, FAA operates under an open-ended authorization for R. & D. In other words, there is no requirement for the FAA to obtain authorization for its programs on an annual basis.

This section of the bill would terminate the open-ended process, establish an annual authorization, and permit Congress to maintain a closer handle on the dynamic area of research and development.

Mr. Chairman, this concludes my remarks concerning the bill.

Mr. WINN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, my colleague from New York, the ranking minority member of the Committee on Science and Technology and the Subcommittee on Transportation, Aviation, and Weather is unable to be here today. He has asked me to request your support in his behalf and to submit his prepared statement to the record.

H.R. 11495 is virtually identical in purpose with H.R. 3965 which passed this House last year by the margin of 402 to 6. I wish to join with the gentleman from Texas and my colleagues on the Science and Technology Committee in urging your support for H.R. 11495 which we approved by the margin of 38 to 0.

Because the FAA's research and development funds are appropriated from the Airport and Airways Development Act trust fund rather than the general fund, they are now subject only to open ended reauthorization every 5 or 6 years. Because these R. & D. funds account for only 3 to 4 percent of the total FAA budget, they have received very little attention in the authorizing process. Moreover, it is well established that research constitutes the foundation upon which all systems are built, including the air transportation system.

In the reorganization of House committees beginning with the 94th Congress, the Committee on Science and Technology was assigned oversight jurisdiction for all ground and air transportation modes research and development. This consolidation has worked out quite well with the exception of the FAA R. & D. budget. Inadvertantly, this item was left with the Committee on Public Works and Transportation through the reauthorization of the airport and airways trust fund each 5 or 6 years.

Since the FAA R. & D. budget accounts for a very small portion, less than 4 percent, of the total FAA budget, it has not received the indepth scrutiny required.

I can also assure you that H.R. 11495 has the support of the Committee on Public Works and Transportation and I ask for your support.

Mr. Chairman, I submit herewith the statement of my colleague, the gentleman from New York (Mr. WYDLER), for printing in the RECORD:

● Mr. WYDLER. Mr. Chairman, I am pleased to join my colleague, the gentleman from Texas, in support of H.R. 11495.

For many years, the Federal Aviation Administration has conducted research and development on numerous programs considered important for aeronautical safety and effectiveness. Unfortunately the results of these programs have not been as rewarding as promised. Little of the funding and effort expended by FAA on R. & D. results in air transport system improvements. This appears true for safety, energy conservation, or environmental protection.

Together with many of our colleagues, I have attempted to obtain a more responsive attitude on the part of the FAA—continually urging greater action to meet the increasingly varied and complex requirements generated by our growing air transportation system.

An essential step in gaining improved congressional oversight of FAA R. & D. programs is annual authorizing jurisdiction. H.R. 11495 would close this small but significant loophole. Even with the reorganization of the committees of the House beginning with the 94th Congress, annual authorization jurisdiction over FAA R. & D. programs does not exist. While amounting to less than 7 percent of the FAA budget, research and development constitutes the cornerstone upon which the future aeronautical system must rest.

Last year, the House enacted H.R. 3965, virtually identical to this bill. H.R. 3965 passed the House by the margin of 402 to 6.

With the House reorganization, the Committee on Science and Technology was assigned oversight responsibility for R. & D. for all transportation modes. It is important to close the aviation gap.

We are assured by the Committee on Public Works and Transportation which has jurisdiction over FAA regulatory and operational functions, that there is no objection to this establishment of jurisdiction.

Although we know of no opposition to this objective, we are concerned that the other body does not share our recognition of the importance of this oversight responsibility. Despite the 402-to-6 margin last year, the Senate failed to consider H.R. 3965. We are hopeful this year our colleagues in the other body will move to consider this important legislation.

Therefore, I urge all who would help to obtain a more optimized air transport system join with the unanimous membership of the Committee on Science and Technology in supporting H.R. 11495. Thank you.●

Mr. FUQUA. Mr. Chairman, I yield 4 minutes to the gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Chairman, I appreciate the gentleman yielding.

Because of the very critical authorizing process that is built into this measure, I intend to support it.

Mr. Chairman, H.R. 11495—the Federal Aviation Administration research and development authorization—contains $8,697,000 under section 3 for research and development of the microwave landing system. The MLS is being developed by the FAA for approval by the International Civil Aviation Organization (ICAO) of the U.N. as a complete and advanced navigation system for modern air traffic.

Recently the General Accounting Office (GAO) at the request of Congresswoman HOLTZMAN released a report on

Federal efforts to protect the public from environmental nonionizing radiation (microwaves) exposure. In the cover letter from Director Henry Eschwege of GAO it is stated:

> Nonionizing radiation has became a subject of national concern because of the rapid increases in its use and its potential harm to public health. The population is receiving measurable exposures to nonionizing radiation. The sources are increasing, and the health effects of such exposures at low levels are controversial.

Section 102 of the National Environmental Policy Act of 1969 states that an EIS must be filed on "major Federal actions significantly affecting the quality of the human environment," with the EPA.

Thus the MLS represents a major Federal action which could have a potentially significant impact on the environment. And as the GAO study demonstrates there is a great deal of reason to prompt such a study.

As of April 11 the FAA, according to their congressional liaison office, has not filed an EIS on the microwave landing system with EPA.

In the House committee report filed with H.R. 11495 (H. Rept. No. 95-974) the House Science and Technology Committee states:

> The Committee, while supporting funding for the Microwave Landing System (MLS), believes that the FAA should provide the Committee with more data and information concerning the MLS development program in the future.

I would hope that the committee is also concerned with the question of the MLS' impact on public health and that their concern as reflected in the quote just stated will be met by FAA action to provide an EIS.

I stated my grave reservations with respect to the MLS in the CONGRESSIONAL RECORD on April 12 (page H2838). I do not believe that the MLS should be encouraged without a complete discussion and assessment of possible health hazards associated with the use of microwaves in the MLS.

I would like to point to three additional factions which mandate an EIS: First many will recall the discovery of Moscow's use of microwaves eavesdropping techniques on our Soviet embassy. The microwave exposure incident in the Soviet Union emphasized the health hazard associated with this technology. Second, in regard to another kind of navigation system for aircraft—the tactical airborne navigation (TACAN) system—three civilian employees engaged in the repair of the system have developed cancer. Two of these individuals died of cancer in 1970. Third, the GAO study which I referred to above states that the Federal Government has failed to live up to its responsibility in protecting the public from potential microwave health hazards.

While there may be no danger to the public in use of the MLS it is clear that there must be a thorough study of its potential impact on the public health before it is utilized in air traffic navigation.

I will vote for this measure, because of the very significant provision requiring annual authorization of FAA funding. However, if no EIS has been completed by the time the appropriation measure for FAA reaches this floor I will vote against that measure and will urge my colleagues to do likewise.

Mr. MILFORD. Mr. Chairman, will the gentleman yield?

Mr. WEISS. I yield to the gentleman from Texas.

Mr. MILFORD. Mr. Chairman, I appreciate the concern of the gentleman from New York (Mr. WEISS). I would say to the gentleman, that there will be, before these microwave landing systems become operational, a full impact statement made. I believe this will relieve any concern the gentleman might have. There have already been studies to the point where we know there is no particular hazard concerning the microwave issue, as opposed to radar where we have done extensive studies, so that this would be akin, I might say, with associating a motorscooter and its operational effect with that of a big Mack truck, because the emissions from the microwaves compared to that of radar that we have studied for a long period of time are far less in the microwave landing systems than that of radar.

Mr. WEISS. I appreciate the comments made by the gentleman from Texas (Mr. MILFORD). I know of the gentleman's continuing concern in matters of this kind, and that is why, to some extent, I am reassured, but I would like to state, as the gentleman will probably recognize on reflection, that there have been some very serious questions raised about this.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MILFORD. I yield 1 additional minute to the gentleman from New York (Mr. WEISS).

Mr. WEISS. Mr. Chairman, I appreciate the gentleman yielding me the additional time.

As I was saying, there have been some very serious questions raised about the potential hazards involved in this whole explosion of the utilization of microwave systems in various areas. Perhaps there is no harm in it, but we do not really know. All I am suggesting is that before the appropriation measure moves forward I would think that the FAA ought to abide by the legal requirements.

● Mr. GOLDWATER. Mr. Chairman, my colleague from New York, the ranking minority member of the Committee on Science and Technology has referred to the fact that H.R. 3965, virtually identical to H.R. 11495, passed this House last year by the margin of 402 to 6. I wish to join with my colleagues on the Subcommittee on Transportation, Aviation and Weather in urging your support for H.R. 11495.

Because the FAA's research and development funds are appropriated from the Airport and Airways Development Act trust fund rather than the general fund, they are subject now only to reauthorization each 5 or 6 years. Because these R. & D. funds account for only 6 to 7 percent of the FAA budget, they receive very little attention in the authorizing process. However, it is well established that research constitutes the foundation upon which all systems, including the air transportation system, are built.

Perhaps because I am also privileged to serve on the Committee on Public Works and Transportation and its Aviation Subcommittee, I can more readily perceive the increasing gap between technology availability and its application. This is becoming a growing problem, not only for aviation, but in all other areas of high technology.

To illustrate the dilemma in which I find myself with regard to the FAA, I will explain:

In response to my bill and companion legislation introduced in the Senate in 1973 to mandate implementation of a collision avoidance system, the FAA promised to adopt a CAS standard by July 1975, and air carrier implementation by July 1977. On the basis of this promise, these bills were withdrawn. Now, in 1978, we still do not have a collision avoidance standard, not to mention its implementation. What is most troubling is the knowledge that there is no lack of available technology. Nor is there a lack of willingness on the part of major user groups to acquire such a capability.

Illustrative of the unresponsiveness of the FAA to congressional mandates and of the difficulty we are experiencing in exercising oversight is the MLS program. In the report on H.R. 3965, the FAA was asked to coordinate and provide an update of the national plan for the development of the microwave landing system by September 30, 1977. An update of the national plan was to have been coordinated among the Departments of Defense and Transportation and NASA annually since 1971. In our hearings last month, we were told that the FAA had decided not to accomplish such an update. The reasons were obvious: To do so would have acknowledged that its MLS development program was over cost, under performance standards, and incapable of implementation. Stopping just short of removing all funding, you will note in H.R. 11495, that we have directed that FAA report quarterly on the status on the MLS development program.

During the last 2 years, I have inquired on numerous occasions of the details of the FAA developmental program for Synchronized-Discrete Address Beacon system. Synchron-DABS is basically an in-house design concept which was subsequently fabricated and tested by the Naval Weapons Center at China Lake, Calif., under contract to FAA. Synchro-DABS provides for a multitude of functions within one very low cost system. The largest aviation user community—general aviation—would thus be provided with electronic guidance capability far beyond their greatest hope at truly affordable cost. However, after extensive testing, demonstrating its capabilities and reliability, what do you think the FAA did? In October 1975, FAA headquarters ordered the Naval Weapons Center to cease testing, dissemble the

equipment and ship it to a warehouse. I am still hopeful of persuading Administrator Bond to restore Synchro-DABS to a test status and a more objective evaluation of its potential.

I hope you will support H.R. 11495, which would enable Congress to help achieve a safer and more efficient air transportation system.

Thank you.●

Mr. WINN. Mr. Chairman, I have no requests for time.

Mr. FUQUA. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

H.R. 11495

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That, notwithstanding any provision of law, there is authorized to be appropriated out of the Airport and Airway Trust Fund (established by section 208 of the Airport and Airway Revenue Act of 1970) to the Secretary of Transportation for the fiscal year ending September 30, 1979, for research, development and demonstration projects under section 312(c) of the Federal Aviation Act of 1958 (49 U.S.C. 1353), and section 14(d) of the Airport and Airway Development Act of 1970 (49 U.S.C. 1714):

(1) $58,949,000 for air traffic control purposes,

(2) $14,097,000 for navigation purposes,

(3) $4,527,000 for aviation weather purposes,

(4) $800,000 for aviation medicine purposes,

(5) $100,000 for a technical advisory committee, and

(6) such additional or supplemental amounts as may be necessary for increases in salary, pay, retirement, or other employee benefits authorized by law.

Funds authorized by this Act shall remain available until expended.

SEC. 2. Notwithstanding the purposes for which funds are authorized in paragraphs (1) through (4) of the first section of this Act, funds authorized by such paragraphs may be used for any other program or project for research, development, or demonstration under section 312(c) of the Federal Aviation Act of 1958 or section 14(d) of the Airport and Airway Development Act of 1970 if notice of such program or project has been given to the Speaker of the House of Representatives, the House Committee on Science and Technology, the President of the Senate and the Senate Commerce Committee in a manner containing a full and complete statement of the proposed program or project and the facts and circumstances relied on in support of such program or project and (a) a period of thirty days has passed after the date such notice was received, or (b) each such committee before the expiration of such period has transmitted to the Secretary written notice to the effect that such committee has no objection to the proposed action.

SEC. 3. The Federal Aviation Administration shall provide the Committee on Science and Technology with quarterly reports beginning June 30, 1978, concerning goals, milestones, obligations, pertinent correspondence with the State Department, and when requested, test data and evaluation of system performance concerning the Microwave Landing System (MLS) development program.

In addition, Federal Aviation Administration shall submit its uppdate of the 1971 National Plan for Development of the Microwave Landing System to the committee by June 30, 1978, and each ensuing year. The update shall include a program plan for the implementation of MLS and shall be coordinated with Department of Transportation, Department of Defense, and National Aeronautics and Space Administration, and State Department participation shall be sought. The implementation plan shall be submitted: *Provided,* That International Civil Aviation Organization has had an opportunity to select a system prior to that time.

SEC. 4. The second sentence of section 14 (d) of the Airport and Airway Development Act of 1970 is amended by striking out "and not less than $50,000,000 per fiscal year for fiscal years 1978 through 1980", and inserting in lieu thereof, "and $85,000,000 for fiscal year 1978".

Mr. FUQUA (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

TECHNICAL AMENDMENT OFFERED BY MR. MILFORD

Mr. MILFORD. Mr. Chairman, I offer a technical amendment.

The Clerk read as follows:

Technical amendment offered by Mr. MILFORD: On page 3, line 2, after the word "thirty" add the word "legislative".

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. MILFORD).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. M'FALL

Mr. McFALL. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McFALL: On page 2, line 23, after the word "Technology,", insert the following: "the House Committee on Appropriations."

And on page 2, line 23, after the word "Senate", insert the following: ", the Senate Committee on Appropriations".

Mr. McFALL. Mr. Chairman, this merely adds to the transfer process, which is described in section 2, a provision for notification of the House Committee on Appropriations and the Senate Committee on Appropriations.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. McFALL. I yield to the gentleman from Florida.

Mr. FUQUA. I thank the gentleman for yielding.

Mr. Chairman, we have no objection to the amendment. I think it is a constructive amendment and commend the gentleman for calling it to our attention. It follows the procedure that we follow in all similar actions of this type.

Mr. McFALL. I appreciate the gentleman's comments.

Mr. WINN. Mr. Chairman, will the gentleman yield?

Mr. McFALL. I yield to the gentleman from Kansas.

Mr. WINN. I thank the gentleman for yielding.

We have no objection to the amendment. It is definitely a clarifying amendment and a good amendment, and we agree to it.

Mr. McFALL. I thank the gentleman.

Mr. Chairman, I yield back the remainder of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. McFALL).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments? If not, under the rule, the Committee rises.

Accordingly the Committee rose, and the Speaker having resumed the chair, Mr. BENJAMIN, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11495) to authorize research, development, and demonstration projects relating to aviation, and for other purposes, pursuant to House Resolution 1100, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks, and to include extraneous matter, on the bill just passed, H.R. 11495.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

## WHITE HOUSE OFFICIALS WHO WE CANNOT TRUST

(Mr. RUDD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. RUDD. Mr. Speaker, we are informed by Rowland Evans and Robert Novak in today's Washington Post that Victor Utgoff, one of the President's key National Security Council officials, distrust the ability of U.S. leaders to use our strategic strength wisely, and is therefore promoting the policy of U.S. strategic inferiority to the Soviet Union.

How can the President entrust vital arms control and strategic policy functions to an official who holds such views, especially one who is involved in key negotiations with the Soviet Union at this very time?

Mr. Utgoff's views are diametrically opposed to the views of most Americans, who believe that the United States must maintain at least equal strength to the Soviets.

A current survey commissioned by the American security council shows that 88 percent of 108,384 people surveyed would support regaining U.S. military superi-

ority over the Soviets, even if it would cost $20 billion more a year.

I would like to include the Evans and Novak column at this point in the RECORD:

[From the Washington Post, Apr. 17, 1978]

THE UTGOFF PRINCIPLE

(By Rowland Evans and Robert Novak)

One of Zbigniew Brzezinski's key technical advisers, privately addressing fellow arms specialists over two months ago, propounded this principle: Better that this country not enjoy a clear arms superiority over the Soviet Union for fear we would sometimes misuse it.

Victor A. Utgoff, director of policy analysis on Brzezinski's National Security Council staff, thereby set off spirited debate within the small, contentious community of strategic experts. Although he complains off-the-record comments are being taken out of context, the Utgoff principle explains much about national security policy in the Carter administration.

His remarks reflect self-distrust among middle-level officials. Fearful that the United States will make no more principled use of military power than the Soviet Union, they are concerned not only about deterrence in Moscow but also self-deterrence in Washington. That mind-set among technical advisers may explain why even nontechnician Brzezinski, traditionally a hard-liner, has not escaped charges of softness toward the Kremlin.

Utgoff addressed 840 weapons experts in Monterey, Calif., Feb. 1 at a conference sponsored by the American Institute of Aeronautics and Astronautics. He refused to talk to us or give us the text of his speech. However, NSC staffers have corrected and amplified accounts given us by those present.

In no sense did Utgoff advocate unilateral disarmament. Describing the Carter administration's commitment to strategic arms control as an "article of faith," he called for "strategic equality . . . through adequately verifiable arms-control agreements." If that is "impossible," he advocated "whatever programs are necessary for our national security," adding, "We'll pay whatever price it takes."

What followed, however, began to raise eyebrows. "We cannot afford to allow ourselves to drift into significant strategic inferiority," Utgoff said. But what is "significant" inferiority? He soon argued that superiority is no blessing.

Losing superiority would "not be the end of the world," he said. "Some of our advantages are fading, and in some cases, it might be to our advantage to allow U.S. superiority to fade away," Utgoff said. Why? NSC staffers told us Utgoff feels losing U.S. superiority in submarine-based missiles might induce the Soviets toward fewer land-based missiles—a highly debatable proposition.

Utgoff's speech reaches the heart of what bothers him about U.S. weapons superiority: "I suspect we would occasionally use it as a way of throwing our weight around in some very risky ways." That is the essence of self-deterrence. If we do not have mobile missiles, neutron warheads and a superior Navy, we cannot be tempted to use them.

Those attending Utgoff's speech were instructed it was strictly off the record. Nevertheless, a set of surreptitious notes soon circulated in Washington, and was read at a conference at the Army-Navy Club here March 21. While those nonverbatim notes are incomplete, they do not differ in substance from the NSC official version given us.

Utgoff, 39, holds a doctorate in electrical engineering and was known as an advocate of "minimum deterrence" as a systems analyst at the Center of Naval Analysis before joining this administration. His newness to high-level policy-making explains what colleagues call his outrage that his speech (delivered to 840 people) leaked out. NSC officials told us Utgoff was "brainstorming," an unusual description for a prepared speech.

Nevertheless, he was back propounding the Utgoff principle March 27 in private conversation with a naval officer. While determined the United States should never be inferior, Utgoff added he equally feared being superior because it might encourage irresponsible U.S. conduct. An NSC go-between explained to us Utgoff meant that if either Washington or Moscow thought it had a strategic advantage, high-risk confrontation might result.

Utgoff's speech was not cleared by superiors and is not government policy, the NSC spokesman told us. Surely, it does not reflect the world view of Brzezinski. But as a nonexpert in the mysterious world of arms control, Brzezinski depends on technicians who share the considerably different world-view of Vic Utgoff.

For Utgoff is not unique. Middle-level officials, serach by the flame of Vietnam, cannot trust their country to handle power responsibly. They incline to Pogo's Vietnam slogan, "I have met the enemy and he is us" (posters of which have adorned walls of the U.S. Arms Control Agency). The Utgoff principle raises doubt whether officials carrying that national self-image can effectively negotiate with an adversary not similarly burdened.

## COMMUNICATION: THE MOST PRECIOUS CURRENCY OF A FREE SOCIETY

(Mr. VAN DEERLIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

● Mr. VAN DEERLIN. Mr. Speaker, our mutual friend Charley Ferris has completed his first 6 months as chairman of the Federal Communications Commission.

Mr. Ferris, who worked more than a dozen years for the now retired Senate Majority Leader, Mike Mansfield, and who then spent a year as consultant to the House Speaker, was determined to devote himself fulltime to the FCC job for at least a half-year before making any public appearances.

His debut on the speech circuit occurred last Wednesday, at the "biggest ever" convention of the National Association of Broadcasters, in Las Vegas. I was privileged to be among some 3,000 members of that organization, and to hear them summoned by the commission chairman to a new level of public responsibility.

As one who has been immensely pleased by Mr. Ferris' performance thus far in a very challenging office, I append a copy of his remarks to the Nation's broadcasters.

REMARKS OF CHARLES D. FERRIS

I learned from Newton Minow that as he was leaving the podium after his first—and most famous—speech to the NAB, a delegate walked up and told him: "I didn't think that was a very good speech."

When Minow was half way out of the room, the same broadcaster accosted him again and said: "I didn't like that speech one bit."

Minow kept moving, but the broadcaster caught him a third time at the exit. Excitedly he shouted at Minow: "That was the worst speech I ever heard in my whole life." Then he turned and stalked away.

A few minutes later, another broadcaster who had witnessed these encounters approached Minow with a comforting comment. "Mr. Chairman," he said, "I wouldn't pay any attention to that fellow. Everyone knows he has no mind of his own. All he ever does is repeat whatever he hears."

Well, each new Chairman of the FCC seems doomed to repeat as well what the NAB has heard from his predecessors.

In 1965, Bill Henry spoke of the FCC's aim "to make room for as many diverse ideas in television as possible." Today too much programming is still the same from hour to hour, and channel to channel, with only the names of the networks changed to protect the appearance of competition.

In 1969, Rosel Hyde urged that television show "what it means to walk in the shoes of the poor, the hungry, and the disadvantaged." Today, a year after *Roots*—a program that brought a sense of heritage, a glimpse of history, and a means of understanding to millions of Americans—the Commission is firmly committed to enforcing a policy that television not only show and tell—but do: that a medium which in law belongs to all the people should not exclude the minority who are not white and the majority who are women from full participation in the lifestream of national communication.

In 1970, Dean Burch conceded that FCC procedures needed to be "revised and simplified." Today, as the new Chairman of the FCC, I am determined that we will solve that problem. The Commission's rules should be written in plain English. A nonlawyer should be able to read and understan them. Those who regulate communications at least ought to be able to communicate clearly. It might even mean fewer dollars for legal services and more money for program excellence.

Seventeen years ago in 1961, Newton Minow worried about "competition for ever higher ratings." Today, the tyranny of Nielsen's numbers has strengthened its hold. The only place in our Republic where points and point-spreads are given greater urgency than here in the casinos of Las Vegas are the corporate headquarters of the three networks in New York.

That arrangement cannot be acceptable to the American people and must not be acceptable to professional broadcasters. For as we have all learned, quantity is not synonymous with quality. More—as you and the Commission have both learned in the case of regulation—does not mean better.

For if television had—or has—its vast wasteland, it will not—and cannot—be made fertile by overlaying it with a vast swampland of regulations. Shortly after coming to the Commission, I instituted a study of the delays in license and comparative renewal cases. We need to establish procedures that are both faster and fairer—and we will.

Thus, much of what I have to say will contribute to the tradition of past Chairmen that it is not only television that puts on reruns. The speeches of FCC Chairmen, like your own industry, tend to the truth that the more things change, the more they stay the same. Living color cannot give life to programs that are reruns in all but title. Decades of invention and innovation in broadcasting have not resolved issues that were there from the start—from that first night when KDKA crackled across the airwaves with the election returns from the Harding-Cox campaign for President in 1920.

By this point, I'm sure, it's clear that one other thing has not changed about an FCC Chairman's speech to the NAB. As one of my predecessors put it twelve years ago: "My work is cut out for me today. You will not agree with everything that is said."

Indeed, I may not agree with all I say a year from now. I intend to be open-minded—and independent. I do not have rigid pre-

conceptions—but I do have convictions. And I do believe that all of us who are responsible for a communications medium that reflects, shapes, alters, and informs the national consciousness need convictions that transcend the bottom line of writing regulations or of counting profits and ratings.

The Commission's decisions on telephone tariffs have a far greater immediate economic impact on every American than our rulings about television and radio. But in terms of their social, psychological, and ultimately their economic effects, broadcasting's images and words are not cheap.

Communication is the most precious currency of a free society. It is not just a matter of billion dollar sales, but of over two hundred million finds: To a large extent, we are what we see of ourselves on television. We are content or we dissent because its technology permits us as never before in history to know or to disguise ourselves. Seeing, far more than reading, is believing.

Without broadcasting, Americans would not have witnessed Bull Connor, Birmingham or the march on Selma—and America might not have two of the most noble and fulfilling legislative achievements of this century, the Civil Rights Act of 1964 and the Voting Rights Act of 1965.

Without broadcasting, America would not have heard the gunfire and seen the casualties at Kent State and Hamburger Hill—and young Americans who are alive today would be dead in a longer, even more bitter war.

Without broadcasting, the Watergate hearings and the impeachment proceedings might have been a matter of record, not reality—and the country might never have reached a consensus that the issue was a matter of principle, not partisanship.

News is the easy case to demonstrate the power of broadcasting. CBS News proved recently that broadcasting can even bring adversaries together in the cause of peace. But entertainment also informs us, in more subtle ways, about our lifestyles, our attitudes and our possibilities.

More people saw Elvis Presley in three appearances on "The Ed Sullivan Show" than in all the live concerts that he performed over the next twenty years. And what they saw influenced and expressed the feelings of the next generation. More people saw a single opera performance live from Lincoln Center last year than had seen it in person in all the performances in history. And that too may influence our national culture.

Your business is the business of America. Your role is so central that you can share credit for some of the best of our lives—from civil rights to political reform. And you also get blamed for much of the worst—for social problems ranging from violent street crime to lower college test scores. The average American citizen spends literally years of a lifetime watching or listening to television and radio. Your effect on values—and on institutions such as the school and the family—has become a national issue—like other issues concerning our national environment and national health.

At times broadcasting has been an easy scapegoat for other social failures. But not always—for this industry too, sometimes fails. When that happens, even when it brings with it commercial success, the public has a right to call you to a different account than the numbers on the balance sheet. Your private enterprise involves a public responsibility at least as serious as that of other industries not to degrade the physical environment. Americans worried about the quality of the air they breathe properly worry as well about the quality of the airwaves that penetrate their homes and saturate their children's minds.

The Communications Act is both an expression of that concern—and of the hope that public communication through many private sources can serve the public interest. The ideal is easier to state than to realize. It has its own internal tensions—for example, between overseeing the public interest in the use of the airwaves and avoiding interference on the basis of a public official's own program tastes or political interests.

As I have discovered, an FCC Chairman can be criticized for moving too slowly—or too fast. But recognizing both the proper limits and the possibilities of the Commission's role, I believe that it must move—that the next FCC Chairman should not be able to quote from his predecessors' speeches as though the lines were newly written. If you invite me back in some future year, I want to say different things to a later NAB convention.

Today, I would like to state five principles that I believe should determine how, and to what ends, the Commission will move.

First, the integrity and independence of the Commission's process is more important than any of its particular decisions. No industry we regulate will be regarded as a "constituent." By law, the Commission's only constituency is the public. We are independent of the Executive Branch. Our job as regulators is not to become agents of the regulated. Nor is it to reinforce public pressures that would impair your journalistic freedom.

But independence does not mean isolation. The FCC fully shares this Administration's commitment to regulatory reform. And we also have a commitment to listen seriously and sensitively to your concerns—and to the concerns of consumers.

Second, the Commission will be even-handed in enforcing its rules and in protecting the public interest. In the past, the FCC sometimes has been more attentive to abuses against your commercial clients—such as fraudulent billing of advertisers—than it has with the misuse of the medium in relation to your true clients—the public. The Commission must judge those who have shortchanged advertisers and those who shortchange the public even-handedly.

No longer should the Commission be tougher on smaller than on the larger licensees. And hopefuly we will be able to develop more effective ways to invoke the sanctions available to us. We will encourage licensees to correct mistakes on their own initiative rather than to await a Commission assessment of liability and punishment. Newspapers regard corrections and retractions as fit to print. When radio or television broadcasters mislead the public, they must set the record straight through corrective programming and advertising.

The demands on you to provide a public service and not simply to maximize profits are not the mere whims of federal regulators. It is the mandate of the law that binds us both. And its source of legitimacy comes from the American people directly. In fact, as well as in theory, your licenses cannot be viewed as a vested interest to be held in perpetuity. I intend to enforce the public interest standard for renewal.

Third, while I will carry out my responsibility under the law, I will not exceed my authority by intervening directly in your specific program decisions. Precisely because the pressures of society on broadcasting this past decade have never been more intense, the need for restraint by government has never been so great. Perhaps today the best definition of a democracy is that it resists the temptation and the pressure to control the mass media, even when they are controversial.

Instead we ought to encourage controversy. Broadcasters have the power to give access to competing ideas—and you can expect that the Congress, the courts, and the Commission will continue to require that you not deny the public access to those ideas. But this does not mean that broadcasters must bend with every breeze of public opinion. Your role as an independent and critical voice is too vital for that. You must, however, be sensitive to viewpoints and opinions of those who do not have FCC licenses.

The New York Times does not compromise its journalistic integrity by opening an Op-Ed page to alternative editorials. To an even greater extent—in broadcasting—the most pervasive form of communication—journalistic integrity means opening the medium to the many.

More local stations are offering that openness. And one network—CBS—recently started a program featuring viewer feedback. This convention has itself sponsored panels where minorities, women and consumer representatives have had their say. None of this marks the completion of the process. But it is perhaps the midpoint of a good beginning. Eventually television and radio can offer the technological equivalent of a New England town meeting.

Fourth, the FCC should seek to stimulate excellence through diversity—and diversity through competition. We need more than marginal improvements and minor adjustments in present regulations and procedures.

I favor a policy of zero-based regulation. We will rely on competition instead of rules whenever that is promising or possible. The marketplace can stimulate innovation, reduce costs, diversify audiences and raise the quality of your medium.

I do believe that the consumer's interest is paramount. And broadcasting is one of the most consumed commodities in this country. But I reject the myth that the consumer's interest and increased government intervention are identical. Less regulation can mean better broadcasting. It can mean that you spend less time on needless procedures—and more time on improved programing. It can mean fewer dollars for legal services—and more money for consumer services.

Government does more harm than good when it maintains a regulatory framework for ceremonial purposes alone. In regulating radio, we may be at that point. In some markets over fifty stations broadcast across a band of tastes as well as megacycles. By moving the dial an inch a listener can hear all the way from Rachmaninoff to Led Zepplin—from stations featuring all news to those preaching their own good news about religion. I doubt that regulation was the primary cause of this diversity. We must seriously consider replacing the current regulation of radio content with a structural, marketplace mechanism that still yields a public dividend for the privilege of having a place on the radio band. Thus we could recognize both that the radio spectrum is not so limited as it used to be—and that it is still not limitless.

Other reforms can blunt efforts to regulate television content. Some of that pressure expresses legitimate concerns. The Commission's rules against employment discrimination, for example, can be an effective alternative to direct FCC scrutiny of media "stereotyping." When you hire Blacks, women, Hispanics, and Asian Americans in responsible jobs, then the diversity of program choice will increase without any rule or agency telling you exactly what to broadcast.

I intend to enforce equal employment opportunity vigorously—and to urge a more nearly equal chance for minorities and women to hold broadcast licenses as well as broadcasting jobs.

A strong noncommercial television and radio service is another effective means of encouraging diverse services without more regulation.

Out of the iron grip of the ratings, where a single point within the range of statistical error can kill a show, public radio and public

television can satisfy needs and audiences that you do not reach. They can create a *Sesame Street*, cover the Senate debate of the Panama treaties, and carry the Metropolitan Opera from Lincoln Center to Lincoln, Nebraska. Public broadcasting has also pioneered in satellite delivery and captioning for the deaf.

You should recognize the contributions public broadcasting has made, and can make in the future, to stimulate a healthy national communications service and a freer broadcast marketplace. Public broadcasting can increase viewers' choices by meeting specialized needs not fully satisfied by an advertiser-based system.

A well-funded system of noncommercial television and radio can reduce the pressure for content regulation of broadcasting in general. It can also provide a useful "market place yardstick" and a competitive prod to you as commercial broadcasters to strive for excellence and experiment with new ideas and formats.

By setting its own high standards for children's programming, public television can raise the public's and your awareness of television's potential in a way the Commission could not or should not. During my term as Chairman, I will support a strong public broadcasting system, as well as a strong commercial broadcasting system.

Finally—and perhaps most importantly—I believe that the FCC should encourage new technology and service, rather than helping any vested interest to hold them back. Your industry exists because of those who saw things that never were—and it will not prosper now by explaining why not to advances in communications technology. These advances do present a challenge to you. But they are also a great opportunity—for broadcasting and for the public.

No one clearly envisions the sights, and sounds, and the possbilities of all the new technology. But we cannot look to the past, backwards to a passing status quo. We have to reexamine old assumptions and apprehensions. Technology will make us more—not less—dependent on the electronic transmission of information—the lifeline of a free society.

Electronic journalism and print journalism must strive to stand on an equal footing as we approach the end of the century. The pace of technological change is so quick and our dependence upon electronic news is increasing so rapidly that we must assure the independence of the electronic media from government control. We owe a commitment to this goal to our children and their children, for television will shape their lives even more than it has shaped ours.

But editorial freedom and independence go hand in hand with competition in the marketplace of ideas and in the marketplace for the attention of viewers and listeners. I do not think you can have one without the other. You cannot argue for less regulation of your own medium, and at the same time argue for more regulatory protection from competing information sources. For it is that competition of ideas and program sources that can help us begin to erect a new regulatory philosophy based upon abundant—not scarce—resources.

The Chicken Littles, who always think that the antennae are about to fall, predict that satellite delivery of multiple program services, fiber optics, and translators will make your industry obsolete. That could happen—if you regard change as an adversary and resist the chance for experimentation. But if you are as bold as a Sarnoff or a Paley when they put together the first networks, you can profit by multiplying the range of your services:

We do not have to wait for cable or fiber optics for Americans to get weather, sports and news on demand—or the capacity to use their television sets to retrieve other data. You can lead the nation into an era of individual choice in communications. The British have taken the first steps towards using broadcast signals for captioned information or teletext data retrieval. We can catch up.

You can make wider use of satellites to pick and choose from a wider number of program options, rather than permitting cable to gain a larger lead in this field. The booming market for syndicated shows proves that the product will be there when you have the means to receive it.

You can support the development of improved television sets to bring better UHF reception and more UHF channels to more people.

In short, your medium can provide a richer diversity with more convenience than any other. Commercial broadcasting can and must represent more than the survival of the tired, the timid and the imitative. And as you increase the options you offer to the public, you will relieve the public's pressure to regulate the content of a limited number of programs. And all this can mean higher profits as well.

In closing, I challenge each of you to ask the most important question that you can ask yourself: What special services are you providing that another licensee could not—or that another technology could not?

If you can answer that you put a major portion of your profits into strong local programming—or that you provide your community with access to a multiplicity of program sources—then you have a reasonable basis for seeking tenure as individual licensees—and as an entire industry. But if you are only flipping a network switch—or replaying an occasional movie package—then you have not made the case that you are essential to your community—or to the national communications system—in ways that a wired nation or direct satellite to home broadcasting would not provide.

Your answer, and your response to the rapid pace of new technology, is by far more critical than any action I will take, or speech that I will make, over my term as Chairman.

So far, broadcasting has more than profits to be proud of. It has, however, deficiencies to be remedied, technologies to be developed, and alternatives to be explored. And these are responsibilites that you could not escape even if you would. Edward R. Murrow said it a quarter of a century ago when your enterprise had one of its most shining moments—back in the drab days of black and white television. After showing Senator Joseph McCarthy browbeating citizens and mugging the Constitution, Murrow asked whose fault it was. "The fault," he answered, paraphrasing Shakespeare, "lies not in our stars, but in ourselves."

As a regulator charged with enforcing the law, I am ready to see and say when the fault lies with you. But I would rather see diversity and excellence thriving and then say: the credit lies not with the FCC, but with broadcasters themselves.

Thank you.●

## PRODUCT LIABILITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 5 minutes.

● Mr. WHALEN. Mr. Speaker, I wish to call my colleagues' attention to the Department of Commerce options paper on "Product Liability," released to the public on April 6. This report is the sequel to the interagency task force on product liability's exhaustive study, and it represents the latest refinement of the administration's thinking on this problem.

The options paper, after reviewing the nature and dimensions of the product liability insurance problem, divides its consideration of solutions into two categories: short term and long range. In the long run, according to the Commerce Department recommendations, the best course to follow is for the Federal Government to develop some form of model tort reform legislation to be adopted by the individual States. This closely follows the recommendation made in April 1977 by a bipartisan congressional panel I chaired.

More significantly, the paper zeroes in on the question of what the Federal Government can do in the short term to provide relief to the manufacturers who are unable to obtain or afford commercial insurance coverage for product liability risk. The options paper suggests:

The product liability problem might be alleviated for some businesses if they were permitted to set aside a portion of their pretax income to fund a specific reserve that would be a form of self-insurance for product liability claims. The fund would pay for settlements and judgments in product liability lawsuits and possibly defense and investigation costs. The Code would be amended so that specified contributions to this fund would be tax-deductible and the fund would not be subject to the accumulated earnings tax.

This is, of course, the same recommendation made last June when I introduced the Product Liability Insurance Tax Equity Act, H.R. 7711. At that time, I was jointed by a bipartisan group of six coauthors. The number of cosponsors today total 63, and the bill has been endorsed by 45 national trade and professional associations. On April 10, PLITE was introduced in the Senate by CHARLES MATHIAS and BIRCH BAYH, as S. 2864.

Our legislation has three key elements. First, it allows for the creation of tax-exempt reserve funds for liability self-insurance. Second, it permits the taking of business deductions for payments made into such funds. Third, it provides that regulations will be established to prevent the new reserve funds from being used as a means for tax avoidance.

In the House two other legislative proposals have been advanced by advocates of the tax reform approach to the product liability insurance crisis. These measures were authored by ABNER MIKVA and JOHN LAFALCE. All three proposals are pending in the Committee on Ways and Means, where they were referred to the Subcommittee on Miscellaneous Revenue Measures.

Congressmen MIKVA, LAFALCE, and I recently wrote to Committee Chairman AL ULLMAN, noting that our three different bills all embodied the same general principles and that the legislative proposal put forward in the Commerce Department options paper followed the same general outline. We urged the committee to move ahead and hold hearings on the concept before the end of this month, so that an amendment could properly be offered at the markup of

omnibus tax reform legislation, which will begin soon.

Mr. Speaker, I wish to emphasize the specific recommendation of the options paper. This is what the Commerce Department recommended to the President:

The Internal Revenue Code should be amended to permit qualified businesses to set aside a portion of their pre-tax income to fund a specific reserve for self-insurance against product liability and related costs.

Consequently, it is my hope that we soon will be able to count on the administration's support of our efforts to bring some relief to those suffering the most from the continuing product liability insurance dilemma. Prompt action by the Ways and Means Committee would be welcomed by thousands of small businessmen throughout the United States.

At this point in the RECORD, I wish to insert two sections of the Department of Commerce options paper on product liability. The first is the general discussion of the option of facilitating self-insurance. The second is the specific recommendation to do so. The text follows:

Option 4: Amend the Internal Revenue Code to permit qualified businesses to set aside a portion of their pre-tax income to fund a specific reserve for self-insurance for product liability claims.

The Internal Revenue Code permits a business to deduct a product liability loss from current earnings after a loss has been suffered. See Int. Rev. Code of 1954, § 165. Likewise, the payment of product liability insurance premiums is a tax-deductible expense. In contrast, if funds are set aside in a self-insurance trust, they are not deductible.

The product liability problem might be alleviated for some businesses if they were permitted to set aside a portion of their pre-tax income to fund a specific reserve that would be a form of self-insurance for product liability claims. The fund would pay for settlements and judgments in product liability lawsuits and possibly defense and investigation costs. The Code would be amended so that specific contributions to this fund would be tax-deductible and the fund would not be subject to the accumulated earnings tax. A model act (with section-by-section explanatory commentary) is set forth in Tab C.

PRO

This remedy will encourage small businesses that are now "going bare" to set aside funds in a self-insurance trust; thus, it will help assure that consumers obtain a full tort recovery.

It will permit small businesses that have a good safety record to obtain a practical benefit from that record. At present, most product liability insurers do not allow small businesses to benefit directly from a claim-free experience. See TFR at p. VI–26.

By stimulating greater use of self-insurance, it should reduce demand for product liability insurance (particularly for some adverse risks) and increase its availability, thereby reducing costs.

Perhaps the greatest benefit of the remedy is that it will permit businesses to make greater use of deductibles—this in turn will reduce their insurance costs.

It may encourage product liability loss prevention techniques since the manufacturer's own funds are at risk.

It will give companies more control over litigation, perhaps reducing settlements and actual costs.

Because bills already exist, this remedy could be implemented quickly.

It may encourage insurers to be more accurate in rate setting because of the potential competition of self-insurance.

A properly structured bill would involve less long-term expense than federal insurance or reinsurance programs.

This approach could be implemented without a new bureaucracy.

CON

The proposal will benefit only those small businesses with product liability problems that can afford to set aside funds in a reserve. (Approximately 40 percent; see National Federation of Independent Businesses Survey, p. 13, 1977).

Unless carefully designed with appropriate penalties, the device could become a new tax loophole.

The device could become a troublesome precedent for additional tax deductions for self-insurance against other risks.

Permitting reserves of this kind would not be in accord with the Financial Accounting Board Standards, which hold that financial statements can be misleading if a company establishes such reserves.

DEPARTMENT OF COMMERCE'S RECOMMENDATIONS

(The Internal Revenue Code should be amended to permit qualified business to set aside a portion of their pre-tax income to fund a specific reserve for self-insurance against product liability claims and related costs.)

Permitting qualified businesses to set aside a portion of their pre-tax income to fund a specific reserve for self-insurance against product liability claims and related costs has the potential of providing immediate relief to both small and large businesses affected by the product liability problem. The principal way it will help small businesses is by allowing them to utilize higher deductibles and thus lower the cost of their product liability insurance. This remedy will also encourage the use of product liability loss prevention and may, by reducing demand for product liability insurance, serve to reduce its price.

The remedy will not meet the needs of all small businesses—some of them have insufficient capital to utilize it. Also, unless carefully structured, it could establish a new loophole in the Internal Revenue Code. The Department has given very careful consideration to this aspect of the remedy and has drafted a model bill (with a section-by-section analysis) (Tab C). It has forwarded the bill to the Department of Treasury for a tax evaluation. The Department recommends that the Administration circulate the bill for commentary by all appropriate agencies.

There is strong congressional interest in this remedy and there may be an attempt to enact it in the Second Session. Therefore, the Department recommends that a prompt decision be made regarding its proposal.●

## PANAMA CANAL GIVEAWAY TREATY: LATEST COMMUNIST THREATS EXPOSED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

● Mr. FLOOD. Mr. Speaker as one of the principal crossroads of the world, the Panama Canal has long been an alluring subject for writers. One of these contributors is Allan C. Brownfeld, a well-known Washington journalist, who recently visited the isthmus and has provided information not well covered by other correspondents in connection with a current treaty proposal now under construction by the U.S. Senate.

In an article, published by Human Events, he emphasizes significant points in the isthmian situation, among them the following:

First. That control over the Panama Canal has long been an objective of the U.S.S.R.

Second. That the only authorized political party in Panama is the Communist Party.

Third. That its members have become increasingly aggressive and now hold high positions in the Government and school system of Panama and that one of them was a treaty negotiator.

Fourth. That Panama is now closely allied with Soviet Cuba and may quietly fall into its orbit.

Fifth. That responsible Panamanians have become disillusioned with the U.S. practice of boosting Communists.

Mr. Speaker, because the indicated article further exposes a major State Department fallacy in arguments for ratification of the proposed Panama Canal Treaty that would surrender the Canal Zone to Panama to "restore better relations" with all of Latin America, I quote it as part of my remarks:

[From Human Events Apr. 22, 1978]

MANY PANAMANIAN OFFICIALS ALARMED BY TORRIJOS' TIES WITH CASTRO

(By Allan C. Brownfeld)

PANAMA CITY, PANAMA.—Although the Carter Administration downplays the connection between Panamanian dictator Omar Torrijos and Fidel Castro, informed sources in Panama itself are concerned about where the close friendship between the two will lead. They are concerned, in addition, with the role being played in the Panamanian government by self-proclaimed Communists and point out a fact with which few non-Panamanians appear to be acquainted—that the Communists are the *only* real political party in today's Panama.

In a long conversation with this writer, held in the office of an American businessman in Panama City, a former high-ranking Panamanian diplomat, who must be un-named because of the very real possibility of reprisals by the Torrijos government, declared, "Torrijos is a good friend of Castro. The U.S. State Department says that Torrijos went to Cuba and was disappointed. But the fact is that Torrijos simply told the people in the U.S. what they wanted to hear."

"Under the Torrijos government, the Communists have become increasingly aggressive in Panama. Communists now hold the positions of Minister of Labor and Rector of the University. A known Communist was one of the negotiators of the canal treaties."

In Panama, this former diplomat pointed out, the Cuban Embassy is the largest of all. He noted that "It has its own equivalent of the U.S. AID program. It conducts sports programs in the rural areas. It is into everything. A great deal of money is coming into Panama to conduct these subversive activities. In 1969, most political parties in Panama were eliminated. The only party which is permitted to exist at the present time is the Communist party. Torrijos himself has no party. The Communists are entrenched in government, they are indoctrinating children in the schools. Our textbooks denounce the U.S. for what they call 'imperialism.'"

So filled with propaganda are the Panamanian public schools, it was reported, that the children of Panama's business community—and even many government leaders—attend the Jewish-sponsored Albert

Einstein Institute. Even Torrijos' own children attend this school.

Those Panamanians, such as this former ambassador, who seek a democratic Panama and oppose not only Torrijos' ties with Castro and communism but also his repression within Panama—his denial of free speech and free elections, are disillusioned with U.S. policy. President Carter's human rights policy, they argue, seems to be for everyone but Panama.

"The policy-makers in Washington," this critic declared, "are simply prepared to be conciliatory. Andrew Young boosts Castro. Democracy has proved to be so pussy-footing that people are fed up. Those who believe in a free society in Panama are strongly opposed to the manner in which the U.S. is handling itself. The U.S. has done nothing to get people on its side. The Russians have given 300 scholarships to Panamanian students to go to Russia to study. Many Panamanian families say, 'I must be a Communist, the Russians are educating my children.' The U.S. Embassy, on the other hand, only deals with the government. The U.S. State Department is constantly bringing enemies of the U.S. as guests to Washington. It makes no sense."

Another critic of President Torrijos, Alen Beliz, who formerly was a New York Times representative in Panama and served with the U.S. State Department—and is now in private business, says that Torrijos remains the dictator he has always been—despite some cosmetic changes. "Torrijos," he declared, "has eased up somewhat because President Carter persuaded him it was necessary to gain approval of the treaties. Torrijos is two-faced: pleasant abroad, and tough within Panama. Torrijos is backed by the U.S. government even though he is totally corrupt and closely tied to Castro. The President is concerned for human rights elsewhere, why not in Panama?"

It is very difficult for Panamanians, Beliz noted, to see President Carter refer to Torrijos as a "good dictator." Castro, he declared, "is trying to infiltrate Panama, and is succeeding. There is the play of the cat and the mouse between Castro and Torrijos. Usually, the cat ends up by eating the mouse."

American journalists, Beliz lamented, "too often simply take the State Department line. Why don't they talk to the Panamanian exiles, many of whom are in Miami? All of the officers who came to power with Torrijos have now been exiled. Political parties are still outlawed. President Carter says that Panama has free elections, but this is not true. Andrew Young has made many mistakes by underestimating Castro's influence and his purposes. The others around the President—Hamilton Jordan, Jody Powell, etc.—simply have no experience with any of this."

Other businessmen described the corruption in Panama in great detail, although they wished to remain anonymous. Torrijos, for example, is said to have spent $300 million to produce sugar mills and is now selling sugar below the world market price to the U.S.—and losing millions. Torrijos built the new Panama airport on a swamp, and it cost millions to fill it. Torrijos' own company got a contract for $67 million. A cement factory which could have been built for $12 to $18 million ended up costing $94 million—because of corruption. Businessmen say that it will never pay for itself.

An Australian journalist resident in Panama argues that Torrijos is really no Communist at all, but simply an opportunist, trying to use both Castro and the U.S. to his own advantage. "But," he noted, "the Cubans are here in force, and are spending a good deal of money propagandizing the people. The local Communists are tightly knit and well-organized, while the other factions are not. There is always the danger that Panama will slip into Castro's Communist orbit very quietly, without even meaning to do it."

Non-political Panamanians, such as a bank employe, educated in the United States, simply do not understand what President Carter, a firm advocate of human rights, has in common with Omar Torrijos, a dictator who has no respect for any of the elementary freedoms. "Everyone I know," she said, "is against Torrijos. If former President Arias ran in a free election, he would win overwhelmingly. The U.S. violates its own principles by its conciliatory attitude toward Torrijos."

The Communists in Panama have without question been the leading advocates of the removal of U.S. influence from the canal—and the country. Last August, the Communists of Panama said, "The U.S.A. was compelled to give in as the result of the struggle of the entire Panamanian people of the unity of the worldwide anti-imperialist forces and the broad international solidarity."

The canal has long been a goal of the Soviet Union. The official Russian view of the American construction, ownership and maintenance of the canal has been permeated with indignation—and prophecy of eventual U.S. downfall.

Volume II of the massive *Istoriya Diplomatii* ("History of Diplomacy") by V. M. Khvostov, issued by the State Publishing House of Political Literature in Moscow in 1963, presents the original canal treaty and subsequent building of the canal as sheer robbery and shameless exploitation by North Americans, exceeding even such "juicy fruits of imperialist diplomacy" as Imperial Germany's contract for the Baghdad Railroad.

Now, with the acquiescence of the Carter Administration, the U.S. appears on the brink of relinquishing the canal. What Washington seems not to be aware of, however, is the firm infrastructure which Castro and his supporters have thus far constructed within Panama and within the Panamanian government. "Is the U.S. blind or does it not give a damn?" one Panamanian asked. No one in Washington, at this time, seems prepared to answer.●

## ABUSES BY THE FBI

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, a few weeks ago I reported to the House the fact of an exchange that was most distasteful, disturbing and rather chilling with the Federal Bureau of Investigation. Without losing sight of the reason why I had made a request of the FBI, it will be actually 1½ years from my original request. I bring up the fact that the reason I have requested the FBI files and had to resort to the Freedom of Information and Privacy Act to do so was because I wanted to know how this agency had investigated threats against me which they themselves have reported to me and which were very disturbing, because it was obvious that the FBI verbal and fragmentary report did not answer the most disturbing questions of all, which are still very relevant and very disturbing. Since it involved my skin and my safety, naturally I am concerned.

What I have found out since I received the original files that were not made available to me until this last Friday when the FBI complied with my second request was a file that reflected more interest in what I was politically than in criminal threats.

Mr. Speaker, I found a file containing clippings about my filibuster against segregationist bills; I found a file that debated whether or not I should get a letter of congratulations on my election to Congress; a file that inferred I was questionable because, unbeknownst to me the FBI believed I somehow received Communist support in two unsuccessful campaigns; I found a file containing such things as a transcript of an old Drew Pearson broadcast which predicted I would be elected; a transcript which, Hoover was assured by his minions, said nothing about him or the FBI.

I found a file that reflected the insidious corruption of the Nation's most powerful and most respected police agency. The FBI became more concerned about its image than its deeds. Its topmost officials concerned themselves more with making Hoover happy than in keeping the country safe from crime or foreign agents.

I found a file in which, if Hoover was unhappy or expected to be, with some word or act of mine, he would be assured that I had received Communist support; but if he was happy with me, the file would reflect that the FBI had cordial relations with me. I knew nothing about any Communist support; the FBI's own records showed that I knew nothing of this unwelcome assistance, but nevertheless I was labeled as questionable. In its treatment of me, the FBI was no different from the Russian KGB. If you were to read from the "Gulag Archipelago" and read from my own FBI file, you would see no difference in values or judgments. That is the most terrifying thing of all, an American police agency with the same mindless preoccupations and judgments and base values of the KGB.

I saw a file in which not only was I slandered, but even a member of my own staff was called a louse though that same staff member had earlier received some of the highest security clearances our Government can give—not once, but twice—one clearance for CIA employment, and another for visiting an AEC plant.

I was and am interested in how the FBI goes about the business of fighting crime and preventing terrorism—about how it can protect me or any other Member of Congress from threats of violence, or how it investigates actual incidents of violence.

What I found is not reassuring. What I found is terrifying, because I found an agency no different in any respect from the secret police of any totalitarian state—in its outlook, in its methods, and in its sycophantic treatment of the feared and regal director. And I found an agency that allowed its own bias, its own prejudice, its own judgments discolor its true mission. If crime blossomed, and if organized crime grew apace, that did not concern them so much as whether anyone realized it or not. And those who realized the corruption and inefficiency of the FBI were to be corrected by the FBI, were to be hounded, were to be excommunicated. Thus, did our protectors become our enemies.

I wish Director Webster well, and I wish the Attorney General well. The FBI

needs to be reformed, because it has been rendered into a horrible caricature of its own zealously created and jealously guarded image of an efficient, intelligent, crime-fighting organization. The FBI as it is shown in my own personal files, became an image from the funhouse, corrupted from the top by a man who ran his own private empire, without direction or guidance from Congress or even the President. Is it still this way? Is the FBI still an empire obeying the slightest whim of mad men on high? For the sake of the country, I hope not. We shall see.

At this point I include the aforementioned letter:

U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., April 17, 1978.*

Hon. WILLIAM H. WEBSTER,
*Director, United States Department of Justice, Federal Bureau of Investigation, Washington, D.C.*

DEAR MR. WEBSTER: I received and have read with growing amazement the contents of FBI files maintained on me, personally.

It is clear that the FBI reflected the whims and prejudices of its Director, and that these were, in turn, registered in files concerning me.

For example, whenever I made remarks that were deemed offensive to the Director, so-called background statements on me would include comments such as "a recipient of Communist Party support in his election campaigns . . .". At the time of my election to Congress, a memorandum to Cartha De Loach advised the Director not to send me a letter of congratulations, "in view of his backing by the C.P." Even before that, the FBI placed in my file newspaper clippings regarding my acitvity in behalf of civil rights and I cannot imagine any reason for this since nothing could have been less subversive than attendance at a NAACP meeting in Seguin, Texas. Nor can I imagine why the FBI would have been interested in such prosaic items as a Drew Pearson broadcast that predicted I would be elected to Congress.

While the FBI carefully labeled me as one who had received Communist support whenever it was felt the Director would be unhappy with me, it did indicate that there were "cordial relations" whenever it was believed the Director would be pleased with what I had said or done. Thus, the Director—like the naked Emperor—was always to be told what he wanted to hear. I cannot imagine a more insidious behavior by a Federal police agency.

You indicate, as the files do, that I had no knowledge of whatever supposed support I ever received from any Communist. Yet, time after time, the files reflect that the FBI disapproved of me on the grounds of this supposed report which even the files show I knew nothing about, never solicited, and would not have have tolerated if I had known of it. Throughout the files these references are, indeed, statements that are subject to broad and erroneous interpretation and which therefore ought to be struck. Further, I am entitled to a complete apology.

If evidence is needed that the FBI was subject to the making of personal remarks and observations, you need only turn to a memorandum of December 31, 1970, in which a member of my staff was characterized as "a louse". Solely because that assistant declined to provide information that the Bureau wanted in order to check out a critical comment included in one of my speeches. I inquire specifically of you whether you believe it accurate to characterize a staff member as "a louse" when I am certain that FBI files on that individual will show that he is entitled to, and has received, some of the highest levels of security clearances of our government.

These are serious matters and thus far I have received only cavalier treatment from the FBI concerning them. This is not the kind of justice that I believe in and it is assuredly not the kind of justice that the FBI is supposed to stand for.

I am entitled to and again repeat—expect—that my records will be cleared, that derogatory statement in them will be deleted, and that I will receive an apology both full and public.

Sincerely yours,

HENRY B. GONZALEZ,
*Member of Congress.*

---

FEDERAL BUREAU OF INVESTIGATION,
*Washington, D.C., April 12, 1978.*

Hon. HENRY B. GONZALEZ,
*House of Representatives, Washington, D.C.*

DEAR CONGRESSMAN GONZALEZ: Reference is made to your letter dated February 22, 1978, and my letter of March 2, 1978, concerning your Freedom of Information Act (FOIA) request.

Enclosed are documents consisting of 276 pages which were indexed to your name, most of which relate to investigations of other events, organizations or individuals. In these instances, you are being furnished those portions of the file which pertain to you as well as additional information, wherever possible, to show the context in which your name was mentioned. Excisions have been made from these documents in order to protect materials which are exempted from disclosure by the following subsections of Title 5, U.S. Code, Section 552:

(b)(1) information which is currently and properly classified pursuant to Executive Order 11652 in the interest of the national defense or foreign policy;

(b)(6) materials contained in sensitive records such as personnel or medical files, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy of another individual;

(b)(7) investigatory records compiled for law enforcement purposes, the disclosure of which would:

(C) constitute an unwarranted invasion of the personal privacy of another person. This exemption was used specifically to delete FBI agents names and information pertaining solely to other individuals;

(D) reveal the identity of an individual who has furnished information to the FBI under confidential circumstances or reveal information furnished only by such a person and not apparently known to the public or otherwise accessible to the FBI by overt means;

(E) disclose an investigative technique thereby impairing its future effectiveness. The technique used involved a lawful means utilized by the FBI to obtain information without revealing the identity of the Bureau.

The only documents not processed were those materials previously released to you on Februaray 13, 1978, and references to the President's Commission on the Assassination of President Kennedy in which your name appears, Volume VI, page 118; Volume VII, page 475; Volume XV, pages 76, 78; and page 57 in the main report.

Documents originating with the Secret Service and the U.S. Air Force have been forwarded to them for direct reply to you. One FBI document containing information originating with the U.S. Air Force has been referred for consultation. You will be notified concerning the release of information in this document upon its return to the FBI.

Your letter dated February 22, 1978, expressed concern over the comment that you are:

". . . considered a liberal who has received communist support."

A review of our files indicates no participation or knowledge whatsoever on your part regarding receipt of communist support. However, there is considerable information as to the unsolicited backing and sympathy by the Communist Party in your political campaigns for Governor of Texas in 1958 and for the U.S. Senate in 1961. This information is included in the portion of the material withheld under the (b)(1) exemption which, as explained on the previous page, relates to classified data. The material is exempt from declassification as its disclosure would compromise the identities of intelligence sources and/or methods. I sincerely hope you understand our position in attempting to release as much as possible while upholding the FBI's investigatory responsibility toward our nation's national security.

In addressing your request for expungement and amendment of our files, I am having your file and references reviewed to determine if there are, in fact, inaccuracies and in particular, statements that are subject to broad and inaccurate interpretation. I will advise you promptly of what action is proposed upon completion of our review.

Your request for a waiver of fees has been considered in accordance with the provision of Title 5, United States Code, Section 552 (a)(4)(A). This provision permits an agency to waive or reduce fees in the public interest when furnishing the information is considered as primarily benefiting the general public. The FBI received over 18,000 Freedom of Information-Privacy Acts requests during 1977 alone. It is not felt that a distinction can be made between your request and those of others wherein the primary benefit is to the individual personally as opposed to the public at large.

Therefore, pursuant to Title 28, Code of Federal Regulations, Sections 16.9 and 16.46, please forward a check or money order in the amount of $27.60, payable to the FBI, to cover duplicating charges.

You may appeal the decision concerning waiver of fees or the withholding of information as claimed pursuant to the exemption provisions of the FOIA, by writing to the Deputy Attorney General (Attention: Office of Privacy and Information Appeals), Washington, D.C. 20530.

Sincerely yours,

WILLIAM H. WEBSTER,
*Director.*

---

## A BILL TO CREATE A CENTER TO EVALUATE MEDICAL PRACTICE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. WAXMAN) is recognized for 5 minutes.

● Mr. WAXMAN. Mr. Speaker, the United States is the world leader in science and technology despite the fact our research and development expenditures are a much smaller part of the gross national product than 10 years ago. This country has created a superb biomedical research organization devoted to the development of new knowledge about the human body in health and disease. It does not, however, have an agency with the responsibility for analyzing the applications of this research and for assessing the effectiveness and costs of current medical practices.

The lack of a center for the evaluation of medical practices, procedures, and techniques hinders the development of national health policy. It makes more difficult the development of a rational strategy to improve the quality of medical care.

What this means is we are using up our Federal health dollars reimbursing procedures considered outmoded or of questionable usefulness when funds could be spent productively to improve patients' health.

Our Nation's ability to pay the national health bill has a limit, so we must make the best use of the funds we have. Because the Federal Government has delayed in doing technology assessment the private sector has led the way.

In February, for example, Blue Cross and Blue Shield of Greater New York began phasing out routine payment of 41 surgical and diagnostic procedures considered outmoded or of questionable usefulness. The phaseout follows a recommendation made last year by the Blue Cross Association, and covers procedures identified as being of doubtful value to patients by the BSA in consultation with several specialty groups.

Dr. Julius B. Richmond, M.D., Assistant Secretary for Health, recently testified before the Senate Subcommittee on Health and Scientific Research of the Committee on Human Resources that the Department of Health, Education, and Welfare, is deeply committed to developing a technology management capability. He readily conceded that HEW has failed to direct adequate resources to technology evaluation.

Our present health programs fail to assess medical technology issues in a comprehensive manner.

The PSRO program represents an attempt to permit physicians to set and enforce standards of medical care at the local level. Unfortunately, in many areas of medical practice, local PSRO's must set very arbitrary standards of care because the knowledge needed to develop criteria of proven validity is simply not available, and local PSRO's have neither the resources nor the expertise to do research on medical care effectiveness themselves.

As we move toward national health insurance we will need to develop wise and effective strategies to control health care costs. It will be possible to define rational systems for cost control, only when we know more about the cost effectiveness of various medical practices, procedures, and techniques. I do not mean to suggest that we will be able to know everything we need to or even most of it. Nor am I unaware that decisions on cost control provisions of a national health insurance bill must take into account social and political considerations, as well as scientific issues. Nevertheless, I believe that a better understanding of the benefits, risks, and costs of commonly used medical procedures and techniques, would be of great assistance in establishing and administering a national health insurance program.

Some areas of medical practice are already being intensively analyzed by the NIH. For example, the indications for coronary bypass surgery and radical mastectomy are currently being thoroughly investigated. However, these studies represent isolated instances where the issues are of particular scientfic interest and where public scrutiny has been intense. Such random studies are not a substitute for a single center which will look at medical care effectiveness, not from the sometimes narrow viewpoint of the research scientists, but from the broader perspective of the overall quality of the Nation's health care and the need to make our health care system more cost effective.

This Center can provide a sounder structure for our current practices in health maintenance and case finding. For example, we have relatively little knowledge about the effect of Pap smears on mortality from cancer of the cervix and uterus. For decades, we have assumed that an annual Pap smear was an essential component of a preventive medicine program. In fact, many gynecologists are now advising their patients to have Pap smears every 6 months. A recent study suggests that biannual examinations would be adequate. If 40 million American women were to get a Pap smear biannually instead of annually, at a cost of $10, the annual saving would be $200,000,000.

Many physicians advise annual sigmoidoscopy for their patients over 40 as a means of detecting rectal and large bowel cancer at a curable stage. Yet a much simpler and less costly test—examination of stool for blood—is also available. The NIH has funded its first study of the effectiveness of stool blood testing in reducing death from colon cancer. But there are no careful studies underway on the added benefit of sigmoidoscopy, for patients who are having their stool tested. Physicians generally charge about $25 for sigmoidoscopy. Under a comprehensive health insurance program, as many as 80 million Americans would qualify for annual sigmoicoscopy at Government expense at a potential cost of $2,000,000,000 a year. Yet, we have no information on the effectiveness of this procedure when added to a stool testing program.

The most expensive part of our health care system is the hospital. Yet, indications for hospitalization are not helpful in most cases.

Lengths of stay for some conditions vary by as much as 100 percent from one part of the country to another. We know very little about why this is true and whether such variation can be medically justified.

The need for more thorough evaluation of new techniques is well known. The rapid growth in the use of computed tomography has been well publicized. While reliable data are not available, it seems likely that the majority of patients currently undergoing CT scanning have poorly defined symptoms such as headaches without objective evidence of neurologic diseases. The role of CT scanning in this clinical situation is unknown. Furthermore, there is no assurance that CAT scanners enable us to do more than spend millions on technology that identifies diseases for which there is no available cure; thus the expenditures in no way improve American health care.

We know very little about the effect of many other new techniques on health outcomes. For example, in many medical centers patients with heart failure are now attached to a Swan-Ganz catheter to monitor the functioning of the heart and lungs. Costs involved in the use of the Swan-Ganz catheter include the capital cost of the equipment, the physician's fee for inserting the catheter and costs for monitoring and interpreting the data which the apparatus procedures. The total true costs are probably hundreds of dollars per patient. Several hundred scientific articles have been written about the Swan-Ganz catheter, but none have documented its effect on patient survival.

What we are seeing today is the proliferation of purchasing expensive equipment and the perpetuation of procedures of limited medical value.

A center to evaluate medical practice can address the full array of technology assessment issues in American health care. It can examine if technology is indeed the cause of spiralling health care costs, or if technology actually saves us money by diagnosing and treating diseases faster than was ever possible previously. We must find ways to reduce the time it takes to transfer medical discoveries into daily medical practice. We must prevent premature use of technology which may have unproven value, and which may trigger long-term side effects in the patient. We must solve the problem of maldistribution of medical technology, which like our physicians is highly concentrated in large metropolitan areas, denying access to equivalent treatment in rural areas.

I have given a few examples of areas where more knowledge is needed before we can improve the quality of medical care in this country and make our health care system more cost effective. Obviously there are many others. It is time that we create a single organization at the Federal level to be responsible for this kind of research.

Some have argued that the function of the center that I have described should not be part of the mission of the National Institutes of Health. They argue that the NIH should concentrate on basic biomedical research and that another agency should be responsible for evaluation of medical practice. I do not agree.

The NIH is already heavily involved in the evaluation of medical practice in the form of clinical trials. No other Federal agency has the expertise and the ties to academic medicine which will be needed to conduct extensive evaluations of medical practice.

Others believe that adequate evaluation of medical practice can be done at NIH within the existing organizational framework. I think that a separate center can accomplish this task more effectively. By establishing a separate unit with an advisory council that includes representatives of the Office of Technology Assessment, the PSRO program, the National Center for Health Services Research, and the Social Security Administration, it is more likely that the issues which have the greatest impact on the health care delivery system will be examined.

Furthermore, by establishing a separate center with a separate budget, the fight for funds between basic research

scientists and those examining medical care effectiveness will be reduced.

Finally, some have expressed concern that a center for the evaluation of medical practice could rapidly become a regulatory agency—an FDA for medical practice. I believe such a development would be undesirable. Therefore, my bill specifically prohibits the direct or indirect use of the center in the administration of title XVIII or XIX of the Social Security Act.

If this country is to develop a rational, equitable, and efficient health care system, it will need to discover much more information about the components of current medical practice and their effectiveness. I believe that the creation of a center for the evaluation of medical practice will move us toward that goal.

At this point I include the following bill:

H.R. 12166

A bill to amend the Public Health Service Act to establish within the National Institutes of Health the Center for the Evaluation of Medical Practice

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That title IV of the Public Health Service Act is amended (1) by redesignating part I as part J, (2) by redesignating sections 471 through 476 (and all references to such sections) as sections 481 through 486, respectively, and (3) by inserting after part H the following new part:

"PART I—CENTER FOR EVALUATION OF MEDICAL PRACTICE

"ESTABLISHMENT OF CENTER

"SEC. 471. The Secretary shall establish within the National Institutes of Health the Center for the Evaluation of Medical Practice (hereinafter in this part referred to as the 'Center'). There shall be a Director of the Center who shall be under the authority of the Director of the National Institutes of Health.

"FUNCTIONS

"SEC. 472. (a) The Secretary, acting through the Center, shall conduct and support (by grant or contract) research on the evaluation of the effectiveness of medical practice and evaluations of—

"(1) diagnostic and casefinding techniques including assessment of their specificity, sensitivity, frequency of application safety, and cost;

"(2) therapeutic procedures including assessment of their benefits, costs, risks, and indications for use;

"(3) the appropriate use of facilities, equipment, and technology including indications for hospitalization and length of stay; and

"(4) the relationship between educational and training requirements for providers and the quality of care provided by them.

The Center shall give priority to research respecting those aspects of medical practice which are costly or widely used or both.

"(b) The Secretary, acting through the Center, may make grants to and enter into contracts with public and nonprofit private entities for (1) research projects on the development of new or improved methods of evaluating any aspect of medical practice, and (2) for training in the evaluation of medical practice.

"(c) After the expiration of the one-year period beginning on the date of enactment of this part, the Secretary may administer through the Center programs or projects relating to the evaluation of medical practice which are authorized under other parts of this title. Sums authorized to be appropriated for fiscal years beginning after the expiration of such period under such other parts for such programs and projects may be appropriated for the administration of such programs and projects through the Center.

"(d) The Center may not participate, directly or indirectly, in the administration of title XVIII or XIX of the Social Security Act.

"ADVISORY COUNCIL

"SEC. 473. In carrying out this part, the Secretary shall consult with an advisory council which shall consist of eleven members appointed as follows:

"(1) The Secretary shall appoint one member of the advisory council from each of the following: The Office of Technology Assessment, the entity of the Department of Health, Education, and Welfare through which part K of title III of this Act is administered, the National Center for Health Services Research, and the entity of the Social Security Administration which administers title XVIII of the Social Security Act.

"(2) The Director of the National Institutes of Health shall appoint seven members. Of the members appointed by the Director, at least one shall be a distinguished physician, at least one shall be a distinguished scientist, and at least two shall represent the interest of consumers of health care.

The advisory council shall meet at least three times each calendar year, and it may hold such hearings and investigations as it considers necessary to enable it to advise the Secretary with respect to the administration of this part. Members of the Council who are not officers or employees of the United States shall receive for each day they are engaged in the performance of the duties of the Council compensation at rates not to exceed the daily equivalent of the annual rate in effect for GS–18 of the General Schedule, including traveltime; and all members, while so serving away from their homes or regular places of business, may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as such expenses are authorized by section 5703, title 5, United States code, for persons in the Government service employed intermittently.

"AUTHORIZATIONS OF APPROPRIATIONS

"SEC. 474. (a) To carry out this part (other than section 472(c) thereof), there are authorized to be appropriated $25,000,000 for the fiscal year ending September 30, 1979, $50,000,000 for the fiscal year ending September 30, 1980, and $75,000,000 for the fiscal year ending September 30, 1981.

"(b) Of the sums appropriated under subsection (a) for any fiscal year not more than 25 per centum of such sums may be obligated for grants and contracts under section 472 (b)(2) and at least 10 per centum of such sums shall be obligated for research conducted directly by the Center."●

## THE PAPERWORK REDUCTION ACT: A NECESSARY BEGINNING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 5 minutes.

● Mr. REUSS. Mr. Speaker, today I am introducing H.R. 12158, a bill entitled the Paperwork Reduction Act of 1978. This legislation will help reduce the excessive amount of paperwork which daily confronts both business and consumers.

Each of my colleagues is certainly familiar with the constant refrain of our constituents—cut out the redtape and relieve us of the paperwork burden. Obviously, there are those who oppose any regulation and paperwork. I have no sympathy for such sentiments and find them both unrealistic and, in many instances, self-serving. Regulation and the paperwork that necessarily accompanies it are not bad per se. Most Americans are willing to bear their share of regulatory responsibility.

But regulation and paperwork which fail to achieve congressional intent, or achieve the intended purposes at a price far in excess of the intended benefit, must be stopped. Recently, a city school system decided to forgo a $4,000 Federal grant, because it would have cost $6,000 in man-hours and paperwork to obtain such a grant. Fifteen employees of a small business firm lost their pension plans, because their company simply could not comply with the avalanche of Federal paperwork. We all know the examples could go on and on. However, these two examples, cited in the final report of the Commission on Federal Paperwork, are most telling.

Paperwork resulting from Federal legislation can be a form of "hidden taxation." To avoid this, the paperwork implications must be considered right from the beginning of any legislation that requires Federal regulation. The paperwork required must not be left solely to the determination of executive agencies anxious to protect themselves from criticism by overregulating, and Congress must continually reexamine each program it legislates. Only through a meticulous review of existing programs can we determine whether these programs have achieved their original intentions.

We must find a process to weigh the benefits of legislation against the cost of compliance, and the Paperwork Reduction Act of 1978 would be a good beginning. This act incorporates several of the recommendations of the Commission on Federal Paperwork. Title I would amend various sections of the Truth-in-Lending Act to reduce the paperwork burdens in consumer credit transactions. Title II would amend the House rules to require a paperwork assessment to accompany each bill reported from committee. Title III would establish procedures to eliminate duplicative and unnecessary Federal reporting requirements. Each of these titles would go far toward easing the burdens of Federal paperwork.

Title I focuses on the Truth-in-Lending Act, because it is one of the more obvious and pervasive examples of legislation that sought, and I believe achieved, a worthy social objective—to tell borrowers what their actual costs are. Truth in lending began as, and remains, a necessary effort to assist consumers in making informed credit choices. The basic problem with truth in lending at present is that its numerous disclosure requirements and technical regulations often achieve counterproductive results. Borrowers are confused by the number of forms accompanying what should be a simple transaction and, more importantly, are unable to digest and understand the information provided by these forms. Lenders, especially small business, complain that compliance is extremely difficult and costly. Inevitably,

the cost of compliance is passed on to the borrower.

Some small creditors have gone out of business, because they could not afford to change their credit forms every time the Federal Reserve Board changed or amended its regulations. Other small creditors have complained that no matter what they do, even after consulting with the Federal Reserve Board, they may still be in violation of the act and subject to its penalties. This bill would eliminate those kinds of horror tales by requiring a standard form to be issued by the Board. With that, the small business person, who remains the backbone of our economy, could be assured that he or she would be in compliance with the Truth-in-Lending Act.

This legislation would also provide that all consumer contracts and agreements subject to truth-in-lending requirements be written in clear, simple, and comprehensible language. We are all too familiar with contracts and disclosure agreements that are heavily laden with legal gobbledygook which requires a battery of lawyers to decipher. This bill attempts to end such obfuscation. Every consumer deserves to know what his credit obligations are, and should be able to determine such obligations from the face of the agreement without hiring a lawyer. Truth-in-lending does not need to be a lawyer's relief act. This legislation will redirect truth-in-lending to its original purpose—providing borrowers with all necessary facts in simple English.

I am not the first to recognize the need to simplify the Truth-in-Lending Act. Among others, our colleagues Representatives ROSENTHAL, SPELLMAN, and WYLIE have been champions in this cause. I salute their work, and am proud to add my support to their efforts. I know that when Representative ANNUNZIO, the distinguished chairman of the Consumer Affairs Subcommittee, considers amendments to the Truth-in-Lending Act he will look carefully at all the proposals that have been advanced to simplify the truth-in-lending laws.

Title II, requiring a paperwork impact statement with each piece of legislation, would force Congress to focus formally on the paperwork consequences of its legislative mandates. As the Paperwork Commission reminded us, "legislation is the root cause of paperwork." We in the Congress must take the lead to insure that each legislative requirement for information is both necessary and manageable, and that the reporting requirements we mandate are the least burdensome and least onerous ways to obtain this information.

Finally, title III would terminate the authority of Federal agencies to gather statistics, effective 5 years after enactment of this bill, unless the authority is reauthorized by Congress—in effect a "sunset law" for data-gathering. Certain exceptions are provided for national security areas and small operations costing less than $2,500 and requiring fewer than 25,000 respondents and for the census which is constitutionally required. Title III would also establish a catalog of Federal statistical activities so that requests for information gathering could be checked for possible duplication of existing requirements in any agency, and a computer processing system to keep the catalog up to date.

Recently, the American Statistical Association and the National Science Foundation conducted a study of Federal information gathering systems. The study concluded that many Federal surveys failed to meet their specific objectives. The 1970 census was a good example of a faulty survey which was certainly less than scientific and accurate in one case I am familiar with, the survey of the city of Milwaukee. Unfortunately, faulty census gathering results in improperly formulated programs and fails to provide an accurate basis for the allocation of funds to State and local governments. Title III is designed to prevent unnecessary, duplicative, or wasteful statistical exercises. It should also reduce the hazard of faulty information gathering by centralizing Federal statistical requests.

Of course, this legislation will not completely eliminate all of the paperwork that Americans must confront daily. But I do think this legislation begins, as we must do, to address this nagging and often frustrating feature of American life. I hope my colleagues will join me in this campaign to eliminate unnecessary Federal paperwork. A section-by-section summary follows:

SECTION-BY-SECTION SUMMARY

Title I. Section 101. Provides that the title may be cited as the "Truth in Lending Simplification Act".

Section 102. This section exempts agricultural transactions from the Truth-in-Lending Act.

Section 103. This section permits, for both open- and closed-end credit plans, a simple statement that a security interest is held in the property for which the credit was extended. It would no longer be necessary to include a long, technical and often confusing description of the security interest. Moreover, if the creditor acquires a security interest in property other than that for which the credit was extended, only a general description of that property would be required.

Section 104. This section amends the Fair Credit Billing Act to eliminate the semiannual notices required of creditors. Consumers would be advised of their rights at the time they receive their bills, when presumably they would be more likely to take notice.

Section 105. This section directs the Federal Reserve Board to issue model forms and clauses to facilitate creditor compliance with the Act. Creditors who properly use the appropriate Board-issued forms would be deemed to be in compliance with the Act.

Section 106. This section permits creditors to use disclosure forms which do not conform to new regulations for a period of time after the regulations are effective, requiring changes in forms only once a year.

Title II. This title amends the Rules of the House of Representatives to require paperwork evaluation statements to be included in House committee reports. These evaluation statements would indicate whether the paperwork requirements exceed the intended benefits of the new legislation.

Title III. Section 301. Provides that the title may be cited as the "Federal Statistical Activity Control Act of 1978".

Section 302. Provides that the purpose of the title is to coordinate Federal information gathering to ensure that the information gathered is necessary and provides the greatest return to taxpayers on their tax dollars. In addition, the title is intended to strengthen Congressional oversight with respect to Federal information gathering.

Section 303. This section adds a new chapter (summarized below) to title 13 of the United States Code entitled "Regulation of Federal Statistical Activity".

Section 401. Definitions of the following terms are provided in this section: "Federal statistical authority", "Federal statistical activity", "agency", "respondent", "statistical purposes".

Section 402. This section requires the President to establish a compilation of Federal statistical activities and submit the compilation and a report to Congress outlining the purposes of the activities, the authority for them, the number of respondents and the costs of the activities. The section also requires that the compilation be updated on a continuous basis.

Section 403. This section terminates the authority of Federal agencies to gather information after a five-year period unless the authority is reauthorized by Congress.

Section 404. The Bureau of the Census is directed to provide to any Member of Congress or committee any appropriate information to aid in the evaluation of existing or proposed Federal statistical authority.

Section 405. This section permits the Director of the Office of Management and Budget to exclude from the definition of Federal statistical activity any activity which has fewer than 20,000 respondents, involves the expenditure of less than $250,000 per year of Federal funds, and which does not have as a respondent any unit of State or local government. Exclusions made by the Director under this section may be vetoed by either House of Congress.

Section 304. This section requires that committee reports of bills which provide for new Federal statistical authority contain a detailed statement on the costs and benefits of the statistical activity authorized by the bill.●

---

## FRAUD IN FEDERAL GOVERNMENT MAY EXCEED $12 BILLION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. FOUNTAIN) is recognized for 5 minutes.

● Mr. FOUNTAIN. Mr. Speaker, tomorrow the House will consider H.R. 8588, a bill to establish Offices of Inspector General in 12 Federal departments and agencies. The mission of these offices will be to conduct and supervise audits and investigations and to provide leadership and coordination for other activities designed to promote economy and efficiency and to prevent and detect fraud and abuse in Federal programs.

In this connection, I should like to insert in the RECORD and call to the attention of my colleagues articles which appeared in the New York Times yesterday and today concerning large-scale, systematic fraud against the Federal Government:

[From the New York Times, Apr. 16, 1978]

FRAUD IN FEDERAL AID MAY EXCEED $12 BILLION ANNUALLY, EXPERTS SAY

(By Anthony Marro)

WASHINGTON, April 15.—Fraud in Federal aid programs has grown to the point at which, some experts say, its annual cost may exceed $12 billion. But many agencies have not yet established the mechanisms to detect, let alone prevent, fraud in their programs.

That is the assessment of a cross section of prosecutors, Congressional investigators and Government officials who said in recent

interviews that the Federal Government has been so negligent in monitoring its own grants that it has permitted itself to become a major victim of white collar crime.

For the most part, the fraud is occurring in programs designed to provide services, training and aid to the disadvantaged: food stamps, health care, job training and housing aid.

But it is not the classic case of the welfare mother who cheats. Much of the fraud is committed not by the poor persons receiving the benefits, but by relatively well-to-do doctors, pharmacists and businessmen who have contracted with the Government to provide services and then set out to defraud it intentionally and systematically.

There are no precise figures for the amounts lost each year because of fraud. Mark M. Richard, chief of the fraud section of the criminal division of the Justice Department, says that the mechanisms for detecting fraud in many agencies are so weak that "the data base just isn't there."

"FRAUD, ABUSE AND WASTE"

But a recent report by the Inspector General of the Department of Health, Education and Welfare estimates that at least $6.3 billion to $7.4 billion was lost through "fraud, abuse and waste" last year in that agency alone.

And at a recent seminar on white collar crime, an official of the General Accounting Office, the investigative arm of the Congress, estimated that outright fraud in Federal economic assistance programs could amount from $12 billion to $15 billion a year and perhaps as much as $25 billion a year. The current annual budget of the State of New York is $12 billion.

Largely because of attention generated by a series of dramatic Congressional hearings and a string of critical audits by the accounting office, there has been a growing awareness of the extent of such fraud.

Among the problems and weaknesses cited repeatedly by persons familiar with fraud against the Government were these:

Relatively few resources have been committed to fight the problem. The fraud section, of the Justice Department's civil division, for example, has only 13 staff attorneys and three supervisors to handle a load of about 1,200 active cases and a backlog of about 4,000 referrals.

Although the great bulk of the money in these programs comes from the Federal Government, the primary responsibility for policing them is often left to state and local prosecutors, who may lack the resources and expertise, and sometimes the enthusiasm, to do it. 'The fact is that the public is more concerned with so-called street crime," Mr. Richard says.

With the exception of the Department of Housing and Urban Development, which was the victim of major program frauds in the early 1970's, few agencies have redesigned their programs to minimize the potential for fraud or to make detection easier.

DIFFERENCE ON SCOPE OF OFFENSES

There is some evidence that many of those engaged in fraud do not consider it theft, or at least see it as a crime less serious than robbery or mugging.

"There's a feeling that people have that they can rip off the Government and it doesn't matter, that it isn't really a crime," says John Ols, the G.A.O. official who cited the $12 billion to $15 billion estimate. "But the fact is that every dollar lost in this way is a dollar that doesn't go to someone who needs it and who is entitled to it."

Mr. Richard, the Federal prosecutor, says that fraud against the Government results in social costs beyond the money involved.

"It's not only a violation of law, but it's an attempt to subvert a program, and this sort of thing affects us all," he said. "When someone manages to subvert a Federal program, he's done something to undermine the integrity of the system over and above the actual dollar cost."

Some evidence of the extent to which the "integrity of the system" has been subverted can be seen in the report by H.E.W., in prosecutions and civil suits by the Justice Department, in Congressional hearings and in audits by the G.A.O.

THOUSANDS COMMITTING FRAUD

Taken together, they present a picture of thousands of persons—many of them well-educated, middle-class citizens—engaged in schemes that range from pennyante abuses of food stamp programs to alleged fraud in massive, multimillion-dollar grain deals.

They include William C. Sibert, a former employee of the Department of Transportation who was charged with embezzling some $856,000 by putting his own name on checks intended for the construction of a subway in Atlanta.

Asked by a judge how this could happen, the Federal prosecutor is said to have replied: "Your honor, he posed as a subway system."

The cases include that of a doctor who allegedly billed H.E.W. for seven tonsillectomies on the same patient; the daughter of a Civil War widow who continued to collect "widow's benefits" for two decades after her mother had died and the officials of a health plan in California who persuaded some people to sign enrollment forms by telling them that they were signing petitions to impeach Ronald Regan, who was then the Governor.

They also include the case of William F. Wilson, a dentist in South Carolina who is now in prison after being charged with, among other things, extracting healthy teeth from poor children so that he could collect fees from a Medicaid dental plan.

"It was just awful," said Joel W. Collins, the Assistant United States Attorney who prosecuted that case. He said the dentist had been found to have billed the Government for thousands of dollars worth of work not actually performed as well as for work that was not required.

"BROKE YOUR HEART"

"There was one girl about 13 years old who only had about three teeth left in her mouth," Mr. Collins said. "Looking at her just broke your heart."

Many of the cases disclosed in recent prosecutions and investigations are far more complex and involve larger sums of money.

Item: The Federal Government is trying to recover $24 million in damages from Cook Industries, which it contends defrauded the Government on grain shipments to 32 foreign countries. The suit, which is the largest civil suit the Justice Department is pressing in a fraud case, charges the company with having shortweighted, misgraded or adulterated grain shipments.

Item: The H.E.W. report, while saying that the estimates of dollars lost through "fraud, waste and abuse" might not have been more than 5.4 percent of its total budget of $136.1 billion, nonetheless concedes that the percentage was far higher in some programs. It said, for example, that at least 24 percent of its Medicaid funds had been misspent and concluded on the basis of a preliminary and hurried investigation that "criminal prosecution potential" exists in cases involving at least 290 physicians and 245 pharmacists.

Item: After paying nearly $5 million in vocational training benefits for veterans enrolled in a "barber's school!" in Puerto Rico the Veterans Administration discovered that the bulk of the 1,000 veterans it intended to aid had never actually taken the courses and that the "school" was little more than a store-front.

The proprietor, Romanita Garcia, eventually was jailed, and the Government has since recovered about $500,000 through a civil suit. But the rest was lost in what Federal prosecutors say was a classic case of fraud, much of it going to veterans who were not taking the courses they had reported taking, and much of it going to the businesswoman who was not providing the instruction she had promised.

Many fraud cases are fairly uncomplicated, relying less on careful planning than on the assumption that the Government cannot or will not audit its expenditures.

In many of the Medicaid fraud schemes, for example, doctors simply billed the Government for services not rendered or overcharged for services that were rendered. In many of the vocational education frauds, schools, sometimes with the aid of "students" who shared their Government benefit checks, simply enrolled veterans and billed the Government for training, even though the veterans never attended classes.

Often, this has involved some collusion with persons in the bureaucracy. In its investigation of prepaid health plans in California, a subcommittee headed by Senator Sam Nunn, Democrat of Georgia, discovered an official of H.E.W. who allegedly had accepted money and a car from a contractor whose grants he had approved. And as a result of an investigation of fraud in its educational training programs last year, the Veterans Administration, according to a recent report, meted out to its employees "one suspension, two demotions, 16 reprimands, 15 admonishments and 36 counselings."

FEW INSIDE ACCOMPLICES

Virtually all of those familiar with the programs agreed, however, that outsiders did not need, and in most cases did not have, inside accomplices to help them defraud the Government.

The fraud is not confined to social welfare and economic assistance programs. Although there are no estimates of fraud in military contracts and other forms of procurement, J. Roger Edgar, the head of the fraud civil division, estimates that fraud in defense contracts accounts for 30 percent to 40 percent of his workload.

One typical case handled by his office resulted in the Government's recovery of $600,000 from a contractor who had been accused of using scrap metal rather than new materials in the catapults that launch aircraft from the carrier U.S.S. *Forrestal*.

In the past, Government officials say, the public and law enforcement figures were more concerned with other crimes, particularly organized crime and narcotics and street crimes, and fraud was not perceived as a major problem.

Even where there was heavy policing of fraud programs, they said, it often focused on welfare mothers who were believed to be obtaining benefits to which they were not entitled rather than on calculated and sophisticated fraud.

According to Richard L. Thornburgh, a former head of the criminal division, the Department of Justice did not even have a strategy for dealing with program fraud before 1972 and thus failed to detect many of the schemes to defraud Federal programs that are now known to have taken place.

"ERROR" OR "ABUSE"

One reason that estimates of the amount of fraud are so vague, sources said, is that many Government officials refuse to call fraud what it is, preferring to dismiss it as "error" or "abuse."

Another is that Federal audit cycles are so long that often fraud is not detected until years after it has taken place. In the case of Mr. Sibert, who allegedly embezzled the $856,000 from the Department of Transportation, the program that the money was taken from was not scheduled to be audited until eight years later, though the applicable statute of limitations runs only five years.

"It was a fluke that we caught him," said one Federal prosecutor. "If he hadn't aroused so much suspicion by spending so much money, the statute of limitations would have lapsed before we even knew the money was gone."

According to many of the sources, the problem is not just with the agencies, but with a lack of commitment by the Justice Department.

An indication of this can be seen in the limited resources of the civil fraud section headed by Mr. Edgar. Last year, it managed to recover about $8 million through civil suits against persons accused of defrauding the Government. It won numerous other suits against persons who did not have the resources to pay.

This, according to colleagues in other parts of the department, was an impressive performance for so small a staff, though it accounted for only a tiny fraction of the billions estimated to have * * *.

"There are a lot of cases that are going to have to be handled, and I'd like to know who is going to handle them," said one recently retired prosecutor. "If you start talking about a $6 billion problem at H.E.W., where are the bodies going to come from?"

A number of prosecutors and former prosecutors agree, noting that last year H.E.W. found suggestions of fraud by more than 13,000 persons in one welfare program alone and that since then several other agencies have begun similar internal investigations.

Griffin B. Bell, the Attorney General, has said repeatedly since taking office 14 months ago that fraud against the Government is a major concern and will be a top priority of the Justice Department.

To date, he has assigned nearly 200 agents of the Federal Bureau of Investigation to audits of health care programs and has added 13 staff lawyers, at least temporarily, to the 33-person staff in the criminal fraud section headed by Mr. Richard.

Although most of those interviewed argued that many more resources would be needed at both the state and Federal level, Mr. Richard said that he believes a strong commitment has now been made.

"You're dealing with an area that has been virtually ignored over the years in deference to other priorities," he said. "We are playing catch-up ball, and it's not going to be done overnight."

[From the New York Times, Apr. 17, 1978]

U.S. AGENCIES STARTING TO BOLSTER MEAGER DEFENSES AGAINST FRAUD

(By David Burnham)

WASHINGTON, April 16.—The Department of Transportation last year assigned only four inspectors to detect fraud and abuse in the $6 billion Federal highway program.

The Veterans Administration had only one auditor for every $238 million provided it by Congress.

The Labor Department devoted only three one-hundredths of one percent of its $23.5 billion budget to investigations and audit.

As these examples suggest, the Government's defense against fraud has been meager. But there are some preliminary signs that Congress and various agencies are beginning to move to stanch the annual flow of billions of tax dollars to dishonest executives, hospitals, schools, doctors, banks, welfare recipients and others who try to bilk the Government. Among these signs are the following:

The House of Representatives is expected to approve on Tuesday legislation mandating the establishment of a central, semi-autonomous office of inspector general in 12 Federal agencies that each year spend $100 billion.

Attorney General Griffin B. Bell, in his first year in office, has sought to increase the efforts of the Justice Department, the Federal Bureau of Investigation and the 94 United States attorneys to combat white-collar crime, particularly fraud against the Government. Although some experts believe that his personnel allocations have not kept pace with his statements, the Attorney General has emphasized this effort in a series of speeches in which he promised new attacks on white-collar crime. "One serious aspect of white-collar crime is fraud against the Government, including Medicare and Medicaid programs," he said in a speech to the bar association in Little Rock, Ark. "But fraud is too nice a term. It is theft of Government funds, and that really means stealing from the public."

In response to a law approved by Congress in 1976, largely at the urging of Representative L. H. Fountain, Democrat of North Carolina, the Department of Health, Education, and Welfare has created a unified and still growing Office of Inspector General, which has begun trying to improve the detection and prevention of fraud and mismanagement in the department's 320 programs.

The Law Enforcement Assistance Administration, a branch of the Justice Department, has made a series of grants to help local prosecutors improve their ability to deal with economic crimes and to assist states in adopting model laws on purchasing and contracts designed to reduce the opportunities to steal from the Government.

NEW EFFORTS TO REDUCE FRAUD

Interviews with a cross section of officials and former officials further indicate that a number of agencies, responding to the pressure developed by Mr. Fountain in hearings of his House Intergovernmental Relations Subcommittee, have begun to increase their efforts to reduce fraud.

Allan L. Reynolds, the recently appointed inspector general of the Veterans Administration, for example, is in the process of tripling his audit and investigation team, expanding it to 325 persons as against about 100 at the end of last year.

Secretary of Labor Ray Marshall announced last week the formation of a permanent office of special investigations to deal with fraud and mismanagement in his department's programs.

Despite these and other steps, however, many officials cited a variety of continuing psychological, sociological and programmatic pressures that mean the Federal Government is still an easy mark.

LACK OF BUILT-IN INCENTIVES

Simply put, the Government lacks some of the built-in incentives to protect itself from fraud that an individual or a business concern has.

An individual has limited resources to spend and normally is quick to notice when he is being cheated. Corporate managers must answer to stockholders if they are being cheated and must disclose the situation on their balance sheets.

But Government administrator's handle money that belongs to no one because it comes from everyone, and they often deal with people they have never seen and to whom they are not immediately accountable.

Charles F. C. Ruff, the fourth Watergate prosecutor, now the deputy inspector general of the Department of Health, Education, and Welfare, touched on the matter in a recent interview.

Some of the "inducements to heightened criminality," he said, include "very few controls on how the money is spent, no immediate victims" and low odds that an offender will be caught. He added: "No one is really being hurt."

Mark M. Richard, head of the fraud section in the Justice Department's criminal division, said, "The problem with fraud, and with most white-collar crime, is in showing the significance of what was done. It's not a sexy area."

Moreover, Government officials may be disciplined to root out corruption because to do so might reflect badly on their programs and ultimately damage their careers. Most of those interviewed said that program managers frequently had an allegiance to the clients or administrative system their programs were serving, a factor that often undermined efforts to improve accountability.

Mr. Reynolds, the inspector general at the Veterans Administration and for almost 25 years an auditor at H.E.W. and the Interior Department, said: "There is a motivation among many program people toward the client or industry—by this I mean a school or hospital system—that they are serving. They don't have a high level of concern, characteristically, about preventing fraud and abuse."

He emphasized that he had not been at the V.A. long enough to make generalizations about that agency.

Robert R. Elliott, the former general counsel of the Department of Housing and Urban Development, said that administrators of Federal programs had "a tremendous tendency" to decide that people stealing from the Government were doing so by accident rather than design. "It doesn't help a program if its constituents are viewed as frauds," Mr. Elliott said "Who wants to find his own program full of frauds?"

MEALS FOR 2.4 MILLION

Administrators of programs and the sponsors of them in Congress, tend to concentrate on the social problems their programs are designed to alleviate and sometimes look upon controls to prevent fraud as a hindrance.

The summer food service program for children, for example, in recent years has provided meals to 2.4 million children at more than 16,000 places throughout the United States.

But the General Accounting Office has investigated the program and uncovered indications of kickbacks, bribes, improper bidding procedures and questionable claims for payments.

Another explanation for the Government's failure to combat fraud more effectively is the sheer size and complexity of many programs. The Veterans Administration, for example, provides monetary benefits to more than six million people. In the fiscal year 1977, the Defense Department had $10,320,141 "procurement actions" in which it paid $10,000 or more for some item or service, according to Brent Rushford, who was recently named an assistant general counsel of the department with a specific mandate to reduce fraud.

Adding to this complexity is the fact that many Federal programs are run by state, county or city governments. The Labor Department's $15 million unemployment insurance program, for example, is administered by the 50 states. Its supervision at the Federal level consists of the part-time effort of six trained criminal investigators and 13 program analysts.

LETHARGIC ENFORCEMENT POSSIBLE

Such situations tend to breed lethargic enforcement. The experienced head of the fraud section in one Federal prosecutor's office said that if he was a local district attorney he would not be greatly concerned about the fraud against his city or county when as much as 90 percent of the funds lost came from Washington.

"I'd figure that if the Federal Government wants to throw away its money, let the

Federal Government prosecute the cases," he said.

Moreover, states and local governments are sometimes not eager to find corruption in the Federal programs because they might be held liable for the repayment of losses from their own budgets.

The General Accounting Office has suggested that Federal prosecutors, like their colleagues at the local level, frequently fair to prosecute those found to be stealing from the Government because of a lack of manpower.

According to one of its reports, almost two-thirds of the 1.2 million criminal complaints referred to Federal prosecutors in a recent six-year period were not prosecuted, at least in part for that reason. Furthermore, the G.A.O. found that in four sample offices 22 percent of the complaints on which the Government did not act "were considered prosecutable."

CONCENTRATION ON DETECTION

While the hearings by Representative Fountain's subcommittee and the statements of President Carter about the need for efficiency in Government appear to have heightened sensitivity to fraud against the Government, officials so far have concentrated on detection and prosecution rather than prevention. Yet it is in the area of prevention that many experts believe real improvements are possible.

For example, Mr. Richard of the Justice Department said that since neither the Federal nor state criminal justice systems could adequately cope with the fraud that existed, the Government should devise programs that were less subject to abuse.

Thomas D. Morris, H.E.W.'s inspector general, said that his office was beginning to get involved in shaping * * * they were proposed. Mr. Morris's deputy, Mr. Ruff, added that his hope was "to reduce fraud by simplifying government."

"If all we do is add new reporting forms, if all we do is make Government more complicated," Mr. Ruff said, "we might as well fold up our tent and go away."

But interviews with officials throughout the Government indicated that there was no concerted effort to prevent fraud.

NO PROJECT ON PREVENTION

Peter J. Petkas, director of the management staff of President Carter's Government reorganization project, said that this group had no across-the-board project concerning fraud prevention. Richard Berg, executive director of the United States Administrative Conference, an agency designed to improve Government procedures, said he could not recall any project by his agency aimed at reducing fraud.

And the Office of Management and Budget has repeatedly reduced the size of investigating and auditing branches in various agencies in the last few years.

According to a number of officials, one underlying explanation for the Government's broad failure to detect, prosecute and prevent fraud is that program managers frequently come from the constituencies they are serving, except to join them when they leave Government service or have financial interests in those areas.

"The revolving door is a contributing factor to this problem," Mr. Reynolds said. "Conflicts of interest in the sense of the ingrained biases of an administrator who comes from an industry he is responsible for, that is a tough problem."

Brent Rushford, who recently joined the Defense Department as an assistant general counsel to work on the fraud problem, agreed. "My own opinion is that while there are a lot of good reasons for cross fertilization, it creates serious problems," he said. "It is very hard to switch your loyalties, very hard to drop old loyalties."●

## NATIONAL INFACT DAY

(Mr. WEISS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. WEISS. Mr. Speaker, April 13, was National Infact Day. Infact is the Infant Formula Action Coalition, a national network of concerned individuals and groups mobilizing to halt the unethical promotion of infant formula by multinational corporations. The day was marked by rallies, vigils, and education programs in cities throughout the country, designed to call attention to these marketing practices and the resulting consequences of infant malnutrition.

At this time, I would like to share an article from Mother Jones' magazine, detailing the problem in more depth. I commend this article to my colleagues:

THE BOTTLE BABY SCANDAL—MILKING THE THIRD WORLD FOR ALL IT'S WORTH

(By Barbara Garson)

"In 1970, I visited a small town called Aliagua, in a very rural area of Luzon. . . . During my visit, an old friend of my family who knew that I was a doctor, approached me and asked me to visit his newborn child, who was very ill. The baby was less than ten days old. He was burning with fever, dehydrated and suffering from severe diarrhea. I asked the mother how she had been feeding the baby and she replied that she was using Enfamil. She told me that this had been given to her on discharge from the hospital in Cabanatuan where she had delivered the child. The milk was given to her by a nurse who told her that her milk was 'inappropriate' for the baby."

So writes Dr. Jesus T. De La Paz, who practices obstetrics and gynecology in the Philippines. According to Dr. La Paz, 80 per cent of the sick infants in the pediatric ward at his country's San Pedro Hospital are bottle fed. Why?

Throughout the Third World, from Haiti to Venezuela to Nigeria to the Philippines, new mothers are leaving maternity wards with tins of powdered milk—free samples—supplied by American, Swiss and Japanese companies. In an attempt to do what's modern, what's best for their babies, they abandon breast feeding. And then, like the family in Aliagua, they try to reconstitute a powdered formula where they have no clean water, no suitable pot for sterilizing, insufficient fuel to boil their one bottle and nipple several times a day, and no refrigerator for the milk.

Above all, they do not have money to keep on buying enough formula. A laborer in Uganda would have to spend 33 per cent of the average daily wage to feed an infant on powdered milk. In Pakistan the figure is 40 per cent. In Haiti a secretary, a relatively well-paid worker, spends 25 per cent of her salary for substitute infant food. And so what happens is that poor mothers start to "stretch" the formula. In 1969 the National Food and Nutrition Survey of Barbados asked mothers of bottle-fed infants two to three months old how long a can of milk lasted. The can contains a four-day supply. But 82 per cent of the mothers said they made it last anywhere from five days to three weeks.

Some mothers who have run out of formula have been found mixing corn-starch with water to give the baby something that looked like milk. Others use cocoa, tea, or simply sugar water to stop the crying, at least temporarily. The British charity organization War on Want found a Nigerian mother feeding her baby water alone. She had seen the bottle and nipple picture on a billboard and thought the manufactured items themselves provided the nourishment.

Unsterilized and diluted bottle formula exacerbates the two most common causes of infant sickness and death around the world: malnutrition and diarrhea. Actually, the two are "synergistic," as the doctors say: each makes the other worse. Underweight babies are prone to the infections that create diarrhea. And the baby with constant diarrhea receives less nutrition from what food it does get.

Since the late '60s, health officials in poor countries have been seeing these symptoms combined in a syndrome sometimes called Bottle Illness. In some hospitals in Africa these severely dehydrated babies are kept aside in beds labeled "Lactogen Syndrome" (Lactogen is the Nestlé Company's powdered formula). Dr. D. B. Jelliffe, a distinguished British pediatric nutritionist who now heads the UCLA School of Public Health's Division of Population, Family and International Health, has labeled the syndrome "commerciogenic malnutrition."

Whatever you call it, the syndrome involves no new diseases. The diarrhea results from the Third World's prevalent bacterial and amoebic infections, which can be contracted from drinking unboiled water. The malnutrition takes the form of marasmus (shown by the sunken eyes, prominent ribs, thin little arms and legs we've seen in the Bangladesh posters) and kwashiorkor (puffy face and feet, anemia and apathy).

What *is* new about "Bottle Illness" is the early onset of these poverty diseases in children. Ordinarily mother's milk, *even of an underfed woman*, will provide adequate nourishment for at least the early months. For a year to 18 months more it can sometimes provides a good protein supplement. Of course it is good for the mothers to eat well, but, unless the mother is virtually starving, the baby gets nourished.

Furthermore, mother's milk provides immunities against various diseases—something all the more important in countries with few public-health measures. No matter what water the mother drinks, the baby receives breast milk relatively free of the local infections. When poor people breast feed, malnutrition doesn't usually appear until well into the second year of life. Recently the Inter-American Investigation of Mortality in Childhood, conducted by the Pan American Health Organization, a branch of the World Health Organization, checked into the causes of some 35,000 deaths in 15 areas of the world, mostly in Latin America. The researchers found that because of the decline of breast feeding, childhood deaths from malnutrition now peak in the third and fourth months of life.

Of course death is only the extreme result. Milk companies would find little profit in distributing those free samples if every infant was going to die in two or three months. But one of the horrible aspects of this new form of malnutrition is that protein deficiency in the early months seems more likely to lead to permanent brain damage. We won't know the full effects of malnutrition that begins at birth until 15 or 20 years from now, for it had been relatively rare in the world until widespread bottle feeding came along.

For ghoulish family planners, let me stop to point out that bottle-baby deaths are not an effective population control. Rather, they tend to *increase* population. Study after study has shown that, regardless of the availability of birth control, people do not start having smaller families until they feel secure that their children will live to adulthood. When children die, people go on having big families in the hope that at least one or two children will survive. Furthermore, the decline of breast feeding may increase population, because there is some truth to the old wives' tale that you don't get pregnant while

you're nursing. It's not foolproof birth control, but lactating mothers do have children spaced farther apart than bottle-feeding mothers.

"FOODS YOU CAN TRUST"

The bottle baby problem really began in the late 1960s. By then it had become clear the U.S. birthrate was heading for an all-time low. Figures from Europe told the same story. Baby-oriented businesses throughout the developed world knew that they had to think of a strategy to cope with the baby bust.

Some companies diversified, but the big push went into finding new markets in the Third World. Ross Laboratories, for example, is the subsidiary of Abbott Labs, which manufactures Similac and Isomil. In 1969 the overseas portion of Ross' pediatric sales was 14.3 per cent; by 1973 it had risen to 22.2 per cent, amounting to $31.3 million. Following the same strategy, Bristol-Myers (Enfamil and Olac), American Home Products' Wyeth division (SMA, S-26, Nursoy) and, biggest of all, the Swiss corporation Nestlé (Lactogen) expanded like mad. Throughout Asia, Africa and Latin America, the airwaves and the billboards began filling with slogans like "Right from the Start—the Foods You Can Trust."

Some nutritionists began to object. After a series of meetings organized through the U.N., the companies agreed to modify their approach. Now their signs said things like: "The Next Best Thing to Mother's Milk." Their pamphlets spoke vaguely about the times when breast feeding is "inappropriate" or "unsuccessful." More important, in the last few years the milk companies have almost entirely dropped billboards and radio spots. They concentrate now on the most effective and direct approach to the new mother. The majority of the companies give out free samples, pamphlets, posters and contributions of equipment directly to hospitals; they give services to and sponsor conferences for the doctors and nurses. Thus, the woman from Aliagua was given Enfamil by the nurse when she left the hospital. In some countries (Guatemala, for instance) "milk banks" connected with the hospitals sell a supply of formula to new mothers at cut rates, so it takes them a couple of weeks before they have to buy it on the open market and realize how expensive it really is.

But Nestlé, Bristol-Myers and some of the others don't stop with the hospitals. Bristol-Myers, for instance, has hired former consumer activist Bess Myerson as a consultant; her name and photo adorn a new publicity brochure. More important, some milk companies now hire their own special "milk nurses." Dressed in nurse-like uniforms, they travel around in countries such as Jamaica or Malaysia visiting new mothers, providing gifts and advice, weighing the babies—and leaving infant formula samples. These "mothercraft personnel" or "milk nurses," incidentally, may or may not be medically trained. Indeed, the use of fully trained nurses as saleswomen is probably the more harmful practice, since it depletes a developing nation's small supply of medical personnel.

Dr. Roy E. Brown is a nutritionist and pediatrician, now at Mount Sinai medical school, who has practiced abroad for 11 years, including time in the Bangladesh refugee camps. (There, incidentally, he used a simple and successful technique to promote "relactation" among mothers who had previously ceased breast feeding.) He told me about a pediatric nurse he knew in Ethiopia in 1963:

"She was a beautiful woman who was not only an Ethiopian nurse but a nurse tutor. She had been to Sweden, where she got advanced training to teach other nurses. She was married and had one child of her own. She left the hospital when a milk company offered her three times what she was getting paid as a nurse.

"I saw her again in 1974. She had two children and was still employed by the milk company. I had become increasingly disturbed by what I had seen of bottle feeding around the world, and I tried to talk to her about it. She said she understood my point of view, but she wanted to make a good living. Her defense was that she did not advise people to stop breast feeding; she simply gave them information if they 'couldn't breast feed.' Besides, people were giving up breastfeeding anyway, so at least she would supply them with a wholesome product and instructions."

MAKE YOUR BABY WHITE

Mary Lee, a housewife in Malaysia, wrote this letter: "On 23rd August, 1976, I had an interview with a Bristol-Myers mothercraft nurse by the name of Mrs. Ho, who came to my house at my request. Mrs. Ho was wearing a white nurse's uniform and informed me she is a State Registered Nurse who trained here in University Hospital, Kuala Lumpur. On arrival Mrs. Ho presented me with a free sample tin of Enfamil powder infant formula without my asking for it. I told her I was thinking of weaning my baby from the breast, to which she said that Enfamil 'is just like breast milk.' She even pointed out on the sample tin the content 'choline,' which she assured me would make my baby's complexion beautiful and fair. In this community mothers feel it is very important to have fair skin. . . ."

Mary Lee happens to be a doctor's wife. She was not particularly impressed by the white uniform, nor was she intimidated when the nurse worriedly weighed her baby. And she doesn't seem interested in making her baby more white with Enfamil. But what about a poor and unsophisticated woman?

Or what about a not-so-poor and unsophisticated woman? During World War II, my mother, otherwise honest and patriotic, bought black market pork chops. This was because her pediatrician prescribed an exact diet for each baby he treated. Four ounces of lamb chop, two ounces of cereal, three ounces of mashed banana. And this I was fed (and re-fed) despite the fact that I threw up three times a day for three years.

Before I was ready for the scraped lamb chops and mashed banana, I was bottle fed with a formula that entailed much measuring, sterilizing and breaking of bottles. Worst of all, the doctor set me on a four-hour feeding schedule. My parents later told me how I cried stubbornly, sometimes for two and a half hours straight, while they sat in agony waiting for the scientifically determined moment when they could give me the bottle that would bring immediate silent satisfaction.

How could they do it? Why didn't they just pick me up and feed me the way their mothers had done? Well, my father's mother was dead and, besides, she had lost children while feeding the old way. And my mother's mother was an immigrant who spread newspaper on the floor after she washed it and kept live fish in the bathtub to make gefilte fish at Passover. I was going to get the best scientific chance in life.

And here's an even more sophisticated woman. When I was to deliver, I chose a hospital that allowed Lamaze and featured rooming-in. They brought me the baby after isolating her for 24 hours, and I nursed contentedly for a couple of days. Then the nurse said "The baby is not gaining any weight. Not an ounce after any feeding."

"But she's sucking." I insisted, "and she's not crying. Let me keep trying."

Then the doctor came in: "Not a single ounce."

I agreed reluctantly to let them start her on formula while I gave it a few more tries. But I knew the bottle would curtail the baby's sucking, and there wouldn't be too much hope after that.

While I was giving it that one more try, a woman who was cleaning the floor, with no white uniform, said to me: "That baby's not gettin' a thing."

"What do you mean?"

"Look," she said, pinching me roughly. "It's all clogged up." She showed me how to put a hot washcloth on my breast and squeeze hard. After an hour of hard work, milk started to flow. Apparently the 24-hour delay after the baby was born had caused the milk to "back up." I should have nursed right away or started squeezing the milk out by hand. If it weren't for the cleaning lady, I, like the woman in Aliagua, would certainly have found that under modern conditions I was one of the many who "couldn't nurse."

The same thing happens in the Third World. There, too, people are being cut off from their past, moving away from their families. The Green Revolution (*Mother Jones*, August 1977) sends former subsistence farmers off the land and into the *favelas*, barrios, and shanty towns in the city. There, with modern medical help, many will find breast feeding "unsuccessful" or "inappropriate." Some can't nurse because they work or hope to work. Most, however, will choose more freely not to nurse. What would they do if the baby cried on the bus? Some don't want to be bothered. But most want to do what's best for their babies. They want to give their children the start that will help them out of the *favela* and into the modern world. Like buying an encyclopedia.

In the scantiest slum store they will find the powdered milk promiently displayed. (A chart in the February 1977 issue of the Brazilian trade journal *Modern Supermarket* shows that baby formulas have a profit margin of 72 percent. This is three or four times higher than the profit margin for most other items.) On the labels of these products are pictures of plump, smiling children, And so, healthy mothers are feeding their babies watered-down imported milk in contaminated bottles in the hope we all share—to do the best by one's children.

THE NUNS GO TO COURT

The bottle baby problem has not gone unnoticed. Activists have been fighting Nestlé in Europe for some time, and in the U.S. the Interfaith Center on Corporate Responsibility (ICCR)—connected with The National Council of Churches—has been publicizing the issue widely, especially to church groups. Therefore, when the Sisters of the Precious Blood, a Catholic teaching order based in Ohio, realized several years ago that they owned stock in Bristol-Myers, they quickly made the connection.

The Sisters tired first to speak to corporate executives about the problem. They found Bristol-Myers more difficult to deal with than the other milk companies, who were, if nothing else, at least willing to talk politely. Eventually, unable to get satisfaction, the sisters submitted a stockholders' resolution asking for information about Bristol-Myers' sales policy abroad. In a proxy statement urging defeat of that resolution, the company said, among other things: "Infant formula products are neither intended, nor promoted, for private purchase where chronic poverty or ignorance could lead to product misuse or harmful effects."

Now it can in some cases be a violation of Securities and Exchange Commission (SEC) regulations to make misstatements in proxy material. After further frustrating dealings with Bristol-Myers, the Sisters of the Precious Blood eventually filed a lawsuit against the company on these grounds. The strategy of the suit was to expose the lie. The Sisters attempted to show, first, that the company *did* promote its Enfamil formula to chronically poor people, and, second, that the

people who bought it were too poor or ignorant to use it safely.

As all TV viewers know, court testimony must always be based on first-hand knowledge. You can't submit statistical reports or get up and say "as everybody knows . . ." So, the Sisters and ICCR painstakingly collected testimony from 15 countries. There are affidavits that read something like: "I, Dr. So-and-So, living in the town of Such-and-Such, Venezuela, or Indonesia, or Guatemala, went to the following grocery stores in poor neighborhoods where I personally saw cans of Enfamil on sale." One exhibit was an Enfamil ad on the back page of the Barbados phone book, as personally observed by the witness, of course.

There are personal interviews, like these taken by Dr. Arthur L. Warner in Guatemala, where one in four slum mothers he talked to was bottle feeding:

"Family B. A young mother of two living in a shanty hillside settlement of Guatemala City decided to wean her baby at ten days, because a friend told her the milk was no good and too weak. She purchased Enfamil on the suggestion of a doctor in the public health 'well-baby' clinic. Her husband earns $3 a day (of which she spends about 75 cents for the infant's milk). They are without safe water and beside an open sewer. Their shack has many openings for flies. They have no refrigeration. She is illiterate. She must haul water . . . from a community spigot."

"Family C. A mother of three, living in a shanty development in Guatemala City, decided to wean her baby at two months because the child wasn't gaining fast enough and was sickly. A clinic nurse had suggested her milk had gone bad. [Local] water, generally considered contaminated since the earthquake . . . Fuel costs are high . . . Boiling water."

A doctor in Jamaica reviews the cases of 37 patients referred to the Tropical Metabolism Research Unit for severe malnutrition. "Twenty-five received infant formula. Five died."

And so the Sisters of the Precious Blood compiled thousands of pages. In one way their brief is an impressive document, and in another it is almost pathetic—this patient piecing together of minute firsthand accounts to show the worldwide workings of imperialism. To show what everyone knows.

In May of this year the case was dismissed though the Sisters are appealing. The decision, by Federal Judge Milton Pollack, though a little difficult to read, appears to say:

The shareholders' resolution was only a request and wouldn't be binding on the board of directors even if it had passed. Therefore, it just doesn't matter. The court doesn't have to consider whether the proxy material contained a misstatement or whether the affidavits submitted by the Sisters are true, because no irreparable harm was done to any shareholder.

There is no law preventing corporations from doing irreparable harm to Third World babies.

BOTTLE ON THE GRAVE

Leah Margulies, small, lively and radical, heads the project on bottle feeding for the Interfaith Center on Corporate Responsibility. "I was hired with the general assignment to develop the * * * and world hunger—agribusiness, cash cropping, you know. But it is very difficult to make it graphic that the world is starving, not because of drought, or floods, but because of economic dependency."

"So you decided to use the baby bottle case as an example?" I suggested.

"I didn't really decide. It grew up around us," Margulies said. "I did extensive research on multinationals in the early '70s. I was anxious to show the effects of the *normal* operations of capitalism, not the big scandals.

"I read *Fortune, Harvard Business Review, Forbes,* annual reports, speeches by corporate executives.

"And I developed my thoughts about economic dependency. The corporations operate in the Third World in a way that creates overall economic dependency as horrifying, impoverishing and unnatural as the dependency of a healthy mother on expensive powdered milk. The import of unnecessary powdered milk—forget Coca-Cola—now takes about one *billion* dollars a year from the Third World.

"But I tell you the truth, even after documenting the entire lawsuit—the facts, the figures, the affidavits—sometimes I still don't believe myself. I don't believe the world could be starving, that babies could be sick and dying just for a little profit.

"Like you remember the story about the graves in Zambia?"

I remembered it well. The film *Bottle Babies,* used widely by the church groups, ends with a shot of a child's grave near Lusaka, Zambia. The small grave is decorated with a crushed milk can and a little baby bottle. The narrator says, "Mothers put empty Nestlé's Lactogen cans and feeding bottles on their dead babies' graves, for they believe to the end that powdered milk and feeding bottles were the most valuable possessions their babies once had."

"Well, last week," Margulies continued, "I happened to see the film *Last Grave at Dimbaza.* The film is about apartheid, not about bottle feeding. No mention was made of that. But it shows the poverty and the horrible infant mortality. The film ends with a shot of those infant graves. My heart jumped. There—you could make it out if you knew what it was—there was that little can of powdered milk.

"But still, when you immerse yourself back in our U.S. reality once again, you don't believe it. For instance, the president of American Home Products is a kindly, charming man. I go in there with a room full of church people. We are all middle class. And this lovely gentleman says, 'Do you believe we would deliberately harm babies?"

I questioned Margulies about the stockholders' approach. Did it make sense to ask corporations on their own to stop selling? Or limit their market to the tiny number of Third World mothers (certainly under five percent) who really can't nurse? She felt that the educational effect on the participating religious groups made it worthwhile. Also, the publicity can't hurt. And pressure here creates the climate for real regulation in the Third World. So far, though, the countries attempting to regulate milk companies are few. In Guinea-Bissau baby formula is available only by prescription. Paupa, New Guinea is cracking down on advertisements. In Jamaica, mothercraft personnel are forbidden to enter the hospitals, though it seems that some still do. And, in any case, they are active in all the slums. Malaysia and Guyana, among other countries, have launched national breast-feeding campaigns. But of course their resources are limited compared to milk company advertising budgets.

"I HAVE AN APPOINTMENT"

Like Margulies, I, too, found myself suffering bouts of doubt. Infants crying from hunger when there is all the milk they need? Maybe this is just a radical "cause." Something blown up out of proportion.

I must check it out, I felt, someplace more neutral and scientific. . . .

At the U.N. I spoke first to Dr. Jacob Schatan of the Protein Advisory Group. He is a mild, thin man, very reasonable sounding, but sad. He is Chilean.

"What is the scope of this bottle-feeding problem? Is it really so dangerous?"

"Everywhere there is a marked trend of decline of breast feeding." Dr. Schatan speaks in U.N. Reportese, though his gestures show concern. "It is a trend accompanying urbanization. I could not tell you the exact percentages for each country, but we can easily estimate the cost to the developing nations in the billions."

"Billions?" I asked. (He has an accent and he mumbles.) "Billions with a B?"

"With a B."

"Do you think there could be legislation restricting the companies?"

The Protein Advisory Group provides information from scientists to the U.N. system, not to countries. However, I would say you need legislation not in relation to sale, but legislation facilitating breast feeding for urban women. If a mother works eight hours, there should be a time and place to nurse at work. This is not done except in a few of the . . . uh . . ." (The pause is cautious, painful; finally, he gives up and uses the word.) ". . . socialist countries. And of course education. There must be an educational campaign."

Next I went to UNICEF, where I spoke to L. J. Tepley, senior nutritionist.

"How did the question of bottle feeding first come to your attention?" I asked.

"And just how could I be concerned with children's nutrition without its coming to my attention?" (Tepley, a stocky American, is as bluff and direct as Schatan is cautious.)

"Is it really as dangerous as some think?" I asked.

"Does any of those papers . . ." (He pointed to a bundle of charts, reports and articles I had been collecting all week and was now spilling on his office floor. They were from the Columbia Medical School, Mount Sinai Hospital, the U.N., the Consumer's Union, the Brookings Institute, the ICCR, the milk companies themselves.) "Does any of them say bottle milk is good for poor people? Here." (He handed me an enormous envelope for all my papers.)

"We know the effects. They are awful. No one doubts it."

"Then why is it spreading?" I asked.

"The causes are two. Ignorance and money. Not necessarily in that order."

"What can be done?" I asked. "Can the milk companies be regulated?"

"I have to go," said Mr. Tepley. (I had dropped in on him unannounced around lunch time.) "I have an appointment."

AND IN NEW YORK

A couple of years ago, the chief of the New York City Health and Hospitals Corporation announced proudly a money-saving contact with Ross Laboratories, the Abbott subsidiary that makes infant formula. Till then the city hospitals had been spending some $300,000 a year on Similac. But Ross was going to slash next year's price to less than $100,000, and in the third year of the contract the hospitals would be getting all the Similac they could use for free.

I decided to take a look around Lincoln Hospital in the Bronx. When I got to the maternity ward, it was feeding time. The sign in front of the swinging doors said, "No entry. Mothers with babies." While I waited, an orderly wheeled in a cart loaded with cases of Similac. Here they use the more expensive pre-mixed formula in individual disposable nursing bottles.

After a while I went down to the prenatal clinic. I asked the pregnant women, all black or Puerto Rico, whether they were going to breast feed or bottle feed. The answers were unanimous.

"What if I'm on the bus when the baby gets hungry?"

"If you're in the house with just your husband, okay. But if there are friends or fam-

ily, then you have to go into the other room."

"I eat a lot of junk. The baby would drain me."

"My milk wasn't good enough for my first one."

"What if you're out in the street? You can't just whip it out!"

In English, Spanish and sign language, the response was clear. Total repugnance at the idea of breast feeding.

I asked whether the nurses or doctors had said anything about breast feeding.

"They said Similac was just as good."

"They said you have to eat a certain diet, and I couldn't eat all those special vegetables."

"They give you pamphlets that say you should choose yourself."

The pamphlets handed out at the prenatal clinic are published by Carnation. The more detailed one, "You and Your Contented Baby," does indeed admit that "the breast-fed baby seems to have fewer digestive upsets than the bottle-fed baby." However, the seven-step instructions for breast feeding include language like "compress the nipple and the brown tissue horizontally," along with medical illustrations of areola and sinuses and indecipherable diagrams labeled "correct and incorrect positions for baby's jaw." This makes it all seem much more complicated than simply heating up a formula. Not to mention the fact that the picture of Carnation milk is in color and labeled "For over 35 years, millions of babies have thrived on Carnation Evaporated Milk formulas." A second, simpler pamphlet says nothing at all about the advantages of breast feeding.

Pamphlets notwithstanding, it is the official policy of the pre-natal clinic that breast feeding is best. The intake nurse told me that she is supposed to mention it to each mother. "But I know that they are going to say 'Ecch, I can't do that.' And then there is a language barrier. I can give directions in Spanish, but I cannot talk about personal things. I do mention it, though, when I think they may be interested. And if one woman a week says 'Yes, I'd like to try,' then I feel very rewarded."

Back up in the maternity ward, the babies had been put away. After an initial period of isolation, they are brought to the mothers every four hours, along with the bottles of Similac.

I stood with a group of new mothers in front of the nursery window talking about breast feeding, while we watched the nurse inside feed a newborn from a Similac bottle.

I asked the women if they knew what the formula would cost.

A couple said, "I have no idea." Some gave me a figure: "$5.50 a case," "$1.50 for the quart can of concentrate." One lady said, "I don't know what it will cost me because I don't know if they're giving mine Similac or Carnation." Apparently she was under the impression that she would have to continue to use whatever the hospital started the baby with.

But the majority of mothers said, "I won't have to pay for it because I'm on this program." The program was WIC (Women Infant Care), a federal program offering health care to mothers and well infants. One of the inducements to remain with the program is a monthly supply of baby products, including bottle formula.

"WILL YOU MAKE A PROFIT?"

"I called Bristol-Myers," I said to Leah Margulies.

"Yeah?"

"And they put me on to Ed Simon in the P.R. office."

"Oh, yeah?"

"I asked him if any of your charges had affected their sales promotions abroad."

"What'd he say?"

"First, he said I was obviously prejudiced because the question implied that the charges were true. Second, he said, 'While not acknowledging any of the claims, it is safe to say we've made every attempt to strengthen our control over the sale of infant formula.'

"And then he started to read me all the clauses from their guidelines:

" 'Detailed information on infant formula . . . will be directed only to physicians and medical personnel. . . .

" 'Mothercraft nurses will perform in a manner comparable to government-sponsored public-health nurses, with their primary concern the assistance of mothers in the proper care and feeding of their infants, whether breast or formula fed. . . .'

"I was busy scribbling, trying to get it all down as fast as I could. Finally, I said, 'With all those restrictions, do you sell more or less Enfamil?' "

"What did he say?"

"He said they couldn't discuss information regarding the sale of specific products."

"One of the Sisters of Mercy made the same point during our meeting with Abbott in Chicago," said Margulies. "They were being very agreeable about modifying their sales techniques. 'Use of mass media will be dropped . . . no radio, billboards . . .'

"Well, as we were about to leave, one of the Sisters said, "Tell me, if you stop selling to people who are too poor to use the product safely, will you still make a profit?'

"There was absolute silence. It must have been a full minute.

"Finally one of the corporate executives picked it up and said:

" 'That is the crux of the problem.' "

NOTE.—Barbara Carson is the author of "MacBird" and a book about routine work, now in paperback, "All the Livelong Day." ●

## LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. JONES of North Carolina (at the request of Mr. WRIGHT), for today, on account of official business.

Mr. RODINO (at the request of Mr. WRIGHT), for today, on account of illness in the family.

Mr. WHITLEY (at the request of Mr. WRIGHT), for this week, on account of medical reasons.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to addresss the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. KINDNESS), to revise and extend their remarks, and to include extraneous matter to:)

Mr. CORCORAN, of Illinois, for 5 minutes, today.

Mr. WHALEN, for 5 minutes, today.

(The following Members (at the request of Mr. PEASE) to revise and extend their remarks and include extraneous matter:)

Mr. FLOOD, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. WAXMAN, for 5 minutes, today.

Mr. REUSS, for 5 minutes, today.

Mr. FOUNTAIN, for 5 minutes, today.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. BREAUX, and to include extraneous matter.

Mr. HUGHES, at the conclusion of the debate on H.R. 11465 today.

Mr. PEPPER, following the vote on H.R. 3489 today.

Mr. WEISS, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $1,149.75.

(The following Members (at the request of Mr. KINDNESS), and to include extraneous matter:)

Mr. ARMSTRONG.

Mr. MCCLORY in two instances.

Mr. STEIGER.

Mr. CUNNINGHAM.

Mr. VANDER JAGT.

Mr. WHITEHURST.

Mr. EDWARDS of Alabama.

Mr. MICHEL.

Mr. DORNAN in three instances.

Mr. GOODLING in three instances.

Mr. BOB WILSON.

(The following Members (at the request of Mr. PEASE) and to include extraneous matter:)

Mr. COTTER.

Mr. WAXMAN.

Mr. HAMILTON.

Mr. ANNUNZIO in six instances.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. BROWN of California in 10 instances.

Mr. DRINAN.

Mr. STARK in two instances.

Mr. PEASE.

Mr. STUDDS.

Mr. EILBERG.

Mr. EDWARDS of California in four instances.

Mr. MURTHA in two instances.

Mrs. SCHROEDER.

Mr. ROGERS in five instances.

Mr. TEAGUE.

## ENROLLED BILL AND JOINT RESOLUTION SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 7744. An act to amend the Acts of August 11, 1888, and March 2, 1919, pertaining to carrying out projects for improvements of rivers and harbors by contract or otherwise, and for other purposes; and

H.J. Res. 770. Joint resolution to authorize and request the President to issue a proclamation designating April 18, 1978, as "Education Day, U.S.A.".

## BILLS AND JOINT RESOLUTIONS PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that

that committee did on the following dates present to the President, for his approval, bills and joint resolutions of the House of the following titles:

On April 13, 1978:

H.R. 4979. To direct the Secretary of the Interior to convey certain public and acquired lands in the State of Nevada to the county of Mineral, Nev.;

H.R. 6693. To promote the healthy development of children who would benefit from adoption by facilitating their placement in adoptive homes, to extend and improve the provisions of the Child Abuse Prevention and Treatment Act, and for other purposes;

H.R. 9179. To amend the Foreign Assistance Act of 1961 with respect to the activities of the Overseas Private Investment Corporation; and

H.J. Res. 578. Authorizing the President to proclaim the third week of May of 1978 and 1979 as "National Architectural Barrier Awareness Week."

On April 14, 1978:

H.R. 7744. To amend the acts of August 11, 1888, and March 2, 1919, pertaining to carrying out projects for improvements of rivers and harbors by contract or otherwise, and for other purposes; and

H.J. Res. 770. To authorize and request the President to issue a proclamation designating April 18, 1978, as "Education Day, U.S.A."

## ADJOURNMENT

Mr. PEASE. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 58 minutes p.m.) the House adojurned until tomorrow, Tuesday, April 18, 1978, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3860. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a list of revised dates of contract awards for the report covering the period March 15 to June 15, 1978, pursuant to 10 U.S.C. 139(b); to the Committee on Armed Services.

3861. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting a report of various warehouse and shop construction projects proposed to be undertaken by the Army National Guard, pursuant to section 10 U.S.C. 2233a(1); to the Committee on Armed Services.

3862. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting a report of various armory construction projects proposed to be undertaken by the Army National Guard, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

3863. A letter from the Principal Deputy Assistant Secretary of Defense (Manpower, Reserve Affairs and Logistics), transmitting the second report on the program of Selected Reserve reenlistment bonuses, pursuant to 37 U.S.C. 308b(e) (91 Stat. 330); to the Committee on Armed Services.

3864. A letter from the Assistant Secretary of the Army (Manpower and Reserve Affairs), transmitting a draft of proposed legislation to amend section 2107(a) of title 10, United States Code, to extend the age limitation on eligibility of students for the Reserve Officers' Training Corps financial assistance program to recognize active duty previously performed; to the Committee on Armed Services.

3865. A letter from the Director, Office of Management and Budget, Executive Office of the President, transmitting a report that the appropriation to the Small Business Administration for the "Disaster loan fund" for fiscal year 1978 has been reapportioned on a basis which indicates the necessity for a supplemental estimate of appropriation, pursuant to section 3679(e)(2) of the Revised Statutes, as amended; to the Committee on Appropriations.

3866. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a report covering the first quarter for fiscal year 1978 on the disposal of surplus military supplies, equipment, material, and the production of lumber and timber products, pursuant to section 712 of Public Law 94–212; to the Committee on Appropriations.

3867. A letter from the Secretary of Housing and Urban Development, transmitting a draft of proposed legislation to encourage broader utilization of the condominium form of homeownership, to provide minimum national standards for disclosure and consumer protection for condominium purchasers and owners and tenants in condominium conversions, to encourage States to establish similar standards, to correct abusive use of long-term leasing of recreation and other condominium-related facilities, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

3868. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council act No. 2–172, to amend the laws of the District of Columbia affecting children born out of wedlock in order to clarify that a child born out of wedlock claiming to a deceased parents' estate simply needs to establish a parent/child relationship, pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

3869. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council act No. 2–173, to endorse ratification of the Equal Rights Amendment (ERA) so that no person shall be denied equality of rights under the law on account of sex, pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

3870. A letter from the Director, ACTION; transmitting a draft of proposed amendments to legislation relating to the Domestic Volunteer Service Act Amendments of 1978; to the Committee on Education and Labor.

3871. A letter from the Chairman, Student Loan Marketing Association, transmitting the annual report of the organization for calendar year 1977, pursuant to section 439(n) of Public Law 92–318; to the Committee on Education and Labor.

3872. A letter from the Secretary of Housing and Urban Development, transmitting notice of a proposed new system of records (Neighborhood Housing Services) for the Department, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

3873. A letter from the Secretary of Housing and Urban Development, transmitting notice of a proposed new system of records (Child Care Centers) for the Department, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

3874. A letter from the Chairman, Federal Maritime Commission, transmitting a report on the Commission's activities under the Government in the Sunshine Act during the calendar year 1977, pursuant to 5 U.S.C. 552b(j); to the Committee on Government Operations.

3875. A letter from the Chairman, Marine Mammal Commission, transmitting a report on the Commission's activities under the Freedom of Information Act during the calendar year 1977, pursuant to 5 U.S.C. 552 (d); to the Committee on Government Operations.

3876. A letter from the General Counsel, Council on Wage and Price Stability, transmitting a report on the Council's activities under the Freedom of Information Act during the calendar year 1977, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

3877. A letter from the Director, U.S. Water Resources Council, transmitting a report on the Council's activities under the Freedom of Information Act during the calendar year 1977, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

3878. A letter from the Deputy Assistant Secretary of the Interior, transmitting notice of the Secretary's determination that certain lands in the States of Nevada, Idaho, and Colorado are not suitable for disposal under the provisions of the Unintentional Trespass Act, pursuant to section 214(b) of Public Law 94–579; to the Committee on Interior and Insular Affairs.

3879. A letter from the Assistant Secretary of State for Congressional Relations, transmitting copies of Presidential Determination No. 78–7, that the financing of the sale to Indonesia of certain aircraft is important to the national security, pursuant to section 4 of the Arms Export Control Act, as amended; to the Committee on International Relations.

3880. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to section 112(b) of Public Law 92–403; to the Committee on International Relations.

3881. A letter from the Administrator, Energy Information Administration, Department of Energy, transmitting a report covering the month of December 1977, on gasoline service station market shares pursuant to section 4(c)(2)(A) of the Emergency Petroleum Allocation Act of 1973; to the Committee on Interstate and Foreign Commerce.

3882. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting reports concerning visa petitions approved according certain beneficiaries third and sixth preference classification, pursuant to section 204(d) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

3883. A letter from the Director, White House Conference on Balanced National Growth and Economic Development, transmitting workshop reports on issues addressed by the Conference; to the Committee on Public Works and Transportation.

3884. A letter from the Secretary of the Treasury, transmitting the 1976 annual report on the operation and effect of the domestic international sales corporation legislation, pursuant to section 506 of Public Law 92–178; to the Committee on Ways and Means.

3885. A letter from the Assistant Secretary of Agriculture for Food and Consumer Services, transmitting a draft of proposed legislation to amend, revise and consolidate the provisions of the child nutrition programs by the National School Lunch Act, as amended, and the Child Nutrition Act of 1966, as amended, and for other purposes; jointly, to the Committees on Agriculture, and Education and Labor.

3886. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to establish a program for developing networks of community-based services to prevent initial and repeat pregnancies among adolescents, to provide care to pregnant adolescents, and to help adolescents become productive independent contributors to family and community life; jointly, to the Committees on Education and Labor, and Interstate and Foreign Commerce.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

[*Pursuant to the order of the House on Apr. 13, 1978, the following report was filed on Apr. 14, 1978*]

Mr. GIAIMO: Committee on the Budget. House Concurrent Resolution 559. Concurrent resolution setting forth the congressional budget for the U.S. Government for the fiscal year 1979. (Rept. No. 95–1055). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted Apr. 1', 1978*]

Mr. ULLMAN: Committee on Ways and Means. H.R. 12050. A bill to amend the Internal Revenue Code of 1954 to provide a Federal income tax credit for tuition (Rept. No. 95–1056). Referred to the Committee of the Whole House on the State of the Union.

## REPORTED BILLS SEQUENTIALLY REFERRED

Under clause 5 of rule X, bills and reports were delivered to the Clerk for printing, and bills referred as follows:

Mr. BINGHAM: Committee on International Relations. H.R. 9486. A bill to authorize a contribution by the United States to the Tin Buffer Stock established under the Fifth International Tin Agreements; with amendment (Report. No. 95–1057, Pt. I). Referred to the Committee on Armed Services and to the Committee on Banking, Finance and Urban Affairs for a period ending not later than June 1, 1978, for concurrent consideration of such provisions of the bill as fall within the jurisdictions of those committees under rule X, clause 1(c) and clause 1(d), respectively, and ordered to be printed.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. KREBS:

H.R. 12143. A bill to authorize appropriations for continuation of construction of distribution systems and drains on the San Luis Unit, Central Valley Project, California; to the Committee on Interior and Insular Affairs.

By Mr. ANDERSON of California (for himself and Mr. LEACH):

H.R. 12144. A bill to amend title 38 of the United States Code in order to provide for the payment of service pensions to veterans of World War I and for certain surviving spouses and certain children; to the Committee on Veterans' Affairs.

By Mr. BAFALIS (for himself, Mr. GOLDWATER, Mr. LIVINGSTON, Mr. WATKINS, and Mr. HUCKABY):

H.R. 12145. A bill to amend the Internal Revenue Code of 1954 to eliminate the adjusted gross income limitation on the credit for the elderly, to increase the amount of such credit, and for other purposes; to the Committee on Ways and Means.

By Mr. BRADEMAS (for himself and Mr. ROGERS (by request):

H.R. 12146. A bill to establish a program for developing networks of community-based services to prevent initial and repeat pregnancies among adolescents, to provide care to pregnant adolescents, and to help adolescents become productive independent contributors to family and community life; jointly, to the Committees on Education and Labor and Interstate and Foreign Commerce.

By Mr. CUNNINGHAM (for himself, Mr. FRENZEL, and Mr. COLEMAN):

H.R. 12147. A bill to amend the Internal Revenue Code of 1954 to exempt certain State and local government retirement systems from taxation, and for other purposes; to the Committee on Ways and Means.

By Mr. FISHER (for himself, Mr. CONABLE, Mr. HOLLAND, Mr. OTTINGER, Mr. PREYER, and Mr. ST GERMAIN):

H.R. 12148. A bill to amend the Internal Revenue Code of 1954 to allow the charitable deduction to taxpayers whether or not they itemize their personal deductions; to the Committee on Ways and Means.

By Mr. GREEN:

H.R. 12149. A bill to prohibit discrimination on the basis of affectional or sexual preference, and for other purposes; to the Committee on the Judiciary.

By Mr. HARRINGTON (for himself, Mr. MITCHELL of Maryland, Mr. EDWARDS of California, Mr. EILBERG, Mr. JOHNSON of Colorado, Mr. STEERS, Mr. BONIOR, Mr. HARKIN, Mr. BAUCUS, Mr. BROWN of California, Mr. PHILLIP BURTON, Mr. BINGHAM, Ms. KEYS, Mrs. MEYNER, Mr. SIMON, Mr. WEISS, Mr. GARCIA, Mr. NOLAN, Ms. HOLTZMAN, Mr. MCCLOSKEY, and Mrs. COLLINS of Illinois):

H.R. 12150. A bill to allow the President to waive certain prohibitions on the furnishing of food assistance to foreign countries if he determines that such assistance would help needy people; to the Committee on International Relations.

By Mr. JONES of Tennessee (for himself and Mr. TUCKER):

H.R. 12151. A bill to amend the Consolidated Farm and Rural Development Act, provide an economic emergency loan program to farmers and ranchers in the United States, and extend the Emergency Livestock Credit Act; to the Committee on Agriculture.

By Mr. KREBS:

H.R. 12152. A bill to permit marketing orders to include provisions concerning marketing promotion, including paid advertisement, of raisins and distribution among handlers of the pro rata costs of such promotion; to the Committee on Agriculture.

By Mr. LAFALCE:

H.R. 12153. A bill to amend the Internal Revenue Code of 1954 to provide for cost-of-living adjustments in the amount of the personal exemption and in the individual tax rates; to the Committee on Ways and Means.

By Mr. LEGGETT:

H.R. 12154. A bill to amend the Longshoremen's and Harbor Workers' Compensation Act to clarify the act's coverage to employees engaged in the manufacture, repair, servicing, or sale of recreational boats; to the Committee on Education and Labor.

By Mr. MAZZOLI (for himself, Mr. LAGOMARSINO, Mr. DUNCAN of Tennessee, Mr. WHITEHURST, Mr. HYDE, Mr. HUGHES, Mr. HARRIS, Mr. EDGAR, and Mr. GARCIA):

H.R. 12155. A bill to amend section 541 of title 28, United States Code, to provide for merit selection of U.S. attorneys; to the Committee on the Judiciary.

By Mr. MIKVA (for himself and Mr. DRINAN):

H.R. 12156. A bill to amend the Social Security Act and the Internal Revenue Code of 1954 to provide that disability insurance benefits and the medicare program shall be financed from general revenues (pursuant to annual authorizations) rather than through the imposition of employment and self-employment taxes as at present, and to adjust the rates of such taxes (for purposes of financing the OASI program) accordingly; to the Committee on Ways and Means.

By Mr. NEAL:

H.R. 12157. A bill to amend and extend the Export-Import Bank Act of 1945; to the Committee on Banking, Finance and Urban Affairs.

By Mr. REUSS:

H.R. 12158. A bill to amend the Truth in Lending Act, the Rules of the House of Representatives, and title 13 of the United States Code to reduce the amount of paperwork required by persons subject to Federal regulations; jointly, to the Committees on Banking, Finance and Urban Affairs, Post Office and Civil Service, and Rules.

By Mr. ROGERS:

H.R. 12159. A bill to amend the Internal Revenue Code of 1954 to suspend the imposition of interest on deficiencies of income tax which result from erroneous assistance given by the Internal Revenue Service, and for other purposes; to the Committee on Ways and Means.

By Mr. SEBELIUS:

H.R. 12160. A bill to raise target prices and loan levels for wheat, and to raise to parity the price level at which grain reserves could be released; to the Committee on Agriculture.

By Mr. STAGGERS (for himself and Mr. ROONEY):

H.R. 12161. A bill to amend the Regional Rail Reorganization Act of 1973 to authorize additional appropriations to the United States Railway Association for purposes of purchasing securities of the Consolidated Rail Corporation; to the Committee on Interstate and Foreign Commerce.

H.R. 12162. A bill to amend the Interstate Commerce Act to authorize additional appropriations for the Office of Rail Public Counsel; to the Committee on Interstate and Foreign Commerce.

By Mr. TEAGUE:

H.R. 12163. A bill to authorize appropriations to the Department of Energy in accordance with section 261 of the Atomic Energy Act of 1954, section 305 of the Energy Reorganization Act of 1974, section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and section 660 of the Department of Energy Reorganization Act, for energy research and development, and for other purposes; to the Committee on Science and Technology.

By Mr. VANDER JAGT:

H.R. 12164. A bill to amend the Internal Revenue Code of 1954 to increase the limitations on the deduction of expenditures by farmers for clearing land; to the Committee on Ways and Means.

H.R. 12165. A bill to extend until the close of June 30, 1981, the existing suspension of duties on certain metal waste and scrap, unwrought metal, and other articles of metal; to the Committee on Ways and Means.

By Mr. WAXMAN:

H.R. 12166. A bill to amend the Public Health Service Act to establish within the National Institutes of Health the Center for the Evaluation of Medical Practice; to the Committee on Interstate and Foreign Commerce.

By Mr. ARMSTRONG (for himself and Mr. KOSTMAYER):

H. Res. 1132. Resolution to amend the Rules of the House of Representatives; to the Committee on Rules.

By Mr. GREEN:

H. Res. 1133. Resolution to create a congressional senior citizen intern program; to the Committee on House Administration.

By Mr. HILLIS:

H. Res. 1134. Resolution expressing the sense of the House that the Secretary of Defense direct the Secretaries of the military departments to change the payment of the housing allowance to military personnel on duty outside of the United States to an actual average expense basis by grade; to the Committee on Armed Services.

## MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

371. By the SPEAKER: Memorial of the House of Representatives of the State of Hawaii, relative to federally mandated predeparture inspection requirements at airports in the State of Hawaii; to the Committee on Agriculture.

372. Also, memorial of the Legislature of the State of California, relative to "National Forgotten Victims Week"; to the Committee on Post Office and Civil Service.

373. Also, memorial of the Legislature of the Commonwealth of Massachusetts, relative to the proposed tuition tax credit; to the Committee on Ways and Means.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

Mr. EDWARDS of Alabama introduced a bill (H.R. 12167) for the relief of Island Trawlers, Inc., Frank F. Hall, and the estate of Oliver J. Clark, which was referred to the Committee on the Judiciary.

## PETITIONS, ETC.

Under clause 1 of rule XXII,

442. The SPEAKER presented a petition of the House of Representatives, Republic of Cyprus, relative to the proposed lifting of the embargo on the supply of military equipment to Turkey, which was referred to the Committee on International Relations.

# SENATE—*Monday, April 17, 1978*

*(Legislative day of Monday, February 6, 1978)*

The Senate met at 12 noon, on the expiration of the recess, in executive session, and was called to order by Hon. WILLIAM PROXMIRE, a Senator from the State of Wisconsin.

### PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

*The earth is the Lord's and the fulness thereof; the world and they that dwell therein.*—Psalms 24: 1.

O God of the universe, eternal and unchangeable, above all men and all nations, Thou art our God and Father of our spirits. Thou art infinite and we are finite. Thou art great and we are small. But Thou hast made us for Thyself and our hearts are restless until they rest in Thee. Help us to love this Earth which Thou hast given us for our home, to conserve it, to cultivate it wisely, to utilize its power prudently. Guide us by Thy spirit that we may so order our work, so discipline our speech, so elevate our thoughts that we may have a share in advancing Thy kingdom on Earth. Guide, strengthen, and uphold all persons who bear the burdens of government that justice and peace may prevail throughout the world.

In Thy holy name we pray. Amen.

## APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
*Washington, D.C., April 17, 1978.*

*To the Senate:*

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable WILLIAM PROXMIRE, a Senator from the State of Wisconsin, to perform the duties of the Chair.

JAMES O. EASTLAND,
*President pro tempore.*

Mr. PROXMIRE thereupon assumed the chair as Acting President pro tempore.

## ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Illinois (Mr. PERCY) is recognized, as in legislative session, for not to exceed 15 minutes.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that I may vitiate the time that was allotted to Mr. PERCY and that I may control it.

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the two leaders each have 5 minutes under their control before the orders.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I yield to the Senator from Arizona.

## REPORT ON SENATOR GOLDWATER'S AFRICAN TRIP

Mr. GOLDWATER. Mr. President, I recently returned from a trip to South Africa and Southwest Africa. As you know, Southwest Africa is now at a crossroads in terms of its future economic and political development. This month the United Nations will be considering how the territory should achieve its independence. In light of this, I would like to provide some information and impressions I gathered during my trip. In particular, Mr. President, I would like to draw the Senate's attention to the terrorist activities of the Southwest African Peoples Organization (SWAPO) and the puzzling support this organization draws from the U.N.

Since 1975 South Africa has been attempting to prepare Namibia, as the territory is known in the U.N. for elections leading to independence. In September of 1975 the South African Government convened a constitutional conference—the Turnhalle Conference—at Windhoek on the future of Southwest Africa. As a nationalist political party, SWAPO was invited to participate but refused and boycotted the conference, organizing sometimes violent demonstrations against it.

Last year when Judge Marthinus J. Steyn was appointed the territorial Administrator General he issued an open invitation to SWAPO leaders, both within and outside the territory, to discuss how the elections should be conducted, and how their party could participate. The expatriate SWAPO leadership in Zambia turned the invitation down cold. The convention drafted a constitution and began to implement a program that would culminate in complete independence by December of this year. But last April South Africa agreed to suspend implementation of the Turnhalle program under pressure from the U.N. which recognizes only SWAPO as the sole representative of black Southwest Africans.

South Africa agreed to delay their internal solution to give the U.N. Contact Group (United States, United Kingdom, West Germany, France, and Canada) a chance to work out another formula for independence. Late last month the Contact Group proposed its final package to SWAPO and the South African Government. It is not clear how either party will respond. We will have to wait and see. But while we are waiting I think we should have a close look at SWAPO which seems to enjoy such esteem at the U.N.

SWAPO, Mr. President, seems to be an organization with origins which have the appearance of legitimacy but which has proven quite recently to be a common terrorist gang. In defense of the U.N., it must be noted that SWAPO's true colors have only begun to show through in the last year or so.

The Southwest Africa Peoples Organization was first established in 1959 as the Ovamboland Peoples Organization. Sam Nujoma has held its presidency since the beginning. Although it has attempted to broaden its ethnic base, SWAPO remains dominated by Ovambo tribesmen. The organization is divided between its internal and external branches. The exiled leadership is based primarily in Lusaka. The external group has historically been the diplomatic arm of the organization. The internal wing is recognized by the South African Government, and legally operates within the territory. SWAPO's program for the territory calls for distribution of the country's wealth, a redistribution of agricultural holdings, a ban on absentee ownership, and an extensive nationalization program to include the two major industries—mining and fishing.

SWAPO has engaged, principally at the direction of the external branch, in guerrilla harassment activities against South African troops in the territory since its inception. Guerrilla activities, however, were very sparse until approximately 1974. In that year guerrilla forces were estimated at no more than 300. Last year the figure was approximately 2,000; this year it is 4,000. And the alarming thing is that they are Soviet equipped. Their leadership is coming under greater Soviet political influence. And the SWAPO guerrillas, operating out of Angola, are trained and advised by Cuban troops.

Most of the SWAPO guerrillas are based in Angola, where the Soviet and Cuban-backed MPLA grants them sanctuary. The others are in Cuba and Russia for training. They make raids, sometimes of a few days' duration, just a few kilometers into Southwest Africa and then immediately return across the northern border into their Angolan havens. Their activities include harassment of opposing political parties and ambushes on South African troops in the territory. They have been known to kidnap schoolchildren in attempts to expand the number of their recruits. They mine roads and bomb the enterprises of opposing politicians.

This violence in pursuit of political power is, of course, unacceptable to us and should be disdained by the U.N. Unfortunately the violence of the past is merely a taste of things to come.

While in the territory, Mr. President, I met with Clemens Kapuuo, who was the leading candidate for president of independent Namibia. Kapuuo was chief of the Hereros, considered the most politically astute of the ethnic groups. Kapuuo was well respected and his support reached beyond his own tribe to other ethnic groups. He was head of the National Union Democratic Organization. I was greatly impressed with his sincerity and his vision for this emerging country. Three days after I spoke with him he was assassinated. By all accounts in the territory the murder was one of a series in the latest SWAPO terrorist plan. Documents captured from SWAPO guerrillas reveal that the organization plans to expand their terrorism and commit more assassinations in the future. While I was in Southwest Africa I obtained copies of the SWAPO documents which clearly state the organization's intentions to "eliminate all prominent puppets, for example, Ndjoba, Kapuuo, et cetera." Mr. President, I ask unanimous consent that these documents be printed in the RECORD at the conclusion of my remarks.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. (See exhibit 1.)

Mr. GOLDWATER. Mr. President, this alone would seem to be sufficient cause for re-examination of U.N. and American support for SWAPO. But other SWAPO policies are at least as frightening. Not content to confine their terrorism to Southwest Africa, SWAPO guerrillas are now engaged with the MPLA in fighting UNITA, the pro-Western faction in Angola. For the past year or so SWAPO guerrillas have engaged in limited combat against the UNITA forces fighting against the Soviet-backed MPLA. But in the last month SWAPO has dedicated significant forces to full-scale combat against UNITA. They now have some 1,000 SWAPO guerrillas fighting in Angola against UNITA troops. I can only guess at their motive, but it would seem that SWAPO's debt to the Soviets and Cubans has been called in. In the process SWAPO guerrillas will gain combat experience and on-the-job terrorist training that might later be put to frightening use in Southwest Africa.

Mr. President, I hope that this record of violence has not been overlooked at the U.N. I also hope that our own State Department did not overlook what the pro-Soviet publication African Communist printed about SWAPO's otherwise concealed objectives:

SWAPO is faced with a strategic problem similar to that facing the Zimbabwean liberation: to resist the ideological and financial pressure from the West, while exploiting to the full the Western powers' desire to accommodate to some degree, and for their own reactionary motives, the force for change in Southern Africa. And both these tasks have to be fulfilled while at the same time advancing the armed struggle . . . the only path to liberation.

There is, however, no evidence of a weakening of U.N. support for SWAPO. If the U.N. needed any further evidence of the nature of current SWAPO thinking it was provided by President Nujoma himself. While in New York recently for proximity talks, Nujoma clearly stated that he opposed major rule in Namibia, and that SWAPO was there to seize power for the benefit of all Namibians. There you have it from the horse's mouth.

But there is a little news from the U.N. Contact Group which met last month in Windhoek. All the groups say they were very concerned about the security situation. That would seem to be an understatement.

EXHIBIT 1

GROOTFONTEIN-BRANGE,
*S.W.A.P.O. of Namibia,*
*May 3, 1978.*

DEAR COMRADES: We would like to make use of this opportunity, although on short notice to give you the list of the names of the people who are in our way of struggle.

1. Christof the shopowner in the location, Grootfontein, H28.
2. Laeza Hoesib, S.A.P., D2.
3. Albertus Naseb DTA man S.
4. Christof Ge-sao S.A.P. S167.
5. Elizabeth Wimmert, O.15.
6. Lea Wimmert, H4.
7. Emma Wimmert, S.
8. Simon Petrus Boy Breker, O.16.
9. Nikodemus Nikode.
10. Fraus Shabaka, O.25.
11. Martin Oppermann.
12. Martin Ukongo.
13. Walter Gawak, ex S.A.P., S93.
14. Jeremias, S.T.A man, S92.
15. Thomas Gaogosels, H90.
16. Nichie Johannes Gurirab, security police, Tsumeb.
17. Ipumbu Israel, Mun. police.
18. Fredrika Nases, S12.
19. Jan. I. Goraseb, S.A.P., S.13.
20. Bernhard Geiseb, DA.T (chief) S.
21. Josef Muambola, O.4.
22. Kahdia police, O.112.
23. Titus Streidwolf, police, S17.
24. Elias Karegek, D.T.A. man, S195.
25. David Dinaar Kiesler.

There are still some others but these above mentioned puppets are very dangerous. Especially No. 1, 3, 8, 13.

Yours in struggle,

1. E. A. GAUSE, *Vice Chairman.*
2. ANNA KAJELEI, GR.
3. HELENA UWUHAIS, GR.
4. E. HAUR, (RUNDER).

P.S.—Comrades 1. Titus Amajenga, 2. Matheüs Samuel, 3. Jonias Shikueni, and 4. Jackson Amukua are our comrades. They were doing quite a good job in single workers. We really hope that they will be keep on doing so.

---

THE 8TH MINUTES OF THE MILITARY COUNCIL

Present were Comrades: 1. Dimo, Chairman; 2. Shalli, Secretary; 3. Greenwell; 4. Haiduwa; 5. Lungada; 6. Pondo; 7. McNamara; 8. Mbulungonga; 9. Chikololo Ngoya; 10. Zulu; 11. Hailonga; 12. Shilongo; 13. Namoloh; 14. Andy Boy; 15. Kapuleko.

The meeting was officially opened by the Commander-of-the-Armed Forces.

Items on the Agenda were as follows:

1. The Introduction of Commanders, viz.
(i) Haiduwa.
(ii) Lungada.
(iii) Zulu.

2. The Tasks of the two Assistants and the Regional Commander cde Nandenga.

3. The moves of the Five Western Powers, the Contact Group at present towards the Independence of Namibia.

4. The Operational Zone of the Regional Commander, Mbulungonga.

5. The new operational Strategy of the Detachments of all Fronts.

6. Shitumba, Efitu, Omulemba, Omulola and Oshana to be directly supplied from Moscow CHQ.

7. The Swedish Journalists coming on the 15th January.

Planning committee agenda.

1. Operational Strategy.

2. The Supply System for comrades inside.

The Commander-of-the-Armed Forces began with the introduction as already mentioned above.

Comrade Lungada introduced as Assistant Commander-of-the-Armed Forces. New tasks to be carried out by him are as follows beneath:

(i) Will be the Chief Co-Ordinator between all Regions and the Command Post.

(ii) Will be stationed at *Shitumba* if not *Efitu*, so as to facilitate the job.

(iii) Will travel to and from respective regions; thus working in close co-operation with the Regional Commanders.

(iv) Will be in touch with cde Haiduwa from time to time, to exchange views and see what is needed inside.

(v) To forward the problems and requirements of all fronts to the CHQ, and what is beyond his power to be transferred to the Commander-of-the-Armed Forces, for final decision or approval.

Comrade Haiduwa was also introduced as Assistant Commander-of-the-Armed Forces. His new tasks are as follows:

(i) To operate right inside the country.

(ii) Will be the Chief Supervisor and Co-Ordinator inside.

(iii) Will have to assign missions to the cadres operating inside.

(iv) To take care of the underground work.

(v) To be given some money with which to commence the job.

(vi) To assure that the following targets are destroyed:

(a) Bridge between Otavi and Otjiwarongo.
(b) Okahandja Bridge.
(c) All power stations.

(d) To eliminate all prominent puppets, e.g. Ndjobo, Kapuuo, etc.

(vii) To establish special sabotage groups.

On the part of the underground work, members made strong emphasis on this point, ultimately reaching a conclusion that this was a technical problem to be tackled only by comrade Pondo, Chief of Intelligence and Reconnaissance.

Tasks of the Regional Commander Nandenga:—

1. To go back to his region.

2. To accompany cde Haiduwa for a week inside to assess the situation in person. Not to stay too long due to the work tailing behind.

3. For him to know the terrain and the situation of our cadres and the foes' movements in general.

4. To see to it that the so-called elections prepared by the enemy is completely disturbed.

5. To ——— that the seizure of a boer prisoner of war is made a " practice."

N.B. The last 2 numbers, e.i. 4 & 5 apply to all Regional Commanders.

The moves of the Five Western Powers.

Comrade Matongo, Chief Commissar, made a short and brief speech on this. Went on to explain the attitudes of the sides concerned. Proceeded by saying that despite imperialist maneuvers, SWAPO has reiterated and clarified its position, mainly that it was not going to participate in the elections as long as South African troops and police remained (in Namibia) on our soil.

The Party has thus called upon the intensification of the liberation war. The Party has made all the necessary arrangements with friendly countries; those prepared to give assistance in all forms.

However, the racists are going ahead with the so-called internal settlement, and should a puppet regime come into existence in Namibia, this will make the issue of independence delicate and crucial and may even prolong the war.

Following the intensification of the war, more troops should be sent into the country. Each and every member of PLAN should and must work more effortlessly and relentlessly.

The National Executive of SWAPO has hence decided to send in journalists to witness and act on our behalf.

Before closure, he warned MC-members that this was a very confidential issue and even a top secret. It was to be handled as such.

The Commander-of-the-Armed Forces made a short comment on this. He said and made it out-pointedly clear that PLAN is ready to fulfill the tasks set by the superior Body.

Also called upon the commanders to be more vigilant. He called for a big "PUSH".

Comrade Andrew (Commander inside) was called upon to brief the Council on the current situation in Namibia, e.i. inside.

"The situation there is under control. To generalise it, the enemy movements are numerous. Means of transport are helicopters, horses and vehicles including armoured cars and APC's. They don't travel by roads mostly. Inside we operate only in smaller groups comprising of 15–20 soldiers. The reason is food as we are supplied by the masses. Our units are mobile only. The situation does not yet allow or make provisions for use to create bases there. Fighting is continuing every now and then."

Nakada: Food is the main problem. Is there any possibility of getting enough food? I'm saying this because as soon as the war is intensified, people will start running away from the other side and secondly in case of a liberated area.

Matongoh—N.B. Very Confidential. Food is at present a problem but in future this will be overcome. The Party has even come as far as deciding to purchase its own Aircraft to transport all the necessities to and from within and without.

Chairman—Food is not only necessary but obligatory. Went on to say that the Party will do her uttermost to assure that all the requirements are made available.

On the question of comrado Haiduwa going inside, said that he was not going to change anything, but would rather recommend him to proceed.

Haiduwa: Had an objection regarding the situation which provides no room for a base inside. Said he views the essentiality.

Nakado: Finally proposed that comrado Haiduwa should go in to assess the situation in person and report back on the prospectives. (Motion overwhelmingly seconded.)

Matongo: Made a short remark: "If comrade Haiduwa refuses the order, this will make a bad impression even reputation; especially to his subordinates." The war should be intensified and right in the country, he said.

Hondo: Went on to generalise the situation inside. Finally put up a suggestion that more and more reinforcements should be sent in the country. The forces operating in the frontier zone should also undertake major operations as to make a "push", especially during the rainy season.

Chairman: The Swedish Journalists are coming. Called upon the Regional Commanders to make preliminary preparations. Their going into the country will depend entirely on the situation, he said.

Sabotage: Work should be intensified and even extended. Qualified personnel are required to blow up targets such as bridges, power stations.

Supply-Group: To be established to transport logistical supplies to comrade inside.

Re: Comrade Martin Iifo: The latter has been demoted cde Ndafongwe has taken over from him appointed as Regional Commisser and automatically member of the Military Council.

Recruits: In due course, training would be done locally at Oshens. There is no problem with supplies, he pointed out.

Prisoners of War: This should be put into practice. All PLAN combatants should be notified.

TASKS ASSIGNED

1. Intensification of sabotage in Northern, North Eastern and partly Southern.

2. Intensifying the battles inside and along the borders being in Namibia to clear the borders.

3. The post camps at the front to be no more in the hands of the Regional Commanders.

4. To make or have practice before an attack on the enemy target is undertaken.

5. The Detachments, Platoons and Sections to be issued specific orders of their units before the mission is accomplished.

6. Firing of the cadres to be controlled in battles.

7. Regional Commanders Mbulunganga to have this operational Area, partly North and partly North Eastern.

8. A/C.A.F. Haiduwa to be given his operational money with which to begin.

9. The Regional Commanders to be with Detachments from time to time and inspect their basements, terrain of basement, seriously push them inside.

10. The training of tank crews should involve those loyal to the leadership and the Party and should have experience in driving.

11. The training of Commanders should be thoroughly checked not to be selected by the Officers of the THTC, in Lubango.

The Regional Commanders, viz. Nakada and Mbulunganga presented their annual reports.

Joint requirements are—

1. Well qualified personnel, viz. engineers, medical men, Anti-Aircraft Gunners, Artillery Gunners.

2. Obligatory: Qualified Political Commissars.

3. Arms and Ammunitions:

(i) 60 mm Mortars & shells.

(ii) RPG–7 shells.

(iii) Mines.

4. Standardised Communication Systems,

5. Combat food.

6. Refreshment courses for commanders.

7. Logistical supplies, food, uniforms and boots. . .

All these were seen as main obstacles contained in the reports were the setbacks and successes experienced during the out-going year.

All the members vowed to intensify the war and to carry out the tasks set by the Party.

Time: 8:00 p.m.

Notes by Shalli/Secretary.

Approved: Chairman/Military Council.

---

## PROFESSOR EMERITUS OF HISTORY ARTHUR BESTOR CONCLUDES AN ACT OF CONGRESS IS NECESSARY TO RELINQUISH U.S. PROPERTY TO PANAMA

Mr. GOLDWATER. Mr. President, I have just received a very important document which I wish to share with my colleagues in the Senate concerning the original intent of the framers as to the exclusive power of Congress to dispose of U.S. property to a foreign nation.

Professor Emeritus of History Arthur Bestor of the University of Washington has just completed and sent to me a thorough discussion of the intent of the framers in arranging the treaty power and imposing particular limitations on that power. I am very interested in his conclusion that the original intent of the Constitution was, as I have contended in earlier debates, that an act of Congress is necessary to the relinquishment of national property. He believes, as I do, that the Panama Canal Treaty alone cannot carry into execution the transfer of U.S. property to Panama.

Mr. President, Dr. Bestor has written a masterful paper, which is illuminated by considerable background explanation of the setting in which the Federal Convention of 1787 took place. He has reconstructed as well, I believe, as anyone could, the frame of mind of the makers of the Constitution and the important details which were well known to them, but are long forgotten to all but a few present-day scholars.

Mr. President, Professor Bestor's paper is the most original and authoritative discussion of the question which has come to my attention. Instead of straining for gnats, Dr. Bestor has kept his eye on the only decisive matter involved: The original intent of the framers. He has not attempted to discuss this or that treaty, which may be a possible precedent or not for the Panama Canal Treaty; nor has he waded through the thicket of dicta in court cases whose holdings are not directly on point.

Rather, Dr. Bestor focuses on the only question that really matters: How did the makers of the Constitution apportion the power to make treaties among the different departments of the new Federal Government and what limitations did they put on this power?

In brief, Professor Bestor distinguishes between the making of treaties and the execution of treaties. It is true the House of Representatives was excluded from direct participation in the making of treaties, but as Dr. Bestor writes, this "was never expected or intended to deprive them of the powers explicitly granted them in the Constitution."

In fact, Dr. Bestor finds:

The exclusion of the House of Representatives from treaty-making meant that safeguards against usurpation of legislative powers must be obtained through making even firmer the requirement that powers vested in the legislative branch should not be exercised in any other way than by Act of Congress.

In other words, Mr. President, the very fact that the framers omitted the Congress from a role in the making of treaties is all the more reason why the role of Congress must be protected in carrying out treaties that touch on legislative powers.

It is the treatymaking department, the President with the advice and consent of the Senate, who treats with foreign countries. The Congress itself cannot negotiate and enter into agreements with foreign nations. Thus, a treaty is required to make the initial agreement with another coutnry to perform a certain act. But, that agreement cannot be completed—it cannot be carried into operation—unless Congress performs the act necessary to execute the treaty.

As Professor Bestor reminds us, one of the outstanding characteristics of the Constitution, a characteristic that is too often taken for granted:

Is the specificity with which it assigns each of the powers or functions of government to a particular branch, and the care it takes to safeguard these distributions of power both against usurpation by other agencies and against attempts by one agency to by-pass another when joint action is required by the Constitution.

Thus, in vesting the powers of Congress, Dr. Bestor writes:

The framers proceeded on the assumption that the best guarantee against usurpation of legislative power was to specify as completely as possible the various powers that they intended to delegate to Congress, expecting this to suffice as a bar to their exercise in any other way than by a law enacted in accordance with the legislative procedure carefully spelled out in the Constitution.

Finally, Dr. Bestor states, that article IV, which assigns to Congress the power to dispose of the territory or property belonging to the United States, "is a delegation of power to Congress exactly like the delegations of power in article I, section 8."

He concludes:

It is thus a power that the framers expected to be exercised by act of Congress, according to the legislative procedure minutely specified in the Constitution. There seems to be nothing in the contemporary evidence to suggest that this power, anymore than the power to collect taxes or make appropriations, was intended to be exercisable by treaty alone, in the absence of complementary legislative action.

Mr. President, I might add that Professor Bestor is well-qualified to give an authoritative opinion on the constitutional question before us. He is unquestionably among the top rank of historians in the country and has devoted a lifetime of deep study to American history, especially the formation of the Constitution.

Without question, he is recognized as one of the preeminent living professors of history in America.

Dr. Bestor received his doctorate degree from Yale University in 1938 and also possesses an honorary law degree from Lincoln University. He has been an active professor since 1930 and was the recipient of the Albert J. Beveridge Memorial Award of the American Historical Association in 1946.

Professor Bestor has authored numerous highly acclaimed books and articles and has contributed to many others. At present, he is undertaking a monumental work on the separation of powers, which is the precise subject before us.

Mr. President, I believe Dr. Bestor has made a significant contribution to the present proceedings of the Senate and because of the high merit of his work and the fact that we are in the closing hours of debate on the treaty, I have had a copy of his paper placed on the desk of each Senator. I hope that my colleagues will consider the painstaking discussion of the Constitutional Convention which is set forth in Dr. Bestor's paper and heed his counsel as to the intent of the framers.

It is possible a declaration or a reservation to uphold the original intent of the framers will be offered before the final vote on the treaty tomorrow, and I hope that my colleagues will have an opportunity to review the paper by Dr. Bestor before we act on that declaration or reservation.

Mr. President, I ask unanimous consent that Dr. Bestor's paper may be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

RELINQUISHMENT OF NATIONAL PROPERTY BY TREATY ALONE: DID THE MAKERS OF THE CONSTITUTION CONSIDER AN ACT OF CONGRESS ALSO NECESSARY?

(An historical memorandum of Arthur Bestor)

(Prepared at the request of Senator BARRY GOLDWATER)

APRIL 12, 1978.

DEAR SENATOR GOLDWATER: I am happy to give my opinion on the constitutional questions raised in your letter of the 14th of March with regard to the necessity of an act of Congress before property of the United States within the Panama Canal Zone is transferred to Panama.

I should preface this memorandum with certain disclaimers. I am offering my opinion as an historian, not a lawyer. My concern, moreover, is with the original intent of the Constitution, in so far as that intent can be documented from the records of the Federal Convention and the State ratifying conventions, from the writings of the framers, and from actions taken in the years immediately following the inauguration of the new government. References to later court decisions, legal commentaries, and opinions of political leaders will be entirely incidental. This memorandum will not attempt a systematic study of developments that have taken place and interpretations that have been offered since the end of the founding period—that is, for present purposes, since the end of the eighteenth century.

I should add that I do not wish to express any opinion, pro or con, on the merits of the pending Panama Canal treaties themselves, but will confine myself entirely to procedural questions.

In my judgment, the original intent of the Constitution with respect to the matter under discussion, as understood by the majority of those concerned in its making, was summed up accurately in the first of two resolutions adopted by the House of Representatives on the 6th of April 1796. The grounds on which this opinion rests will be developed in the memorandum that follows. First, however, the text should be given in full:

*Resolved*, That it being declared by the second section of the second article of the Constitution, that the President shall have power, by and with the advice [1] of the Senate to make Treaties, provided two-thirds of the Senate present concur, the House of Representatives do not claim any agency in making Treaties; but, that when a Treaty stipulates regulations on any of the subjects submitted by the Constitution to the power of Congress, it must depend, for is execution, as to such stipulations, on a law or laws to be passed by Congress. And it is the Constitutional right and duty of the House of Representatives, in all such cases, to deliberate on the expediency or inexpediency of carrying such Treaty into effect, and to determine and act thereon, as, in their judgment, may be most conducive to the public good.[2]

This resolution was drafted by James Madison,[3] in many respects the most active and influential member of the Federal Convention of 1787 which had drawn up the Constitution. It was introduced by Thomas Blount, brother of another member of that Convention. The resolution was adopted by a vote of 57 yeas to 35 nays. Among the absentees were 6 congressmen who were considered favorable, and one who was presumably opposed.[4] The House at that time included four persons who had been members of the Federal Convention. One (Jonathan Dayton) was the speaker and did not vote. All three others voted for the resolution (Abraham Baldwin, Nicholas Gilman, and James Madison).

The resolution of 1795 expressed the sense of the House of Representatives only, for it was not a concurrent resolution. In subsequent years, however, the Senate has generally acquiesced in the principle enunciated in the resolution, in so far as treaty provisions requiring the appropriation of money or the alteration of tariff arrangements were concerned. The situations in which the Senate has indicated such an acceptance lie beyond the scope of the memorandum, but are adequately summarized by the Congressional Research Service of the Library of Congress in its compilation *The Constitution . . . , Analysis and Interpretation* (1973 ed.), pp. 487–498, and are more fully discussed in the Samuel B. Crandall (1904) and Elbert M. Byrd, Jr. (1960).[5]

Resolutions recently proposed in the House of Representatives differ from the one adopted in 1796 in that they have been drawn up as concurrent resolutions. In reaffirming the principle of the earlier resolution, moreover, the new ones apply it not to appropriations or tariffs but to the transfer or alienation of territory and other property belonging to the United States. For a proper understanding of the constitutional issues to be discussed herein, it will therefore be well to lay before the reader the text of one of these. House Concurrent Resolution 347, introduced on the 9th of September 1977 (a resolution that is identical in wording with a number of others that have also been filed) reads as follows:

Footnotes at end of article.

*Resolved by the House of Representatives (the Senate concurring)*, That it is the sense of the Congress of the United States that any right to, title to, or interest in the property of the United States Government agencies in the Panama Canal Zone or any real property and improvements thereon located in the zone should not be conveyed, relinquished, or otherwise disposed of to any foreign government without specific authorization of such conveyance, relinquishment, or other disposition by an act of Congress.

The constitutional issues to be discussed in the present memorandum involve three points:

(1) Whether the framers of the Constitution intended the treaty power to be subjected to the requirements that certain kinds of provisions would not be self-executing but would become operative only through action (previous or subsequent) by both houses of Congress;

(2) If so, whether the kinds of provisions that would require an act of Congress before becoming operative comprised (as the resolution of 1796 asserted) "regulations on any of the subjects submitted by the Constitution to the power of Congress";

And (3) Whether the framers intended to include, among the "subjects" requiring an act of Congress, the specific power "to dispose of . . . the Territory or other Property belonging to the United States," a power delegated to Congress by Article IV, section 3, clause 2 of the Constitution.

The three questions are intertwined, and can only be answered by tracing the development of the treaty clause in the context of the development of other clauses of the Constitution that in some way impinge upon it. To do this is the aim of the present memorandum, but limitations of time have prevented me from projecting the same kind of analysis forward into the debates over ratification.

### I. THE FEDERAL CONVENTION OF 1787

Under the Articles of Confederation (drafted in 1776–77 and ratified in 1781) the federal government consisted simply of a single-chambered Congress, with no separate executive and no system of independent courts. The present Constitution, of course, provides for two houses of Congress and for three branches of government, legislative, executive, and judicial. The Philadelphia Convention that drew up the Constitution in 1787 was therefore obliged to decide how the varied powers that had thitherto been concentrated in a single body, the old Congress—to say nothing of powers to be newly added—ought to be distributed among the several agencies of the complex government about to be established. Both the old and the new, moreover, were governments of limited powers. Hence the Convention had also to decide the particular limitations that should be carried over or newly added and the particular powers upon which they should operate.

Under the Articles, the old Congress possessed "the sole and exclusive right and power of determining on peace and war." [6]

This included, of course, the power of making treaties, and the latter was subjected to limitations of two sorts. In the first place, commercial treaties might not be made that would interfere with the power of each state to "impose such imposts and duties on foreigners, as their own people are subjected to," or with each state's power to prohibit "the exportation or importation of any species of goods or commodities whatsoever." [7] In the second place, treaties could not be entered into except with the assent of nine states—that is, the affirmative vote of two-thirds of all the states then in the union.[8]

Answers to three questions must be sought in examining the records of the Federal Convention. How did the framers of the Constitution distribute the power of making treaties among the several agencies of the new government? What limitations did they impose directly and specifically on the treaty power itself? Finally, how did they expect or intend the treaty power to be limited by provisions of the Constitution other than those dealing explicitly with treaties?

Detailed questions like these came under discussion mainly in the final part of the Convention. During the first nine weeks of the sixteen-and-a-half-week meeting the debates dealt primarily with general problems of governmental structure, with the extent of the powers to be granted, and with federal-state relations. When the time finally came for drawing up specific provisions to carry out the broad decisions already reached, the task was put into the hands of a Committee of Detail, and the Convention recessed to give the five members a solid week (plus the weekends before and after) to prepare a draft. The Committee reported on Monday, the 6th of August, precisely six weeks before the Convention finished its work and adjourned. Most of the major debates on foreign affairs occurred during this final stage of the Convention.

Within the Committee of Detail a first sketch of the projected Constitution—actually a detailed outline rather than a draft—was prepared by Edmond Randolph of Virginia.[9] At a mid-point in the document came a section that itemized the "legislative powers." In connection with each of its nineteen numbered clauses, space was provided for a listing of "certain exceptions" and another listing of "certain restrictions." Three consecutive clauses out of the nineteen are relevant to the present discussion.

The second item in the catalogue was the power "To regulate commerce," and three "Exceptions" were enumerated: "1. no duty on Exports. 2. no prohibition on Importations Inhabitants [a euphemism for slaves]. 3. no duties by way of such prohibition." Next came two "Restrictions," to wit: "1. A navigation act shall not be passed but with the consent of eleven states in the senate and 10 in the house of representatives. 2. Nor shall any other regulation—and this rule shall prevail, wherever the subject shall occur in any act." [10]

The next two items were concerned with treaties, and two types were separately discussed. The power "To make treaties of commerce" constituted item 3, and limitations were indicated simply by cross-reference: "Under the foregoing restrictions." Item 4 was the power "To make treaties of peace or alliance." Here there was both a cross-reference and an amplification: "Under the foregoing restrictions, and without the surrender of territory for an equivalent, and in no case, unless a superior title." [11] The matter of territory seems to have been much on Randolph's mind, for he got ahead of himself in composing the preceding clause (item 3). He first wrote the words "The lawful territory," and then, realizing that territorial questions belonged in the next clause, he scratched out the three words and proceeded to list the making of commercial treaties as item. 3.[12]

It is difficult to fathom the exact meaning of these rather cryptic phrases about "lawful territory" and "a superior title." But it is not at all difficult to recognize the importance that Randolph attached to adequate safeguards where use of the treaty power might involve transfer of territory. Concern about this matter became one of the important themes in the ensuing discussion of the treaty power on the floor of the Convention.

In the draft constitution finally submitted to the Convention on the 6th of August 1787, the Committee of Detail followed Randolph's lead by vesting the treaty power wholly in the Senate, with no provision for participation by either the President or the House of Representatives. So far as domestic legislation was concerned, the committee also recommended virtually the same restrictions that had been in Randolph's original sketch. Thus the committee's draft constitution forbade duties on exports and laws impeding "the migration or importation of such persons as the several States shall think proper to admit"—slaves, again. And for navigation acts it required a two-thirds vote—a slight relaxation of Randolph's stringent eleven-state requirement.[13] But the draft constitution applied none of Randolph's restrictions (or even the now obsolete restrictions of the Articles of Confederation) to the making of treaties, and thereby empowered the Senate to make treaties on its own unshared authority and by simple majority vote.[14]

Opposition to this weakening of the safeguard surrounding the treaty power began to form as soon as the Committee of Detail presented its draft. In his margin of the printed copy, George Mason of Virginia wrote: "As treaties are to be the Laws of the Land & commercial Treaties may be so framed as to be partially injurious, there seems to be some necessity for the same Security upon this Subject as in the . . . Section [which read: 'No navigation act shall be passed without the assent of two thirds of the members present in each House']." [15] Mason voiced his misgivings on the floor as early as the 15th of August, long before the Convention actually reached the treaty provision of the course of its clause-by-clause consideration of the draft constitution. Under discussion was a provision denying the Senate power to originate money bills. Mason supported the motion in a speech which Madison described as follows: "He [Mason] was extremely earnest to take this power from the Senate, who he said could already sell the whole Country by means of Treaties." [16]

This remark precipitated a debate—the very first on the newly formulated treaty clause—and the central issue in it proved to be the possibility that territory might be ceded by treaty alone without approval by the legislature as a whole. John Francis Mercer agreed "that the Senate ought not to have the power of treaties," which he was willing to transfer to the executive, on the seeming ground that the latter's role would be simply that of a negotiator. But, Mercer went on, "Treaties would not be final so as to alter the laws of the land, till ratified by legislative authority. This was the case of Treaties in Great Britain; particularly the late Treaty of Commerce with France." [17]

Mason concluded the discussion on this particular day with an elaboration of his views. He "did not say that a Treaty would repeal a law; but that the Senate by means of treaty might alienate territory &c. without legislative sanction. The cessions of the British Islands in W[est] Indies by Treaty alone were an example. If Spain should possess herself of Georgia therefore the Senate might by treaty dismember the Union." [18]

To explain three of the allusions in those speeches, a brief digression is in order. The "late Treaty of Commerce with France," to which Mercer referred, was the treaty of commerce and navigation signed at Versailles on the 26th of September 1786, which provided for significant reductions in British import duties on French wines and other products, with reciprocal benefits to British goods exported to France. Article XIV, however, recognized parliament's final authority in the matter by providing: "The advantages granted by the present treaty, to the subjects of his Britannic Majesty, shall take effect . . . as soon as laws shall be passed there for securing to the subjects of his most Christian Majesty [i.e., the king of France] the reciprocal enjoyment of the advantages which are granted to them by the present treaty." [19]

Footnotes at end of article.

When Mason countered with a reference to British cessions in the West Indies "by Treaty alone," he was presumably alluding to the treaty of peace between France and Great Britain at the end of the War of the American Revolution. This treaty, signed at Versailles on the 3rd of September 1783, provided for a reciprocal return of islands conquered during the war, but at the same time it also ceded to France the island of Tobago, which had been British before the war.[20]

In warning against the possible surrender of Georgia (to explain the third of the allusions) Mason was referring to the still-unsettled southern boundary of the United States, where Spanish claims, if they came to be recognized in a treaty, would strip Georgia of all but a small coastal area and relinquish vast territories in the west that were claimed by other southern states.[21]

On the 17th of August 1787 occurred a second brief debate on treaty-making, two days after the one just described. The subject that day was the war power of Congress and whether it should be defined as the power "to make war" or the power to "declare" it.[22] At the end of the day a motion was made (by Pierce Butler of South Carolina) "to give the Legislature power of peace, as they were to have that of war"—in effect, to give the House an equal share with the Senate in the making of peace treaties. Elbridge Gerry of Massachusetts seconded the motion, raising again the spectre of territorial cessions without full legislative approval. Gerry pointed out that as few as eight senators (or fourteen if all should be present) could exercise the treaty power, and he argued that they "may consequently give up part of the U[nited] States." Because the numbers were so few, he argued, "[t]he Senate are more liable to be corrupted by an Enemy than the whole Legislature." [23]

Full-scale debate on the treaty clause finally came about in the succeeding week, on the 23rd of August. The clause as drafted by the Committee of Detail still stood unchanged, with its exclusion of the House and the President from participation, and with a simple majority of the Senate empowered to make treaties. At the end of the day the section was referred back to the Committee of Detail, but only after a debate that focussed mainly on the role of the House of Representatives, and in the course of which, as Randolph observed, "almost every Speaker had made objections to the clause as it stood." [24]

The first suggestion made was so uncontroversial that it occasioned no discussion and involved no motion and no vote. It seems instead to have been silently adopted, almost as if the arrangement had been assumed from the beginning without ever being spelled out. The remark was by Madison and his notes alone reported it. He "observed that the Senate represented the States alone, and for this as well as other obvious reasons it was proper that the President should be an agent in Treaties." [25] By the end of the day Madison was referring to the power of the President & Senate to make Treaties," [26] and the Convention seems thereafter to have thought always of treaty-making as a joint responsibility. Far from representing a transfer of power from the senate to the president however, the change signfied the introduction of the president into the process as a nationally-minded counterbalance to the state-oriented membership of the Senate.[27] This was clear in Madison's initial statement, and two speakers on later occasions could refer to the president as a check upon the senate, not (as many commentators today would have it) the senate as a check upon the president. Comparing treaty-making procedure under the proposed Constitution with practice under the old congress, Nathaniel Gorham of Massachusetts said "There is a difference in the case, as the President's consent will also be necessary in the new Gov[ernmen]t." [28] Rufus King actually used the word "check," remarking "that as the Executive was here joined in the business, there was a check which did not exist in [the old] Congress." [29]

The burning issue in the debate of the 23rd of August was not the draft constitution's exclusion of the president from treaty-making, however, but its exclusion of the House of Representatives. Gouverneur Morris of Pennsylvania made the first actual motion for amending the clause, proposing to add "but no Treaty shall be binding on the U.S. which is not ratified by a law." Madison questioned the wisdom of so sweeping a provision, arguing that "treaties of alliance for the purposes of war" ought not to be exposed-to so open a procedure as legal ratification by the two Houses.[30] He was reviving the distinction that Randolph had made in the Committee of Detail between "treaties of commerce" and "treaties of peace or alliance." During the further course of the debate, Madison explained his own view more fully. He "hinted for consideration, whether a distinction might not be made between different sorts of Treaties—Allowing the President & Senate to make Treaties eventual [i.e., treaties that would go into effect in case of certain eventualities] and of Alliance for limited terms—and requiring the concurrence of the whole Legislature in other Treaties." [31]

At a later session (on the 7th of September) Madison offered a similar proopsal for differentiating treaties by subject. A revised treaty clause had been reported out by committee, and it provided for approval of treaties by two-thirds vote. Madison moved an exception whereby a simple majority would suffice to approve treaties of peace, "allowing those to be made with less difficulty than other treaties." [32] In opposing the motion, Elbridge Gerry of Massachusetts raised again the spectre of a relinquishment by treaty of territorial and other rights. Madison reported the speech as follows:

"Mr. Gerry was of opinion that in treaties of peace a greater rather then less proportion of votes was necessary, than in other treaties. In Treaties of peace the dearest interests will be at stake, as the fisheries, territory etc. In treaties of peace also there is more danger to the extremities of the Continent, of being sacrificed, than on any other occasions." [33]

Despite this objection, Madison's amendment was accepted.[34] But the issue did not die. Madison himself immediately prepared a draft that he hoped would meet the objections. It read as follows:

"But no Treaty shall be made without the concurrence of the House of Representatives, by which the territorial boundaries of the U.S. may be contracted, or by which the common rights of *navigation* or *fisheries* recognized to the U[nited] States by the late treaty of peace, or accruing to them by virtue of the laws of nations may be abridged." [35]

Madison did not actually present his proposal on the floor. Instead two deelgates from North Carolina, High Williamson and Richard Dobbs Spaight, moved an amendment of their own, providing that "no Treaty of peace shall be entered into, whereby the United States shall be deprived of any of their present Territory or rights without the concurrence of two thirds of the Members of the Senate present." [36] To New Englanders, concerned about the fisheries, this did not seem quite adequate, and Rufus King immediately spoke up, saying: "It will be necessary to look out for securities for some other rights, if this principle be established; he moved to extend the motion to —'all present rights of the U[nited] States..' " [37]

Argument on the same theme continued the next day (the 8th of September) after Rufus King moved to strike out the exception to the two-thirds rule that had just been voted for treaties of peace.[38] Gouverneur Morris favored retaining the exception, employing a rather involved argument which did at least high-light "the Fisheries" and "the Mississippi" as "the two great objects of the Union." Williamson added another, "the Western Territory." Finally Roger Sherman of Connecticut brought the discussion to a conclusion with a speech in which he announced that he "was ag[ain]st leaving the rights, established by the Treaty of Peace, to the Senate, & moved to annex a 'proviso that no such rights sh[oul]d be ceded without the sanction of the Legislature.' " [39] His motion, though seconded, seems not to have been put to a vote. But the Convention did vote to rescind the exception to the two-thirds rule which it had made in favor of treaties of peace.[40] This ended all attempts to treat differently from other treaties those that involved territorial and property rights.

The tracing of this theme to its negative conclusion has taken us ahead of certain other parts of the story. It is time to recur to the debate of the 23rd of August 1787, when Madison originally moved to distinguish between different sorts of treaties.

Before the Convention on that date was Gouverneur Morris's motion that "no Treaty shall be binding on the U.S. which is not ratified by a law" [41]—that is to say, by action of both Houses. James Wilson of Pennsylvania, a future justice of the Supreme Court, supported the motion with the following argument, as reported by Madison:

"In the most important Treaties, the King of G[reat] Britain being obliged to resort to Parliament for the execution of them, is under the same fetters as the amendment will impose on the Senate. It was refused yesterday to permit even the Legislature to lay duties on exports. Under the [treaty] clause, without the amendment, the Senate alone can make a Treaty, requiring all the Rice of S[outh] Carolina to be sent to some one particular port.[42]

Doctor William Samuel Johnson of Connecticut opposed the amendment,[43] and a debate ensued, the substance of which is clearer (in this instance) in the notes of James McHenry than in those of Madison. Wrote McHenry:

"It was motioned that no treaty should be binding till it received the sanction of the legislature.

"It was said that a minister could not then be instructed by the Senate who were to appoint him, or if instructed there could be no certainty that the house of representatives would agree to confirm what he might agree to under these instructions.

"To this it was answered [by Wilson] that all treaties which contravene a law of England or require a law to give them operation or effect are inconclusive till agreed to by the legislature of Great Britain.

"Except in such cases the power of the King without the concurrence of the parliament conclusive.

"Mr. Maddison [sic], the King's power over treaties final and original except in granting subs dies or dismembering the empire. These required parliamentary acts." [44]

In this speech, Madison (in concurrence with Wilson) was asserting as a rule of the British constitution they very same principle that he would apply to the American constitution in his House resolution of 1796—the principle that treaties are not self-executing when they involve appropriations or transfers of territory, or (if Wilson's views are assimilated to Madison's) when they require a law to give them operation.

The Convention concluded the day's session by voting overwhelmingly against giving the House a role in treaty-making.[45] At the same time, however, the treaty clause was sent back to the Committee of Detail, which meant that the question could be

Footnotes at end of article.

raised again when the committee reported a revised provision.

It was a successor committee that actually reported, on the 4th of September 1787, a revised text which read: "The President by and with the advice and consent of the Senate, shall have power to make treaties: . . . But no Treaty shall be made without the consent of two thirds of the Members present." [46] The two-day debate of the 7th and 8th of September has already been pretty fully discussed, for these were the sessions in which distinctions among various types of treaties were urged and rejected. The one point of importance that remains to be noted was the second and final rejection of the move (this time initiated by Wilson) to include the House as well as the Senate in the treaty-making power. The vote was even more decisive than the first, 10 states to 1, with none divided.[47] There followed a succession of attempts to make the two-thirds rule more stringent, by requiring the consent of two-thirds of all the Senators instead of two-thirds of those present.[48] None of the proposals were accepted, however, and the treaty clause emerged in the final Constitution with only verbal changes from the version reported on the 4th of September.[48]

The decision of the Convention to exclude the House of Representatives from direct participation in the making of treaties was deliberate and unmistakably clear. The reason, equally clear from discussions in the Convention and afterwards, was that the Senate was expected to act, more or less continuously, as a body of confidential counselors to the President, advising him on foreign policy at every stage, from the initial formulation of instructions to negotiators, through the final giving of consent to their handiwork. In performing a functionlike this, secrecy and dispatch are considered indispensable, and would not have been the case had the Senate's role been thought of as nothing more than debating the merits of, and giving final approval to, an already fully formulated treaty. The framers of the Constitution excluded the House of Representatives from the making of treaties because they did not see how the process they envisaged could be made to work if two separate bodies, comprising a large number of persons, were expected to serve as confidential advisers on delicate negotiations with foreign powers.

On domestic matters, where secrecy was neither necessary nor desirable, the makers of the Constitution intended the House of Representatives to be full partners with the Senate in the exercise of power—indeed to have certain stated responsibilities in money matters. To exclude the House from participation in the making of treaties was never expected or intended to deprive them of the powers explicitly granted them in the Constitution. And though some members of the Convention feared that this might happen, none of those who advocated the arrangement made by the Constitution ever argue that it *should* happen or was intended to happen.

An outstanding characteristic of the Constitution as we have it—a characteristic that is too often simply taken for granted—is the specificity with which it assigns some of the powers or functions of government to a particular branch, and the care it takes to safeguard these contributions of power both against usurpation by other agencies and against attempts by one agency to bypass another when joint action is required by the Constitution. To take one example, the Constitution requires the concurrence of the two Houses of Congress and the President to make a valid law, it spells out in detail the procedure involved in a presidential veto, and it goes on, in article I, section 7, clause 3, to prevent any by-passing of the President by attempts to legislate in any other way, such as by order or resolution without presidential action.

Now the last-mentioned precaution was first proposed in the Convention on the 15th of August 1787,[49] just a month and two days before it completed its work. Indeed, the task of distributing the powers of the federal government among its several branches can be said to have begun only with the Committee of Detail. The resolutions referred to it on the 26th of July were mostly in general terms; [50] the Randolph sketch (discussed above) was primarily an outline of the detailed powers that would be needed and the hands into which they should be put; [51] and the draft reported by the committee on the 6th of August emphasized detailed enumerations and specific distributions of power.[52] These were debated modified, strengthened, and surrounded with safeguards throughout the final six weeks of the Convention, at the very same time that warnings were being sounded on the floor against the danger that the treaty power might encroach upon or usurp the normal legislative authority of the two Houses of Congress.

The exclusion of the House of Representatives from treaty-making meant that safeguards against usurpation of legislative powers must be obtained through making even firmer the requirement that powers vested in the legislative branch should not be exercised in any other way than by act of Congress.

It is possible to do this by including both a positive delegation of power and a negative restriction on its exercise by others. Such a double-barrelled precaution is employed by the Constitution in connection with the distribution of powers between the states and the federal government.[53] It is employed once to prevent usurpation of the financial powers of Congress. Besides delegating such powers to Congress in Article I, section 8, the Constitution makes assurance doubly sure in Article I, section 9, clause 7, which begins: "No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law."

The inclusion of this clause cannot possibly be construed as permitting the exercise of the rest of the powers of Congress in other ways than by law. Such a construction would be monstrous. The power of Congress "[t]o lay and collect Taxes" is certainly as exclusively in congressional hands (so far as federal taxation is concerned) as if another clause were present saying that no taxes shall be levied or collected except in accordance with law.

Except for the special provision regarding appropriations (the presence of which is explicable historically by reference to the special power of the House to originate bills for raising revenue), the framers proceeded on the assumption that the best guarantee against usurpation of legislative power was to specify as completely as possible the various powers that they intended to delegate to Congress, expecting this to suffice as a bar to their exercise in any other way than by a law enacted in accordance with the legislative procedure carefully spelled out in the Constitution.

Among the powers added to the legislative enumeration during the weeks when the treaty clause was under critical scrutiny was the one that now constitutes article IV, section 3, clause 2, beginning: "The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States." No such clause had been in the Articles of Confederation, but the old Congress had nevertheless proceeded to exercise the power in question by providing for the sale of lands in the west and the establishment of territorial governments there. The Committee of Detail failed to fill the gap in the extensive enumeration of powers it included in its draft of the 6th of August. On the 18th (three days after the first discussion of the treaty provision on the floor of the Convention) James Madison proposed a list of powers "proper to be added to those of the General Legislature." First in the catalogue was the power "to dispose of the unappropriated lands of the United States." [54]

Madison's proposals were referred to the Committee of Detail, but before the latter could report, Gouverneur Morris moved on the 30th of August a provision on the same subject that was much more far-reaching, employing the same phrases as those ultimately adopted. It gave the legislature power not merely to handle the unappropriated lands in the West (as Madison proposed) but the power "to dispose of . . . the territory or other property belonging to the United States." [55] The clause was adopted after very little discussion.

The proposal was made and adopted in the immediate context of a debate on the admission of new states. It came, however, just a week after its mover, Gouverneur Morris, had precipitated a debate on the treaty clause by moving to include the House in the procedure. It came, moreover, a day before a new committee undertook to sift and make recommendations concerning the various parts of the proposed constitution that had been postponed, including those relating to treaty-making. The issues under debate in this final period of the Convention were all interrelated. In particular the relinquishment of territory and of rights equivalent to property had figured prominently in the debate over the treaty power, as excerpts quoted above have shown. The clearest assignment to Congress of the power "to dispose of . . . the territory or other property belonging to the United States" had therefore a direct bearing on matters that had been central in discussions of the treaty power.

Despite its placement in Article IV (in juxtapostion with the section on the admission of new states), the territorial clause is a delegation of power to Congress exactly like the delegations of power in article I, section 8. It is thus a power that the framers expected to be exercised by act of Congress, according to the legislative procedure minutely specified in the Constitution. There seems to be nothing in the contemporary evidence to suggest that this power, any more than the power to collect taxes or make appropriations, was intended to be exercisable by treaty alone, in the absence of complementary legislative action.

[22] For a full discussion of the alteration and its significance see the present writer's article "Separation of Powers in the Domain of Foreign Affairs," *Seton Hall Law Review*, V, 527–665, esp. 602–613 (Spring 1974).

[23] Farrand, *Records*, II, 319.

[24] *Ibid.*, II, 393.

[25] *Ibid.*, II, 392.

[26] *Ibid.*, II, 394.

[27] The eventual rephrasing, incorporated in the Constitution as art. II, sec. 2, clause 2, provides that the president "shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur." The phrase "advice and consent" was a long-familiar one in British statutes, colonial charters, etc., and signified continuous consultation ("advice") and, at the final point, approval ("consent"). As a constituent of the enacting clause of all British statutes it was simply shorthand for the entire process of legislative deliberation and decision. This point is treated at length in the article by the present writer already cited (in note 22 above), "Separation of Powers in the Domain of Foreign Affairs," esp. pp. 540–547, 652–660.

[28] Farrand, *Records*, II, 549 (8 Sept. 1767).

[29] *Ibid.*, II, 540 (7 Sept. 1787). See also note 34 below.

[30] *Ibid.*, II, 392.

[31] *Ibid.*, II, 394.

[32] *Ibid.*, II, 540.

[33] *Ibid.*, II, 541.

[34] Without dissent, according to Madison, *Ibid.*, II, 540. On the same day Madison made another motion, "to authorize a concurrence of two thirds of the Senate to make treaties of peace, without the concurrence of the President," arguing that the latter "would necessarily derive so much power and importance from a state of war that he might be tempted, if authorized, to impede a treaty of peace." Gouverneur Morris objected "that no peace ought to be made without the concurrence of the President, who was the general Guardian of the National interests." When put to the vote, Madison's amendment was rejected, 8 states to 3. *Ibid.*, II, 540–541 (Madison's notes; in editing the Journal, Farrand has confused the actions taken on the two motions of Madison, pp. 533–534).

[35] *Ibid.*, IV, 58. Madison first wrote "no Treaty of peace," but than scratched out the last two words, thus making the provision applicable to all sorts of treaties. The House, in other words, would have to concur whenever any treaty might have the result of surrendering territory or fishing rights or rights of navigation.

[36] *Ibid.*, II, 534; se also 543.

[37] *Ibid.*, II, 543.

[38] *Ibid.*, II, 547.

[39] *Ibid.*, II, 548.

[40] *Ibid.*, II, 549. The vote was 8 states to 3. Immediately thereafter the Convention voted to retain the two-thirds rule for all treaties, rejecting by 9 states to 1 (with one divided) a motion to strike it.

[41] *Ibid.*, II, 392.

[42] *Ibid.*, II, 393.

[43] *Ibid.*

[44] *Ibid.*, II, 395.

[45] *Ibid.*, II, 383, 384, 394. The vote was 8 states to 1, with one divided. Only Pennsylvania (whose delegates included Gouverneur Harris, the mover, and Wilson) voted in favor. The state with an evenly divided delegation was North Carolina.

[46] *Ibid.*, II, 495, 498–499.

[47] *Ibid.*, II, 532, 534, 538.

## CROSSROADS IN HISTORY

Mr. ROBERT C. BYRD. Mr. President, we stand at a crossroads in history—not just the epic history of the Panama Canal, but the history of the U.S. Senate and the two nations which are the parties to these treaties. Approval of these treaties would be another step in America's proud history of world leadership, a proud moment for the Senate, for our country, and for Panama.

Rejection of these treaties would be contrary to our national principles and purpose, and would damage and undermine Panamanian national dignity.

Today marks the 37th day of debate in the Senate on the treaties. The debate which began here on February 8 was preceded by lengthy hearings by the Committee on Foreign Relations and additional hearings by other committees.

Further, many Members of the Senate visited Panama in order to become better informed about the issues involved in the treaties.

The debate in the Senate has been one of the lengthiest and most thorough in history. In Senate consideration of treaties, only the Treaty of Versailles in 1919 and 1920 consumed more time. This debate has also been historic in that, for the first time, the Senate's proceedings have been broadcast across the Nation by national public radio.

Prior to and during the debate on the treaties, serious and legitimate concerns have been raised about their content and meaning. We have attempted to deal with these concerns through amendments to the treaties and to the resolutions of ratification. This is totally consistent with the Senate's constitutional role and our responsibility to insure that the treaties are in the best interests of the United States.

That, in the final analysis, will be the basis for each Senator's decision—whether, in that Senator's perception, the treaties are in our best interests.

### NATIONAL INTEREST

As Benjamin Franklin wrote long ago:

> There is no science, the study of which is more useful and commendable than the knowledge of the true interest of one's country.

In describing the treaties as being in our best national interests, I am talking about a time-honored concept in American foreign policy. It was Franklin, our first Ambassador and one of our earliest statesmen, who said that our foreign policy should be based on the principles of mutuality and equity.

It is a matter of determining our mutual interests with other nations and acting together to protect those interests. This is what has sometimes been referred to as enlightened self-interest. As Franklin said, "In every fair connection, each party should find its own interest."

Those are the principles upon which this treaty, and the Neutrality Treaty, are based—mutuality and equity. These are sound principles, in the best American tradition; they represent the best interests of the United States and are the best means of assuring that the Panama Canal will continue to serve the nations of the world.

Under this treaty Panama would have an increased stake in the canal and in its efficient and unimpeded operation. However, the United States would retain a high degree of control over the canal through 1999, plus defense rights thereafter, as provided under the Neutrality Treaty. Thus, these two treaties will fully protect U.S. interests for both the near and the more distant future.

There has been a tendency by some to overlook this and to overlook the fact that treaties are between sovereign powers, not between individuals. Thomas Jefferson spoke to this point in 1793 when a treaty the United States had signed with France in 1778 was questioned. That treaty had been negotiated with the French monarchy under Louis XVI. Subsequently, of course, the monarchy and Louis XVI were replaced. Jefferson said:

> . . . The treaties between the United States and France were not treaties between the United States and Louis Capet (Louis XVI), but between the two nations of America and France; and the nations remaining in existence, though both of them have since changed their forms of government, the treaties are not annulled by these changes.

We would all do well to keep in mind Thomas Jefferson's point: Treaties are between nations. This is the case regardless of changes in the individual leadership. It should also be remembered that throughout the 75 years of our treaty relationship, the Panamanians, despite longstanding resentment in Panama of the 1903 treaty, have consistently honored it.

PANAMA

Let me turn for a moment to the Panamanians. In this lengthy and wide-ranging debate, numerous comments have been made about Panama, Panamanian history, the Panamanian people, and their government.

Panama, unlike our own richly endowed Nation, is not blessed with great natural resources. Its greatest assets are its people and its geographic location—the isthmus through which the world's two largest bodies of water have been linked.

A translated version of some of our debate has been broadcast on Panamanian radio and there has been extensive coverage in the Panamanian press. The canal is, of course, a matter of vital importance to Panama; it is the very lifeblood of that country. It is a subject about which Panamanians have felt strongly for decades. The Panamanians have taken understandable offense at some of the remarks made here, and some, I fear, have been misinterpreted or misunderstood.

I believe the Panamanians have exercised remarkable restraint, and want to commend them for maintaining their equanimity in this situation. The American people know, and I hope the people of the world understand that, in the tradition of the Senate, our debate has been free, open, and unrestrained. This is the genius of our system, which presumes that no individual, no group or party has sole access to the truth. Rather, through debate and argument, through the competition of ideas, we hope to arrive at a decision which serves the principles and the interests of this country. But when the vote is taken, when the decision has been made, we present to the world an undivided front: we speak with one voice abroad, although at home—before the time for decision—we not only tolerate but also encourage the free expression of differences.

INTERNATIONAL IMPLICATIONS

In addition to the intense interest in Panama, these treaties are viewed throughout Latin America as matters of great importance, and as symbolic of the United States' attitude toward its neighbors. The Senate's vote on this treaty may well determine the course of United States-Latin American relations for decades to come. Approval of these treaties is critical to our future relationships with the rapidly developing Latin American countries—countries whose destinies are closely intertwined with our own.

Furthermore, implementation of these treaties would be consistent with our role as a world leader. These treaties are evidence of wise and judicious use of power, of an attitude of compassion and cooperation, by the most powerful nation in the world.

Thus, the treaties not only serve our own world interests, but they also serve the interests of the rest of the world. A bilateral treaty, such as the one before us, attempts to reconcile the interests of both nations, as I believe this one does. However, these treaties serve the interests not only of Panama and the United States, but also of all the other nations of the world.

Let us not forget that the Panama Canal is an international canal—open to all nations. Construction of such an international canal was the goal of the original Senate resolution of 1835, requesting President Andrew Jackson to negotiate with nations of Central America for the purpose of opening "a communication between the Atlantic and Pacific Oceans, by the construction of a ship canal across the isthmus which connects North and South America, and of securing forever * * * the free and equal right of navigating such canal to all such nations, on the payment of such reasonable tolls as may be established."

This is the purpose of the Panama Canal. This was the motivation for that monumental effort to construct the canal. This is the purpose of these treaties: an international waterway open to peaceful transit by the vessels of all nations. And the actions taken by the Senate to improve the treaty have been with that same purpose in mind. Our actions have been directed at assuring that the canal will remain open, secure, and accessible. It is the canal, not the internal affairs of Panama, which is our concern.

These treaties are evidence of a maturing partnership, a constructive partnership, a relationship based on mutuality and equity. These treaties reflect the world of today and tomorrow—not the world of yesterday. We have an opportunity to show wisdom and foresight, to exercise forward-looking leadership. We must consider the needs of future generations.

It is a time for vision—a time for courage.

No matter how long one may serve in the Senate, there are few rollcalls that have greater portent than that which will occur tomorrow. Both the short- and long-term consequences of our actions will have momentous impact. It is not an overstatement, it is not an overdramatization to say that our action tomorrow may well influence the course of world affairs for years, indeed, for generations.

We are at a crossroads. We face a critical decision. I am hopeful that the Senate will choose the road that will bring credit and honor to this body and to this country. Approval of this treaty will be a proud moment for us, for our Nation, and for Panama.

Mr. President, I yield back such time as I may not have consumed.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Tennessee (Mr. BAKER) is recognized as in legislative session for not to exceed 15 minutes.

Mr. DANFORTH. Mr. President, it is my understanding that the Senator from Tennessee has yielded that time to me.

The ACTING PRESIDENT pro tempore. Without objection, then, the Senator from Missouri is recognized for 15 minutes.

SETTING THE RECORD STRAIGHT

Mr. DANFORTH. Mr. President, I wish to address some attention today to one of the most frequently heard comments I have received from my constituents about the Panama Canal treaties. Repeatedly, people have said to me something on the following order:

We do not mind giving Panama our canal, but why do we have to pay them to take it from us?

As a matter of fact, a radio commercial which was run in my State put the point this way:

If you agree with Senator Danforth and Jimmy Carter that we should pay Panama billions of dollars to take our canal, that is your privilege.

That is the point that I would like to address myself to today, because, in point of fact, that is not correct. Under the treaties, we are not paying Panama any money at all to take the Panama Canal, much less billions of dollars. As a matter of fact, under the existing treaty, the 1903 treaty, the United States is obligated to pay out of its Treasury to the Republic of Panama $2.3 million a year. That would be $50.6 million between now and the year 2000, that we, the American people, are obligated out of our Treasury to pay the Republic of Panama between now and the year 2000.

By contrast, under the treaty that is now under consideration, the so-called Panama Canal Treaty, the United States does not obligate itself to pay anything out of the Treasury of our country to the Republic of Panama. It is true that Panama will receive revenues pursuant to these treaties, but they will not be revenues paid out of our Treasury; they will not be revenues paid to Panama by the American taxpayers. They will be revenues derived from tolls, tolls charged to shippers who are using the Panama Canal. They will be tolls paid by shippers in some 65 countries.

Last January, when I visited the Panama Canal, there were numerous ships going through the canal at that time, many of them Japanese ships. I was told that one of the ships going through the Panama Canal during the day that I was there was a Cuban ship. Ships from Germany, ships from all over the world are using the Panama Canal. The additional revenues that would go to Panama under these treaties would be from tolls charged to those shippers.

It is true that American shippers also use the Panama Canal. However, we are not talking about Joe Doakes, the ordinary taxpayer in this country who is coughing up the money himself. We are talking about tolls that are being charged to Texaco, to Occidental Petroleum, to Atlantic Richfield, and to United Brands, which are four of the major users of the Panama Canal.

The United States will incur, pursuant to this treaty, certain incidental costs. The costs will take the form of interest which we would forgo, which is now payable from the Panama Canal Company to the U.S. Government. The Panama

Canal Company is, itself, an instrumentality of our Government. But it is true that we would forgo certain interest payments.

It is also true that the U.S. Government would incur certain other costs, most importantly the cost of providing early retirement for certain employees of the Panama Canal Company.

And these costs equal at the outside about $720 million over the period between now and the year 2000, or about $34 million per year on the average.

But the fact of the matter is that this $720 million or $34 million a year is not money we are paying to the Republic of Panama to take the canal from us. These are incidental expenses that are incurred. Not a penny of it is money that is payable to the Republic of Panama.

It is my understanding Senator PERCY will make some remarks later in the day which will take the view that a good portion of this $700 million or so will be recouped or can be recouped out of tolls.

So it is highly doubtful that this full amount of potential increased loss to the Treasury, which in no event would go to Panama, it is highly doubtful all of that would, in fact, be realized by the taxpayers of the United States.

However, looking at the worst case, looking at the absolute outside of the highest projected cost to the Treasury of the United States, what are we talking about?

We are talking about an average of $34 million per year. What does $34 million per year mean? What does it amount to?

It sounds like such a colossal figure, but we are looking now, next year, at a Federal budget for the United States of a half a trillion dollars.

Would that we would be able to debate every item in that budget as we have debated this particular item over a period of 2 months. Thirty-four million dollars in a budget of half a trillion dollars, that equals, Mr. President, 7/1000 of 1 percent of our 1979 budget. Not 1 percent or a tenth of a percent or one hundredth of a percent, but 7/1000 of 1 percent of our 1979 budget.

In this Government, the Federal Government, we spend money at a rate of $1 million every 63 seconds, 24 hours a day, 7 days a week, 52 weeks a year. We in the Federal Government are spending the taxpayers' money at a rate of $1 million every 63 seconds. That means that the $34 million that we have directed such terriffic attention to over the past 2 months, and that radio commercials have been bought to advertise, we are now in the business of spending $34 million every 36 minutes and, again, 24 hours a day, 52 weeks a year.

Mr. PERCY. Will my distinguish colleague, at some point in his comments, yield?

Mr. DANFORTH. I certainly will. I would like, for the matter of sequence, to finish a few points and then I will be happy to yield.

The $720 million which would be spread over 22 years would take the Federal Government 12 hours and 36 minutes to spend.

To put $34 million in context, I would just like to cite some other things we are spending money for in this place.

The State Department will spend $31.8 million just moving people around the world. The State Department will spend $40.1 million just moving the belongings of people around the world.

It costs $184.6 million to operate the U.S. Senate for a year, and that excludes the cost of postage, it excludes the cost of printing, it excludes the cost of maintenance and utilities; $184.6 million a year just to operate the U.S. Senate. How long do we go on debating that? Certainly not for a period of 2 months.

The Capitol police, the people who are in charge of pushing the tourists around will cost us next year $20 million. The cost just for routine maintenance of two Senate office buildings is $10.3 million. The Government Printing Office next year will spend $74 million just for printing things for Congress; $73 million will be spent by the National Archives primarily to file and save tons of bureaucratic paperwork.

So it seems to me that if we want to talk about $34 million for 2 months, that is just fine. But maybe we are straining at gnats and swallowing camels.

If we can recoup a good portion of that $34 million, as the Senator from Illinois, as I understand it, will suggest later today, that is a very fine solution.

But the one point that I would like to close with before yielding to my distinguished colleague is that even this $34 million, out of a half trillion dollar Federal budget, even that $34 million does not consist of one single penny that is payable out of the Treasury of our country to the Republic of Panama.

Mr. PERCY. I thank my distinguished colleague for yielding.

I first would like to say that I think he has put in perspective a very important point, the most important point being that all of those people that confronted me on this over a period of months now to say, "Why are we paying Panama for us to give this away to them?" Just do not understand. We are not paying Panama anything out of the U.S. Treasury. I think my distinguished colleague from Missouri has made that point very well.

The payments to Panama do come out of user's fees, and the shippers, and 65 nations actually make those payments.

What we are doing is just righting a wrong of 75 years standing and starting to pay them something close to the real worth of the rights they gave to us years ago. Because even today, after we negotiated those rates up three times, they still are less than 1 percent of the toll revenue of the canal.

But when my distinguished colleague mentions all these figures of $34 million and $720 million over a period of 22 years that we will continue to operate the canal, I am certain as a member of the Finance Committee he is in no way minimizing the value of money, even though it is just a few million or three-quarters of a billion.

I recall that my distinguished former colleague, Senator Dirksen, made the comment on the floor of the Senate one day: "A billion here and a billion there, and pretty soon you're talking about real money."

We are talking about real money—three-quarters of a billion dollars of cost which, as my distinguished colleague has said, we will be able to recover and should be able to recover, and it should not come out of the taxpayers' money. It should not come out of the Treasury.

That is broken down by the cost of these treaties: $276 million in civil service early retirement benefits. There is no reason why that money should come out of the Treasury.

I think the gesture we are making to the whole world now is a generous and a gracious gesture, but the right gesture for this country. However, we have costs involved in these treaties, and we should say that those costs will be absorbed over the next 22 years by the users of the canal and paid out of these fees.

The other costs we have, in a sense, are not what the State Department calls costs. However, as a former businessman, I say it is a cost of these treaties. We now get $22 million in revenue. We are losing that $22 million. I will speak later about how we can recover that $22 million a year, because that is $440 million over 20 years, and that is real money.

The ACTING PRESIDENT pro tempore. The time of the Senator from Missouri has expired.

## SPECIAL ORDER

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Oklahoma (Mr. BARTLETT) is recognized, as in legislation session, for not to exceed 15 minutes.

## A COMPREHENSIVE TEST BAN

Mr. BARTLETT. Mr. President, the emotional, high-pitched debate surrounding the production decision on the neutron bomb suggests a poor climate within which to deal with the vital question of comprehensive limits on nuclear testing. For many antinuclear activists, a comprehensive test ban treaty is not simply another arms control measure. A CTB is viewed by them as a means to "cut the Gordian knot" of disarmament, more of a major step toward nuclear disarmament than just a means to reduce the development of new weapons and limit the growth of nuclear stockpiles. These activists recognize full well that an absolutely "comprehensive" test ban treaty would result in a loss of confidence in the reliability of the nuclear weapons stockpile of the United States.

If a decline in the reliability of the stockpiles of the two superpowers were equal, then theoretically nuclear stability would be enhanced in the beginning as each side lost confidence in its ability to deliver a disarming first strike against the other. Unfortunately, equal deterioration of unequal forces could derive one side of its assured retaliatory capability long before the other had lost its ability

to strike. This would be destabilizing, especially if the stronger side were to attempt to gain political advantage from the situation.

And, even if the loss in reliability of the weapons in the superpower stockpiles were equal, the United States would probably be at immediate disadvantage with respect to the Soviet Union. American nuclear weapons rely on a more precise degree of sophistication, and American nuclear delivery systems place a greater degree of importance on optimizing designs for small size and low weight. Furthermore, because the Soviet Union is closer to deploying its next generation of strategic systems than is the United States, Russia knows better what future warheads it will need. All of these factors would work against the United States during a comprehensive test ban. Thus, if the effect of a CTB were equal on the nuclear warheads of both the Soviet Union and the United States, the United States would have to have a sufficient lead in many aspects of its nuclear weapons structure to insure that whatever good is achieved through a CTB would not be overcome by the harm done to nuclear stability and the national interests of the United States.

In an open and democratic society like the United States, little chance exists that the United States could conduct secret nuclear testing designed to obtain an advantage over the Soviet Union. The same cannot be said about the Soviet Union. Large areas of Soviet Union are remote from overseas sensors and lie in regions which frequently have earthquakes which are difficult to distinguish from small, but very significant nuclear tests associated with tactical nuclear weapons and fission triggers for thermonuclear weapons. Existing verification techniques are simply not sufficient to prevent the Soviet Union from conducting those tests which permit maintaining the reliability of the nuclear weapons stockpile and some weapons modernization.

Nuclear weapons detectors and monitors inside the Soviet Union could offer some improvement in our ability to verify compliance with a Comprehensive Test Ban Treaty, but they could not completely prevent circumvention. Small tests could be completely hidden through various camouflage techniques and larger tests could be conducted on a limited scale. Identification of a limited number of larger tests would be very difficult because the United States would normally not have sufficient information to be able to assert, without doubt, that a given number of suspicious events were actually underground nuclear tests and not earthquakes.

Banning all nuclear weapons testing also suffers from a problem of definition. Many programs important to our Nation's energy research program involve technologies which are difficult to distinguish, technically, from what might be weapons related programs. This parallels the difficulties we experience with the Soviet Union which often seems willing to place certain limits on nuclear weapons testing while resisting equal restrictions on so-called peaceful nuclear explosions (PNE's) which serve many of the same functions as weapons testing.

Also, we should be careful not to commit ourselves to a CTB until we see what limits are placed on new delivery systems in a future SALT II agreement. For example, the United States may find itself heavily dependent on the air launch cruise missile (ALCM) as a result of the ongoing SALT process. As countermeasures are developed against ALCM's and as defenses are deployed against their carriers, the United States may find it necessary to reduce the size of the warhead in order to permit longer ranges and more sophisticated electronic equipment on board cruise missiles. This would require testing.

A CTB also impacts on the theater balance in Europe and on the mutual and balanced force talks. NATO still relies on its tactical nuclear weapons to counter both conventional and nuclear attacks from the Warsaw Pact. NATO seeks more modern weapons such as the enhanced radiation/reduced blast weapons which can reduce collateral damage in the defense of Europe. An improperly timed CTB could interfere with the development and deployment of these systems.

As more of our Nation's nuclear weapons are deployed in a mobile mode, we must insure that they are safe and secure. Take, for example, the ground-launched cruise missile. Unless major steps are taken to insure that the nuclear weapons mounted on some versions of the proposed GLCM are absolutely safe and tamperproof, the flexibility to be gained by deployment of this system will be reduced. Yet, the GLCM offers the hope of being able to target, from rapidly changing locations, a wide variety of targets including Soviet MRBM's and IRBM's.

One of the main arguments given for negotiating a CTB is that a CTB will help to prevent nuclear proliferation. This belief draws its strength from the statements of nations such as India, France, and the People's Republic of China to the effect that they can never feel free to restrain their freedom to conduct nuclear testing and activities until the United States, the Soviet Union, and Great Britain restrain their programs.

Those nations which may be capable of joining the nuclear club will make the decision to do so, if and when they do, on the basis of their perceived political and military needs, independent of whether the existing nuclear powers continue testing. Nations like South Africa, Israel, Taiwan, South Korea, Brazil, and others will make their decisions based upon complex political judgments which are outside the realm of a CTB to influence. Furthermore, they will do it with technologies upon which a CTB will have no influence. If the existing nonproliferation treaty is unable to provide sufficient protection against proliferation, there is little that a CTB can add to prevent its occurrence.

At the present time, we are seeing the development in certain political circles of intense psychological pressure for the conclusion of a Comprehensive Test Ban Treaty in the near future. However, we have not seen the emergence of any significant new reasons to commit ourselves to a CTB now, nor have we seen the emergence of any new breakthroughs in verification technology.

If and when the time comes to consider a Comprehensive Test Ban, I hope that the debate will take place in a climate far more reasonable than that which has surrounded the recent discussion of the enhanced radiation weapon. Perhaps, the best way to approach the problem of further restrictions on nuclear weapons testing is to take those incremental steps which are made possible by progress in our verification technologies. In that way, we may be able to avoid the idealistic euphoria and alternating hysteria that accompanied the "Ban the Bomb" movement and is now associated with many of the efforts against the enhanced radiation warhead.

There are reasonable agruments to be made on both sides of the CTB issue. I believe that it would be best to let each side attempt to prove its case incrementally. For starters, I would suggest the following: The Senate should first consider ratification of the pending Threshold Test Ban Treaty signed in 1974, and the PNE Treaty signed in 1976. This would give the Senate a chance to become familiar with the issues associated with nuclear test limitations.

The administration could then give consideration to reducing the ceiling on nuclear tests down to a range of perhaps 10 kilotons, or whatever can be verified. This would give us a chance to gain experience in living with rather severe restrictions on our nuclear programs. It would also give us a chance to develop confidence in the Soviet Union with a more limited nuclear test ban.

Following this period in which we would be living in a secure, but restrained, testing environment with the Soviet Union, we should be conducting those development programs which would give us more confidence in the long run reliability of our weapons and in our verification technologies. These are areas in which we should increase investment. At the same time, we would be making a reasonable gesture of restraint which might have some symbolic value in preventing proliferation. Simultaneously, we could continue to develop programs and policies designed to discourage both the ability and the need for other nations to develop nuclear weapons. Only then could we be comfortable with a truly comprehensive test ban treaty.

## ROUTINE MORNING BUSINESS

The PRESIDING OFFICER (Mr. HODGES). Under the previous order there will now be a period for the transaction of routine morning business, as in legislative session, for not to extend beyond the hour of 1 p.m. with statements therein limited to 3 minutes.

## HOLOCAUST—WHY THE GENOCIDE TREATY SHOULD BE RATIFIED NOW

Mr. PROXMIRE. Mr. President, millions of Americans had an opportunity to see last night a spectacular program

on NBC Television on the terrible attempt by the Nazis to exterminate the Jews just before and during World War II in Europe.

That program called "Holocaust," is catching the interest, the imagination, and the concern of the American people, as well it should. It is a vivid and terrible reminder to us of how vicious mankind can become. That is a program that will continue tonight, tomorrow, and Wednesday. It is a 9½-hour program.

I raise that point because for 11 years now I have been rising on the floor of the Senate almost every day to plead to the Senate to ratify the Genocide Convention. "Holocausts" is what the Genocide Convention is all about.

It vividly tells the story of the attempt of the Germans to exterminate Jews in World War II. The United States led the fight in the United Nations. We won the approval of the United Nations for the treaty. After the treaty was ratified in the United Nations, some 85 countries, including every major country except the United States in the world, has ratified it. Every President of the United States since President Truman has called for us to ratify it. Yet the Senate of the United States has refused to act.

It is really shameful on our part that we have not recognized our responsibilities.

I earnestly hope that Senators will take this opportunity to watch this remarkable program on NBC and will examine their conscience and their heart and recognize the responsibility that we have here in the Senate to act, and I do hope that in spite of the fact we are moving along this year, and it is an election year, the leadership will be able to call that treaty up for action after 30 long years of waiting. That treaty has been pending since 1948.

## NEW YORK CITY

Mr. PROXMIRE. Mr. President, the New York City Comptroller, Harrison Goldin, has pointed to still another loss of millions of dollars the city has suffered through ineptitude in this case failure to enforce the penalty clauses in a contract.

The city lost at least $10.8 million because the city's transit authority has neglected to assess penalties against the Pullman Co., for being some 2½ years behind in the delivery of 745 subway cars, forcing the city to extend the use of 40-year-old cars.

Now, there is a penalty clause in that contract that requires Pullman to pay as much as $37,250 a day for 2½ years. Unfortunately, the city has permitted much of that to lapse. They can still collect $10.8 million if they act now.

Mr. President, this comes after other costs New York experiences that I have explained to the Senate recently.

For example. The State comptroller, Arthur Levitt, made an investigation reported a few years ago in which he found that park employees were typically—this was an investigation that took several months—typically 90 minutes late for work, instead of a half-hour that they are allowed, they took 1 hour and 15 minutes on the average for lunch and were only working productively 50 percent of the time.

Mr. President, it is clear that there are areas here in New York where substantial funds could be picked up if sweetheart contracts were eliminated, contract terms were enforced, and if some of the time spent loafing were eliminated.

If New York is to come before the Congress of the United States, as it is in the process of doing, and ask for extension of its Federal loan—and they are in the process of asking for something like 15 years, a $2 billion guarantee—I think we should take New York's efforts to help itself or the lack thereof into very careful consideration in asking whether to move ahead.

Mr. President, I ask unanimous consent that an article that appeared in yesterday's New York Times entitled "Goldin Calls Transit Authority Lax in Penalizing Tardy Contractor" be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 16, 1978]

GOLDIN CALLS TRANSIT AUTHORITY LAX IN PENALIZING TARDY CONTRACTORS

(By Glenn Fowler)

The New York City Transit Authority has failed to assess $10.8 million in contract penalties for delays in the delivery of new subway cars, City Comptroller Harrison J. Goldin charged yesterday.

"Pullman Inc. has been up to two and a half years behind on the delivery of 745 cars for the subway system, which is forcing the city to extend the use of 40-year-old cars that should have been retired, long ago," Mr. Goldin said following an audit by his staff.

Moreover, he said, "these relics are a major factor in service disruptions, and keeping them patched together adds substantially to the city's subway maintenance costs."

The Transit Authority contends that many of the delays in delivery are excusable under terms of two contracts that were signed in 1972 for the purchase of the R–46 passenger cars at a total cost of $208.5 million.

PENALTY OF $37,250 A DAY

Mr. Goldin said that the contracts provided for a penalty of $37,250 a day per car for late delivery, but that the Transit Authority "has written off all but $1.5 million out of an estimated total of $12.3 million worth of penalties that should be charged to Pullman."

The comptroller said also that it was impossible to charge Pullman for delays totaling $13.3 million more because "the authority failed to exercise proper enforcement of the contract." And $3.7 million more in penalties should not be sought because delays were unavoidable either by the authority or the manufacturer, Mr. Goldin declared.

"But to charge Pullman only $1.5 million is ludicrous," he insisted.

In its defense against the charges, the authority said that because the city had placed two purchase orders for additional R–46 cars beyond contract deadlines, the city could not penalize Pullman for the delays. However, Mr. Goldin's auditors found that the orders in question had actually been placed earlier than the dates claimed by the authority.

In one case an order for 135 additional cars was placed on Dec. 21, 1972. Mr. Goldin said, which was 10 days before the deadline. He said that a final order for 156 cars was placed on Aug. 9, 1973, six days before another specified deadline.

According to the Comptroller, the manufacturer felt it would have ample time to fill the orders by April 25, 1975, as called for in the contract. Penalties for delays beyond that date should be $3.9 million, he said.

Pullman should also be assessed $1.4 million for delays in testing the cars caused by malfunctions of motor-control units, Mr. Goldin contended. Finally, $5.5 million should be charged to Pullman for delays arising out of its failure to comply with design standards, he said.

"It's bad enough that the Transit Authority did not diligently expedite production in its approval of drawings, designs and changes by providing adequate" test specifications for some of the equipment, Mr. Goldin said, "but to compound damage by letting the manufacturer off the hook is beyond excuse."

He recommended that the authority stop current payments to Pullman and begin negotiations to assess the penalties. The city, he said, should either receive cash reimbursement or equivalent value in new subway cars or extra equipment.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. LONG. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

## CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER (Mr. McGOVERN). Is there further morning business? If not, morning business is closed.

## THE PANAMA CANAL TREATY

The Senate resumed the consideration of Executive N, 95th Congress, 1st session.

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of the resolution of ratification of executive N, 95th Congress, 1st session, Calendar No. 2, which the clerk will report.

The assistant legislative clerk read as follows:

*Resolved* (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Panama Canal Treaty, together with the Annex and Agreed Minute relating thereto, done at Washington on September 7, 1977 (Executive N, Ninety-Fifth Congress, first session).

The PRESIDING OFFICER. Under the previous order, the Chair now recognizes the Senator from Louisiana (Mr. LONG) to call up an amendment.

AMENDMENT NO. 99

Mr. LONG. Mr. President, I call up my amendment No. 99 to the resolution of ratification.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Louisiana (Mr. LONG), for himself and others, proposes an amendment numbered 99:

Strike out the period at the end of the resolution of ratification and insert in lieu thereof a comma and the following: "subject to the condition that the instruments of ratification to be exchanged by the United States and the Republic of Panama shall each include provisions whereby each Party agrees to waive its rights and release the other Party from its obligations under paragraph 2 of Article XII.".

Mr. President, on behalf of myself and Senators NUNN, DECONCINI, TALMADGE, and CANNON, I offer this "condition" in the form of an amendment to the resolution of ratification of the Panama Canal Treaty.

This "condition" requires that the instruments of ratification to be exchanged between the Governments of the United States and Panama shall contain provisions whereby each party agrees to waive its rights and release the other party from its obligations under article XII, paragraph 2 of the Panama Canal Treaty.

As presently drafted, article XII, paragraph 2 unduly restricts the options of both the United States and Panama with respect to the construction of a sea-level canal until the year 2000.

It is my understanding that the Senate leadership, the administration, and the Government of Panama have each reviewed this proposed waiver of the reciprocal rights and obligations under this provision and have agreed to accept the "condition" I now propose.

Last week, Senator DOLE had offered an amendment to the text of the treaty that would have stricken article XII, paragraph 2. While I fully agreed with Senator DOLE's analysis that this provision is not in our best interest, nevertheless, I respectfully disagreed with the method he chose to accomplish his purpose. An amendment to the text of the treaty is objectionable to Panama and simply unnecessary in this case since article XII specifically allows the United States and Panama to make a subsequent agreement relating to each party's rights with respect to a new interoceanic canal. As the treaty contemplates, the "condition" I propose is such an agreement to cancel the rights and obligations imposed in this article at the time of the exchange of the treaty documents.

Mr. President, this provision is purported to contain restrictions on both the United States and Panama with respect to the construction of a sea-level canal. These restrictions are supposed to be a mutually beneficial quid pro quo. I submit that these provisions are more advantageous to Panama than to the United States.

Paragraph 2(a) purports to give the United States the option to build a sea-level canal in Panama until the year 2000. Our negotiators have interpreted this section to mean that the United States has the sole authority to build a sea-level canal in Panama until 2000; we would have to waive this option before a third nation could construct a canal. However, the language of paragraph 2(a) is less than precise and may be subject to a different interpretation. General Omar Torrijos has been quoted as saying this article gives the United States only a "first option" to build a new canal in Panama.

On the other hand, the United States' obligation under paragraph 2(b) is unequivocal by stating that the United States "shall not negotiate with third states for the right to construct an interoceanic canal on any other route in the Western Hemisphere" without the consent of Panama.

The logic escapes me which would illustrate the wisdom of renouncing our right to negotiate for a new canal. Apparently, based on the 1970 Interoceanic Canal Commission Study, our negotiators felt that Panama was the only economically feasible route for a new canal, and they wanted to prevent Panama from inviting another country to construct a canal. In return, we relinquished our right to build a canal elsewhere without Panama's consent.

It has been reported that these provisions were an 11th hour addition to the treaty at the suggestion of President Carter. With all due respect to the President, in my view, this language is simply a "bad deal" for this Nation. It is objectionable for the following reasons:

First, the imprecise language creating a dubious obligation on the part of Panama juxtaposed with the crystal clear restriction on our rights to negotiate with third nations is totally unacceptable.

Second, even if Panama continues to be the most economically viable location for a sea-level canal, these provisions give up our much-needed leverage with Panama. By giving up our right to negotiate with our other Latin neighbors, the United States has placed itself in an extremely poor bargaining position; thus, since we could not build elsewhere, Panama could demand a high price from us and give us little voice in the operations of a new canal or a third lane of locks.

Third, this arrangement obligates the United States for 22 years into the future based on recommendations of a technical study completed 8 years ago—the 1970 Interoceanic Canal Commission Study. What if the relative feasibility of routes is restudied and a better route is found? Circumstances can change. Technological and engineering advancements can occur. Political conditions can alter. Is it wise to rest our policy totally on this sort of technical evaluation which may become dated?

To show how opinions can vary, I noted some remarks in the CONGRESSIONAL RECORD of last Monday, April 10 by Senator GRIFFIN, citing a 1967 study sponsored by the Council on Foreign Relations. The study surveyed various options for a new canal and concluded at that time that the preferred route would be through Nicaragua and Costa Rica. The study observed:

Although the cost of construction bears on the final choices, it should not be the prime factor in making a decision on a new canal. A waterway which is less expensive in dollars may be most expensive in political consequences.

I agree with Senator GRIFFIN that even if Panama appears to be economically and technically the best location for a new canal, this Nation should not relinquish its right to approach Nicaragua, Costa Rica, or Colombia. Former Secretary of State, Henry Kissinger, in his testimony before the Senate Foreign Relations Committee, raised the question of whether it would be wise to place two canals in the same country. Dr. Kissinger stated that although reasonable men could differ on this question, if we did build a sea-level canal, we might want to consider having it in another country.

Finally, there are practical realities which would discourage any hostile foreign power from building a new canal in Panama. Under the proposed treaty arrangement, any canal built in Panama would be covered by the provisions of the U.S.-Panamanian Neutrality Treaty. Thus, the United States and Panama would be the guarantors of the neutrality of the new canal no matter who built it. Also, our historic influence in Central America would make it difficult for a foreign government to build a new canal in Panama unless we agreed. The United States is the overwhelmingly prevailing naval power at both the Atlantic and Pacific entrances to any interoceanic canal built through Central America.

Mr. President, I am of the belief that any treaty that is unfair to Panama is also not in the best interest of this Nation in the long run. Under the "condition" I am proposing, Panama and the United States are merely waiving their reciprocal rights and obligations under article XII, paragraph 2 of the Panama Canal Treaty—a waiver explicitly contemplated by the language of the treaty.

This change is fair to Panama; it is fair to the United States; and, it is a far better arrangement for the entire Western Hemisphere.

Mr. President, I ask that Senator HATFIELD of Montana be added as a cosponsor of the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRIFFIN. Will the Senator yield for a question?

Mr. LONG. I yield.

Mr. GRIFFIN. The Senator said the waiver was specifically contemplated in the treaty. In what respect is that so?

Mr. LONG. The treaty says: "During the duration of this Treaty, the United States and Panama shall not negotiate with third parties for the right to construct an interoceanic canal on any other route in the Western Hemisphere, except as the two parties may otherwise agree."

Well, by this condition in the exchange of documents we would agree that the two parties may negotiate with other countries. It just has the effect of agreeing as the section I have read specifically contemplates. It says unless the two parties agree. In this case, we would agree. In the ratification of the documents we would agree to waive the restriction that each places on the other in connection with that article.

Mr. GRIFFIN. Mr. President, I find this proposal by the distinguished Senator from Louisiana to be very interesting. Of course, I appreciate his reference to my earlier expressions of concern about

article XII, particularly section 2 thereof. I must say, though, that I am somewhat at a loss to understand why we would seek to correct the situation by reciting the waiver as an amendment to the resolution of ratification. With all due respect to the Senator from Louisiana, I do not understand why we would seek to waive something in advance of actually arriving at an agreement. It seems to me the appropriate thing to do here would be to change the agreement.

I am concerned about two things. I would like to express myself and perhaps the Senator from Louisiana would care to respond.

One, would the waiver, so-called, be binding on successor governments to Mr. Torrijos, or is this something that we would just be doing in connection with his regime? I guess part of really the same question is, Is it contemplated that this waiver would be approved by the people of Panama in a new plebiscite? If it is not to be approved in a new plebiscite, then it seems to me that it reinforces the concern that I have that all we are doing here is trying to waive in advance with the person who temporarily happens to be in power down there, Mr. Torrijos, a very, very crucial and important article of this treaty.

The Senator from Louisiana is so correct in his arguments against article XII. However, I am really concerned about the way he seeks to remedy the situation. I am at a loss to understand why it should be done in this way.

Mr. LONG. Let me just say to the Senator I do not have only doubt that if this treaty had been agreed between the United States and Panama, either the United States or Panama could waive this condition to permit the other to negotiate with anybody they care to negotiate.

This is something that the Government of Panama can agree to and it does not require a plebiscite. The Dole amendment would have required a plebiscite. It seems to this Senator that there is no point in requiring a further plebiscite in Panama when all we would need would be an agreement between the heads of state of the two countries. In this particular case, we do not change the documents, but both sides agree that we will waive the right to hold the other party to that particular provision. We would achieve what Mr. DOLE sought to do, but we would simply do it without requiring a plebiscite in Panama to bring that about.

I have looked into this matter myself, and I have also been advised by the legal authorities in the State Department and elsewhere that this is all we need. I do not see any point in insisting on a plebiscite in Panama if we can achieve the same result by a simple agreement between the two countries.

It is my understanding that Panama never asked for this provision to begin with, but this was an idea that came from the American side. I must say whosoever's idea it was, it seems to me like it was a very poor idea. While some think it is a good idea, including some in this body, to me it does not help at all. I think we could get a much better deal if we are going to go in and spend many billions of dollars building another canal, or even to expand upon what we have—I think there would be a far better deal if there was the power to negotiate among several different groups, looking at several routes. It would be a tremendous economic asset to a country through which the canal would be built in the future. Look at what we have to offer. I think that being the case, we could make a better deal.

I believe the Senator from Michigan believes so as well, does he not?

Mr. GRIFFIN. I think article XII puts us in a terrible position. It is one of the major concerns I have had about the treaty throughout.

The Senator from Louisiana has responded very forthrightly, indicating that a plebiscite by the people of Panama is not contemplated. One of the reasons it is offered in this way is to avoid a plebiscite.

Let me ask again the other question that I asked before. Is a waiver at this time by General Torrijos, who may not be in power forever in Panama, is the Senator from Louisiana satisfied that a waiver executed and accomplished in this way will then be binding on a successor government in Panama?

Mr. LONG. I would say it is. Keep in mind that, as far as we are concerned, what we want in this country is the right—which we have right now minus this treaty—to negotiate with anybody about a new canal. Here is a treaty that proposes to say that we do not have that right unless the two parties agree that we have that right. Well, we just agree right here and now that we do—that is, in the exchange of the documents. That being the case, we have the right to negotiate with anybody.

Having done so, unless we should agree later on—which we would be very foolish to do, because this is a provision that has the sanctity of the Congress, a condition in this ratification that we have a right to negotiate with others—that right could not be given away without the consent of Congress; that is, the Senate.

Mr. GRIFFIN. If I may respond, it is interesting that the Senator from Louisiana is recognizing that, on our side of the agreement, the concurrence of the Senate is necessarily involved, which is true under our Constitution. I might point out to the Senator from Louisiana that, under the Constitution of the Republic of Panama, their ratification process includes not only the head of state, but the people themselves, who act in the place of the Senate through a plebiscite. It seems to me what is sought to be accomplished by the Senator's amendment here is substantially and significantly to change the treaty without subjecting it to the ratification process of the Republic of Panama.

As much as I agree with the objection of the Senator from Louisiana to article XII, paragraph 2 thereof, I think this is the wrong way to go about correcting it and I am going to have to vote against his amendment. What needs to be done, of course, is to have a renegotiation of these treaties where Panamanians and Americans are on equal footing at a bargaining table. This particular provision, as well as other provisions, needs to be corrected. I think all the way through, the effort here, in the Senate, to rewrite the treaties and send them to Panama on a take-it-or-leave-it basis, as the Senate is seeking to do with respect to the DeConcini amendment, is the wrong way to go. We ought to send the treaties back for renegotiation. I think that was the proper course in handling the first treaty and ought to be the course that the Senate will follow in handling this treaty.

I thank the Senator from Louisiana for yielding.

Mr. LONG. Mr. President, I certainly hope that the Senator will not vote against what conditions and amendments make this a better deal for the United States merely because he hopes to defeat the treaty itself. It is my view that, insofar as we can improve on the treaty and can change it, something that is more appealing and more acceptable to the American people, then something that the people of Panama would be willing to accept, and then something the Government of Panama would be willing to accept, the better off we all will be. In my judgment, this corrects what I believe to be one of the most objectionable features of the treaty. I have no doubt that if this is agreed to, the Panamanians will go along with it and that will solve one of the serious problems involved.

Mr. ALLEN. Mr. President, I support this amendment to the resolution of ratification even though I believe it does not go far enough. Further, it should have been an amendment to the treaty rather than an amendment to the resolution of ratification. However, the time for offering amendments to the treaty has expired and all we have left is the opportunity to offer reservations in the form of amendments to the resolution of ratification.

Indeed, the reservation will leave us in worse shape than we are now before these treaties are agreed to because, under the 1903 treaty, we did have the right and we do have the right to negotiate with any other nation for another canal and to build that canal anywhere that we deem fit.

We also had and we still have the right to veto any further canal construction in Panama. We have a monopoly, as set forth in the 1903 treaty, and the 1955 treaty, for that matter. During the course of the debate on the treaty, when amendments were in order to the treaty, I offered an amendment which was defeated, as were all amendments to the treaty, that provided that the United States did not relinquish its right to negotiate with another nation for the construction of another canal outside of Panama and to actually construct and to operate and maintain that canal.

So, Mr. President, as the situation exists now, we can negotiate outside Panama and build a canal outside Panama—in Nicaragua, Mexico, or else-

where. We have that right. We also have a monopoly on canal construction, isthmian canal construction, in Panama. Under the treaty before us, we cancelled the 1903 treaty and the 1955 treaties, so that there are no prohibitions of any sort. Then, in order to get back our veto power on the construction of other canals in Panama, we had to give up our right to negotiate with other nations for the construction of a canal and to the actual construction and operation of a canal.

So, we already have a right and, under the treaty, we give up that right. In order to get it back, we have to agree not to negotiate for another canal in another country. A very sloppy job, I must say, by our negotiators.

We failed to amend the treaty to give us the right to negotiate for another canal outside Panama. Those amendments were defeated at the behest of the administration and the leadership. My amendments would have retained our veto right on other canal construction in Panama and would have given us the right to negotiate outside of Panama for another canal. What the amendment setting up a reservation to the resolution of ratification offered by the distinguished Senator from Louisiana (Mr. LONG) does is strike out the prohibition on the United States from negotiating outside Panama for a canal.

But it also removes our veto power over the construction of another canal in Panama. In other words, we give up our monopoly under the treaty provision.

The amendment or reservation, as it might be called, of the distinguished Senator from Louisiana (Mr. LONG), knocks out both of these provisions in the treaty. It allows us to negotiate elsewhere and it removes our monopoly from canal construction in Panama, thus giving Panama the right to negotiate with any other nation besides the United States and, indeed, including the United States, for the construction of a canal.

So even with the amendment of the distinguished Senator from Louisiana (Mr. LONG), we will be in worse shape than we are now, because now we can negotiate elsewhere and we can also forbid any other country from building a canal in Panama. We give up that latter right even under the amendment of the distinguished Senator from Louisiana (Mr. LONG). But it is better than the treaty, and that is the reason I support it.

It does return to us that which the treaty deprives us of. It does return to us the right to negotiate elsewhere for a canal.

But it gives Panama the right to negotiate with another country for the construction of another canal in Panama.

Mr. President, frankly, I do not believe another country is going to want to build a canal in Panama based upon the experience of the United States after creating an investment that is worth $10 billion and then be required to give it to Panama. I do not believe other countries, being somewhat more realistic and more pragmatic than the United States is, I do not believe there is any danger of their coming in and building a canal in Panama.

So I do not see that giving up that veto power is giving up too much. But the Long reservation does return to us the right to negotiate with other nations for the building of a canal.

I regret that it is being done in the form of a reservation. As the distinguished Senator from Louisiana pointed out, this reservation will not require another plebiscite. I wish they would hold another plebiscite because I believe that we need a compact with the people of Panama rather than a compact with Dictator Torrijos.

But, as I say, the time for filing amendments has expired. We have turned now to the resolution of ratification. Though I had an amendment that would return this right to us and retain the veto, it was defeated.

Personally, I wish an amendment had been adopted that would have called for another plebiscite. But with the present status of things, I believe this is the best that we can get for strengthening the treaty.

I would certainly agree with the distinguished Senator from Michigan that the preferable way to handle both treaties would be to return them to the negotiating table and to see if a treaty could be negotiated that would meet with the approval of the people of the United States and the people of Panama.

Right now, I do not believe either people approve this treaty and I would prefer to return both treaties to the negotiating table. That can be done under the parliamentary situation that we have.

But I say to the distinguished Senator from Michigan (Mr. GRIFFIN), I do not believe we can wait to see that that is going to be done because I have serious doubts as to whether the Senate is going to vote to send this back either to the committee or back to the President for further negotiations and we have to take each step as we come to it.

So I do believe the Long reservation would be an improvement over the treaty as we now have it before us, and I do plan to vote in favor of the Long reservation.

Mr. GRIFFIN. Will the Senator from Alabama yield?

Mr. ALLEN. I am glad to.

Mr. GRIFFIN. Of course, I highly respect the views of the Senator from Alabama. As he knows and I can understand, even though we are on the same side of the issue, I can see that reasonable people can differ as to what is the best thing to do in terms of the disposition of the Long reservation.

Let me just ask the Senator from Alabama, and I would direct the question to the Senator from Louisiana, but he is temporarily absent from the floor, could we go down through this treaty and change other provisions of it as well by having a reservation that would waive our right to enforce this and that, other provisions in the treaty?

Mr. ALLEN. I question whether that can be done, I state to the distinguished Senator from Michigan. But an amendment would have been preferable, and how by reservation can we go contrary to the express provisions of the treaty? This is all we have before us, I would point out to the distinguished Senator from Michigan.

Mr. GRIFFIN. Yes.

Mr. ALLEN. All that I feel the leadership will accept. Of course, they are in full charge of the amendments to the treaties. They can accept them or reject them.

I am pleased that they are willing to go this far because they failed in reference to past amendments.

I say that I do not believe we can risk waiting to see if the Senate is going to send the treaty back to the negotiating table or to return it to the committee. We have to face the situation as we find it. I would much prefer an amendment to the treaty. But this is better than nothing, in my judgment.

Mr. GRIFFIN. I thank the Senator from Alabama.

I think he put his finger on it when he said that he would much rather have a treaty with the people of Panama than just a treaty with the temporary ruler of Panama.

Mr. ALLEN. That is correct.

Mr. GRIFFIN. I not only would prefer that, I think it is essential that we have a new treaty relationship with the people of Panama, and that if we settle for a treaty only with the temporary ruler of Panama I do not think we are solving the problems that we have in our bilateral relations with the Republic of Panama at all.

I think we are creating new and more serious problem when we settle for a waiver or a change in the treaty that is effective only with the dictator in Panama.

This is a serious, substantial revision of the treaty. It goes to one of the most important articles in the treaty, and for the Senate to engage in a maneuver here that will circumvent by design the ratification processes of the Republic of Panama so that a very important article is, in effect, deleted, without giving the people of Panama any say in it, I think is going to create more trouble than it will solve.

Second, I seriously question whether any waiver under this procedure that General Torrijos gives us would be binding on a successor. And I wonder if anyone can answer the question of how long General Torrijos is going to be the ruler of Panama. It could be a short period of time. It could be a longer period of time.

But I do not think this is the way to proceed and I just respectfully have to register my views in the strongest way.

Much as I believe that article XII is wrong, this is not the way to deal with it; and, as I said before, I will have to vote against the reservation.

Mr. ALLEN. I thank the Senator for his comments. I agree with him.

I feel that if this reservation is added to the Resolution of Ratification, if the time ever came that we wanted to negotiate with Nicaragua or Mexico for another canal route, this reservation could well justify our entering into those negotiations, because we could point to this reservation as being a valid reservation and as authorizing us to negotiate.

I believe that world opinion certainly would support that effort on our part.

I seriously doubt that we are going to build another isthmian canal. I believe this is the last one that anybody will build. With the charge being made of unfair treatment toward Panama or any other Central American nation, with the demand for the facilities to be given to the country in which the route is located, I think that will effectively prevent the United States or any other nation from building another canal in the isthmus. It just would not pay.

Still, I believe we should reserve our right to enter into negotiations with another nation for the building of another canal, because we do not know what the future will hold. I do believe that the Long reservation, with its shortcoming, leaves us better off than we are today under the present treaties, because we now have the right to negotiate with other nations for a canal and we have a right to veto Panama from allowing another nation to build a canal in Panama. I do not believe we are giving up a great deal there; because if another nation wants to build a canal there and would agree to operate it on the same nonprofit basis that we are operating the canal, I would see very little objection to that. I certainly do not want to compete with any other nation to build a second canal in Panama. If we build another one, I would rather have it outside of Panama.

For these reasons, I hope the reservation will be agreed to.

I yield the floor.

Mr. LEAHY. Mr. President, in the course of the past few weeks, we in the Senate, and the people of the United States as a whole, have engaged in a debate over the future of the Panama Canal and the future of the relations between this country and our long-time friend and ally, the Republic of Panama. These debates have assumed a central focus in the discussion of American foreign policy that they do not, in reality, merit. We have used as an example, on the floor the fact that we have spent almost 3 months on this treaty. Yet, when we set up the NATO alliance, the most significant military alliance in recorded history, the Senate spent all of 12 days on it. I think the American people might question why so much time has been spent on this matter, when we have so many far greater matters facing this country.

Last Thursday, the Senator from New York (Mr. MOYNIHAN) pointed out that our concerns, and predominately those concerns the opponents to these treaties have tried to include in these documents, signify a deeper anxiety regarding our role in the world today and in the years to come. The canal is important; this treaty is important. However, neither should occupy this vast amount of attention at the center of American foreign policy today.

Our national will is not in the process of being tested solely today, but, rather, it is tested every day. Panama is our friend, and has been our friend since the birth of its Republic in 1903. We are not called upon to abandon the Panama Canal, but to redefine its operation and to act in the spirit of our long friendship with Panama. Mr. President, we are not being blackmailed or challenged by our friend; but rather, we are asked to rethink our relationship, to set things right. Our friends in Panama do not intend to stab us in the back. They realize how fruitless and dangerous such an action would be.

They have known for decades that the step we contemplate today is the just and honorable step that has been put off for so long. Panama takes comfort in knowing that we are committed by these treaties to underwrite the defense of the canal's neutrality, but our friends ask us to limit our interest to that possible future action and not to an unnecessary interference in their sovereign affairs. Panama's true interest in the canal is synonymous with our own—its neutrality, its continued unimpeded operation, and its legacy as a testament to the monumental effort of our two countries. Panama may very well not have been able to build the canal without us, but we could never have built it without Panama.

Mr. President, I wish to emphasize the points so eloquently expressed last week by my friend and colleague, DANIEL PATRICK MOYNIHAN. Our recent history—Vietnam, Watergate, Angola (indeed, Africa itself, and our dependence on foreign energy resources—has raised a number of questions for all Americans, and with these questions, fears as well. We are called upon, and will be called upon again and again in the years directly ahead, to define our role in the world, to resolve critical problems here in the United States, and to help resolve just as critical problems facing our fellow people throughout the world.

America, a great and powerful nation, may very well be called upon to commit her prestige and power to preserve this world and those nations which have strived with us toward freedom and prosperity. At the same time we are not called upon to exert our considerable power against our trusted friends in Panama. Let us make no mistake: Panama is in our camp, and has been for the entire duration of her independence. Let our two nations work together and let the United States exert her power where it is so desperately needed. Let us not waste her attention and her prestige in the way we seem to have been trying to do in over the past several months.

If we are to exert our strength, let us not manufacture a conflict which need not exist. We must direct our attention and our energies to the resolution of serious problems here and we must assist our friends in Panama with the resolution of their problems. The ratification of the treaty before us is a monumental step toward both of these goals. We cannot set our house in order until we accurately define the direction in which our power and influence must flow. Panama cannot set her house in order until she is able to exercise sovereignty over her entire territory.

We must not fall into the trap that many would argue we have already succumbed to. We must admit to ourselves and to the world that we know from which quarter we are threatened, that we know where our security interests lay, and that we will not tolerate unnecessary interference within the established limits of our security. The canal can run if we have troops there, and the canal can run if we do not have troops there. We can use the canal if we operate it, and we can use the canal if Panama operates it. We can defend the canal from bases in Panama, and we can defend the canal from bases in America. We can defend the canal by declaring to the world through ratification that we intend to turn the operations of the canal over to Panama, our friend and partner, and to no one else—no one else. We are insuring the smoothness of this transition by ratification of this treaty today just as we stated our intention to maintain the neutraliy of the canal with the help of our friend by ratification of the previous treaty in March. We, the United States, need only make it clear to the world, that we will not tolerate any action, covert or overt, that threatens the determination that we, together with our partner, Panama, have laid down in these treaties.

Mr. President, we cannot expect to protect the freedoms that we enjoy in our great republic at the expense of a sister republic. If we restrict another people's freedom, we undermine our own. This treaty is in the best interest of both countries. We have operated the canal for three-quarters of a century. By the end of this century, it will clearly be time to transfer canal operations to Panama. After a century, it must be right. It is a just symbol of our greatness and our generosity—not our weakness. These treaties seal our friendship with a proven friend who has stood by us throughout this century of conflict.

To those who would liken these treaties to a curtain falling on America's greatness, I will say today, and I will always say, that it is just the opposite. As I have said in Vermont, the curtain is rising on a new American era, one in which this great republic assesses her problems as well as her strengths and goes forward to resolve those problems, and in confidence, helps her friends resolve theirs. We are saying to the world through these treaties today:

> We know what our true interests are, and we know where those interests are threatened. We will not be confused by symbolism any longer. We will make a stand in Panama—with our friends in Panama.

Mr. President, there was an article in the Washington Post last week by Mr. Robert Kaiser. It is entitled, "What Is (and Isn't) Said in Canal Debate."

Mr. President, I ask unanimous consent that that article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 12, 1978]

WHAT IS (AND ISN'T) SAID IN CANAL DEBATE

(By Robert G. Kaiser)

If the Senate debate on the Panama Canal treaties had to sell tickets to stay in business, it would have closed weeks ago.

Sen. Patrick Leahy (D–Vt.) says the proceedings "resemble the plot line of a television soap opera. You could listen to the debate for several days, leave for a week or two,

and come back to it having missed very little. All the arguments are being forwarded again and again."

As a literal description, Leahy's is impossible to fault. But, in fact, the arguments that have been repeated again and again for almost two months do not cover many of the strongest senatorial emotions that appear to be covertly at work in the debate—judging from private conversations with senators.

Off the Senate floor, numerous senators acknowledge that the formal debate has often been a symbolic substitute for deeper issues that have rarely been addressed directly: the true lessons of the Vietnam War and the proper world role for the United States in the post-Vietnam era.

Sen. Robert C. Byrd, the majority leader, alluded to all that on the second day of the debate, nearly two months ago. Byrd spoke of those who feel that "we are sliding down the mountain of greatness, that the Vietnam War—and now the possibility of what some of the opponents refer to as 'giving up' the Panama Canal—are signs that our national fiber is being peeled away, that we are soft."

As usual, Byrd had a good sense of what was behind many senators' positions on the canal treaties. The hard core of opposition (20 to 25 senators) is obviously convinced that these are bad treaties, not in the best interest of the United States. But many of them are even more upset about the *symbolism* of giving up the canal.

For example, Sen. Orrin Hatch (R-Utah), a freshman member of the "new right" bloc in the Senate, said the other day—not in debate but in the Senate cloakroom—that "this is the culmination of that pattern of surrender and appeasement that has cost us so much all over the world."

Hatch, Sen. Jesse Helms (R-N.C.), Sen. James B. Allen (D-Ala.) and others in the hard core of opposition share a deeply pessimistic view about the course of U.S. policy and even the fate of the republic in the hands of its present leaders. That pessimism has an emotional flavor—it comes from more than political analysis. "Is America really going the way of Rome?" Hatch asks.

That pessimism sets the opponents apart from a large majority of their Senate colleagues. But the diehards are numerous enough to work coherently to prolong the debate.

They also have support in the treaty votes from Senators who do not share their world view, though exactly how many is hard to say. Sen. Charles Percy (R-Ill.) has told colleagues that he reckons a secret ballot would result in 85 affirmative votes. (The first treaty got 68.) Other senators privately put the number at 75 to 80. But even some of the opponents acknowledge that they have "political" votes on their side from senators who are nervous about reelection or who want to position themselves on "the right" in this fight.

Byrd has said publicly that three senators who voted against the first treaty had promised to vote for them had they been needed for two-thirds approval.

Publicly the opponents' protracted opposition to the treaties has been accepted with good manners by the majority and the Senate leadership. But privately their tactics—and the time they are consuming in a busy legislative year—have angered many senators. Some are furious at the amount of time being "wasted"—a word used by Sen. George McGovern (D-S.D.).

The anger has emerged vividly just once, in an impromptu exclamation of frustration from Sen. Daniel Patrick Moynihan (D-N.Y.). Moynihan was ignited by an amendment offered by Sen. Malcolm Wallop (R-Wyo.), another of the "new right" senators.

Wallop's amendment said, in effect, that if Panama failed to live up to the terms of the new treaties, then the existing treaties of 1903 and 1936, giving the U.S. virtually unlimited rights in the Canal Zone, would come back into force. That contradicted the first article of one of the new treaties, which explicitly declares that their adoption nullifies the 1903 and 1936 treaties.

The amendment was tabled, 50 to 37, and Moynihan rose soon after the vote. He noted that the Senate was then in its sixth week of the Panama debate:

"By comparison the North Atlantic Treaty occupied 12 days of the Senate's time. And we begin to enter into a period where standards are collapsing. The senator from Wyoming [Wallop] this afternoon . . . submitted an amendment to this treaty which was so inane, so devoid of intellectual competence or even rhetorical merit, as literally to silence the supporters of these treaties."

Moynihan was enraged by Wallop's attempt to ignore the first article of the treaty. "Now we are all at least supposed to have learned to read before we come into this chamber," he said.

"Are we to reduce this United States Senate to a playground, a playpen of juvenalia? . . . Are we going to ask the world to look down upon us as persons who have no standards of the integrity of an argument, of the logic of a sentence, of the empirical basis of an assertion of fact? . . . there is the reputation of the Senate involved. . . ."

Moynihan is a newcomer to the Senate, and his impatience is not shared by many of his senior colleagues. (Moynihan himself realized he had broken the rules, and his diatribe was much toned down for publication in the Congressional Record, which is less a record of what is said in Congress than of what members wish they had said.)

Wallop and his colleagues on the opposition side are not intimidated by remarks like Moynihan's. They realize that President Carter and the Senate's treaty backers failed to sell the treaties in the country as an unassailably good idea for the United States. So they have a license to assail the treaties—which happen to be the handiest available symbol of the "weakness" they deplore in American policy.

The length and repetitiveness of the debate are a measure of the proponents' failure to win over public opinion decisively. The issue of America's post-Vietnam world role is still an open one, at least in the U.S. Senate, and that gives the debate its importance, and even its legitimacy—boring and irrelevant as the discussion sometimes is.

Mr. LEAHY. Mr. President, the article points out, quite rightly I might say, that not all of the debate has taken place here on the floor of the Senate. The article points out, quite rightly, that there have been discussions within the cloakrooms and off the floor about whether somehow the ratification of these treaties spell a decline of America's greatness.

I cannot help but think, Mr. President, of the reaction in the country and other places after the end of the Vietnam war, the time when we somehow seemed to be able to take enormous pride here because we had had an indecisive clash with part of the Cambodian Navy at the end of that time. We seemed to indulge ourselves almost in self-flattery by ignoring the realities of the situation, ignoring the fact that when we left Vietnam we did something we should have done years before. We also were ignoring the fact that our true allies, in the areas where we had the greatest concern, such as in Western Europe with our NATO alliance, were all strongly in favor of the fact that we finally disengaged ourselves from a losing situation and could once more put our attentions back to the areas where America's influence and America's power is most greatly needed.

I think that that is certainly one of the best examples that we can give, the fact of the NATO alliance itself, the enormous strength that we have united there. And I wonder, Mr. President, how many of our allies who face the very real possibility of nuclear war on this planet, a nuclear war that they hope the United States will be able to preclude from ever happening, must feel when they see us so tied up over a matter that is of such minuscule moment as compared to the constant life-and-death-of-this-planet choices facing us in other areas.

Mr. President, I hope that the people of this country realize that the choice before us is of reaffirming the greatness of the United States or of showing, in effect, a pettiness and a failure that is not in keeping with this great country.

Mr. President, I yield back the floor.

Mr. GRAVEL addressed the Chair.

The PRESIDING OFFICER. The Senator from Alaska is recognized.

Mr. GRAVEL. Mr. President, I compliment my colleague from Vermont, the distinguished Senator, Mr. LEAHY, for a very, very fine statement and putting the matter before us in good perspective.

Before I launch into it I yield to my colleague, Senator CHURCH, the manager of the bill, for a comment.

I yield to Senator CHURCH.

Mr. CHURCH. Mr. President I very much appreciate the Senator yielding to me.

First of all, I want to commend my good friend, PAT LEAHY, for a remarkably fine statement. Second, I ask permission of the distinguished Senator from Alaska if I might put three questions to the sponsor of the reservation in order to better understand its meaning and to develop a legislative history that I believed should form a part of the Senate's consideration of the reservation.

Mr. GRAVEL. I am happy to yield to my colleague for that purpose.

Mr. CHURCH. I thank the Senator very much.

First of all, addressing the able Senator from Louisiana, does the reservation mean that the restrictions contained in paragraph 2 of article XII are nullified?

Mr. LONG. The reservation requires, as a condition to ratification of the treaty, that both the United States and Panama agree to waive the constraints with respect to negotiating with other parties for the construction of a sea-level canal. Specifically, it means that Panama is free to negotiate with any other country, including the United States, for the construction of a sea-level canal in Panama, and the United States is free to negotiate for the construction of a sea-level canal in any other country. There would be no bar in the treaty to the cosntruction of a new canal in Panama or by the United States elsewhere.

Mr. CHURCH. How is it possible that the reciprocal constraints expressed in paragraph 2 of article XII can be voided in a reservation?

Mr. LONG. Paragraph 2 of article XII provides that the United States and Panama may waive the respective restrictions placed on the other in this paragraph of the article. The phrases,

"or as the two parties may otherwise agree" and "except as the two parties may otherwise agree" permit each party to agree to remove the restrictions placed on the other. Acceptance of this reservation by both countries requires that each shall agree, in the instrument of ratification, to "otherwise agree", or waive the restrictions of paragraph 2, article XII.

Mr. CHURCH. Does the reservation void or negate all provisions of article XII?

Mr. LONG. No, it does not. The other provisions of article XII would remain in force. These include the requirement for a feasibility study by the United States and Panama concerning the possible construction of a sea level canal in Panama, the provisions of paragraph 3 which give the United States the right to add a third lane of locks to the existing canal, and the provisions of paragraphs 3 and 4 with respect to the additional lands and the use of nuclear excavation techniques. All these would remain in force should the United States either add the third lane of locks or construct a sea level canal in Panama.

Mr. CHURCH. I thank the Senator very much.

I think this exchange does, in fact, clarify the purpose of the reservation and makes it possible for the leadership to support the reservation offered by the Senator from Louisiana.

I thank him for his answers to the questions.

Mr. LONG. I thank the manager of the bill. We thought about this and discussed it, and I believe that with this amendment some of us can vote for the treaty who otherwise would find extreme difficulty in doing so.

Mr. CHURCH. I thank the Senator from Alaska for his courtesy.

Mr. GRAVEL. Mr. President, I think yielding for that kind of purpose is like handing somebody a switch to whip you with. I say that in good humor to my colleague.

Let me first address a statement to the leadership. I know the leadership plans to support the Long amendment, but I nurture the vain hope of being able to persuade my good friend from Louisiana that this is not a good idea. I know he has an open mind, and I am going to try my darndest right now. I hope similarly the leadership would keep an open mind. I think, with some of the information I will bring out, I may be able to make a case that could be persuasive.

First off, not as an admonition to the leadership but just as a statement, we find ourselves in some difficulties today on this issue for the very simple reason of accepting things we do not truly think out.

I would say that if the Long proposition is accepted, people will stand on this floor and gnash their teeth over that unfortunate decision, for the very simple reason that when you strip away from the issue of the Panama Canal the matters of sovereignty and justice to the Panamanian people, then—in the light of cold economic analysis—the most important item in these deliberations is to determine what will be in the enlightened economic self-interest of the United States.

I feel responsible for this section of the treaty. I went to the negotiators, to the President, and to the Secretary of State to press for language to cover this situation. If we put that language aside, there may come a day when our relationship with Panama may not be as strong as it is today. And I would say that if that day comes, certainly these debates will have contributed to it. If at that time you start from square one, that is, sort of a no-holds-barred situation, that is not in the best economic interest of the United States. I do not think it is in the best economic interest of Panama either, but it may not be viewed that way at that point in time.

Let us now look at what I think is the central point of my colleague from Louisiana, namely that we can look for a better deal elsewhere—may we have order, Mr. President?

The PRESIDING OFFICER (Mr. MATSUNAGA). The Senate will be in order. Members will cease their conversation.

Mr. GRAVEL. I thank the Chair.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. GRAVEL. Because I know my colleague from Louisiana is experienced in business practices. It just strikes a chord of reasonableness that if you are going to try to negotiate something with Charlie over there, and he appears to have a bit of a monopoly, then your best tactic is to bring in Peter and John as possible participants in the deal so that you can play one off against the other and get the best deal. That is standard practice in any kind of dealing, any kind of human dealing, economic or noneconomic.

But I think in this particular case we have gone beyond that. That would have been the situation maybe in 1903. That might have been the situation before the facts available to us today occurred. It certainly would have been the situation prior to 1964.

But since 1964, when we launched upon a course of study to find out what to do with respect to a sea-level canal, and came to a conclusion in 1970, we have had facts before us, and those facts are known to the world—they are known to the Panamanians as well as to ourselves.

In fact, the United States of America spent $22 million studying where to put the Panama Canal, a sea-level canal, if one is to be built. So I think you cannot come in here now and say that we are going to make off as if that study never existed, and we are going to take some study that was off the back of somebody's envelope and say "maybe it could go in Costa Rica, maybe it could go here, so let us bring those into the picture." If those were real possibilities, I think my colleague from Louisiana would have a point. But I think they are not real possibilities, and I think anybody who has made any effort to ascertain the specific facts involved will be aware of this.

So I want to send over to my colleague from Louisiana a copy of the map of the proposed sea-level canal routes through Central America. Unfortunately, I do not have it in a large map. I have it in these small maps which each Member of the Senate may have if he likes.

I would offer one also to my colleague from Alabama so that he might follow these deliberations; one copy to my colleague from Michigan; one to the Senator from Maryland, if he might want to follow; and also to the Senator from Georgia, who might want to follow these deliberations.

The key matter here now is what did the study look for and what did the study find.

American taxpayers paid $22 million for this study—and I might add $14 million of that was spent on evaluating nuclear construction, whether or not we could use nuclear devices to construct a sea level canal. If you look at the map I have handed out to you you will see there were 30 sites that were studied all the way from Mexico into Colombia, touching Nicaragua, Costa Rica, Panama, and Colombia.

Of the 30 sites, 22 were essentially dismissed after preliminary investigation as being fairly out of the question, quite out of the question.

So the study, as is normal, narrowed down to eight possible sites. If you will follow with me on the map I will discuss those eight sites. The first site considered as a viable site of the eight was Route No. 5 in Nicaragua. It goes through Nicaragua and parts of Costa Rica.

Certainly Costa Rica—and I will just make political editorial comments on the side—is a fine representative government, excellent economy, good, solid-type people to have commercial dealings with.

I think if you look at Nicaragua—I will not editorialize too much—but I think the papers have been replete with considerable difficulties that they have internally. So since political stability is figured as such an item of issue with respect to Panama, which has a reputation for being a stable government since its founding, I can only surmise as to what the reactions of the Senate would be were we talking about a similar long-term commercial arrangement with Nicaragua.

The second one is site No. 8, and that also goes through Nicaragua and Costa Rica.

Then you have site No. 10 which goes through Panama; site No. 14 which goes thorugh Panama; site No. 15 which goes through Panama; site No. 17 which goes through Panama; site No. 23 which goes through Panama and Colombia; and site No. 25 which goes through Colombia.

Let us just cursorily look at each one of the sites and see why they were discarded, because it is really upon this that the case has to rest on whether there is a reasonable alternative to want to bring somebody else into the dealing process.

With respect to No. 5 through Nicaragua and Costa Rica, that was a lock canal, and that would cost some $6 billion. Now, a lock canal is no different from what you have right now. So obviously the only reason this was studied, and it was so stated in the report, was

so you could have a comparison, so you could have something to bounce your costs off of alternatively. It is a lock canal. You would not build that because you have one.

No. 8, in Nicaragua and Costa Rica, is a very long canal, as you can see, and the cost of that was $11 billion. In point of fact, that is just the cost of the canal. The support facilities would be in addition and, of course, you also have the difficulty of having no deep draught harbor in the area, which means the boats would not have a good approach. If you have been down to Panama, you know that what you do is aggregate the boats at either end of the canal, get ready, and then go through.

So having a deep harbor is pretty vital, very vital. But the cost here is just the cost of the canal and that is $11 billion. If you got in to try to build the port facilities where you would need to sort of warehouse the vessels until they could go through, then it gets to be out of reason.

The next, No. 10, is in Panama. That is the site that was selected by the commission, and that is going to cost $2.88 billion.

Now, mind you, compared to No. 8, which would cost $11 billion as opposed to not quite $3 billion, that is a substantial difference.

Now we go to No. 14. That is all in Panama. This is, in the commission's opinion, the second best site. The cost is $3 billion, which is slightly more than the one that was chosen, which would cost $2.88 billion. Its greatest difficulty is that you might have to close down the canal operations in order to build it; so if it took 5 years—the study talked in terms of 15 years, but I think that is unrealistic; we built the Alaska pipeline in 3 years, and I think they could do similarly with this kind of activity—or even if you got it down to 3 years, it would be very costly to world maritime activity to close it down. It would be very costly, for example, to the State of Louisiana, because the port of New Orleans is a very important port.

So, when you have added the cost of closing the canal, you can see why this was designated second choice instead of first choice.

Then we go to route No. 15, and that is a lock canal, which essentially is no different from the present canal.

I would like at this point to give my colleagues copies of the chart which I have been following; it has just been xeroxed, and we are having the charts passed out so that my colleagues can follow me on it.

Route No. 15, a lock canal, again was studied for comparative purposes. Obviously we have a lock canal, so nothing would be gained there, as this lock canal could not handle vessels larger than 150.000 deadweight tons. So there is no point in pursuing that, and of course the commission did not.

No. 17, in Panama, is unfeasible unless they go to nuclear excavation, at a cost of $3 billion. Seemingly this is out in the hinterlands, and would have no port facilities to bring it about.

Route No. 23, between Panama and Colombia, again is pretty much in the hinterlands; there are no construction support facilities. The cost would be $5.39 billion, and it would require excessive excavation.

Then Route 25, entirely in Colombia, is prohibitively expensive and would require nuclear excavation.

Let me say that with respect to Colombia, I met in Bogota with the chief engineer who represented Colombia on the study commission. We had breakfast together. We had sent him copies of our work, and he was very candid in telling me that there was just no way that any realistic person would make a decision to build a canal in his country. I did not solicit that, it was gratuitous. Here was the head guy for the Colombian interests, who readily admitted it would be preposterous.

So, that is not a group of people that you would want to bring into a deal. That goes back to the essence of the argument of our colleague from Louisiana: "Let us leave our options open to deal with someone else." The Colombians would laugh at us if we said to them, "Let's start dealing."

I also know the Costa Ricans find it most humorous. Maybe with Nicaragua you could make some kind of arrangement, but that would leave only the possibility of No. 8, and No. 8 would require the permission of Costa Rica.

So we cannot bring anybody else into the negotiation process but the Panamanians. Maybe we can close our eyes to the facts, but this is all from the study the American taxpayers spent $22 million for. We can say that we will close our eyes to the facts, and maybe someone will pop up from out of the woodwork with a feasible sea-level canal, but that would be like closing your eyes to the fact that day is day and night is night, hot is hot and cold is cold. You cannot close your eyes to those facts. These are also facts, and I would hope that my colleagues would be cognizant of that.

So, as to making a deal with someone else to play one off against another, there is nobody to play off. Reasonable people agree that the only place you can build a canal is in Panama.

Senators may say, "Well, the Panamanians may not be aware of that." All they have to do is hire a consultant to advise them as to what the economics are, and they would be saying, as I am standing here right now saying, that the United States of America has no reasonable alternative.

Let us look at what the fastest deal would be. Here I have to go back to the statement made by the Senator from Alabama that we presently have a monopoly right to build a sea-level canal in Panama today, under the 1903 treaty. Mr. President, that right does not exist. If anyone thinks that the situation in the world today would permit us to move construction equipment into Panama without their permission and start digging, affecting their environment, he would have to really see a psychiatrist. We do not have a monopolistic right; there is just no way you can exercise that kind of a situation today.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. GRAVEL. I am happy to yield to the Senator from Washington.

Mr. MAGNUSON. You skipped No. 9 in all your discussions.

The PRESIDING OFFICER. Will the Senator from Washington please use his microphone?

Mr. GRAVEL. The Senator asked me what the situation was with No. 9 as an alternative.

Mr. MAGNUSON. Right.

Mr. GRAVEL. No. 9 was not one of the eight selected. They started out studying 30 routes, and narrowed it down to eight that they thought were the most viable, and then analyzed the eight in greater depth. No. 9 they did not feel met the criteria that were set for the eight, and you can obviously see why. It is straight across Panama. It is a little bit out in the open country, with no support facilities, and I do not have a topographical map, but I would have to rely on the judgment made by the engineers that did not consider it in a class with the eight most feasible.

Mr. MAGNUSON. The reason I asked was that at one time there was a general discussion about a sea-level canal, which would be north of the present canal, about the same distance from the canal as No. 9. This area was considered an advantageous site because it was sparsely settled, would not pose great environmental problems, and it would be at sea level. Maybe it is not exactly that location——

Mr. GRAVEL. I think my colleague is referring to No. 10, because No. 10 is 10 miles due west of the present canal.

Mr. MAGNUSON. I have my directions confused. It is hard to realize that the canal goes from west to east.

Mr. GRAVEL. The Panama Canal actually goes from north to south.

Mr. MAGNUSON. Part of it goes from north to south. But it is this way, toward us from——

Mr. GRAVEL. That is right. This is closer to the United States, by going west.

Mr. MAGNUSON. And that is why the Senator did not discuss No. 9?

Mr. GRAVEL. Yes, No. 9 was left out by the commission.

For the information of my colleagues, I flew over with a helicopter at about 150 feet the entire route No. 10. It would not really impinge upon existing development. It is open terrain; that is, cleared farmland, and certainly the farms that would be taken for the construction could be swapped for other fertile ground, for the people in question.

The point I was coming to was the assumption that under the present treaty that we have a monopolistic right. In today's climate there is no way that Panama or, for that matter, any other nation which had given up such a right, would permit a foreign country to come in unilaterally and start digging a trench without their permission. So the fact of the situation is today that the 1903 right we think we have can only be exercised as the product of the good will of the Government of Panama and the people of Panama. That is the realistic situation today.

So we come to the next part. If we do not want to accept what is being pro-

posed here by the Commission's conclusions as to what our alternatives are from a construction point of view, then what are the other elements of an economic deal?

Those elements are sheer purely economic. That is, what would be the tolls?

If we still hold to the theory that the object of the exercise is to build the canal so that the tolls and the cost of transportation will be cheaper, then obviously the first thing we have to do is to build the cheapest canal because that will give the cheapest tolls. If No. 5 was built in Nicaragua and Cost Rica, that is twice the cost of route 10. So the tolls would obviously be twice as much. If the other canal was built through Nicaragua and Costa Rica, that is $11 billion. That is almost four times. So what we are talking about is going to the Panamanians and saying, "Look, we may have some disagreements, but why not you build the canal and we will pay you twice as much as you thought possible?" The parameters of discussions are what the other costs would be. Those are the parameters.

If one wants to open this up to more dealing, I suggest that it is not thoroughly thought out.

I would suggest that the best course of action is where we are today. That is recognition by the United States that Panama is the only legitimate location to have a sea-level canal and for us to forswear any intention that we would be the owners and builders.

The Panamanian people are going to own the sea-level canal, just as they will own anything of importance in their country. They have not gone through 70 years of semicolonialism to turn around and cut a new deal where we would be in charge. Of course not. That is preposterous. It is no more acceptable to the Suez or any other place where a country owns the geography in question. They are going to use that geography to their best economic self-interest. That is normal and to be expected.

So the premise that we begin with when we talk of a sea-level canal is that it has to be premised on the simple fact that it will be the Panamanians who will own it, and it will be the Panamanians who will build it. Now comes the crucial thing, that they cannot do anything without money. That is where we come into the picture, I say to my good friend from Louisiana. That is where we come into the picture because it is an important picture, an important picture to New Orleans, the State of Texas, the gulf coast area, to the east coast of the United States.

I can show this to Members with one very good map. Members can see this map now in my hand. When we see the location of Panama, the gulf coast, and the east coast, we can see how close all this is. We see Alaska, a little bit of a treasure chest for the United States. We see the west coast where we have timber that has to be moved to the east coast, and coal which has to be moved; we have the largest coal deposits in the State of Alaska known today.

How will that arrive in the East? Will it reach the East by crossing the continent? I can show figures where that is not economically feasible.

Obviously, what we do is breach the continent. That is what we are talking about. How do we breach the continent? We breach the continent at the smallest point. The smallest point suggested by this $22 million American taxpayer expenditure was route 10.

So we say to the Panamanians, "We do not have a deal for a sea-level canal or anything without it being used." Who uses the canal most today? We do, by one-third. Japan is second.

I am talking about the large world maritime powers, not the west coast powers of South America. It is more vital to them, but I am talking more in a global sense.

They cannot finance it with Ecuador. They cannot finance it with Costa Rica. They have to finance it with the United States, Japan, the OECD countries. That is how to finance that kind of a project.

It is very simple. The deal we are talking about is not a deal about whether we will construct it here or there, or whether we will own it or they will own it. The deal my good friend is talking about is the financing part of the whole arrangement. That is the deal that comes into the question.

We say with our economic ability, "OK, we will finance the canal. Then what will it cost us to go through the canal if we put up our money to finance it?"

That is where we begin to negotiate. That is where negotiations become serious. Japan could finance this. The Arab world could finance this. Germany could finance it. That is about it. Russia cannot finance it. Anyone who suggests they can is really not aware of their economic situation.

Those are the countries that can finance it. In point of fact, if we were intransigent, the Panamanians could go to the Japanese, to the Germans, or they could go to the Arabs. But those negotiations would be fruitless for the very simple reason that whoever is going to finance wants to get their money paid back. They will ask, "Who will use it?" The United States is one-third the user. Obviously, if we boycotted them—and we could, as all we would have to do is to pay the cost for breaching the Continent further north in the United States and boycott the Isthmus.

If somebody invested $10 billion to build the canal and the United States with malice aforethought was going to thwart that, all they have to say is, "We will not use it. We will pass a law here and subsidize our maritime interests to go somewhere else, or subsidize the railroads to carry it across." That is what we do right now. We subsidize the railroads at the expense of the port of New Orleans, of New York, and a few other ports on the east coast of the United States. That is our present national policy.

So the discussions, the negotiations, center on the financing.

Here is a very simple situation. The blue line on this map represents oil coming out of Alaska today, 1,400,000 barrels per day. Essentially, it goes to the west coast. If we do not develop the pipeline system from Long Beach to Midland, Tex., so the oil can go to the middle of the United States, the best project now to get the oil to market soonest, the alternative is to go to the present Panama Canal.

That is with the existing oil. We cannot even say grace over that on the west coast.

The red line on the map represents potential discoveries in 2 to 5 years, based on figures by USGS. It was their average or a little more conservative than average in their projections. I have it marked out here as 2 million barrels per day.

These black lines are existing imports, to scale, in the United States right now. That red one is after 2 to 5 years of discovery. We project that will push out imported oil. This white one is after 5 to 10 years of exploration. So, hopefully, in a decade, we would have in our inventory the potential coming out of Alaska of around 5.5 million barrels a day. If we cannot even say grace over 1.4 million barrels right now, we are not very provident in thinking out the future if we do not do something in that regard.

Arthur D. Little has done a study that compares the various alternatives for shipping the oil. If I could just point to the various alternatives, they are the trans-mountain reversal, which my colleague from Washington State was successful in thwarting the proposal of the company in question. I am very sympathetic to his position, because if I lived in the Puget Sound area and enjoyed the beauty of that, I would be very concerned about the possibility of supertankers coming into the Puget Sound area.

The other alternative is this Northern Tier pipeline, which would take it into the refineries in that part of the country. The problem with that is that the refineries can be very easily satiated with around 500,000 barrels a day. You could actually satisfy their needs with swaps through Maine, without even building one piece of pipe, but we have not gotten to the sensible policy of swapping oil as it used to be done in industry. The Government constructs impediments to that.

Another proposal is the Long Beach to Midland, Tex. route.

The other one is very significant and just got into the news. There was a wire service article on the Guatamalan pipeline as if it were something new. Somebody called me in Alaska and said, "Boy, have you heard about this?" I not only had heard about it, but I have been writing on it for 9 months. But it shows how thinking gets out of proportion sometimes.

Guatemala was important to analyze because D. K. Ludwig had suggested in 1969, when the discovery at Prudhoe Bay was made, that we ought to move oil in pipelines across Panama. This was never given serious consideration.

So when Arthur D. Little made an analysis, they came up with these figures. The Little study showed the throughput volume, the capital investments required and the cost of oil landed in either Houston, which would be the

equivalent of New Orleans, where the superports will be, or Chicago.

It showed that the trans-Guatemalan line, under these projections, was $2.16. That is pipelines, now. That is very critical to perceive at this point, that this chart is pipelines, except for the last two alternatives.

The transmountain reversal was $2.30 into Chicago; Northern Tier $2.78 into Chicago. The Sohio phase I was $2.06—there are two phases, because there are two pipes involved. The first phase would handle 500,000 barrels a day, the second phase would handle another 500,000. That first phase would handle the projected surplus on the west coast very well, but not the projected volume from expansion of the Alaskan pipeline.

Sohio filed a tariff in Alaska for this route which the study projected to cost $2.06. The actual filing in Alaska was over $3. So this study is very conservative.

Then going around the Cape is $3.14.

We asked Arthur D. Little if they would take the matrix of this computer run and add to that what it would cost for a supertanker—that would be a 250,000 dead weight tonner—to go from Valdez to Houston or to the east coast of the United States and compare that cost. They gave us back some figures. Then I superimposed upon that a toll.

The toll on a barrel of oil right now is 27 cents. We superimposed a toll cost of around 44 cents, so we almost doubled the toll. This is what results came back from Arthur D. Little's computer run. The first line on this chart is the pipeline system. That is the cheapest pipeline, Sohio, which takes the least amount of construction. That is $2.06 a barrel delivered to Houston. The Northern Tier, which would be the most expensive of pipelines, had a $2.78-a-barrel cost from Valdez. With a supertanker, almost double the toll, for 265,000 deadweight tons, it was $1.75. For the 150,000 deadweight tons, it was $2.18. Quite a sizable savings. We are talking about almost 50 cents—that would be the average per barrel, quite a considerable sum of money when we discuss how we are going to get oil more cheaply to the marketplace.

When you consider that $1.75, measure that against what is actually happening today with oil going through the canal at, let us say, $3. We are talking about over $1 we could save on a barrel of oil today.

The fact that that cost is being eaten by the State of Alaska today and the oil companies in question may not be very important, but let me submit that when we operate inefficiently anywhere in our society, whether it is private, public, what have you, we all pay in one degree or another. That is money that is wasted on inefficient transportation systems. That is money that cannot be used to find more oil or gas.

I submit that what would happen, using these very conservative projections, just on oil alone, is that we could probably pay for a new sea level canal.

Let me show one chart to demonstrate that we do not even need the new oil. When the study was done the Commission made some projections as to how you would pay off the sea level canal that they projected in 1970 would cost $2.8 billion. For this chart, I would truly love to have the attention of my good colleague from Louisiana because I think it is important for him to appreciate the facts of how we could pay for a new canal.

They made projections of a high, medium and low revenue picture. I took the average, the medium revenue picture. We took the projections for this period of time; that is, until 1980, this decade that we are in. Their projections show that with this line, you are able to amortize, with 60-year bonds at an interest rate of 6 percent, the cost of a sea level canal had it come into being instantly in 1970.

This line is the actual revenue picture of what the tolls have been in this part of the decade of the seventies. I think anybody can see that if the sea level canal had been brought into being instantly in 1970, we would have been able to pay for it very handsomely with what has gone through the canal. These great Alaskan oil finds which I used, which really set me on the trail of investigation, were not even in this picture. So you see from their own projections, it came out quite well. Of course, in there, you had the effect of toll increases. But you see that, even with the situation today, operating almost in a nonprofit situation you could have paid for the sea level canal.

Let me now jump to one point that is important to my colleague from Louisiana, and this is the reason that I hope he will join with me in recognizing that we should leave well enough alone in the treaty. My colleague comes from a maritime State, much more of a maritime State than the distinguished former chairman of the Committee on Commerce, who has been looked at as Mr. Maritime in this body. Senator LONG comes from the State of Louisiana. I believe the Port of New Orleans is probably the second most important port in the United States; certainly in the top five in the world, probably fourth place in the world. I believe Amsterdam would be No. 1. It is one in the Netherlands; I think it is Amsterdam. So, as a person with an economic interest in the maritime area and a constituency that has something vital at stake, I think the following will be very enlightening to him.

First let me show two charts here which sort of lead into where we are today.

When the Commission made its projections, it determined potential transits. This red line shows the average potential transits that it foresaw.

This blue line is the transits that actually took place. Other than the recession, it is quite obvious from a forecasting point of view, the projections were quite different from what actually occurred.

That is the first inkling that something unusual is happening in these projections.

The second is when we look at the tonnage that went through the canal. This red line represents their forecast of tonnage.

Now, this is a long-term forecast. When we look at the tonnage that actually went through, this blue line, we see it is quite on target.

So, we could say to the Commission that they are pretty far off on their transits, but right on target with respect to the tonnage.

What does that mean? Very simply, that the size of the vessels going through the Panama Canal was changing under their very eyes and it changed in this very short decade—less than a decade—7 years. It was changing right then and there.

So we look further and when we see the dynamics of what was going on in the world maritime fleet. Let's look first at bulk carriers. That is the second largest item in world maritime trade, and up until 1961 we see, literally, nothing was happening. Then, all of a sudden, in 1961, it took off like a skyrocket, to the point that now 19.6 percent of all the bulk carriers—that is in numbers—are over 60,000 deadweight tons.

That is the barrier of the present canal. Around 65,000 deadweight tons and we cannot go through the canal.

This must be translated into tonnage, which is the significant element in world commerce, not the number of ships. We could have a number of rowboats. There is no difference. It is the tonnage that counts, and we see our bulk tonnage today.

In 1975 43.8 percent of the bulk carriers, in tonnage, could not go through the Panama Canal.

So we could state very simply, that is an obsolescence factor. So the present obsolescence of the Panama Canal with respect to bulk carriers is 43 percent.

Then look at what happened with the largest item in world maritime trade, which is tankers. And I might say, the largest item going through the Panama Canal is oil. Look what happened and just see the chart and the way it goes.

Back in 1955 and 1956, 2.4 percent of the new tankers being built were 70,000 deadweight tons. By this period here, 1971–75, 66.7 percent were over 70,000 deadweight tons.

Mr. MAGNUSON. Which cannot go through the canal?

Mr. GRAVEL. That is right. At all. Could not go through the canal if we wanted to carry it.

Mr. MAGNUSON. No.

Mr. GRAVEL. But then we see what happened here on this chart. We see the line a different way. It shows that 76.5 percent of the world tonnage of tankers cannot go through the Panama Canal.

Now, we take those two figures and add to those two figures the balance of cargo in world trade, tonnage, and we see the tonnage available in world trade. We see 57.8 percent of all the vessels over 60,000 deadweight tons cannot go through the canal. So we arrive at our obsolescence figure in 1978, of obsolescence for the Panama Canal. We have to admit the present canal is 57 percent, almost 58 percent, obsolete. That is where we are today.

So if we take——

Mr. MAGNUSON. Does the Senator from Alaska think there is going to be any change in that, that in 1978—what did the Senator say, 57 percent?

Mr. GRAVEL. Yes.

Mr. MAGNUSON. Whatever it is, 57 percent.

Mr. GRAVEL. Yes.

Mr. MAGNUSON. Does the Senator not think that by the year 2000, if we want to go that far, that the canal is not going to be very functional at all?

Mr. GRAVEL. I want to disclaim any charge that the Senator and I conspired in this because he is just hitting me with the question straight out and I want to offer my next chart.

Mr. MAGNUSON. All right. I did not know that.

Mr. GRAVEL. I want the record to show the Senator did not know this next chart was coming up.

And that, very simply, is this, if we just reversed those figures—if I could really get the attention of my collleague from Louisiana on this one point, then I will not impose on him for his vital attention, but if I can just show him this, and my colleague from South Carolina, also—In 1966, 89.59 percent of the world tonnage was capable of using the Panama Canal. In 1977, that figure is 42.2 percent.

Now, that is a pretty rapid decline, as we see.

I did not want to be that severe. That is a 12-year period. In the next 20 years, we do not know what will happen, but let us be conservative and say only one-third of what happened in the last 12 will happen in the next 20. Only one-third of that performance. We see that by the year 2000 only 7.64 percent of the world maritime fleet will be able to use the Panama Canal.

This is disastrous for the port of New Orleans, or any port on the gulf or east coasts of the United States. It is disastrous for the Western Hemisphere.

This will be compounded by the fact that Suez Canal is going to be able to handle supertankers in 1981. They will be able to handle tankers of 250,000 deadweight tons.

So the barrier that every day is getting bigger for Louisiana, the silting-in—I know my colleague can understand this, this is one of the biggest problems in Louisiana, the silting-in, in New Orleans. It silts in. Well, it is not only the delta that is silting in, it is the present Panama Canal that is silting in, because every day that goes forward, this chart keeps going and it is like the port silting-in. We can use it less and less every year, with the fleet we have in the world.

Now, stop and think, if we can build a new sea-level canal and get with the program in a hurry, to catch up to what I think has been the only provident action in the United States today from an important maritime point of view, and that is the decision in the State of Louisiana to build a super oil port.

I want to compliment my colleague. I met with the people who are involved with that in the State of Louisiana, and they told me how it came about.

Senator RUSSELL LONG, the senior Senator from Louisiana, called his port people to Washington, sat them down in his office and said, "Hey, I think this is an idea you people want to get out and do something about."

They are now out doing something about it and will start construction in the next few months.

There will be only two superports in the United States. I am proud to say I beat him by a few days; that other superport is in Valdez, Alaska. The other is going to be off Louisiana.

They will be the only two ports that will be able to handle an oil cargo efficiently, and in the best interests of the consumers of the United States. One came about through his leadership, and one came about, I am proud to say, through my leadership, with his good support.

The question is, how do we get the oil from Alaska to use that port you are building? I know that you are not building it for Arab oil. It is for us. There is only one way to do that, and that is by breaching this isthmus.

We can talk of negotiating with Peter, Paul, and John. There is only one group we are going to negotiate with, and that is the Panamanians.

I started out with this report and my efforts to get this language in the treaty on the premise that if we treat the Panamanians right, they are going to treat us right. If we are going to put a dollar on the table and make a dollar, they are going to be as smart as we are to make that dollar. The only deal is going to be a good commercial deal—good for both parties. If it is good for only one party, it is not a good deal.

So, requisite to bringing about the breach of that isthmus is the good will and friendship of the Panamanian people and the leadership of Panama, whoever it is.

The language I press for, which I want to get in this treaty, states a very simple thing. The only figures available are what I have just presented. Obviously, I am proud of my work, but I do not think it is definitive. It needs a great deal more study, a great deal more negotiation.

Obviously, what we should do is study the situation. We will put up the money, and we will have a proposal before the Senate. I compliment the Senator from Washington in joining me and in offering his leadership to bring this about. I hope it will come about, regardless of what happens with the treaties. I hope it will come about in the near future; because with what is going on, we can make a decision here. What makes man different from animals is that we can anticipate that we are going to have a problem, and we do something about it before it is upon us.

So, shame on us if we have to wait until the year 2000 and say that 90 percent of the world maritime fleet cannot use the canal; therefore, let us study it. This treaty says that the United States and Panama will study it. It has to be with Panama. We are going to be studying something across their land, and it would be the height of arrogance to talk about the impact on their environment without involving them in the study. So we do it together. We are a wealthy country, and they are a poor country.

What happens when you want to make a deal with somebody? The Senator knows that if he has an oil lease and does not have the money to exploit it, he finds a guy with a few bucks who can finance the exploration of his oil lease; and if they find some oil, he is going to make a lot of money. If they do not find oil, he is not out of any money. But he is taking advantage of the geography he has to lease.

My colleague knows that kind of arrangement, and that is all I am suggesting under the study. They have the land; they have the potential canal site; we have the money. Let us study it with them and do it together. If something comes from it, and if somebody hits an oil strike on his leased land, he shares in the benefits of it, and so does the guy who drills the oil and sells it. Everybody makes a buck. With the Panamanians, we have the language in here, and we are going to study it, and then we are going to negotiate on what the deal is going to be. That is all the language amounts to.

It is punitive to say, "You can't do this and you can't do that." The "can'ts" are not important in this case because the "can'ts" in this treaty, on its language, are not the language itself. They are the realities of what exist in our society today. They have the best site; that is their "can." We have the money, and that is our "can." That is what our disciplines are.

So, to take the language out does not mean a hill of beans. What does count is that we stand up toe to toe with the Panamanians, as equals, and say, "My good friends, you have a piece of land that we think is important to the world maritime interests, ourselves included. Since we use the isthmus, since we are the biggest in the Western Hemisphere, we are interested in seeing that something comes about. Let's study it, and after we study it, let's negotiate." That is all there is to this language.

I know my colleague's interests. I know his interests are sincere and well-meaning, because there is much at stake for the gulf coast and the State of Louisiana. I know that motivates him in this regard. He wants to get the best deal for his people. The best deal for his people in this regard is for his people to have good relationships with the people of Panama. And they do. Louisianans have a great relationship with the people of Panama; and the people of Panama know that if there is a State in the United States to which they are economically bound, it is the State of Louisiana.

So it is upon that crucible of friendship that you want to build. You do not want to push it aside and say, "Let's deal potentially with somebody else." There is nobody else with whom to deal.

I hope that my colleague, upon reflection upon the facts I have brought forth, will see the wisdom of our not going backward. Let us not eradicate this language from the treaty, so that if the treaties are approved—and I pray they are—we wake up tomorrow and recognize that our economic interest is that we have to have a sea-level canal and have to start from scratch in talking about it, as though we have never had a conversation with them.

This conversation did not start with us and the Panamanians. It started with Charles V of Spain, in 1505. That is when the conversation started on breaching the Isthmus of Panama. He saw it then. That is how they could get the gold from the Spanish Main across to Europe. Then, when we had the gold rush of 1849, the Americans built a railroad so they could get the miners across the isthmus and to California.

Oviously, it is in our economic interest to have it in this location. I think that to pull out this language is to negate the $22 million. It is to tell the Panamanians, "We don't think you're very important." Unless we recognize that they are the ones to negotiate with—and from their point of view, we are really the only ones to negotiate with—we negate all the good will that is embodied in this section.

I know why the Panamanians were not enthusiastic about this section. At the time it was proposed, they did not understand it. I did not get a chance to brief the chief of state of Panama until the day he signed the treaty in Washington. I did not get a chance to go to Panama to make this presentation to the intellectual leadership of the University of Panama until December of this year.

So there is no constituency that is knowledgeable and enlightened about this in Panama.

Nobody has throught out with great detail that they cannot built the sea-level canal without us because it takes us to finance it and it must be used to make it worthwhile. All those things have not been thought out to develop a constituency—just as it has not been thought out and a constituency has not been developed in the United States.

I have made several presentations, but there has been no effort, other than on the Senate floor, to make the Nation privy to these facts. Yet, these facts have not been refuted by competent authority—whether it be a Panama Canal economist or a consulting firm that works for the Panama Canal or a consulting firm that works for world maritime interests I have briefed in Japan, Venezuela, Britain, and Norway. There has been no refutation of what I have put forward, and I think there has been universal acceptance that this is pretty interesting, pretty valid, and we should move forward with the study.

The yeas and nays have not been ordered. I hope my colleague will withdraw his amendment. If he does so, I think time will show that he acted in the best interests of the people of Louisiana, which is what is motivating him to do what he is doing.

He has been probably the most able person in their history to cut deals for his people. I know him. I have seen him do it, and I admire him for doing it. On this one, I can only say to my colleague that I have spent hundreds of hours on the subject; and I can tell him that what is in the interest of the people of New Orleans is in the interest of the people of Alaska and in the interest of the people of Panama, and that is for all of us to love each other, so we can sit down and cut a good commercial deal.

(Mr. NUNN assumed the chair.)

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. GRAVEL. I am happy to yield.

Mr. MAGNUSON. I was somewhat inclined to vote and maybe even cosponsor the amendment of the Senator from Louisiana for the simple reason that I thought if a person knows, as the Senator points out, in any business dealings that he is the only person you can bargain with, you are not as apt to get as good a deal as if there is some option.

I understand that the Panamanians do not particularly like to be tied up this way. I do not know. The Senator has had more experience with them than I have had.

But suppose that a consortium of maritime nations in the world decided that they needed the second canal. The Senator and I agree the quicker we get going on it, no matter what we do here, the better. I have talked about the need for a second canal since 1938, as I mentioned before, when Lyndon Johnson and I went down to make the first study for the Navy. But supposing the United States said to a group of maritime nations, Japan, England, Norway, Sweden, and some of the South American nations, "Well, we don't want this under the control of just one nation any more. It is an international canal, and if we need it, we are all going to put our share in." The United States would have to furnish most of the money because, as the Senator pointed out so well, we are going to be using the canal more than any other nation. Between the United States and Japan, I guess, they might account for almost half of the use of the canal.

Assume they all wanted to get together and each put in a share in some sort of an international loan deal. I do not want to mention the United Nations in this, but it could be similar to that. How would that happen if the amendment of the Senator from Louisiana were not adopted? Could the United States act for them?

Mr. GRAVEL. We would all lose our present posture. My colleague is entirely correct. I say to Senator MAGNUSON from the State of Washington that he is right on target. This should be financed really on a multinational basis. Each country, by and large, that uses it should buy some of the bonds for their use.

Mr. MAGNUSON. Yes.

Mr. GRAVEL. In that way, you have an international financing mechanism that would come into being. The Panamanians would own it. The tolls would be tied to the financing in question, and you would have yourself a very serious commercial venture. In my mind, that is how it should be done.

Mr. MAGNUSON. I shall ask two questions. First, can that be done the way the treaty stands now?

Mr. GRAVEL. Yes. In fact, the way the treaty stands now we are in that posture. In other words, first, we recognize that we are going to do the study with the Panamanians.

Mr. MAGNUSON. Yes. The Senator and I want to begin that study immediately.

Mr. GRAVEL. Immediately. It should have begun yesterday.

Mr. MAGNUSON. Yes.

Mr. GRAVEL. Second, after the study is in, that is when you make your decision of go-no go. You know what your costs are, you know what the economics are going to be, and you know who will be the beneficiaries. And then you just go structure the debt that will be involved. We, with the Panamanians, could take the initiative to say, OK, the study shows that Japan uses this canal for about 8 percent and so the Japanese ought to finance this share. We would negotiate with the Panamanians to set up a body to do this, or their own ownership body could do it. They could set up a Panamanian corporation. We would have a seat on the board of directors. Japan could have a seat on the board of directors. You could do all of this and yet the ownership would still be in the hands of Panama. The profits would still go to the people of Panama. But the rest of the world would be assured of a viable commercial undertaking.

We lose sight of the fact that when deLesseps built the Suez Canal, that was the hottest piece of commercial property in the world at that point in time, and that is the reason he was able to sell stock to go try and build the Panama Canal. I think it was several thousand percent that the stock appreciated in Suez. Once you make the breach, it is a very good venture, once you build a sea-level canal.

Mr. MAGNUSON. Everyone went broke, did they not?

Mr. GRAVEL. Oh, not in Suez, no. They went broke on this one because unfortunately Mr. deLesseps—and I might say it is almost 100 years back—made the calculated mistake of going for a sea level canal rather than a lock canal.

Engineers who thought of it recommended a lock canal, but he made a political decision on somewhat of an ego trip to build a sea level canal, and the technology was not there to do it at that point in time.

Mr. MAGNUSON. But under the present wording of the treaty, as it stands now, could that sort of consortium be arranged in the world?

Mr. GRAVEL. Yes. In fact, we have already——

Mr. MAGNUSON. But who would be the banker?

Mr. GRAVEL. That is not determined at this point, because under the treaty language what you have is that the United States and Panama must negotiate. If you take that language out there is no "must negotiate." I mean, we can sort of go our separate ways. They really cannot do anything. We cannot do anything. We cannot exercise that right of monopoly that my colleague inferred.

Mr. MAGNUSON. It does not bar anyone from negotiating right now, does it?

Mr. GRAVEL. Actually, it sort of forces them to negotiate. That is the beauty of this thing. It is that the two major elements in the world that have to come together with mutual agreement on what is to be done are Panama and the

United States. That is in this treaty. That was the language I was able to secure in here.

Mr. MAGNUSON. And we go out and float a loan.

Mr. GRAVEL. Exactly, or Panama would float the loan and we would undersign it.

Mr. MATSUNAGA addressed the Chair.

Mr. MAGNUSON. May I ask the second question? And then I will yield to the Senator from Hawaii.

Mr. MATSUNAGA. On this point, I might point out, if the Senator from Alaska will yield, that the language of the treaty itself is very clear, and we are now talking about article XII, paragraph 2, which reads:

The United States of America and the Republic of Panama agree on the following.

And this is where the Senator's question comes in and where the answer is implied, if not directly responded to:

(a) No new oceanic canal shall be constructed in the territory of the Republic of Panama during the duration of this treaty except in accordance with the provisions of this treaty or as the two parties may otherwise agree,

which means that the United States and Panama may agree to a consortium going into Panama to construct the sea-level canal. That is what the present provisions of the treaty provide.

Mr. MAGNUSON. There is no bar. Say that we went down to Panama and said, "We have a group of nations that are interested, and we would like to negotiate on behalf of those nations with you." If they agreed, there is no bar to that.

Mr. GRAVEL. Not at all.

Mr. MATSUNAGA. That is correct. So long as Panama will agree and the United States will agree to it there is no bar to the proposal put by the Senator.

Mr. MAGNUSON. I suppose we will take the initiative. We agree that something ought to be done.

Mr. MATSUNAGA. Then we need only the agreement.

Mr. MAGNUSON. And we would be able to go down and present this to Panama.

Under the Long amendment, there is no question that could be done also, is that not correct?

Mr. MATSUNAGA. That is correct.

Mr. GRAVEL. Except that under the Long proposal, you would no longer have the caveat in place that it is the United States and Panama. It could be Panama and anybody else.

Mr. MAGNUSON. I know that.

Mr. GRAVEL. So really we are going backwards if we take it out. Does the Senator see what the present part of the treaty is? It is a frame. You can take the frame out and you have the whole wide world to do whatever you want. This narrows the funnel down to a study done with us and Panama, and then after the study a decision that involves us and Panama, not Panama and Japan, or Panama and someone else.

Mr. MAGNUSON. I, at first, was very dubious about this provision in the treaty. I discussed with the Senator from South Carolina my concern that we would be tied down to Panama and they would be tied down to us. Naturally they do not mind because we are the only ones who could finance something or put together a consortium if it is necessary.

(Mr. ANDERSON assumed the chair.)

Mr. GRAVEL. Very much so.

Mr. MAGNUSON. I inquired of Mr. Bunker and others who negotiated this, "Why did you put this provision in the treaty at all? Why not just leave it open, say nothing, and you would not need the Long amendment."

Well, he said, "We were advised"—which the Senator from Alaska pointed out so well today—"that this was the only place you could construct a second sea-level canal and that, therefore, we must say something about it in the treaty."

I understand that the Panamanians are concerned about that provision because they did not want to be tied down.

I got to thinking about it, and I thought, well, this is not bad.

I thought, well, if the Panamanians are not tied to us and we are not tied to them, anybody could come along and they could deal with any country, including Russia.

So then I got to thinking maybe this is a good provision. The best engineering, I guess, came out of that commission. That was headed by Robert Anderson of Texas.

Mr. GRAVEL. Right.

Mr. MAGNUSON. Lyndon Johnson——

Mr. GRAVEL. Milton Eisenhower.

Mr. MAGNUSON (continuing). Created the commission because we had that experience, the two of us, in 1938, and he was very interested in this matter. As a matter of fact, we came back, not being engineers, either one of us, and recommended Nicaragua. We thought that was the best place. We had our eye on the Gulf of Tehuantepec, which was a safer place to build it than all the others. That would have been a shortcut to New Orleans. But that has become too costly, I understand, is that correct?

Mr. GRAVEL. Yes. That would cost about $6 billion to $11 billion.

Mr. MAGNUSON. I am driven by my deep desire after many, many years of talking about this and being a part of it to see that we get going on a second canal.

As a matter of fact, one of the reasons, I will confess, I am voting for this treaty is that I do not think we are giving them very much by the year 2000 anyway. I do not think this present canal is going to amount to much in the year 2000.

I am a little bit torn as to whether the best way to proceed is through the Long amendment or to follow the suggestions of my friend from Alaska. But either way I do not want to shut out a consortium because I think that may be necessary, a consortium where we pay our share.

So I want to thank the Senator from Alaska and the Senator from Louisiana, too, for bringing this up. I think it will clear the air.

I have introduced a resolution to begin negotiations immediately for the construction of a second canal. I was going to make it a reservation, but they advised me I should make it a resolution. The resolution was sent to the Committee on Foreign Relations, and there it is. When we complete action on the treaty, I hope the committee will consider this resolution. I think it is so important because time is running out, time is running out for the whole free world on this canal business.

I thank the Senator from Alaska and the Senator from Louisiana for bringing this important matter up.

I find a great number of people who are very dubious about the canal treaty. If you explain to them that the canal is going to be probably almost nonfunctional by the year 2000, and if we need a second canal, we are going to build a second sea-level canal, then they are quite a bit more relieved about voting for this treaty than they were before.

I thank the Senator for yielding.

Mr. GRAVEL. I really want to thank my colleague from Washington, who has provided leadership, and certainly given us historical perspective. His participation which goes back to 1938 with Lyndon Johnson on this whole canal issue.

Again I want to state that my good friend from Louisiana is right on target in recognizing that the canal has great import to his State and in fighting to the best of his ability for the interest of the people of his State. I think in a normal situation the best way to negotiate is with as many options as possible.

I think in this situation we have already eliminated many options over time, and that the option that is left to us is to locate a new canal in Panama. With the political realities that exist in the world today that can only take place with the good will and friendship and leadership of the Panamanian people and their government.

So it is important to us to get a treaty that will gain us that friendship, and then to step forward with them, make this study and, as this language says in the treaty, after we have made the study, to negotiate. We have to understand, regardless of what is done, it is going to take two to effect the canal under the realities of the situation, and it will take two to effect the canal under the language of this treaty, that is, it will take Panama and the United States.

To take that language out still leaves the reality of the situation. But when you do that, when you consciously take the language out, still leaving the realities, you leave great confusion because insult can be taken as a result of that.

So it is most unfortunate if we do take this out. I think some people who will not understand the exigencies of what the situation is in the world today will——

Mr. MAGNUSON. Mr. President, I wonder if the Senator will yield for one more thing?

Mr. GRAVEL. I would be happy to yield.

Mr. MAGNUSON. Can I have the attention of the Senator from Idaho? As long as he is on the floor and other distinguished members of the Committee on Foreign Relations are here, no matter what happens to this amendment, I hope I can get some kind of recognition from you people concerning the resolution that I have introduced to proceed immediately or as soon as possible

toward negotiations on a second canal. I hope I can get some assurance that the Committee on Foreign Relations will take this matter up.

Mr. CHURCH. If I understand the distinguished Senator correctly, he intends to introduce and press for early consideration of a resolution——

Mr. MAGNUSON. Yes.

Mr. CHURCH (continuing). That would urge the United States and Panama to commence negotiations——

Mr. MAGNUSON. Yes.

Mr. CHURCH (continuing). Looking toward the possibility of building a sea level canal; is that correct?

Mr. MAGNUSON. Yes, that is correct.

Mr. CHURCH. I can give the Senator every assurance that such a negotiation would attract the interest of the Committee on Foreign Relations. I see no reason whatever why the committee could not proceed to take up such a resolution and hold hearings on it in the near future.

Mr. MAGNUSON. I thank the Senator.

Mr. GRAVEL. I can only add that it would strike me as not very logical to at one moment have the Senate turn down a caveat in treaty language that requires us to negotiate with Panama, and then at the same time come in with a resolution saying "negotiate with Panama." I mean, you want to guarantee if that resolution is going to have any weight at all, you want to have this language in the treaty so that there will be only two parties to the negotiations to get them going, and that will be ourselves and Panama.

So I would hope the leadership would rethink its position on the efficacy of taking this language out. I think it would not be in the best interests of the United States or of the people of Panama and could really lead to some unfortunate misunderstandings down the road, because somebody will think that there are alternatives that are not there, and we will spend 3, 4, or 5 years hassling people with unrealistic proposals that had been set aside with the $22 million we have already spent.

Mr. CHURCH. The Senator always states a good case. But I see nothing inconsistent with the committee's consideration of the resolution proposed by the Senator from Washington and the adoption by the Senate of the reservation offered by the able Senator from Louisiana.

Even with the adoption of the reservation, the following words would remain in the treaty. I quote from section 1 of article XII:

> Consequently, during the duration of this Treaty, both Parties commit themselves to study jointly the feasibility of a sea-level canal in the Republic of Panama, and in the event they determine that such a waterway is necessary, they shall negotiate terms, agreeable to both Parties, for its construction.

That is what is contemplated by the resolution of the Senator from Washington, so I see no inconsistency in the two actions.

Mr. MAGNUSON. No, that is correct.

Mr. GRAVEL. The only inconsistency I see, and I call it most respectfully to my colleagues' attention, is that when you move to section 2 of article XII you do not have the simple words of good will, you have the definitive words that they are bound together.

We so often stand here on the floor of the Senate and make great statements, but it is just a statement thrown out there.

Section 1 of article XII is a statement thrown out there for good will. If we do not have that good will, we need something more than that; so we have section 2, which says that the Republic of Panama, during the duration of the treaty, cannot do anything without our agreement, and then, on the other side, in (b) it states that during the duration of the treaty the United States cannot do anything without Panama.

That is the beginning of the marriage. If we are going to have a marriage between the Panamanian people and the people of the United States, then we have entered into—we sort of have a betrothal here, and now we are looking forward to the marriage if we pass the blood test, so to speak.

What my colleague wants to do is become "unengaged," break the vows of the betrothal, and then say, "Let's get married."

Mr. President, I only know how to get married one way, and that is first to get betrothed, to think about it, and then to set it in motion. My friend wants to break the engagement. That, to my mind, would be very tragic. You do not continue with a happy love affair by breaking off the engagement.

Mr. CHURCH. I agree with the Senator. He is infatuated with the language of love. I have already told the able Senator from Alaska that he always makes a very persuasive case, though not always as ardently as he has today, but, nevertheless, effectively.

Senators know that it was a great Frenchman, Ferdinand de Lesseps, who first envisioned, then promoted, and finally managed the digging of the Suez Canal. It is quite possible that the distinguished Senator from Alaska is going to become the Ferdinand de Lesseps of the 20th century in his advocacy of a new sea-level canal.

Mr. GRAVEL. I might say at least the nationality is correct.

Mr. CHURCH. Yes, there is a French connection. [Laughter.]

But I would say to the Senator that if we adopt this reservation, it does not in any way inhibit the United States and Panama from jointly building a new sea-level canal across the isthmus, if that seems feasible. There is nothing in Senator LONG'S reservation that would discourage or deter negotiations between the two countries. Indeed, if the arguments of the Senator from Alaska are valid, and I think they are, the Panamanian Isthmus will prove to be the only practical place for such a canal to be built.

So, whether or not these provisions remain in the treaty, as a practical matter the United States and Panama will be the two countries involved in constructing any sea-level canal that connects the Atlantic and Pacific Oceans.

I hope the Senator from Alaska does prove to be the Ferdinand deLesseps of that great venture. His name will be emblazoned in glory and the people of Alaska, along with the people of the rest of the United States, will hold his memory dear. But——

Mr. GRAVEL. If my colleague will permit me to make a comment, it is getting pretty deep in here right now.

Mr. CHURCH. But the fact is that there are some Senators who do not think that the United States or Panama should covenant in this treaty not to negotiate with any other party in connection with building a sea-level canal in the future. And since they attach great importance to this reservation, I think the better part of wisdom is to accept it and elicit their support when the final vote comes on the treaties, with such a reservation included, particularly inasmuch as the Panamanian Government does not object to the reservation. Thus by accepting this reservation I can not see how the cause could possibly be hindered, but I can plainly see how it could be enhanced. And, I daresay, this observation is equally apparent to the able Senator from Alaska.

I am delighted with the Senator's charts. I have seen them twice now. I am thoroughly convinced by the Senator's arguments that the present canal is rapidly becoming obsolete. I am aware that, only 12 years ago, something over three-quarters of the world's maritime tonnage could pass through the canal, and that today, a short time later, something less than half of the world's maritime tonnage can pass through the canal. And I am aware of the Senator's projection which shows that, by the time we actually transfer ownership and operation of this canal over to Panama, less than 10 percent of the world's maritime tonnage will be able to pass through the canal.

Obviously, the Panama Canal is an old lady. Go down and look at her; she is 64 years old already, and she will be 86 years old when we turn her over to the Panamanians. Between now and then, it is obvious from any reading of the Senator's charts, that the needs of the United States and, indeed, the needs of international commerce will probably call for a sea level canal to replace the present lock canal. It is evident that the United States and Panama will have to get together.

One of the compelling reasons to adopt this treaty is that it will tend to preserve that close cooperation and friendship which will enable us to get together to build the kind of canal with which we can meet the needs of the 21st century.

Those of us who support this treaty look forward. Those who oppose the treaty look backward. That is the difference. I hope that tomorrow two-thirds of the Senators in the Senate of the United States will look forward to the needs of the future, and thus vote in favor of ratifying this treaty.

As manager of the treaty, I am prepared to support the reservation offered by the distinguished Senator from Louisiana. That reservation does not impede any eventual agreement to con-

struct a sea level canal joining the two great oceans at the Isthmus of Panama.

Mr. President, I would like to pose a unanimous-consent agreement.

Mr. HOLLINGS. Will the Senator withhold that for a moment? We are checking for Senator BELLMON.

Mr. CHURCH. May I just explain what the proposal might be?

The PRESIDING OFFICER. The Senator from Alaska has the floor.

Mr. GRAVEL. I will release the floor in just a moment. I just wanted to state that I think I made a fine presentation. But I failed to take account of the eloquence of my dear friend from Idaho. He agrees with what I have to say and then gives me a lecture in arithmetic, that 67 is more than 66. I will reserve any further comments I have because I am waiting very interestedly to head the distinguished Senator from South Carolina, who I know will shed some real light on this subject. I do want to hear him. I had a preview of this at the table, and I believe he joins me in furthering this approach. I would like to yield the floor and say that I will not carry my appeal any further to the leadership. I think they carry the burden of that leadership very well. I wish them well in the next 24 hours. I will make one final plea and appeal to my good friend from Louisiana, who I think, if he were to release his amendment, would absolve us of any difficulties. I do yield the floor and thank my good friend for his courtesies.

The PRESIDING OFFICER. The Senator from South Carolina.

Mr. CHURCH. Will the Senator yield?

Mr. HOLLINGS. I will be glad to yield to the Senator from Idaho.

Mr. CHURCH. First, I will ask the Senator from South Carolina if he wishes a rollcall vote on the reservation he will offer.

Mr. HOLLINGS. I am sure the Senator from Oklahoma and the Senator from Pennsylvania do wish a rollcall vote.

Mr. GRAVEL. And I will join in asking for a rollcall vote.

Mr. HOLLINGS. I am only checking to find out what time would be convenient. I think 5 o'clock would be convenient. Or we can speed it up.

I think 5 o'clock would be convenient.

Mr. CHURCH. I am waiting to hear from the Republican side.

Mr. President, I understand that it is acceptable with the Republican side of the aisle for a back-to-back vote to be arranged. The first vote will be on the Long reservation and the second vote on the Hollings reservation. Both votes will commence at 5 p.m. today, providing we can now proceed to a debate on the Hollings reservation.

Mr. HOLLINGS. Certainly no later than 5.

Mr. CHURCH. I think we are ready now to proceed with that debate. The prerequisites appear to be in order to make a unanimous-consent request feasible.

UNANIMOUS-CONSENT AGREEMENT

I ask unanimous consent, Mr. President, that at the hour of 5 p.m. today the Senate proceed to a rollcall vote on the Long reservation, after which it immediately will proceed to a rollcall on the Hollings reservation.

Mr. GRIFFIN. Reserving the right to object, Mr. President—

Mr. CHURCH. And that the time between now and 5 p.m. today be equally divided between the proponents of the Hollings reservation and the opponents.

The PRESIDING OFFICER. Does the Senator understand time has been set aside for Senator MORGAN.

Mr. CHURCH. Yes.

A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. CHURCH. Does the special order for Senator MORGAN read that he may claim his 30 minutes at any time after 3:30 this afternoon?

The PRESIDING OFFICER. That is correct.

Mr. CHURCH. Then the unanimous-consent request I have propounded is not inconsistent with the unanimous-consent agreement already entered into.

The PRESIDING OFFICER. The Senator is correct.

Mr. CHURCH. Mr. President, I ask unanimous consent that at the hour of 5 p.m. today the Senate proceed to a vote on the reservation offered by the distinguished Senator from Louisiana (Mr. LONG), following which the Senate then vote on the reservation offered by Senator HEINZ, Senator HOLLINGS, and Senator BELLMON, the time for debate on the latter reservation being equally divided between the proponents of the reservation and the manager of the treaty, and that the time begin running now.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

RESERVATION NO. 14

Mr. HOLLINGS. Mr. President, my colleagues, Senator BELLMON and Senator HEINZ, are momentarily not on the floor. I only have a brief statement to make with respect to the reservation. I thought we ought to clear the air.

The PRESIDING OFFICER. Would the Senator like his reservation to be stated?

Mr. HOLLINGS. Let us call the reservation, but I will also have a word to say about the Long reservation.

Mr. President, I call up my reservation No. 14 and ask that it be stated.

The PRESIDING OFFICER. The reservation will be stated.

The assistant legislative clerk read as follows:

The Senator from South Carolina (Mr. HOLLINGS), for himself, Mr. HEINZ, and Mr. BELLMON, proposes reservation No. 14.

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the reservation, which is to be made a part of the instrument of ratification, that any accumulated unpaid balance under paragraph 4(c) of Article XIII at the termination of the Treaty shall be payable only to the extent of any operating surplus in the last year of the Treaty's duration, and that nothing in that paragraph may be construed as obligating the United States of America to pay after the date of the termination of the Treaty any such unpaid balance which shall have accrued before such date".

Mr. HOLLINGS. Mr. President, this is a reservation which is very similar to the measure by the Senator from Oklahoma (Mr. BARTLETT) which we debated some 10 days ago. At that time it was in the form of an amendment. We agreed with the misgivings of the Senator from Oklahoma (Mr. BARTLETT) but said it could be better handled by way of a reservation. There are no new records or arguments to be made, but I will make a more coherent record with respect to our proposal after I comment first on the proposal by the Senator from Louisiana.

It is not my intent in doing so to add to the burdens of the Senator from Idaho and the Senator from Maryland, the managers of these particular treaties. I think Senator CHURCH and Senator SARBANES have done a magnificient job throughout in handling all the difficulties, on and off the floor. It has been a thankless task in some measure. A lot of the good argument has gone on off the floor.

I find perhaps some of the misunderstanding to be that many people do not become more learned in the sense of the exact provisions of these treaties and how they work in the best interests of the United States. Instead they only take up the treaties in segmented fashion by way of amendment. Just a moment ago we heard the treaty called an old lady, and we had our good friend from Alaska (Mr. GRAVEL) talking about further negotiations and studies.

Let me bring into focus, if I can, the real study at hand that prompted President Carter to include article XII, section 2, that is to be stricken by the reservation of the Senator from Louisiana. I oppose the striking of that reservation. I oppose it for the very reason that President Carter included it in these treaties.

We go back to 1965 and, at that particular time, an interoceanic canal commission was formulated by Congress for which we appropriated, over the ensuing 5 years, some $22 million. The exact name was the Atlantic-Pacific Interoceanic Canal Study Commission. Amongst its various duties was trying to study other canal routes than the present lock system down at the isthmus—through countries like Colombia, Nicaragua, Costa Rica, wherever—and the alternatives of the regular excavation versus the nuclear excavation. This intent was foremost in the Canal Commission's mind throughout that 5-year study.

I quote from the record made before the Committee on Foreign Relations, part 4, on page 521, the testimony of John P. Sheffey. Colonel Sheffey, Mr. President, was the Executive Director of the Interoceanic Canal Commission. He presently serves as the executive vice president of the National Association for Uniformed Services, which group, as best I can tell, are not enthusiasts for the treaty. Certainly, Colonel Sheffey, individually, is very enthusiastic about the provisions included in article XII, section 2. He says, on page 521:

When we entered this study in 1965, one of our purposes was to prove that we could build a canal, a technically satisfactory canal, outside Panama because it would give us far

better negotiating leverage to renogiate our relationship with Panama.

So, at the very beginning. the Interoceanic Canal Commission study, amongst other ideas and intents and purposes, said, "Look, if we can really find another route, we ought to look with somewhat of a prejudice or favor for a canal somewhere outside of Panama, if at all possible, so we can better our leverage in negotiating with the Panamanians." It certainly was not a pro-Panama group, in other words.

Having studied it for some 5 years, I then go back to the original part of his testimony, and I read from page 511:

First, as the former executive director of the $22 million Sea-Level Canal Study of 1965–70, I assure you that there are no foreseeable circumstances in which the United States would be likely to consider building a new isthmian canal outside Panama. The only feasible routes are in Panama. The economic, technical, and political objections to the far longer routes in Colombia and Nicaragua eliminate them from practical consideration. Limiting the choice to Panama costs the United States nothing, and in return we get the commitment that other powers cannot meddle in this matter.

I quote again from page 521, when Senator SARBANES is questioning. The distinguished Senator from Maryland is asking then Colonel Sheffey:

"So what we give up"—this is the initial article XII, section 2—

'is that right to build a sea-level canal outside Panama, and we are really not giving up anything.

Colonel SHEFFEY. It is giving up nothing whatever, Mr. Chairman.

Senator SARBANES. The Panamanians, as I understand it, give up at least the right to allow some other power to come into Panama to build a canal.

Colonel SHEFFEY. It is an extremely valuable quid pro quo. We are getting something for nothing.

That, Mr. President, is a record that should be made and it should be finalized.

I might add, if someone really wishes to debate it, that Saudi Arabia with anybody else would be a consortium. When you have billions running around and you want to invest, you can pick up Ghana, Tanzania, Argentina, or anybody else and call that a consortium, inasmuch as they have some purpose or reason. There is plenty of money available for oil passage, for oil transport, over a sea-level canal.

I may also add, along this line, that Colonel Sheffey pointed out, rather than being an old lady as the treaty was called earlier, on page 511, he said:

Certainly, the foreseeable traffic cannot support two isthmian canals, and 95 percent of the world shipping forecast for the year 2000 will still be of sizes that can pass through the present canal. The 5 percent of superships that need a larger canal cannot possibly support its costs, even in Panama.

So, to many, it was not an old lady, nor was it to this Senator. But let us look at page 63, finally, of this large, voluminous report that you cannot see, of course, in the CONGRESSIONAL RECORD, but which measures 3 inches thick.

The choice of a feasible sea-level canal excavated by conventional means is limited to Routes 10 and 14.

This is quoting directly from page 63 of the study. In other words, Panama is the only feasible location.

I think that record ought to be made, because many people, in the very origins of this debate last August and September, were running around pellmell, saying let us do something with Nicaragua. The very same Senators that were saying that had forgotten that, as a result of this particular finding—that is, of the Interoceanic Canal Commission—the United States gave up its rights to build a sea-level canal in Nicaragua. Nicaragua had been pressing for some time, like the Panamanians, to rid itself of the last vestiges of colonialism. Certainly, written-in perpetuity was given under the Bryan-Chamorro Treaty in 1914, when then Secretary of State William Jennings Bryan under President Woodrow Wilson, got, in perpetuity, the exclusive right for the United States to build a sea-level canal in Nicaragua. The Canal Commission said, as I read on page 63, that a canal there is not feasible. It would be some 140 miles in length through Nicaragua, versus less than 40 miles in Panama. It would cost $11 billion—that is the 1975 findings—in Nicaragua, versus some $2.7 billion in Panama in 1970 dollars. It would displace some 370,000 inhabitants in Nicaragua; relatively little displacement in Panama. And, of course, Nicaragua is subject to earthquakes and Panama is not.

Having made that finding, it then summoned up by convention the Bryan-Chamorro Treaty and rescinded that right by a vote of 66 to 5 on February 21, 1971. I would like to see a little bit better institutional memory around this body so that when we do make the studies, we take advantage of them and we do remember the history made and we are not running pellmell down the road, as the opposition would picture it, just to please the Panamanians and the State Department.

So much for the Long reservation. I understand the leadership has worked its will. I would follow it. I would not have any misgivings about the judgment of the Senator from Idaho, but I think President Carter acted wisely when he had our negotiating team include article XII, section 2 (a) and (b) with a signoff by both parties for an exclusive right within the Republic of Panama for the sea-level canal.

Now, Mr. President, we have called up the reservation with respect to the contingent cost debate.

The treaty as written provides that the Panama Canal Commission shall pay a sum of $10 million annually to the Government of Panama from any surplus revenues that are collected. Not only should we pay annually $10 million but, insofar as revenues permit, an additional $10 million each year, to be carried over each year and be taken from the cumulative revenues during the remaining period between the date of ratification and the date of the treaty's expiration on December 31, 1999. The question is, should there be a residual liability to be paid by the United States from that amount, if any, that is carried over and that would apparently be due and owing in that we have not been able to satisfy them from a previous year's collection of some $10 million.

The treaty itself says, "As to be agreed."

We never have been able to see the agreement. I want to agree with Senator BARTLETT that I do not think that a statement by the distinguished Economic Minister, Nicholas Barletta, out in San Francisco, to the Commonwealth Club constitutes an agreement. I am glad San Francisco and the Commonwealth Club invited him and I am glad he made the statement. But we get letters from Secretaries of State and Defense, and everything else, saying, "No, it ain't so."

We have answers in an indirect manner through the Ambassador of Panama, Gabriel Lewis. "I am not going to answer your letter," says Omar Torrijos to Senator BARTLETT.

I want to look and see what Nicky Bartletta said out at the Commonwealth Club in San Francisco. But, I rather agree with Senator BARTLETT, I am sure Senator BELLMON agrees with him, that that does not suffice. We believe, however, a reservation does suffice.

Now, here is what we are trying to make certain of. I will read from the particular section of article XIII, 4(c):

(c) An annual amount of up to ten million United States dollars ($10,000,000) per year, to be paid out of Canal operating revenues to the extent that such revenues exceed expenditures of the Panama Canal Commission including amounts paid pursuant to this Treaty. In the event Canal operating revenues in any year do not produce a surplus sufficient to cover this payment, the unpaid balance shall be paid from operating surpluses in future years in a manner to be mutually agreed.

Now, when they agree and accept our ratification with this resolution of ratification, then they have agreed. We do not have to run around like a dog chasing its tail to find where in the dickens has the agreement gone. Because our reservation says it simply, and I refer now to the reservation by the distinguished Senator from Pennsylvania (Mr. HEINZ) and the distinguished Senator from Oklahoma (Mr. BELLMON), and myself. And I quote:

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the reservation, which is to be made a part of the instrument of ratification, that any accumulated unpaid balance under paragraph 4(c) of Article XIII at the termination of the Treaty shall be payable only to the extent of any operating surplus in the last year of the Treaty's duration, and that nothing in that paragraph may be construed as obligating the United States of America to pay after the date of the termination of the Treaty any such unpaid balance which shall have accrued before such date".

We can see then what we are trying to do is make for the agreement as provided for in the body of the treaty in that expression, "in a manner to be mutually agreed."

We hear rumors. We hear whispers. We hear hints.

Go look at the Commonwealth statement. Look at the letter of the Secretary of State or the Secretary of Defense.

We hear, "Look at the Comptroller General who said he had misgivings and

now does not have misgivings." We say, "Look at all these things."

None of those, of course, constitutes an agreement. Any lawyer would advise us of that. It takes two parties to agree. With the resolution of ratification, with our reservation, if the Panamanians accept that particular ratification, then the two have agreed.

Mr. President, during the past few days, the distinguished Senator from Oklahoma (Mr. BELLMON) and I have looked anew at the understanding we have proposed to the Panama Canal Treaty concerning the contingent payments provisions under paragraph 4(c) of article XIII. With an eye to expediting the debate and offering the best possible approach, we have worked along with the distinguished Senator from Pennsylvania (Mr. HEINZ), who has a reservation dealing with the same section of the treaty. What we have done now is to combine the best features of Mr. HEINZ' reservation and the measure proposed by Mr. BELLMON and me.

Article XIII, paragraph 4(c) provides that the Panama Canal Commission shall pay a sum of $10 million annually to the Government of Panama from surplus revenues.

This contingency payment—contingent upon adequate surplus revenues—is in addition to other payments provided Panama under the terms of the treaty.

The paragraph goes on to say that in the event that there is insufficient revenue to make this $10 million payment, the obligation will carry over into subsequent years.

The issue is whether, in the absence of sufficient revenues to make some or all of these contingency payments, the United States would have an obligation to pay the accumulated deficiency upon the termination of the Panama Canal Treaty on December 31, 1999.

The Department of State argues that the United States would have no such obligation under the treaty.

However, the history of the matter discloses considerable uncertainty in other quarters, and this uncertainty is the origin of the reservation that Mr. BELLMON, Mr. HEINZ, and I are calling up.

The reservation is simple and to the point and reads as follows:

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the reservation, which is to be made a part of the instrument of ratification, that any accumulated unpaid balance under Paragraph 4(c) of Article XIII at the termination of the Treaty shall be payable only to the extent of any operating surplus in the last year of the Treaty's duration, and that nothing in that paragraph may be construed as obligating the United States of America to pay after the date of the termination of the Treaty any such unpaid balance which shall have accrued before such date.

Mr. President, we have learned during our long deliberations on the Panama Canal treaties the virtues of clarity.

We have seen that differences of interpretation can cause serious disagreement.

When there is a difference of interpretation—or even the possibility of a future difference—the best recourse by far is to be specific now and settle the matter now, during the treaty ratification process.

And it is clear beyond doubt that unless this particular matter is clarified now, there could be a substantial difference of interpretation later on.

Oh, I know that there are all kinds of State Department assurances and White House assurances circulating through this Chamber to the effect that there is no such obligation.

And I have seen the letter from Comptroller General Staats saying that no understanding is necessary.

Yet last November 30, when he appeared before the Subcommittee on the Panama Canal of the House Marine and Fisheries Committee, the Comptroller General was not so certain about what our obligations were in this regard and he indicated that he had not yet formed an opinion on the matter.

Now he has—but that is not to say that everyone down in Panama agrees with him. And Governor Parfitt, Governor of the Canal Zone and President of the Panama Canal Company, in his February 1, 1978, testimony before the Senate Armed Services Committee, alluded to the possibility of differing interpretations on the contingency payment.

In other words, there is sufficient debate about what the treaty really means; that we have been sent running off to months-old testimony, scurrying to the files for copies of letters from various officials and departments, looking at old press clippings, and all the rest.

Imagine nearly a quarter of a century down the line, when those in charge of policy get out their copies of the treaty and start the debate all over again. Imagine the confusion, the disagreement, and the possibility for ill-will. Arguments like that at the time of the turnover could cancel out many of the other advantages accorded us by these treaties.

How much simpler then—and wiser, too—to deal forthrightly with the situation now. We can do so easily and effectively in the Resolution of Ratification. Then there can be no doubts at century's end. The Panamanians will know—we will know—what the terms of the treaty provide and what they do not provide.

There will be no possibility of false expectations in Panama or anywhere else. Instead of debate and discord in the year 2000, the transition can be consummated in an aura of friendship and cooperation that is the whole purpose of these treaties.

Mr. President, I do not believe the Senate needs or wishes to consume any considerable period of time discussing this matter. We had a rather full debate on the general issue week before last when Senator BARTLETT offered an amendment similar to our reservation.

The majority correctly decided that the matter could be effectively resolved by means other than an amendment. The reservation we propose today will solve the problem and clear the air. I ask the Senate's speedy approval of our reservation.

Mr. President, I am glad to yield to the distinguished Senator from Oklahoma. As he makes his way to his seat—we cannot have this on film, but those listening on radio should know—I wish to state my feeling. I have worked on this canal problem for more than 10 years. I have listened and I have learned and I have visited, and I continue to listen and try to learn even more. I believe that the most meaningful statement made about the Panama Canal treaties was a very sober, cogent, and unemitonal but very inspiring statement made by the Senator from Oklahoma (Mr. BELLMON). He studied every angle. It is not an easy question. It is complex. There is no clear-cut answer. These treaties are not going to settle every problem we have in Latin America or even with Panama.

Senator BELLMON, on the day of the ratification of the neutrality treaty, stood tall and strong in the U.S. Senate Chamber. He said, "I believe that the people of Panama would like to be treated the way we would like to be treated by them." As a result, he voted in favor of the treaty, and I thought it was downright eloquent. I admire him for it, and I am glad to be associated with him on this reservation.

Mr. BELLMON. Mr. President, I thank the Senator from South Carolina for his very kind and complimentary remarks. I am pleased to join Senator HOLLINGS and Senator HEINZ in sponsoring this reservation. I will be very brief. Senator HOLLINGS has made the case extremely well, and I have very little to add to what has been said.

Article XIII, section 4, paragraph c states:

An annual amount of up to ten million United States dollars ($10,000,000) per year, to be paid out of Canal operating revenues to the extent that such revenues exceed expenditures of the Panama Canal Commission including amounts paid pursuant to this Treaty. In the event Canal operating revenues in any year do not produce a surplus sufficient to cover this payment, the unpaid balance shall be paid from operating surpluses in future years in a manner to be mutually agreed.

Many of my constituents in Oklahoma who contacted our office to express opposition to the canal treaties had based their opposition on their fear that we are not only giving the Panamanians the canal but also are going to pay them a sizable sum of money to take it off our hands. They base this fear on what I consider to be misinformation that has been circulated, that this language from article XIII, section 4, means we are going to pay the Panamanians a lump sum after the year 2000.

The last sentence I read from paragraph c has given rise to different and potentially expensive interpretations. The Panamanian negotiators have claimed that a "rollover" effect is possible. A "rollover" effect is, quite simply, that if Canal toll revenues are not sufficient to pay Panama the $10 million stipulated under article XIII, section 4, paragraph c then the debt will roll over

to the following year. Under this interpretation it is conceivable that by the year 2000 the United States would have to pay Panama a lump sum of $220 million in order to turn the canal over to Panama in a state which is free of liens and debts as is called for in Article XIII, Section 1.

Our negotiators have stated unequivocally that, at the expiration of the Treaty, the U.S. will be under no obligation to pay any unpaid balance from previous years because of such a rollover. The $10 million payment is a contingent obligation based only on available toll revenue surplus. The reservation will lay to rest any varying interpretations of the article which might arise in future years.

My support of this reservation is intended to protect the American taxpayer from a future $220 million surprise should these treaties be ratified and should the revenues from tolls be inadequate to pay the extra $10 million a year.

Mr. President, I believe that the reservation which Senator HOLLINGS, Senator HEINZ, and I have offered to the Senate is a way of clearing up this possible misunderstanding, that it should help to remove some of the opposition that many people feel toward the treaties, and that this is in keeping with the intention of our negotiators at the time the negotiations were completed.

I urge that this reservation be adopted, so that this uncertainty can be cleared up and so that the fears and doubts which many Americans have can be removed.

Mr. HEINZ. Mr. President, I compliment the Senator from Oklahoma (Mr. BELLMON) on his very fine statement, and I commend the Senator from South Carolina (Mr. HOLLINGS), as well, for his remarks regarding the reservation that is now before the Senate.

The reservation is a joint effort of Senator HOLLINGS, Senator BELLMON, and me, in order to lay to rest the issue that my colleagues have addressed at considerable length. In their statements they have pointed out the problems involved in this matter.

There has been a great deal of interest in this reservation, and several other Senators have expressed a desire to join us in sponsoring it. For that reason, I ask unanimous consent that the names of Senator CANNON, Senator BROOKE, Senator DECONCINI, Senator PAUL HATFIELD, and Senator NUNN be added as cosponsors of the reservation.

Mr. HOLLINGS. Has the Senator included the names of the Senator from Nevada (Mr. CANNON) and the Senator from Massachusetts (Mr. BROOKE)?

Mr. HEINZ. I have included both in my request.

The PRESIDING OFFICER (Mr. GLENN). Without objection, it is so ordered.

Mr. HEINZ. Mr. President, I offer this reservation, together with Senator HOLLINGS and Senator BELLMON, who have had similar concerns about this treaty. The content of the reservation is similar to the amendment offered by Senator BARTLETT some 10 days ago, on April 7.

Since this issue was thoroughly debated at that time, and since Senator HOLLINGS and Senator BELLMON have gone into considerable detail, I am not going to make an extensive statement at this time. Suffice it to say that I supported the Bartlett amendment because I believe it is vital that the Panama Canal Treaty be clarified with respect to the status of the $10 million per year contingency payment.

The Bartlett amendment was tabled, but the issue is still with us. However, since it is essentially one of interpreting the existing treaty language, I believe it can be as effectively handled by a reservation or an understanding as by an amendment, so long as such a reservation, as is the case with this one, is incorporated into the text of the Resolution of Ratification.

The objective of this reservation is to make clear that the $10 million contingency payment, which is to be paid only from surplus revenues, the so-called contingency payment specified in article XIII, paragraph 4(c), does not constitute—and I emphasize "not constitute" —a debt which in any way extends beyond December 31, 1999, and the expiration of this treaty, and therefore will not become an obligation to the American taxpayer.

Some doubt arose about this point because of ambiguities in the Treaty language and alleged statements by Panamanian officials indicating contrary expectations. Some of that confusion has since been cleared up. First, our Government has made clear its policy will continue to be to set tolls at break-even levels so as not to guarantee an annual surplus which would then be paid to Panama. Second, the Panamanian Government has made clear that its interpretation of the treaty parallels our own with respect to the status of these payments. The statement of the Panamanian minister of planning and economic development, Nicholas Barletta, in his February 28 speech in San Francisco has already been printed in the RECORD and those remarks have been cited in debate on several occasions, so I will not take the time to quote it now.

That statement, however, is helpful in that it clears up some concern about the current Panamanian view on this question. Of course, Dr. Barletta's comment remains only a statement of opinion. It is reassuring, it is welcome, but it is, nonetheless, not binding.

Similarly, the April 4 letter from the Comptroller General to Senator STONE, to which Senator HOLLINGS referred and which was also put into the RECORD on April 7, provides reassurance. Again, it is welcome reassurance, but it does not necessarily bind the Panamanians.

I believe it is important to lay this matter to rest once and for all, and to do that we need language which will have to be formally accepted by both the United States and Panama when the instruments of ratification are exchanged.

The reservation which we offer achieves that objective. The reservation defines and limits our obligation with respect to the payment described in article XIII, paragraph 4(c), and it limits our obligation in terms of both amount of money and duration. The reservation leaves no question that although unpaid balances may "roll over" or accumulate from year to year, at the time the treaty is terminated, that is to say December 31, 1999, any payment due may not exceed the amount of any surplus in the final year of canal operation under this treaty. Further, no payment may be made in any event after December 31, 1999.

So what this language does is to clarify and make a part of the resolution document two essential points. First, that the United States owes nothing after the treaty terminates; second, that we cannot be expected or required to pay an excessive amount, conceivably as much as $220 million, in the final days before the treaty terminates.

Mr. President, this reservation clearly limits the financial obligation of the United States and in doing so it limits the financial obligations of the taxpayers of the United States. This is, I believe, the way the negotiators on both sides intended to write the treaty. Unfortunately, in my judgment, that is not the way they did write the treaty. I think that the adoption of this reservation, therefore, is a necessary and responsible addition to the Panama Canal Treaty.

I am hopeful—indeed I am confident—that it will be acceptable to both proponents and opponents of the treaties, and I urge its adoption.

Mr. President, I reserve the remainder of my time.

I yield to the Senator from Illinois.

The PRESIDING OFFICER. The Senator from Illinois.

Mr. PERCY. Mr. President, I thank my distinguished colleague.

The Senator from Illinois wishes to make some comments that might run as long as 15 minutes or so. Is that perfectly all right?

Mr. HEINZ. Yes.

Mr. PERCY. Mr. President, when I returned from a visit to the Canal Zone in January——

The PRESIDING OFFICER. If the Senator will suspend, the Senator from Pennsylvania only has 4 minutes remaining.

Mr. PERCY. Mr. President, will the Senator yield?

Mr. HEINZ. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. HEINZ. How is the time divided and among whom? Who controls the remainder of the time?

The PRESIDING OFFICER. The time is divided between the Senator from Pennsylvania and the Senator from South Carolina on one hand and the floor manager of the treaty on the other.

Mr. HEINZ. Mr. President, I am not sure of the position of the floor manager of the treaty. Perhaps he will be willing to yield some time to Senator PERCY.

Mr. MATSUNAGA addressed the Chair.

The PRESIDING OFFICER. The Sentor from Hawaii.

Mr. MATSUNAGA. How much time does the manager have?

The PRESIDING OFFICER. Forty-one minutes.

Mr. MATSUNAGA. I thank the Chair.

Mr. President, the committee is not opposed to this reservation and is willing to accept the reservation, and in the interests of time I am willing to yield back all of our time.

Mr. HOLLINGS. Mr. President, have we had the yeas and nays ordered yet?

The PRESIDING OFFICER. The Senator may yield it to another Senator.

The vote on this does not come until 5 o'clock by previous agreement.

Mr. MATSUNAGA. That is correct. But I was about to ask unanimous consent.

The PRESIDING OFFICER. This comes after another vote that occurs first at 5 o'clock. This comes after that other vote.

Mr. MATSUNAGA. I understand that, Mr. President. But I was about to ask unanimous consent that inasmuch as there were no other Senators who wished to speak on this amendment——

Mr. STONE. Mr. President, I wish to ask unanimous consent if the Senator will yield for that purpose.

Mr. MATSUNAGA. I am happy to yield for a unanimous-consent request.

Mr. STONE. I thank the Senator.

Mr. President, I ask unanimous consent that my name be added as a cosponsor to the Long amendment, which is scheduled for vote this afternoon, and the Heinz amendment which is also scheduled for a vote this afternoon.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MATSUNAGA. Mr. President, if there be no other requests and if the cosponsors of the amendment are willing to yield back their time, I ask unanimous consent that the Senator from North Carolina (Mr. MORGAN) may proceed under a previous order of the Senate for a period not to exceed an hour but in no case beyond 5 o'clock, when the vote will be taken back to back on the amendments pending.

Mr. HEINZ. Mr. President, as I understand the request of the Senator from Hawaii, we will yield back the remainder of our time on the reservation, that is the Hollings-Heinz-Bellmon amendment, and the Senator from Hawaii will also yield back the remainder of his time.

I know at this point of no request for time to speak further on reservation 14. Does the Senator know of anyone?

Mr. HOLLINGS. No, I do not know of any. I would be prepared to yield back the time.

Mr. HEINZ. I would be more than prepared, with that understanding.

Mr. MATSUNAGA. Then, Mr. President, I make this unanimous-consent request.

The PRESIDING OFFICER. Does the Chair understand the Senator from Illinois was not speaking on 14; is that correct?

Mr. PERCY. The Senator from Illinois would like to speak on an unrelated subject of about 15 minutes' duration before 5 o'clock if it is at all possible, if there is no other pending business.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Hawaii? If not, it is so ordered.

The Senator from North Carolina is recognized.

Mr. MORGAN. Mr. President, we have been on this issue now for approximately 2 months, and I suspect that about everything has been said on behalf of these treaties that can be said, as well as all that can be said against the treaties, and I doubt that anything I could say this afternoon would change the minds of any of those who are prepared to vote.

But I would like to take a few moments of the Senate's time and state for the RECORD some of my thoughts about these treaties, some of the things I have studied, and some of my beliefs about them, and why I intend, barring any unforeseen developments between now and tomorrow afternoon at 6 o'clock, to cast my vote in favor of ratification of the treaty before the Senate, as I did for the Treaty of Neutrality which was ratified by the Senate some 2 or 3 weeks ago.

I would say in the beginning, Mr. President, that there are a lot of things in these two treaties with which I disagree, but I doubt that anyone can draft any treaties or that any treaties could be drafted with which I would agree completely and in totality. As a matter of fact, I doubt if treaties could be drafted that would be satisfactory to any Member of the Senate as well as the Government of Panama.

But, taken as a whole, I believe the treaties are in the best interests of the United States, the national security of this country and, therefore, I think they should be ratified.

I want to address my remarks primarily to three topics this afternoon in the debate, if time permits. I want to talk a little about the history, which has led me to the conclusion that the time for a new treaty arrangement with Panama is now. And then I want to address the tough questions which we all have to answer about the second treaty dealing with the Panama Canal. And, finally, I want to speak of my personal convictions about the canal issue and about my hopes for our country.

No issue to my recollection has aroused so much debate and controversy, and certainly no issue during my 4-year tenure in the U.S. Senate has generated so much mail from the American people. While at times the communications we have received have been less than pleasant, I am refreshed and I am reassured by the public debate on this issue.

I have just returned from a long weekend of travels back and forth across the State of North Carolina where I have talked to literally hundreds of people, and I am impressed with the knowledge of the people concerning the issues before us, and I am impressed with the willingness of what I believe to be the majority of the people of North Carolina to place their trust and their confidence in the majority of the Members of this Senate.

We have a great country, Mr. President, and I believe that the greatness of this country requires us to make some decisions that a lesser country could not afford to make. It is this time of decision which prompts me to speak about the Panama Canal treaties.

Let me say, Mr. President, that my concern about these treaties did not begin in August of last year when the President of the United States announced that an agreement had been reached between the Governments of Panama and of this country. My concern and my interest began during the first year that I arrived in the Senate.

Like so many of my colleagues and like so many of my constituents in North Carolina when I was first approached about the idea of a new treaty on the Panama Canal which might eventually turn over control of the canal to the Panamanian Government, I was repelled by the idea. Like more than a majority of the Members of this Senate, when asked in 1975 to join in a resolution expressing our displeasure and opposition to any kind of a new treaty with Panama, I joined in that resolution.

But like so many of my colleagues and my constituents I joined in sponsoring that resolution without first taking the time to ascertain whereof I was speaking.

Later on, in the latter part of 1976, on behalf of and at the behest of another committee on which I serve, the Select Committee on Intelligence, and at the request of my distinguished chairman, the senior Senator from Hawaii (Mr. INOUYE), I undertook a trip, along with my assistant, Mr. Ricks of that committee, to visit the Canal Zone, not for the purpose of talking about the Panama Canal Treaty but looking at the Southern Command of the U.S. military forces, looking at the defense intelligence agencies of that command.

It was while I was there and talking with the people in the defense intelligence agencies of our country, and talking with the American Ambassador, in going through the Canal Zone and meeting with the Citizens Association of the Canal Zone, and with the rank and file of the Panamanians, that I came home in January of 1977 and said to the people of my State that I felt that some adjustments and some rearrangements ought to be made with the people of Panama; that we had come a long way from the days of gunboat diplomacy, a diplomacy that was accepted by most all of the world when we acquired the right to build that canal, and that, if we expected to develop a relationship which would help us develop some kind of solidarity in the Western Hemisphere, we had to do what, in my mind, was right, and to arrive at a new relationship with the people of Panama. At the same time, we had to provide for the national security of this country, and provide that the canal would remain open for shipping not only for the United States but for all of the world.

I expressed my opinion through the media in North Carolina after that, having no idea that within the period of a few months an agreement would be reached between our two countries.

I can understand the frustrations of the Panamanian people, who, time and time again, since the day that the 1903 treaty was signed, have expressed their indignation and their displeasure at the terms of the 1903 treaty.

We cannot right all the wrongs that have been committed in this country, Mr. President, in years past, because if we did we probably would give this country back to the Indians. But I think that when wrongs have been committed, even though they were right in the eyes of the world at the time that they were committed, and they are still causing dissatisfaction, that we are big enough in this country to take a look at them and reexamine ourselves. We are a great enough and strong enough nation to do what is right, and to look at the facts.

The people on that little isthmus that now constitutes the country of Panama have long been a furiously nationalistic people, almost since the date when the country was discovered by the Spanish explorers in 1501, and since the days when Christopher Columbus visited it in 1502. The history of that isthmus did not begin with the United States. Some of my friends have said to me, "You know, after all, what Panama is, we in the United States made it."

I am not sure that is true. In 1529, over 400 years ago, the Explorer Cortez drafted a plan for a canal route. In 1534, again more than 400 years ago, the King of Spain ordered a survey for a ship canal. In 1535 there was a highway built across the Isthmus of Panama, where the Spaniards, having brought their gold up from the west coast of South America, offloaded it at this narrow 50-mile isthmus and carried it across the isthmus on land, and then put it on their ships which carried the gold to Europe. At one time, the three most thriving metropolises in the whole Western World were Panama City, Mexico City, and Lima, Peru.

What I am saying is that Panama has been a center of commerce for the world a long, long time and has been a most independent nation. In 1814, nearly 90 years before we began to get involved in the building of the canal, the Spaniards attempted to construct a canal, but they were interrupted by a revolt. Again in 1821, Panama, apart from the country of New Granada, severed relationships with Spain at the time of the Latin American independence movements. At that point, Panama joined the country of Colombia. From that time until the independence, which we helped bring about by revolution in 1903, time and time again these furiously nationalistic people tried to establish their own province, but time and time again their revolutions were put down.

I point that out to say that the nationalistic tendency in this part of the world is not something of recent origin, but something that has existed since the very founding of the Nation. It is something that we in this country have to recognize and ought to deal with. We have to deal with it, Mr. President, because I believe that it is in the national interest of this country that we remove some of the sources of irritation to our Latin American neighbors that have prevented us from building the kind of solid support there that we seek from those countries.

As I returned home from Panama in 1976, I stopped by for a day or two in Mexico City. While visiting there, I said to the American Ambassador,

How are our relations with Mexico? Do they trust us? Are they afraid?

He said to me,

Well, Senator, I think relations between Mexico and the United States are pretty good, considering the fact that on the 13th of September of every year the Mexicans have a national celebration in which they stand in Chapultapec Castle and read off the names of the young cadets that we Americans killed in storming that castle in Mexico City in the 1840's.

Three times since the turn of the century we have used military force in the country of Mexico. Thirty-eight times, or maybe 39, since 1891, we have used force in Latin American countries. No later than the last decade, we used military force in moving into the Dominican Republic.

So when we study the record of the United States, I think we can readily see why many of our Latin American friends to the south are somewhat dubious of us, and somewhat afraid to join into meaningful coalitions for the protection of all of the Western Hemisphere.

I was speaking with the Ambassador from Mexico who serves here in Washington sometime ago. He is a great friend of the United States, and he said to me, "Senator, did you know that your country had taken half or more than half of our country in the last 100 or so years?"

That astounded me. I knew we had annexed Texas. I did not fully realize we had taken Texas, New Mexico, Arizona, California, and the area covered by Nevada, all in the last 100 or so years.

You know, those of us who live down in the South are not quite over the Civil War yet. We live with our brothers from the North, we speak the same language, and yet I must confess to you that there are animosities in the South today against the people from the North. Can you imagine the kind of fear that must rest in the minds and hearts of these people who live to the south of us, who do not speak our language, and who have seen us time and time again, all in the interest of protection of American property or for the purpose of collecting levies, or for whatever reasons may have existed—can you imagine their fear when, we have used military force against them so often?

Mr. President, as I have examined all of these facts, I have concluded that it is time that we in this country let the world know and let our neighbors and friends in the Western Hemisphere know that we want to work together to build a unified front against the ever-expanding and increasing communism in this world. It disturbs me, Mr. President, when I look at a map of the world. If you will, visualize a map of the world and picture in your mind the countries that are controlled by Communist forces and under the influence of Communist forces. If you look at that map, you will see all across the top of the continent of Europe nothing but red: the Soviet Union, East Germany, Czechoslovakia, Romania, Yugoslavia, and I could go on. Picture in your mind's eye the map of Asia, and look at the great land masses of China, Vietnam, North Korea, and others. You know, there would not be a whole lot of land left where there is freedom, where there is a free and democratic society. Really, when you look at it, the Western Hemisphere is about all that is left, with only one spot of a Communist-dominated country. Mr. President, I believe it is in the interest of this country that we do something about it.

For example, we have 2,200 miles of common border with our neighbor to the South—Mexico, a great neighbor and a great friend. There are 60 million people in Mexico, and the population is expected to double in the next 19 years. They are living in crowded conditions. They are living on about 12 percent of the arable land.

Today, because of the great poverty in that area, we are constantly troubled by illegal aliens who cross the border and come into the United States. We cannot control that because of this 2,200 miles of border.

Thank goodness, I see no tendency despite this poverty of our neighbor to the South—Mexico—turning toward communism. But I will say this to you, Mr. President, that there is very little middle class in Mexico. As I drove through the suburbs of Mexico City I observed poverty, the likes of which I have never seen. There are people there who are just ripe for the picking by some Communist leader who has a knack for inspiring the people. If you were living in abject poverty, Mr. President, and had no hope under the present system, you would be a lot more inclined to follow any leader who might come along.

Yet, Mexico, with all of its poverty and all of its needs for economic assistance, is afraid of our country, with all its wealth. They are afraid of the "imperialistic" United States that has not only taken more than half of its country away from them, but also has, since the turn of the century, used military force on so many different occasions.

That is why it is important that we not only do something to improve our relations in Latin America, but also to improve our relations with the country of Panama, which I think has great affection for the United States.

Mr. President, I have heard a lot of talk about General Torrijos. I would say, in all fairness, that I think General Torrijos is a strong-armed Latin American leader, but I have heard very little said about other leaders of Panama.

On my visit, I sat in the office of the President of Panama for more than a half-day, a man named Lakas, a first-generation Panamanian whose mother and father came from Greece, a man who was not a political leader but a contractor, who accepted the challenge of the presidency of that country in order to try to do something to improve the quality of life and the plight of the people there.

President Lakas was educated in America. He spent 7 years at Texas A. & M., and if you closed your eyes, Mr. President, you could almost hear our late

President Lyndon Johnson speaking, or John Connally, or someone else with a typical Texas accent.

I went to the office of the Minister of Economics and Planning, a very important office in that country. I found there a man named Mr. Barletta, educated at North Carolina State University where he received a B.A. degree in agricultural economics; where he received a master's degree in agricultural economics, and from where he went on to get his doctorate degree at Chicago; a man who was schooled in the American system of free enterprise; a man who has been recognized by almost all who know him as one of the brilliant minds of all of Latin America.

No one can convince me that Mr. Barletta has any Communist leanings.

I visited with the Minister of Foreign Affairs, a man who was educated at La-Salle University and Stanford University.

These people know what life in America is like, and they are the people who literally run the country on a day-to-day basis. It is not to say that Torrijos is not a strong man. He came from a major's rank in the National Guard, and sometimes that frightens us.

I see a real desire on the part of the people of Panama and the government leaders. They want to be friends with us. They want to improve their plight.

Mr. President, I go back to what I said earlier, these people are furiously nationalistic. It did not begin with the time that we began negotiating the treaties. Some 53 times between 1846 and 1903 the people living in this small province of Panama tried to secede from Colombia, but they were not able to do so. It was only when we promised to protect them in their revolt that they were able to do it. I think there is no question but that we did protect them. Because of that, and because of their desire to be free, they were so very disappointed by the 1903 treaty.

What happened? The French company tried to build the canal from somewhere around 1878 to the time 1885. The company failed because of the loss of about 20.000 lives to malarial fever and yellow fever and had gone bankrupt. They wanted to salvage what they could from their venture. They approached us and asked us if we would pay them $40 million to take over their assets.

Of course we were interested. We had tried in the 1820's to get the right to build a canal. We had been turned down by Colombia because they were afraid of us. We tried again in 1846 to get the right to build the canal and were turned down because they were afraid of us, even though they did let us build a railroad on the condition that we agree to let them use the railroad to protect the sovereignty of the province of Panama.

I point out something I have not heard mentioned on the floor of the Senate. In 1868 the Secretary of State William Seward, negotiated a treaty with Colombia which would have given the United States the exclusive right to construct an isthmian canal. Again it was rejected by the Colombian Senate.

Nevertheless, when we were approached in 1902 and 1903, we were willing to bargain. What happened? We went to Colombia and said, "We want to negotiate a treaty to build this canal. We want to take over the assets." All we asked for was the right to construct the canal and to maintain it until the year 2000. We agreed to pay the French company, whose stock was held by a man named Bunau-Varilla, $40 million, to pay Colombia $10 million, and an annual annuity of a quarter million dollars.

Once we had done that, again the Senate of Colombia turned it down.

Mr. President, we had some idea they were going to turn it down, so we had been doing a little footwork in this country through Mr. Bunau-Varilla and through a lawyer in New York by the name of William Cromwell. We sort of expected it so we were laying the foundation to generate another rebellion.

Bunau-Varilla was very much interested in bringing this matter to a conclusion because his rights ran out in 1904. When the Colombian Senate rejected that treaty in August of 1903 his forces went to work. During August, September, and October, we helped to bring about a revolution. Bunau-Varilla led the people in the province to believe that if they would just declare their independence, American warships would appear off the coast to protect the revolutionaries and to prevent Colombia from putting down the revolution in their own country.

So on November 2 and 3, just as he had planned, the Panamanians declared their independence, just as they had been led to believe, our warships appeared off the coast. And just as they had been led to believe, we refused to comply with our commitments of the 1840's refusing to let the Colombians use our railroad to transport their troops.

So the revolution came about.

I do not think anyone can really say we fomented the revolution, but I think it is pretty obvious that Bunau-Varilla knew from us what was going to happen. After that, we recognized Panama as a nation within 3 days.

In less than 2 weeks, right here in Washington, Secretary of State Hay had negotiated a treaty with Bunau-Varilla. All that we asked of Bunau-Varilla, who had become, through his own devices, the new minister for the State of Panama, was to make a treaty with the State of Colombia. But this Frenchman, who had a great deal to gain if the treaty were passed and because we were going to pay his company $40 million—and he personally, as a stockholder, about $400,000—did not want the Senate to dillydally around. So when he got the treaty that Secretary Hay offered to him, he made it a little more agreeable than what we had even asked for. He struck out the 2000 year from the lease and put in "in perpetuity." He struck out the width of the Canal Zone of 5 kilometers and put in 10 miles. He gave us the right to control immigration and trade and even to disband their army—an agreement much more generous than anyone had hoped.

As a matter of fact, Senator Money of Mississippi, in 1904, claimed that the treaty "comes to us more liberal in its concessions * * * than we * * * ever dreamed of having . . . In fact * * * it sounds very much as if we wrote it ourselves."

The past president of the American Bar Association, a man by the name of James Carter, by the way, called the whole affair a "crime."

What I am trying to say is that the treaty with the new country of Panama was pretty generous to the United States and it was from the day that treaty was signed that the trouble began. When Mr. Bunau-Varilla met the Panamanian delegates down at Union Station, three or four blocks from here, he confronted Mr. Amador and another Panamanian, Mr. Frederico Boyd, and he said, "Oh, look, we have a treaty signed by the United States whereby they guarantee the independence of your state. After nearly 100 years of trying to become a free and independent state, your independence is guaranteed by this country."

Well, according to Mr. Bunau-Varilla's own statement, when Mr. Amador read that treaty, he almost fainted. What Mr. Bunau-Varilla did not tell in his autobiography was when Mr. Federico Boyd read the statement, he struck Mr. Bunau-Varilla, right across the face. And, Mr. President from that day until this, we have had continuous trouble with these extremely nationalistic people of Panama.

Some 8 or 10 times, we have had to use military force to put down riots and trouble in Panama. From time to time, we have tried to pacify those people. In 1936, the Senate agreed to a new treaty in which we said, "All right, we will not use any force to protect the canal except with the permission of Panama." And that is the way it exists now.

But in 1964, when the riots occurred and some 20 Panamanians were killed, some several hundred were injured and we lost four of our people, President Lyndon Johnson met with former President Eisenhower and former President Truman. They decided that it was time that we did something to reach an understanding with these people so that we could live in peace and harmony and grow together and also enjoy the freedom in use of this canal. I believe, Mr. President, that these treaties do that, although they do not do everything that I would like them to do.

Mr. President, these treaties remind me, this whole matter reminds me of the years when I used to practice law. I know some of my colleagues here have had these experiences. From time to time, during my years of practice, I would have a client come in who was having an argument with his neighbor over a land line. He would come in, mad as the dickens; he was mad as a wet setting hen, we used to say. He would implore me, "I want to defend this land line and I am not going to give 1 inch. By golly," he would say, "I will see him dead and in Hades before I'll give 1 foot. I'll take it to the United States Supreme Court."

But you know, after 3 or 4 years of litigation, going to court and taking depositions and picking juries and paying me a few legal fees, my client began to get a little more conciliatory, saying, "Maybe we ought to do something about it; maybe we ought to give a little bit; let's get this thing over so we can move on and live in peace and harmony."

I think that is exactly what Lyndon Johnson and Dwight Eisenhower and Harry Truman were saying in 1964: We would like to keep things as they are, but by golly, if it is going to mean a continuous disruption in relations between our country and Panama, let us do something about it. I think that is what we have done.

I. INTRODUCTION

I will speak specifically today to three topics in my remarks. I will address some of the history which has led me to the conclusion that the time for a new treaty arrangement with Panama is now. Next I will address the tough questions which we all have to answer about the second treaty dealing with the Panama Canal and, finally, I will speak to my personal convictions about the canal issue and my hopes for our country.

No issue to my recollection has aroused so much debate and controversy and none has generated so much mail from the American people. While at times the communications we received were less than pleasant, I am refreshed and reassured by the public debate on this issue. We have a great country and I believe that this greatness requires us to make decisions a lesser country could not. It is this time of decision which prompts me to speak about the Panama Canal treaties.

II. CHRONOLOGY OF PANAMANIAN HISTORY—1500–1820

Discovery and Development:

1501. Discovered by a Spanish explorer and explored the following year by Christopher Columbus.

1529. Explorer Cortez drafted a plan for a canal route.

1534. The King of Spain ordered a survey for a ship canal.

1535. The Camino Real, highway across the Isthmus, was in use; also about this time Panama was incorporated into the Vice Royalty of New Granada; Panama retained much of its independent identity; British interest as part of concern with Spain.

1814. Spanish attempts to construct a canal were interrupted by colonial revolts.

1820–46

1821. Panama, apart from New Granada, severed relations with Spain in the tide of Latin American independence movements.

Panama at this time joined with New Granada in the Republic of Greater Colombia.

1831. New Granada became an independent republic incorporating Panama as an independent state.

1841. Panama seceded from New Granada and maintained its independence for 13 months.

1846–1901, U.S. INVOLVEMENT

General—53 times, between 1846 and 1903, Panama attempted to secede from Colombia.

Unrest had always existed.

1846. After many years of interest, from the time of acquiring Florida, the United States sought to secure some form of rights in Panama. Fear of British business interests prompted the United States to negotiate the Bidlack Treaty with New Granada. Under the treaty, the United States promised to insure that transit over the Isthmus remained open and that New Granada would have its sovereignty over the area insured by the United States.

1850. United States signed the Clayton-Bulwer Treaty with England setting forth that neither the United States or Britain would exercise exclusive control over any canal over the Isthmus or fortify a canal.

1853. Panama again seceded from New Granada.

1856. U.S. troops were landed to protect the Panama Railroad, the first time U.S. troops were on the ground in the country.

1868–69. Secretary of State William H. Seward negotiated a treaty with Colombia which would have given the United States the exclusive right to construct a canal. It was rejected by the Colombian Senate.

1878. French efforts at constructing a canal got under way; no conclusive decision over the French involvement in a canal project was ever made.

1885. Revolution in Panama against Colombia.

1989. Beginning of 5-year revolt against Panama.

1901. Negotiation of the Hay-Pauncefote Treaty abrogating the 1850 Clayton-Bulwer Treaty and clearing the way for U.S. negotiations.

1901–03

1902. Herran, the Colombian negotiator, began talks concerning the canal route for Colombia; Hay threatened that delay would result in renewed negotiations with Nicaragua.

1903. Three days after the Hay-Herran Treaty was signed concluding a deal over a canal route, Herran received delayed instructions not to sign the treaty.

Hay threatened a break off in relations if the treaty was not ratified by Colombia; privately President Roosevelt indicated his awareness of the Panamanians' readiness to declare its independence. News reports to this effect were released by the press.

Hay made it clear to Panama that the $40 million set up by the Congress to secure a route would go to the French Company, headed by Bunau-Varilla, and only the $10 million in the treaty would go to Colombia.

August 12, 1903, Colombia rejected the treaty.

Efforts at fostering a revolution in Panama were begun by Bunau-Varilla and William Cromwell, a lawyer with interests in the Canal Company.

Cromwell tried to get a Panamanian to give $100,000 for a revolution, guaranteeing him the presidency of the new country—this was before Colombia had rejected the Hay-Herran Treaty.

Bunau-Varilla met with the Panamanian revolutionaries and encouraged their activities throughout September of 1903; in October he promised a complete package for the Panamanians—money, a constitution, a military plan.

On October 15, U.S. ships were ordered to sail on a routine exercise toward the isthmus. On October 16, Bunau-Varilla was made aware of this fact.

Bunau-Varilla secured a promise that, for his assistance, he would be appointed Panama's first minister to the United States. He called for a revolution on November 3, the day he calculated the U.S. squadron would appear off the coast of Panama.

On November 2, a U.S. ship, the *Nashville* arrived and the revolution commenced; orders were on board the *Nashville* to insure that the line of transit across the isthmus was kept open even against government—Colombian—troops. On November 3, the revolution was essentially completed. The only clear legal rule against which the U.S. action would be judged was the 1846 Bidlack Treaty which provided that the United States would insure Colombia's sovereignty over the Isthmus of Panama.

On November 6, the United States recognized the independence of Panama.

Negotiations began which led to the Hay-Bunau-Varilla Treaty. Bunau Varilla exerted the same pressure and threats against Panama as Secretary Hay had against Colombia.

Bunau-Varilla negotiated treaty and signed it; Panamanians were outraged; Federico Boyd, one of the negotiators who arrived too late, struck Bunau-Varilla across the face at Union Station.

Bunau-Varilla on his own sent a cable to Panama stating that if Panama did not ratify the treaty, the United States would withdraw its protection and sign a canal treaty with Colombia.

The terms of the treaty negotiated and signed on November 18 have been reviewed many times here in the Senate, but I believe they were best summarized by Senator Money, of Mississippi, when in 1904 he claimed that the treaty:

> . . . comes to us more liberal in its concessions . . . than we . . . ever dreamed of having . . . In fact, it sounds very much as if we wrote it ourselves . . .

The past president of the American Bar Association, one James Carter, called the whole affair "a crime."

1904–64

General—Period of unrest and dissatisfaction with the treaty.

Need for U.S. intervention in Panama eight times between 1904 and today, excluding the use of troops in the riots of 1959 and 1964.

United States has intervened 39 times in Latin America since 1891 with military force.

Interpretative problems arose immediately as in 1904, interpretation of treaty to allow United States to control custom-

houses; settled by famous Taft agreements.

In 1904 the United States forced Panama to include a right of U.S. intervention in the country's constitution.

Treaty used in 1920's as basis for intervention.

In 1921, Panama was threatening to invade Costa Rica in attempting to settle a border dispute which had existed since colonial days. Based on the 1903 treaty's call for the United States to guarantee Panama's independence, the United States forced Panama to withdraw.

In 1926, a new treaty was negotiated to soothe Panamanian anger but included provisions for U.S. intervention and was rejected by the Panamanian Assembly.

Through the 1920's and into the 1930's, there was unrest and dissatisfaction with the treaty. Finally, in 1936, a revision was made increasing the toll rates.

During the war, the United States secured additional bases in Panama, agreeing to withdraw within a year after hostilities ended. The United States was slow to withdraw. Post-World War II irritation had begun.

The central issues of the 1950's were over discriminatory policies within the Canal Zone which affected Panama.

Inadequate toll payments to Panama after the large increase in traffic through the canal.

U.S. commissaries within the zone which adversely affected Panamanian business.

Segregation in housing and schools within the zone.

Discrimination in pay, based on the "U.S. rate" and the "local rate."

In attempting to resolve some of these problems, President Eisenhower signed the 1955 treaty revising the original 1903 treaty.

Unrest and unhappiness continued until 1959 when the first of the "flag incidents" broke out. Panamanian students seeking some public recognition of their country's stake in the canal requested that their flag be flown along side the U.S. flag. Tempers flared and violence erupted.

On December 2, 1959, President Eisenhower stated: "I do—believe we should have visual evidence that Panama does have titular sovereignty" in the zone. Negotiations began at this point on measures which lead us up to the treaties we have today.

In 1964, riots over flag broke out and 25 deaths resulted; serious negotiations began which have led to the current treaties.

At this point, it is worthwhile to review some of the statements made by four of our Presidents about the canal issue:

THE 1960'S AND THE VIEWS OF THE PRESIDENTS

President Eisenhower spoke to the problem created by the treaties:

I think that not all of the difficulties that have come about have been entirely because of their demands. It is perfectly true there was a treaty made many, many years ago, more than 50, now. And the conditions of that treaty were changed from time to time as the whole condition of affairs in the world so demanded, just exactly like our Constitution has been amended 22 times.

President Kennedy, in 1962, arranged for the United States and Panamanian flags to be flown jointly in the Canal Zone. In 1961, he described our relationship with Panama based on the 1903 treaties:

My Government recognizes that differences will inevitably arise between even the friendliest nations, and believes that these differences must be discussed thoroughly and frankly, in order to clarify the interests and attitudes of both parties. It seems clear, therefore, that when two friendly nations are bound by treaty provisions which are not fully satisfactory to one of the parties, arrangements should be made to permit qualified representatives of both nations to discuss these points of dissatisfaction with a view to their resolution.

President Johnson had to deal with riots brought about by another flag-raising incident. The issue even went to the Organization of American States and the United Nations. He said of the canal and the treaties:

[The] life (of the Canal) is now limited. The canal is growing old, and so are the treaties for its management, which go back to 1903.

My advisers have recommended that we should propose a new treaty for the existing canal. After careful review with my senior advisers, I have accepted this recommendation.

* * * * *

These changes are necessary not because of failure but because of success; not because of backwardness but because of progress, The age before us is an age of larger, faster ships. It is an age of friendly partnership among the nations concerned with the traffic between the oceans. This new age requires new arrangements.

The strength of our American system is that we have always tried to understand and meet the needs of the future. We have been at our best when we have been both bold and prudent in moving forward.

President Nixon proceeded with negotiations begun under Johnscn and noted:

The world has changed radically during the 70 years this treaty has been in effect. Latin America has changed. Panama has changed. And the terms of our relationship should reflect those changes in a reasonable way.

For the past nine years, efforts to work out a new treaty acceptable to both parties have failed. That failure has put considerable strain on our relations with Panama. It is time for both parties to take a fresh look at this problem and to develop a new relationship between us—one that will guarantee continued effective operation of the Canal while meeting Panama's legitimate aspirations

III. TOUGH ISSUES

I would like to address the four major issues which I believe confront this body as we draw to a close on this most important and, I believe, well executed debate. In answering these issues, each Senator will determine how he views the facts and how he views the future.

These major points are:

Our defense considerations;

The provisions for a new canal;

The economics of the treaty; and

The ability of Panama to operate the canal.

1. DEFENSE

The primary concern in my mind is defense.

This centers on keeping the canal open which has been and is our primary national interest in Panama.

As President Nixon stated:

It is time for both parties to take a fresh look at this problem and to develop a new relationship between us—one that will guarantee continued effective operation of the Canal while meeting Panama's legitimate aspirations.

The Neutrality Treaty which we have hammered out goes a long way to resolve many defense concerns. Indeed, there are several improvements over the current treaties.

The treaty provides that the canal remain neutral permanently and this is part of a separate treaty independent of the business parts of the Panama Canal Treaty. This concept has been in every treaty governing thc isthmus since 1846 and secures our primary interest that the canal be open and that we be free to insure that fact.

The Neutrality Treaty improves our situation over the past and is an advance for U.S. foreign policy.

Under the 1936 Treaty, defense of the canal had to be undertaken after consultation with Panama. The new treaty leaves the determination of the need for action to each of the parties. The 1903 and 1936 treaties were vague on the rights of warships, while the new treaty is specific on the rights of U.S. warships to go to the head of the line. The earlier treaties were vague and employed many of the terms of international law; the new treaty is specific and uses the language hammered out by the President and the Congress.

I believe that the Neutrality Treaty satisfies the major concerns I have about defense.

The Panama Canal Treaty:

I feel that the treaty before us now has some advantages for the United States and Panama in the area of defense. Let me be specific.

The Panama Canal Treaty insures that for the next 22 years the United States, in no uncertain terms, has primary responsibility for the canal. As General Torrijos said after the September 7 signing:

We are now under the protective umbrella of the United States.

In addition, the new treaty contains a status of forces agreement which we have not had in the past. This agreement spells out the relationship of the U.S. military personnel outside of the Canal Zone with Panama for the next 22 years and is an important improvement.

The treaty also creates a combined board to regulate military concerns such as coordinated defense of the canal. I believe that it is clear that this board is a mechanism for coordination; it is not a joint command which would deny the United States the right to act independently.

Taken as a whole and in conjunction with the Neutrality Treaty, I believe that our defense interests are insured by the

new agreements. As a member of the Armed Services Committee, I sat through many hours of discussion and open debate over the merits of the treaty. On the whole, the discussion impressed me as favoring the new treaties insofar as military considerations are involved.

2. SEA LEVEL CANAL

There has been concern expressed about the Panama Canal Treaty's provisions for a new canal. The treaty provisions for a new canal. The treaty provides that the parties should jointly undertake a study of the feasibility of a new canal or a third set of locks. I believe that all the Senate agrees on the merit of this provision.

The treaty also provides that no canal should be built in Panama without the agreement of the United States. It also states that the United States should not negotiate with any other country to build a canal unless the parties otherwise agree. These provisions reflect the basic reality that there really is no other route for a canal. A $20 million study by the Presidential Inter-Oceanic Canal Study Commission came to just that conclusion a few years ago. In short, the new treaty simply states the obvious.

We have just accepted a reservation which directs the United States to waive its rights under article XIII by agreement with Panama. I am not adverse to this idea, although I believe it is a bit unnecessary.

3. ECONOMICS OF THE CANAL TREATY

I believe that some of the most important debate has taken place over the economic provisions of the second treaty.

The treaty provides for an increase in the payments made to Panama out of canal revenues, which has been long overdue. In addition, it provides for an additional payment if profits are high enough, an incentive for the Panamanians to keep the canal in smooth working order for the next 22 years.

I believe that the statement of Senator MUSKIE on the 28th of February answers many of the questions which have been posed about the economics of the treaty. In that address he spoke of fairer compensation to Panama with which I fully concur. The time has come to work more closely with our neighbor. The study conducted by the Budget Committee, chaired by Senator MUSKIE bear out his conclusions that the canal can provide sufficient revenue under raised tolls to meet the commitments undertaken by these treaties.

Payments for pensions and retirement plans and a reduction of costs by military consolidation were all dealt with ably by the Senator at that time.

Since February 28, we have seen many attempts to find any minor flaw in the treaty insofar as money is concerned. I can only say that the basic analysis of Senator MUSKIE still stands and I have faith in the work of the Budget Committee on this point. Second, I am sure that there are some flaws in any treaty, but none has been pointed out to me which would constitute sufficient cause to reject the entire package.

As I understand it, most of the costs incurred under these treaties will be handled by canal tolls and ordinary customary loans from internation development bodies will be sought. I believe that to be satisfactory.

For the United States, it appears that we are running no loss to our own economy. The canal's use has been diminishing constantly and less than 1 percent of our GNP goes through the canal today. I do not believe we are going to hurt this way.

4. CANAL OPERATION BY PANAMA

I am confident after visiting the Canal Zone and Panama in 1976 that the Panamanians can do the job. At present, they fill 80 percent of the canal jobs and I believe that the plans for training in the next 22 years will assure efficient canal operation. Panama's public commitment to do this is one which I believe will press them to provide the best service possible.

I feel that the same motives that prompt the Panamanians to seek control of the canal will likewise press them to keep the canal open and in good working order.

IV. CONVICTIONS

Let me address this body on some of the overall questions with which I have struggled during the course of the debate. I believe that in the answer to each of these questions, we can find the guidance for the decisions we must undertake here.

NATIONAL INTEREST

The first and most important question is whether the treaties signed by the President are in the best national interest of the United States. National interest is a vague term and many people give it a different content. I mean by the national interest decisions to which we are ready to make a commitment and which are vital to our national survival.

The statements by the distinguished majority and minority leaders before the passage of the Neutrality Treaty convinced me that they believe in these treaties and that the treaties will enhance the position of the United States in the world.

The change in relations between our two countries is vital to Panama's national interest as well. We have genuine interests in Panama and Panama must be aware of that. We have an obligation to see that the treaties we send to Panama are realistic and do not unduely infringe upon the national aspirations of Panama.

It is my responsibility to my State of North Carolina to insure that the national interest of the United States is furthered by what we do here and I believe that these treaties, yet to be finalized, go a long way in that direction.

RETREAT BY THE UNITED STATES

Is this effort a retreat for the United States?

Many among the American people fear that after Vietnam and inaction in Africa, we are retreating and pulling out of world affairs. Mr. President, no vote will ever be cast by this Senator which represents a retreat for our good and great country.

I have been against the pullout from Korea, I have been for a strong defense and in particular the B–1 bomber, I have expressed my fullest support for our friends in the Mediterranean and in particular our most important commitment in Israel. Commitment is a crucial word to me and I feel that five American Presidents have been committed to improving our relationship with the Republic of Panama, one of our best friends in Latin America. To cooperate with a friend and to honor a commitment is in no way retreat. It is the most direct sign a nation can give of its greatness.

Our greatness is not diminished by signing a treaty with Panama. It is enhanced by the demonstration of our moral will to deal fairly with even the smallest of countries.

THE FUTURE

During the course of the debate, we have all been asked to speculate about the future. I believe that after the extensive hearings before the Foreign Relations Committee and the investigations of the Armed Services and Intelligence Committees on which I sit, we have the best information before us. On the basis of that information, we are asked to cast our gaze toward the future. Senators on both sides of this issue have expressed their sincere concern for the possible repercussion of these treaties. Thousands of my constituents have addressed their fears and uneasiness about these new arrangements to me while others have expressed their great hope for the future. There has been a great outpouring of concern by the American people on this issue. Speculating about the future is always difficult.

I guess that I am an optimist. I believe that the future can best be served by the new treaties and the arrangements contained in them.

For the future, I believe we can see three possible benefits with Panama, there should be improved relations, a better guarantee that the canal will remain open and more stability for Panamanian politics. In Latin America, I believe we will see improvement in our relations with many states. Some will continue to be antagonistic, but for our friends this action will be a strong tool for them to resist Communist pressures within their own governments. In the world, I believe we will acquire the image of a great and moral country, one which practices what it preaches. To the small countries of Latin America, Asia, and Africa, we will stand as an alternate world to do the neocolonialism of the Soviet Union—a friend with whom one can work freely, not as a shackled slave.

We can always expect the worst and often we are not disappointed. On the whole, I believe that this body has taken into account as many possibilities as is humanly possible. At some point, with the debate as extensive as it is, the issue becomes a matter for the exercise of judgment, discretion, and experience. For myself, I believe that the future will be better served by the new treaties. These treaties are no panacea. Treaties are only as good as the commitments made to them. I would caution against to much optimism or too much pessimism. We

need a realistic view of the future and of what we can achieve.

IS THIS THE BEST COURSE

Let me conclude that I believe that the course we are taking is the best one for our country. I am guided by the words of Lyndon Johnson, who said of the Panama situation:

These changes are necessary not because of failure but because of success; not because of backwardness but because of progress. The age before us is an age of larger, faster ships. It is an age of friendly partnership among the nations concerned with the traffic between the oceans. This new age requires new arrangements.

The strength of our American system is that we have always tried to understand and meet the needs of the future. We have been at our best when we have been both bold and prudent in moving forward.

President Johnson set forth the challenge for all of us, that is to act with courage and with foresight. As men and women entrusted with the burden of making decisions for the future, we must utilize all the abilities at our command and act to protect and defend the interests of our great land. I plan to do no less.

Mr. MATSUNAGA. Will the Senator from North Carolina yield?

Mr. MORGAN. I am delighted to yield.

Mr. MATSUNAGA. I wish to congratulate and commend the Senator from North Carolina (Mr. MORGAN) for the courageous position he has taken. The Senator, being from the State that he comes from, where sentiment was overwhelmingly against the treaty, nevertheless took his position from the very beginning. That took a lot of courage. Now, the sentiment is going the other way and the polls indicate that the American people today favor the treaties. The Senator from North Carolina (Mr. MORGAN) can take much of the credit for it, because it was his courage that took him into his own State, as well as to other States by voice over national radio, and helped to convince the American people that what the Senate, at least two-thirds of the Senate, is attempting to do is the right thing to do.

Through the leadership of Senators like the Senator from North Carolina, I think we have convinced the people that it is much more important to the United States that we look upon ourselves as a Nation which strives to that which is right. We know that we have the greatest Nation on Earth. We know that we are the strongest on Earth. But we must use that strength in order to do that which is right and we are striving to do that which is right.

Again, I congratulate and commend the Senator from North Carolina for the leadership he has shown in this matter.

Mr. HOLLINGS. Mr. President, I ask unanimous consent that the Senator from Florida (Mr. CHILES) be made a cosponsor of our reservation.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HOLLINGS. I commend the Senator from North Carolina. We have very little time and I hope he will continue after these two rollcalls.

I think the great disadvantage of this debate is that discusssion of something so important as the Panama Canal Treaty has been disjointed. Here we have one of the most comprehensive, cogent statements I have heard on the subject of the Panama Canal treaties. I congratulate Senator MORGAN, and I hope he will continue, because I shall have more to say on what he has said after these two rollcalls.

Mr. MORGAN. I thank my distinguished colleague.

Mr. CHURCH. Mr. President, I merely want to join in complimenting Senator Morgan for what I think is an exceptionally fine address. Though I was not actually in the Chamber. I was in the majority leader's office and I listened to him over the loudspeaker. I want him to know that I think he has taken an admirable stand and he has explained his position so lucidly that I am sure it will be taken to heart by the people he represents in his great State.

Mr. MORGAN. I thank my distinguished colleague.

Mr. President, in the 1 minute I have remaining, let me say that the founders of this great country of ours, in providing that treaties should be ratified by the Senate, understood that in dealing in foreign affairs, the issues would not always be easy and that, sometimes, the Members of the Senate would have to take stands that might appear to be contrary to popular opinion. That is why they provided that those of us in the Senate, who have 6-year terms, would be able to study the issues in depth. That is what Mr. Madison was writing about when he wrote the 75th Federalist papers.

I think, Mr. President, that that is our responsibility in the Senate. I shall try to continue my remarks after the votes.

The PRESIDING OFFICER. The hour of 5 p.m. having arrived, the question is on agreeing to amendment No. 99.

Mr. HOLLINGS. Do we have the yeas and nays?

Mr. CHURCH. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. CHURCH. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHURCH. Mr. President, for the information of the Senate, the leadership supports both of these reservations.

It is my understanding that the yeas and nays have not been ordered. I ask for the yeas and nays on both votes.

The PRESIDING OFFICER. Is there objection to ordering them on both votes on one motion?

Without objection, it is so ordered.

Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Louisiana. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Maine (Mr. HATHAWAY), the Senator from Rhode Island (Mr. PELL), and the Senator from Connecticut (Mr. RIBICOFF) are necessarily absent.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. PELL), and the Senator from Connecticut (Mr. RIBICOFF) would each vote "yea."

Mr. BAKER. I announce that the Senator from Alaska (Mr. STEVENS), and the Senator from Wyoming (Mr. WALLOP) are necessarily absent.

I further announce that the Senator from Kansas (Mr. DOLE) is absent attending the funeral of a relative.

I further announce that, if present and voting, the Senator from Alaska (Mr. STEVENS) would vote "yea."

The result was announced—yeas 65, nays 27, as follows:

[Rollcall Vote No. 99 Ex.]

YEAS—65

| | | |
|---|---|---|
| Allen | Hansen | Nelson |
| Baker | Hatch | Nunn |
| Bartlett | Hatfield, Paul G. | Packwood |
| Bayh | Heinz | Pearson |
| Bellmon | Helms | Percy |
| Bentsen | Hodges | Proxmire |
| Brooke | Humphrey | Randolph |
| Bumpers | Inouye | Roth |
| Burdick | Jackson | Sarbanes |
| Byrd, Harry F., Jr. | Johnston | Sasser |
| Byrd, Robert C. | Laxalt | Schmitt |
| Cannon | Long | Schweiker |
| Chiles | Lugar | Scott |
| Church | Magnuson | Sparkman |
| Curtis | Mathias | Stennis |
| Danforth | Matsunaga | Stone |
| DeConcini | McClure | Talmadge |
| Domenici | McIntyre | Thurmond |
| Eagleton | Melcher | Tower |
| Ford | Morgan | Weicker |
| Garn | Moynihan | Young |
| Goldwater | Muskie | |

NAYS—27

| | | |
|---|---|---|
| Abourezk | Griffin | Leahy |
| Anderson | Hart | McGovern |
| Case | Haskell | Metzenbaum |
| Chafee | Hatfield, Mark O. | Riegle |
| Clark | Hayakawa | Stafford |
| Cranston | Hollings | Stevenson |
| Culver | Huddleston | Williams |
| Durkin | Javits | Zorinsky |
| Glenn | Kennedy | |
| Gravel | | |

NOT VOTING—8

| | | |
|---|---|---|
| Biden | Hathaway | Stevens |
| Dole | Pell | Wallop |
| Eastland | Ribicoff | |

So amendment No. 99 of the Senator from Louisiana was agreed to.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. LAXALT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to vote on reservation No. 14. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

(Mr. BURDICK assumed the chair.)

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Maine (Mr. HATHAWAY), the Senator from Rhode Island (Mr. PELL), and the Senator from Connecticut (Mr. RIBICOFF) are necessarily absent.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. PELL) and the Senator from Connecticut (Mr. RIBICOFF) would each vote "yea."

Mr. BAKER. I announce that the Senator from Alaska (Mr. STEVENS) and the Senator from Wyoming (Mr. WALLOP), are necessarily absent.

I also announce that the Senator from Kansas (Mr. DOLE) is asent to attend the funeral of a relative.

I further announce that, if present and voting, the Senator from Alaska (Mr. STEVENS) would vote "yea."

The result was announced—yeas 90, nays 2, as follows:

[Rollcall Vote No. 100 Ex.]

YEAS—90

| | | |
|---|---|---|
| Abourezk | Goldwater | Melcher |
| Allen | Hansen | Metzenbaum |
| Anderson | Hart | Morgan |
| Baker | Haskell | Moynihan |
| Bartlett | Hatch | Muskie |

NOT VOTING—8

| | | |
|---|---|---|
| Biden | Hathaway | Stevens |
| Dole | Pell | Wallop |
| Eastland | Ribicoff | |

So reservation No. 14 was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the reservation was agreed to.

Mr. HOLLINGS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. CHILES). The Senator from Illinois.

Mr. PERCY. Mr. President, when I returned from a visit to the Canal Zone in company with some of my colleagues in January, I said at that time I would not vote to ratify the Panama Canal Treaties as they had been signed by President Carter and General Torrijos because they were flawed in a way subsequently acknowledged by the President.

Not satisfied with the clarification that was not legally binding, the Senators and I decided, and the leadership did, that the Neutrality Treaty itself would have to be amended to provide for the United States right to defend the canal against any aggression and to guarantee that U.S. warships in time of emergency can go to the head of the line and pass through the canal.

Now that these amendments have been incorporated, I support ratification of the treaty. With these amendments I believe the treaties serve the best interests of our country.

Nevertheless, our work will not be complete when we vote on the treaty on Tuesday. There will still be the implementing legislation to consider. In the context of the implementing legislation I shall want to pursue the concern I have already expressed about costs to the U.S. Government under this treaty.

Mr. President, there are on the floor of the Senate at this time members of the Armed Services Committee and members of the Committee on Foreign Relations who heard testimony on these treaties.

The Armed Services Committee clearly pointed out in their subsequent report that there would be a cost in excess of some $700 million to the Treasury of the United States and to the American taxpayers under the present plan.

Now, this cost is not of payments being made to Panama. They would not receive a penny. The only payments they will receive come from toll revenue. But the costs to the American taxpayer would be costs that were real costs in the form of interest income that would have to be given up and the cost of early retirement for civil servants, just to mention two items.

It is my firm belief that a significant percentage of these costs can be offset by higher tolls over the next 22 years, and I submit to my colleagues that this is a better way to deal with the costs than appropriating taxpayers' funds or just writing off canal revenues, which until now have gone to the U.S. Treasury.

Today I am providing further data on how the cost of the treaty to the American taxpayer can be reduced when the implementing legislation is considered by Congress.

Using the figures developed by the Senate Budget Committee and the Congressional Budget Office, it is presently estimated that the cost to the Government over the life of the proposed treaty is likely to be about $700 million more than it would under the revised 1903 treaty. One large component of this total is $276 million for a civil service early retirement system for eligible employees of the canal enterprise, figured to be $9.2 million per year over 30 years. The other involves the loss of an annual interest payment to the U.S. Treasury at a current rate of about 6.3 percent on the U.S. investment in the canal now about $20 million per year. The administration intends to recommend that this annual interest payment not be continued.

I have expressed my very strong objection to this to the State Department. I think it is a case of overlooking the fact that $20 million is a lot of money, and that is a cost to the American taxpayer, if that interest income is given up. It is my strong feeling that any actual loss of revenue to the U.S. Treasury should be reviewed as a true "cost" of the revised treaties.

The United States historically has operated the Panama Canal at tremendous benefit to the public by generally setting tolls just to cover operating costs. We have in a sense been subsidizing the canal users for 64 years. In real terms, toll rates for use of the canal are actually lower today than they were in 1914. No attempt was made to reap the kind of revenues which the canal would have been perfectly capable of generating, and which could have added hundreds of millions of dollars to the U.S. Treasury.

This was done by the Panama Canal Company with the full concurrence and support of the President of the United States, the executive branch of the Government, and the Congress of the United States. It was a policy that we had adopted, and it was one of the benefits that the world experienced as a result of the operation and ownership of the canal by the United States. This was our contribution to world trade.

But the rules of the game are being changed now. World opinion and a good bit of American public opinion feel that the injustices to Panama over a period of almost three-quarters of a century should be rectified. A nation that still today, after four upward revisions, still only receives less than 1 percent of the toll revenue raised by the Canal Company is not, in my opinion, being adequately compensated for a swath being cut right through the center of that country, as has been described so many times on the floor of the Senate.

We have now 22 more years during which the United States will operate the canal, but because of these treaties we have an additional cost to bear of some $700 million. As Everett Dirksen said on the floor of the Senate, and I repeated his comment earlier today, "A billion here and a billion there, and pretty soon you are talking about real money." Some $700 million, in my way of thinking, is enough money to be concerned about, and we have enough time to do something about it.

I would think, in a spirit of partnership, it would be our objective to increase revenues to cover as much as possible of those contingency payments. Even though they are not required, they are an expectation and a hope, and certainly the 65 nations using the canal, and the shippers of those nations, can afford to pay a reasonable increase and a reasonable toll so as to meet the expectations and needs of Panama as well as the liquidation expenses and costs to be borne by the United States.

Under the new treaty, Panama will receive a substantial payment from revenues in recognition that Panama's chief natural resource is its geographical feature which allows it to be a gateway between the Pacific and the Caribbean. Even today, after four upward revisions in payments to Panama since the original treaty, Panama receives annuities which represent less than 1 percent of gross revenues of the canal.

I believe that changing the present arrangements with Panama so that they have a greater stake in the canal is fair and just, and also serves our interest by giving Panama a real incentive to keep the canal open, secure and operating efficiently.

At the same time, I think it is reasonable to propose that the U.S. taxpayer not be asked to bear all the costs associated with the changeover of the control of the canal without serious consideration of alternatives. In the same way that annuities to Panama will be figured into the toll formula as operating costs, we should in the implementing legislation, direct that the maximum possible of U.S. costs of the changeover be met through tolls. From a business point of view, this means we are trying to minimize costs to the taxpayer by taking reasonable advantage of the revenue-producing capacity of the canal—particularly in the early years, when we are most confident about its ability to generate revenues in excess of expected operating costs.

Naturally, there are some disadvantages to such an approach. Higher tolls could reduce traffic from what it would be if tolls were increased more gradually.

This approach also will not appeal to some special interests. Some shipping lines would be affected more than others. Any decreases in traffic as a result of toll increases will adversely affect Panama's annuities based on tonnage. However, any loss of tonnage payments, particularly in the early years, would not be large, and could be offset through contingency payments to Panama, provided for in the revised treaties, from canal operating surpluses gained from a higher toll rate increase.

But this approach does have the clear advantage to us of having the adjustment costs shared by the actual users of the canal who receive direct benefits instead of being borne by the American taxpayer who only indirectly benefits—if at all. If, as I believe, this treaty will serve the interests of all nations in having a secure and open canal, then it is only reasonable that we ask the other user nations to share in the costs of protecting these interests.

Let me make clear that I am not suggesting that whatever we may choose to do be made part of the treaty through understandings or amendments. These issues are a matter of our own legislative prerogatives, and therefore should be dealt with in the legislation implementing the treaties. We will want to evaluate the various cost components and thoroughly consider the complex economics when deciding on what the toll formula will contain. We can also use the opportunity to look for more efficient ways of operating the canal. And we will want to closely consult with Panama in the spirit of our newly revised partnership.

I am suggesting that when the time comes, there will be options open to us regarding how we deal with the costs. We can decide exactly how much of the costs we may want to meet through tolls.

There is general agreement that tolls can and will be raised at the outset of the treaty period to cover the new annuities to Panama. The most recent study we have available, prepared by Arthur Anderson & Co., of cash requirements for running the canal under the proposed treaty, including the annuity payments to Panama, indicated that toll increase of 19 to 27 percent will be required at the outset for the first few years of the treaty. These calculations do not, I should point out, include continuance of the interest payments to the U.S. Treasury, nor would they attempt to assure payment to Panama of the $10 million contingent on surplus revenues. For purposes of our discussion, let us use a 25-percent figure.

According to the most current study available on toll revenues, prepared by Dr. Ely Brandes and Randall Chun of International Research Associates, a 25-percent toll increase would bring in about $47 million more than current toll rates would in the first year it was applied.

This $47 million is about equal to the additional revenue the Arthur Anderson study indicates that the Panama Canal Commission will need during the first year of operations under the new treaty.

Based on all the studies of future canal costs and revenue potentials, I believe that the toll levels can be set in such a way to not only cover the new annuities to Panama, but also to offset 75 to 80 percent of the potential costs to the U.S. taxpayer, without unduly affecting the long-term traffic patterns or economic viability of the Panama Canal. Let me outline such a program, with the proviso that the numbers I use should be considered preliminary and subject to further detailed analysis.

Let us begin with a 54-percent toll increase, instead of the 25-percent increase currently planned. This would, in the first 7 years of the treaty (including 1985) yield an additional $271 million in revenue over the 25 percent increase, with the largest increments occurring in the earliest years. I would suggest that this additional revenue, and that which would accrue beyond 1985, be used to insure the payment of all civil service early retirement adjustment costs, continuation of the interest payment to the Treasury—although on a reduced base as explained later—and to assure sufficient payment from the surpluses to Panama to offset any loss in the 30-cent-per-canal-ton annuity payment. This loss is the result of the decrease in traffic (about 8 percent by 1985) as a result of a 54-percent increase as opposed to a 25-percent increase.

Mr. President, I ask unanimous consent that three tables which are pertinent to my remarks be printed in the RECORD at this point.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE I.—EFFECTS OF TOLL INCREASES ON REVENUE

| | 1979 | 1980 | 1985 | 1990 |
|---|---|---|---|---|
| TOTAL REVENUE (THOUSANDS) | | | | |
| Percent increase in tolls: | | | | |
| 0 | $194,044 | $197,485 | $209,933 | $223,631 |
| 25 | 240,873 | 243,392 | 251,090 | 267,572 |
| 50 | 280,943 | 281,993 | 278,954 | 297,304 |

TABLE III.—POSSIBLE USE OF ADDITIONAL REVENUE GENERATED BY A 54-PERCENT TOLL INCREASE

[In millions]

| Item | 1979 | 1980 | 1981 | 1982 | 1983 | 1984 | 1985 | 1990 |
|---|---|---|---|---|---|---|---|---|
| Additional revenue from a 50-percent toll increase over that of a 25-percent increase | $45.7 | $43.9 | $41.3 | $38.8 | $36.2 | $33.7 | $31.1 | $33.0 |
| Projected contingency payment—offset of loss in traffic-based annuity plus $2,000,000 | 3.4 | 3.7 | 4.2 | 4.7 | 5.1 | 5.6 | 6.0 | 7.6 |
| Remainder | 42.3 | 40.2 | 37.1 | 34.1 | 31.1 | 28.1 | 25.0 | 25.4 |
| Interest payment to Treasury | 18.3 | 18.3 | 18.3 | 18.3 | 18.3 | 18.3 | 18.3 | 18.3 |
| Remainder | 24.0 | 21.9 | 18.8 | 15.8 | 12.8 | 9.8 | 6.7 | 7.1 |
| Payment to civil service for early retirement benefits | 9.2 | 9.2 | 9.2 | 9.2 | 9.2 | 9.2 | 9.2 | 9.2 |
| Additional revenue available to establish civil service early retirement reserve fund to be invested at 6 percent minimum interest | 15.8 | 12.7 | 9.6 | 6.6 | 3.6 | .6 | −2.5 | −2.2 |

Mr. PERCY. In figuring the offset of tonnage-based revenue loss of Panama, with whom, after all, we are trying to forge a positive relationship, I have estimated the likely loss in revenue and added, above that, about $2 million per year to give some reasonable assurance to Panama.

Of course there can be no iron-clad guarantee to Panama that contingency payments will be made, since they are not required to be made under the treaty. We should, however, demonstrate our good faith by directing that revenues should be created to provide this offset.

I have then provided for an annual interest payment to the Treasury, because as I stated earlier, I view the loss of the interest payment as a cost of the treaty.

In the early 1950's, partly because the canal was for the first time consistently producing revenue over and above cost, the Bureau of the Budget placed a valuation of $373 million on the assets held by the Panama Canal Company as of June 30, 1951, and determined that the Canal Company should, when revenues permitted, pay the Treasury Department interest on that property. The interest level was based on a computed average effective coupon rate borne by all marketable Treasury bonds outstanding as of July 31 of each year.

Over the years, the original base figure of $373 million has been reduced, for three basic reasons: First, as a result of the 1955 treaty, about $23 million of this property was transfered to Panama. I should note that at that time the United States requested no compensation from Panama for the transfer. Second, over the years, the Panama Canal Company occasionally had revenues beyond those needed to pay interest. These funds were used to pay off some of the principal to the Treasury. Such payments of principal have amounted to $40 million since 1955. Finally, there have been several transfers of property between the Panama Canal Company and other U.S. Government agencies, particularly the Department of Defense, which have resulted in changes in the principal on which the Panama Canal Company pays interest.

The interest payment to the Treasury will amount to $20.1 million in fiscal year 1978.

However, annuity payments Panama now receives from the U.S. Government under the present treaty of $1.8 million (the Panama Canal Company pays an additional $.5 million a year) will cease under the new treaty. I see this as a real cost savings. Figuring in this saving, net revenues to the Treasury will amount to $18.3 million in fiscal year 1978. This $18.3 million interest payment is the figure I use in my calculations.

Upon implementation of the treaty, property valued at about $92 million will be turned over to Panama, reducing the principal on which interest has been paid in recent years from $319 million to about $227 million. If the payments to the Treasury were to be continued at the present interest rate (6.3 percent) on the reduced amount of property, the annual payment to the U.S. Treasury would drop to $14.3 million per year—in effect a loss of $4 million as result of the new treaty. Therefore, I suggest the following adjustment: I would propose that the interest rates be adjusted to reflect the current average cost of notes to the Treasury of a 12-year-or-greater maturity. This rate is currently about 8⅛ percent. On a principal of $227 million, this would produce an annual revenue of $18.4 million a year, or about the current level of Treasury income.

Even after deducting the $18.3 million from the additional revenues accrued from the 54 percent toll increase, and the offset contingency payment to Panama, there would still be a sizable flow of income, starting at $24.0 million the first year and flattening out to between $6.7 and $7.1 million by 1985–90. This income flow can be used to cover all of the additional civil service early retirement costs caused by the treaty.

The Civil Service Commission estimates the unfunded liability of these costs at $148 million, which under its normal procedures would be amortized over a 30-year period with annual payments of $9.2 million per year. Over 30 years, this amounts to a total dollar outlay of $276 million.

In the first 6 years of the treaty, the income from a 54 percent toll increase over and above the amounts needed for canal costs, regular annuities, payments to the Treasury, and a projected contingency annuity, would still exceed $9.2 million per year. These surplus funds could be deposited into a civil service early retirement reserve fund. Assuming a conservative return to this fund of 6 percent per year, over the 6 surplus years this fund would grow to about $62 million. In ensuing years, interest payments earned by the fund would be adequate to make up any shortfalls in annual revenues needed to meet the $9.2 million annual payment for early retirement costs. When the treaty terminates at the end of 1999, the fund would still have about $90 million (interest payments to the fund would exceed the annual outlay needed to top off income from tolls), which is more than adequate to fund the $8.2 million annual payment for an additional 9 years.

To summarize, I have suggested a program which generates $384 million in revenue, and thereby covers $276 million in projected civil service early retirement costs, and allows interest payments to the Treasury to continue over the life of the treaty at an $18.3 million level. This would leave us with a one-time appropriation for military consolidation of $43 million and an annual expense of $1 to $4 million in schooling and hospital costs for U.S. employees of the canal.

This seems to me—and I think will seem to the taxpayer—to be a reasonable package and a far better prospect than they now have if they face an added cost over the next 22 years of $700 million from the U.S. Treasury.

Naturally, there are many other options to choose from, depending on the level of toll increase deemed acceptable and the specific transition costs which we wish to offset through those increases.

The program I have outlined is based on the best projections we now have available. In the future should some unanticipated developments occur in the world economy or transport technology which would call into question the financial viability of the program I have outlined, then adjustments would have to be made. Likewise, over the next 22 years event may occur that would allow the canal to generate more revenue than is now anticipated and thus permit the covering of all U.S. transition costs. This degree of uncertainty would, of course, also hold true under the present arrangements for running the Panama Canal. We must maintain flexibility. After all, the primary U.S. economic interest regarding the canal is that it continue to be an economically viable enterprise serving our own, Panamanian, and world commerce.

I would also like to clarify one other major point. The Brandes study, and my proposed system, are based on how world commerce would react to a single toll change based on current conditions. Future increases will be necessary to offset inflation. Insofar as inflation affects

the cost of canal operations more or less equally as it affects alternatives to the canal, such periodic adjustments should be possible without damage to current traffic patterns, and in such a way so as to preserve the kind of real revenue projections made in the Brandes study and my examples.

Quite frankly, as a former businessman, I think I have only scratched the surface of what might be possible if we truly allow the Panama Canal Commission to conduct its operations like a business. For example, the Panama Canal Company is currently required to maintain a balance of about $45 million in the U.S. Treasury in a noninterest paying account, as is required for all U.S. Government corporations. This could be regarded as a subsidy to the U.S. Treasury. Considering we can hardly expect the Panamanians to follow this procedure when they manage the canal, we could in the implementing legislation allow the Commission to deposit these accounts in commercial institutions and use the revenues to meet expenses, thereby reducing the pressures on tolls or increasing revenue to further reduce costs.

I have suggested some preliminary thoughts on how, if the Congress chooses, transition costs could be dealt within the implementing legislation at the appropriate time.

I have believed, and continue to believe, that the treaties serve our most important economic, security, and political interests by assuring that the canal will be kept secure and open and operating in partnership with Panama, so long as Panama accepts the amendments and changes in the treaty language that have been adopted now by the Senate.

With regard to the long-range financial viability of the canal, we should realize that, regardless of whether there are new treaties, the expense of operating the canal can be expected to go up during the remainder of this century. Canal Zone Governor Parfitt noted in recent testimony before the Armed Services Committee that the canal would have to raise tolls in the next 10 years to cover regular operating costs even if there were no new treaties.

In the long run, uncertainties increase. We just do not know for sure what inflation rates will be or what technological developments in transportation could occur. It would be unwise to make absolute predictions 22 years into the future. The important point is that some financial uncertainties would exist, treaties or no treaties.

Under the treaty, we will have control until the end of the century in those areas where we can make a difference: Control over tolls, defense, and the important management decisions affecting canal operations.

We must also consider what costs we would incur if we reject these treaties or amend them so that they will be clearly unacceptable to Panama, which amounts to killing the treaties. I think it is crucial. Any meaningful analysis should include these costs as well.

If we reject these treaties, we had better be prepared to pay to defend ourselves against the unrest and the attacks against the canal from extremists which testimony has indicated will surely come. Just a couple of weeks ago, Gen. William Westmoreland predicted terrorist attacks against the canal if the treaties were rejected.

Even assuming that we can keep the canal open most of the time, its excellent reputation for reliability will have suffered, and any prudent shipper, importer, and exporter will think twice about using the canal. Insurance rates would certainly rise to reflect the increased risks.

General McAuliffe, commander of the U.S. Southern Command, with whom most of us have met and talked while visiting the Canal Zone, says a force level of 40,000 troops, at an annual cost of $20 million, would be needed if violence spreads from one end of the canal to the other. Even this, he warns, would not assure that we could prevent interruption of canal operations. If, in the worst situation, there is loss of life, how do you measure these costs, much less the costs in terms of our image as a great world power and of ourselves?

These costs are just as real as, and ultimately more important than, the dollar figure we eventually attach to an early retirement plan, or the value of a commissary building in the Canal Zone.

Nevertheless, we have a responsibility to the U.S. taxpayer to recover by means of toll increases as many additional financial costs as we can.

In this connection, during consideration of the implementing legislation, I intend to press for language requiring confirmation of the U.S. directors of the Panama Canal Commission, to assure that they will be sensitive to our own concern on the matters affecting taxpayer interest.

Let us approve the second treaty and deal effectively and prudently with the costs when we consider the implementing legislation.

(Senator PAUL G. HATFIELD assumed the chair.)

Mr. PERCY. Mr. President, as I indicated at the outset, on my return from a visit earlier this year to the Panama Canal, I would not have voted to approve or ratify or give advice and consent to the treaties assigned by the President and General Torrijos because they were flawed in two major respects, as was subsequently determined by President Carter himself. A statement from the White House, a reservation or an understanding, were not adequate to meet that situation. Amendments were required in the language of the treaty itself, amendments that provided first, for the right of first passage at the head of the line of any U.S. warship, any time it is determined that it is in our national interest for that warship to proceed. We do not have a two-ocean Navy. On occasion, we have had to move ships rapidly. No one, looking at this treaty, is going to sign, ratify, approve, or advise and consent to a treaty that will in any way endanger the security of the United States and the security of many countries that depend upon the mobility of our naval forces to provide an element of protection to them. The Senate of the United States has changed that language and we urge Panama to accept it.

We also have amended the treaty to provide that unilaterally, at any time in the determination of the United States that there is a real threat to the neutrality of the canal itself after the year 2000 into perpetuity, the United States can use is military forces to insure preservation of the neutrality of the canal. I have talked to General Torrijos, as have other of my colleagues. We have talked to other Panamanians. It is in their interest, and they know it, that as to outside intervention, the Panama Canal must be protected. They do not envision their ability at any time, probably, in the future to protect the canal against outside forces that may intervene. For that reason, I think they welcome an assurance from the United States that we feel the right for us to intervene to protect the neutrality is a right that, really, is not just protecting the interests of the United States and of Panama, but of world peace as well. An amendment to that effect has been adopted and we trust that it is acceptable to the Panamanians.

The final element that I have found, as I have toured Illinois and discussed from one end of the State to the other the Panama Canal treaties and my own position on them, is a great concern that we are incurring a considerable cost that is unnecessary. The suggestion that I have provided today as to how we can recover virtually all, if not all, of that $700-million cost, I think, removes another lingering doubt in the minds of many people that this is a fair and equitable agreement. We shall be managing the canal for the next 22 years. What I urge is having the American commissioners confirmed by the Senate, so that we can impart to them our strong feeling that this arrangement is only equitable and fair when it is equitable and fair to both parties.

We have reached out to make an arrangement that is fair and will provide a sound basis for a partnership with the Republic of Panama. So, too, I think it is in their self-interest to see that we manage this canal in the next 22 years so as to produce adequate toll revenue to meet operating and transition costs and maintain it in the condition in which we feel it must be maintained so as to turn it over in absolutely perfect condition to Panama.

Finally, just one word of advice to our friends in Panama. I should like to state publicly what I said to General Torrijos and to other officials in that country. There will be many demands made upon Panama and its Government for expenses. They have costs of health, they have costs of education, they have housing costs, they have road repair costs. I urge the Government of Panama, no matter who is managing the Government at that time, to give first priority and that first priority always and forever, to the revenue necessary to maintain the canal in absolutely top-flight operating condition. This is an old canal. The equipment is old. But it has been maintained exquisitely by the U.S. Govern-

ment. Its operation has been perfect and it is a miracle of engineering that must be preserved at all costs.

This is not a big bonanza, this canal. It is not a big revenue maker. The U.S. Government has never made money on the canal, nor will we even when we maximize revenue in the next 22 years. But there is enough revenue to provide some surplus over and above 100 percent of all the funds needed to maintain the canal in top operating order.

Panamanians are an intelligent, highly trained, well-educated people. Their pride in this canal will be very great, indeed. I receive every assurance from the highest levels all the way through government that they were well aware of this, that the pride they would have in the canal would induce them to take every step necessary to maintain it in perfect operating condition.

I look forward, Mr. President, should the Senate advise and consent to the second treaty tomorrow, to help work out a relationship with Panama and a partnership that will last into perpetuity.

This is a new era, a new day. It is a hard adjustment for many people emotionally. It took me a long time to come to the conclusion, using reason rather than emotion, that this was the right thing, the best thing, for the United States to do in the long run to keep the canal open and operating, and operating efficiently.

It is in that interest that I hope we will approve these treaties and that we will provide constructive oversight over the next 22 years, to insure that the basis for a strong and viable partnership is maintained.

Mr. ROBERT C. BYRD addressed the Chair.

The PRESIDING OFFICER. The Senator from West Virginia.

TIME-LIMITATION AGREEMENTS

Mr. ROBERT C. BYRD. Mr. President, I have been discussing the following request with Mr. LAXALT, Mr. CHURCH, Mr. BAKER, and others.

I ask unanimous consent that with respect to the three amendments by Mr. BROOKE and a substitute by Mr. MCCLURE, there be a time limitation, all inclusive, of——

Mr. LAXALT. In accordance with our discussions, for 10 minutes, if that is agreeable to the Senators. This would contemplate back-to-back votes.

Mr. BROOKE. Let me say to the distinguished majority leader and to our distinguished floor manager (Mr. LAXALT), I believe, certainly, within an hour, and I will try to be brief.

Mr. LAXALT. We are contemplating two rollcall votes in the package, are we not?

Mr. BROOKE. That is right. I think it would contemplate three rollcall votes. I would expect a rollcall vote on the substitute and I hope the substitute is passed, but, if the substitute is not passed, then there would be a rollcall vote on my reservation. So that would be two, and there is one second rollcall vote, a third reservation will not require a rollcall vote.

Mr. ROBERT C. BYRD. How much time?

Mr. BROOKE. Three rollcall votes, a total of 45 minutes.

I did not expect the Senator from Illinois. I thought we were going on at quarter of 6 and now we are really backed up. I would think we need no more than 30 minutes of discussion, depending on the time of the opposition.

Mr. ROBERT C. BYRD. Yes.

I ask unanimous consent that on the three amendments by Mr. BROOKE and the substitute by Mr. MCCLURE there be a total time limit for discussion of 30 minutes—how is it to be divided?

Mr. BROOKE. I yield to my distinguished colleague from Idaho (Mr. MCCLURE) as to how much time he would need out of that.

Mr. MCCLURE. I wonder if the Senator from Idaho might have 10 minutes on the substitute to the Brooke reservation?

Mr. BROOKE. That would leave me 10 minutes on one reservation, and 10 minutes on another.

Mr. ROBERT C. BYRD. If I understand, between the two Senators, they would want 30 minutes between them.

Mr. MCCLURE. Twenty minutes between the two Senators on the reservation and substitute, and he would have 10 minutes on the other two reservations.

Mr. BROOKE. Which is plenty.

Mr. ROBERT C. BYRD. A total of 30 minutes.

And how much, I ask one of the managers of the treaty, would we be agreeable to on this side?

Twenty minutes then to the distinguished Senator——

Mr. BROOKE. We might be able to shorten that time.

Mr. ROBERT C. BYRD. All right.

Mr. PERCY. If the Senator will yield, would it be possible to have a 10-minute rollcall on any of those rollcall votes?

Mr. BROOKE. Could we back them up and have the three—well, we have to vote on the substitute.

Mr. CASE. Why not vote now and then we can have the discussion.

[Laughter.]

Mr. ROBERT C. BYRD. I would suggest, if we can get an agreement on the time, we do that as of now.

Mr. BROOKE. All right.

Mr. ROBERT C. BYRD. Thirty minutes to the two Senators, the Senator from Massachusetts and the Senator from Idaho, and 20 minutes to the Senator from Maryland, on the three amendments and the substitute by Messrs. BROOKE and MCCLURE respectively.

The PRESIDING OFFICER (Mr. LEAHY). Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Now, Mr. President, I ask unanimous consent that on the disposition of those amendments there be a time limitation on Mr. HELMS' amendment.

Mr. HELMS. One hour, equally divided, and we will not use that.

Mr. ROBERT C. BYRD. All right.

One hour, equally divided, with respect to the amendment by Mr. HELMS.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a 30-minute time limitation with respect to an amendment by Mr. CURTIS, to be equally divided.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I would prefer not to take any more time and to let the distinguished Senator from Massachusetts proceed.

Mr. MCCLURE. Would the Senator from West Virginia yield for a question?

Mr. ROBERT C. BYRD. I beg the Senator's pardon.

Mr. MCCLURE. Would it be possible to ask unanimous consent that it be in order to order the rollcall votes on those reservations which the Senator from Massachusetts and the Senator from Idaho are going to offer so that we can get that ordered now?

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order to ask for the yeas and nays on the amendments by Mr. BROOKE and Mr. MCCLURE and on any tabling motions that may be made with one show of seconds at this time.

The PRESIDING OFFICER. Without objection, it is so ordered. Is there a sufficient second? There is a sufficient second. The yeas and nays were ordered.

UP UNDERSTANDING NO. 26

Mr. BROOKE. Mr. President, I send to the desk an amended version of my understanding regarding foreign assistance in Panama and ask for its immediate consideration.

The PRESIDING OFFICER. The understanding will be stated.

The legislative clerk read as follows:

The Senator from Massachusetts (Mr. BROOKE.), for himself and Mr. HARRY F. BYRD, JR., proposes an unprinted understanding numbered 26.

Mr. BROOKE. Mr. President, I ask unanimous consent that further reading of the understanding be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The understanding is as follows:

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the understanding, which is to be made a part of the instrument of ratification, that nothing in the Treaty, in the Annex or Agreed Minute relating to the Treaty, or in any other agreement relating to the Treaty obligates the United States to provide any economic assistance, military grant assistance, security supporting assistance, foreign military sales credits or international military education and training to the Republic of Panama".

Mr. BROOKE. Mr. President, the change from the original understanding is technical in nature, altering the term "foreign military credit sales" to read "foreign military sales credits."

This understanding states that the United States has no obligation to provide any form of foreign assistance to Panama as a result of these treaties. The foreign assistance issue is to be handled independent of the treaties and their as-

sociated documents. In addition, the intent also is to indicate to Panama that no U.S. commitment exists regarding foreign assistance as a result of the negotiations that led to these treaties.

As the Senate has already agreed to an identical understanding during its consideration of the Neutrality Treaty, I do not believe there is any need to go into the matter in any depth. I understand that the floor manager of the treaty is prepared to accept this understanding and, therefore, I yield back the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. SARBANES. Mr. President, the understanding to which the Senator addresses himself is the understanding that was added to the previous treaty. It is completely consistent and consonant not only with representations made to us by the Executive but also with our full understanding of the situation, and we therefore are happy to accept that understanding, for the reasons that the Senator has stated in his presentation with respect to it.

Mr. BROOKE. I yield back the remainder of my time.

Mr. SARBANES. Was time assigned to the reservation, Mr. President?

Mr. BROOKE. I am working under a time agreement.

The PRESIDING OFFICER. The Senator from Maryland has a total of 20 minutes.

Mr. SARBANES. With respect to all the reservations?

The PRESIDING OFFICER. With respect to all the reservations.

Mr. SARBANES. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. SARBANES. Is it possible to go to a vote at this point on this amendment to the articles of ratification in the form of an understanding, without yielding back our time that is allocated for debate on other reservations?

The PRESIDING OFFICER. If the Senator is talking about a voice vote, yes.

Mr. SARBANES. I am prepared to go to a vote. If the Chair will put the question, I think we are prepared to vote.

The PRESIDING OFFICER. The question is on agreeing to the reservation offered by the Senator from Massachusetts.

The reservation was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the reservation was agreed to.

Mr. BROOKE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP RESERVATION NO. 27

Mr. BROOKE. Mr. President, I send to the desk an amendment to the resolution of ratification and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Massachusetts (Mr. BROOKE) proposes an unprinted reservation numbered 27 to the resolution of ratification.

Mr. BROOKE. Mr. President, I ask unanimous consent that reading of the reservation be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The reservation is as follows:

Before the period at the end of the resolution of ratification, insert a comma and the following: "Subject to the Understanding, which is to be made a part of the instrument of ratification, that before the first date of the three-year period beginning on the date of entry into force of this Treaty and before each three-year period following thereafter, the two parties shall agree upon the specific levels and quality of services, as are referred to in Article III, Paragraph 5 of the Treaty, to be provided during the following three-year period and, except for the first three-year period, on the reimbursement to be made for the costs of such services, such services to be limited to such as are essential to the effective functioning of such canal operating areas and such housing areas referred to in Article III, Paragraph 5 of the Treaty. If payments made under Article III, Paragraph 5 of the Treaty for the preceding three-year period, including the initial three-year period, exceed or are less than the actual costs to the Republic of Panama for supplying, during such period, the specific levels and quality of services agreed upon, then the Commission shall deduct from or add to the payment required to be made to the Republic of Panama for each of the following three years one-third of such excess or deficit, as the case may be. There shall be an independent and binding audit, conducted by an auditor mutually selected by both parties, of any costs of services disputed by the two parties pursuant to the reexamination of such costs provided for in this Understanding."

Mr. BROOKE. Mr. President, this understanding relates to the $10 million annual payment to Panama for services it is to provide to the commission as anticipated in paragraph 5 of article III of the treaty. It replaces the previous understanding I submitted for Senate consideration on the matter. I am joined by Senator HARRY F. BYRD, Jr., in offering this understanding.

As became apparent during hearings on this treaty and our consideration of it during the past month, a great deal of ambiguity existed regarding this payment for services. Estimates of the actual costs of the anticipated services in each of the initial 3 years the treaty would be in effect ranged from $4.4 million to $10 million or more. No provision existed in the treaty to insure that the quality of the services would be commensurate with need and stipulated payment. Nor was any attention given to establishing a procedure by which differences between the two parties regarding cost and quality of services could be settled in a reasonable way. To ignore these obvious problems would have been to tolerate unnecessarily one of several tension-producing deficiencies in this treaty. We should not do so in this instance. Thus, I am offering this understanding which, hopefully, will accomplish the following:

First, it will provide for prior agreement between the two parties as to the levels and quality of services that are to be provided by Panama to the Commission. Such prior agreement will be required before the beginning of each 3-year period set forth in paragraph five of article III.

Second, it will limit the services to be paid to those essential to the effective functioning of the canal operating areas and housing areas to be operated by the Commission. This limitation is necessary to avoid a situation where necessary services might be purchased during the first 3-year period the treaty would be in effect if ratified in order to avoid any controversy with Panama over whether or not the full $10.0 million annual payment had been earned.

Third, it provides for a mechanism by which an excess payment or an underpayment to Panama could be adjusted for in a succeeding 3-year period. Specifically, if an excess payment over actual cost of services took place in any of the first 3 years the treaty was in effect, the rate of payment during the next 3-year period would be reduced by the amount of the excess. Conversely, if an underpayment resulted a similarly appropriate adjustment would be possible. This satisfies the principle of reciprocity that should characterize treaties and ensures that the United States will receive appropriate value for dollar expended.

Fourth, it provides that any disagreement between the United States and Panama regarding the legitimate costs of the services actually provided would be settled by a binding audit by an independent auditor agreed upon by both parties. This should reduce the potential for lasting friction because of disagreements on this matter.

Mr. President, if the treaty is ratified. it will be important that we have taken every reasonable step to remove as many obstacles as possible to a successful U.S. effort to manage the Canal over the next 21-year period. This understanding is offered with that in mind. It imposes a necessary discipline on both parties.

I yield to the distinguished floor manager of the bill, and I reserve the remainder of my time.

Mr. SARBANES. Mr. President, the proposal which the distinguished Senator from Massachusetts has made is an evenhanded one. It addresses that consideration, in that the audit which will be made provides and the provision covers an excess or a deficit. Therefore, I think the Senator has come forward with an evenhanded proposal.

He also directs himself to the very important question of specific levels and quality of service.

We are prepared to accept the understanding which the Senator from Massachusetts has offered.

Mr. BROOKE. Mr. President, I have asked for the yeas and nays, but I ask unanimous consent that a vote on that understanding follow immediately the vote to be taken on the substitute motion by the Senator from Idaho (Mr. MCCLURE) and, if necessary, on the reserva-

tion I have offered, to which that substitute will be offered.

Mr. SARBANES. Did I correctly understand the Senator to say it would be immediately after?

Mr. BROOKE. Yes.

The PRESIDING OFFICER. The Chair is a little confused. Is the Senator from Massachusetts asking for a voice vote on the reservation he has just discussed?

Mr. BROOKE. No. The yeas and nays have already been ordered. I am asking unanimous consent that the vote not occur until immediately after a vote taken on the substitute motion of the Senator from Idaho (Mr. McCLURE) to the reservation that I will offer at this time; and, in fact, if the substitute motion is not agreed to, that there immediately follow a vote on the reservation.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP RESERVATION NO. 28

Mr. BROOKE. Mr. President, I send to the desk a reservation in the form of an amendment to the resolution of ratification and ask for its immediate consideration.

The PRESIDING OFFICER. The reservation will be stated.

The legislative clerk read as follows:

The Senator from Massachusetts (Mr. BROOKE) proposes an unprinted reservation numbered 28.

Mr. BROOKE. Mr. President, I ask unanimous consent that reading of the reservation be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The reservation is as follows:

Before the period at the end of the resolution of ratification, insert a comma and the following: "Subject to the reservation that exchange of the instruments of ratification shall not be effective earlier than March 31, 1979, and the treaties shall not enter into force prior to October 1, 1979, unless legislation necessary to implement the provisions of the Panama Canal Treaty shall have been enacted by the Congress of the United States of America before March 31, 1979."

Mr. BROOKE. Mr. President, this reservation relates to the linkage between the coming into effect of the Panama Canal Treaty, if indeed it does come into effect, and the necessary implementing legislation. This present version of the reservation replaces reservation No. 12 that I previously offered on this matter. Senator HEINZ and Senator HARRY F. BYRD, JR., also are sponsors of this reservation.

My original reservation would have forestalled the exchange of the instruments of ratification until such time as the appropriate implementing legislation had been enacted by Congress. However, upon further reflection, I have come to the conclusion that it makes sense to indicate certain time disciplines regarding the passage of the implementing legislation to which we will seek to adhere. What is suggested in this resolution would provide ample opportunity for us to act in a timely but not precipitous manner. By doing so, we could limit apprehensions that even after Senate ratification of the treaty, if we decide to take that action, Congress would not move with all due speed to place the United States in a position to fulfill its obligations under the treaty.

The reservation as I am now submitting it provides the following timetable:

First, the exchange of the instruments of ratification shall not be effective earlier than March 31, 1979. It need not take place even at that date.

Second, the treaties shall not enter into force prior to October 1, 1979, unless legislation necessary to implement the provisions of the Panama Canal Treaty shall have been enacted before March 31, 1979. This stipulation sets the earliest dates the treaties could come into effect. It does not require that it do so on a specific date.

The effect of the reservation is to provide Congress a maximum period of approximately 1½ years to enact the necessary legislation. This should be sufficient time to do the proper job on a very complex piece of legislation. Moreover, it would provide us an opportunity to monitor the drift of events in Panama and elsewhere that would have an impact on U.S. capacity to manage the canal over the next 20 years or so. Given the emotions that have been evoked by this issue, I see great merit in not feeling forced to proceed immediately with the implementing legislation if the decision is made to ratify the Panama Canal Treaty.

A relatively long time period between the decision to ratify, if it is made, and the effective date of the treaties is needed for several reasons. First, if the implementing legislation is needed, it will be extremely complex. Numerous statutes will be affected. All legal ramifications of the end to U.S. jurisdiction in an area we have controlled for three-quarters of a century will have to be explored. A new employment system will have to be established. In short, the passage of the Panama Canal Treaty of 1977 would entail a wholesale reorganization of the canal enterprise.

Second, any reasonable assessment of the legislative schedule for the rest of this year leads to the conclusion that it would be impossible to give the necessary in-depth attention to the implementing legislation it deserves this year. There is a backlog of important legislation on energy, farm problems, labor relations, and so forth. The administration, unwisely in my opinion, continues to talk about forwarding a SALT II Treaty to the Senate sometime in early summer. I use the term unwisely regarding SALT II because I have grave doubts that the proposals that have publicly surfaced so far are an acceptable basis for a SALT Treaty with an aggressive Soviet Union in seeking military superiority in the world.

Third, the implementing legislation would be of interest to many committees. This will inevitably add to the time necessary to consider it in an adequate manner.

Fourth, this is an election year. The necessity of campaigning will further restrict the capacity of Members to give the needed attention to this matter.

Fifth, there are likely to be many controversies between Congress and the executive regarding this legislation. For instance, it appears that the administration, in many of its calculations regarding the financial arrangements envisioned in the treaty, has assumed that the United States will forgo the interest payments on the U.S. investment that are presently going to the Treasury from canal revenues. I believe Congress would and should insist that those payments continue. And there are likely to be other financial items that are going to be handled in a manner different than presently contemplated by the administration. Such disagreements would naturally lengthen the time needed for consideration of the legislation.

There is, thus, ample reason to prolong the period before the treaties go into effect. Past experience with treaties indicates that what is contained in this reservation is not unique. For instance, in the case of the 1955 Panama Canal Treaty, Congress took 3 years in passing all the necessary legislation. It is true that the 1955 treaty entered into force at the exchange of the instruments of ratification. But the nature of that treaty and the means to implement it were far different than the one we are presently considering. In 1955, the United States kept all jurisdiction and the right to act as if sovereign in the Canal Zone. This meant that the implementation of the treaty was essentially a unilateral concern.

If the present treaty goes into effect, Panama will obtain general jurisdiction and will be intimately involved in all aspects of the new relationship. Failure of the United States to be in a position to implement its part of the agreement immediately when the treaty would go into effect would create a very difficult problem and greatly complicate the effort to manage the canal until the end of the century. This can only be avoided if there is an extended period before the treaty comes into effect to allow the enactment of the necessary legislation. The approximately 1½ years provided by this reservation should be sufficient for this purpose.

There is an additional important reason why sufficient time should be allowed to pass the implementing legislation. If the treaty came into effect before the United States had passed the legislation, we would find ourselves in the rather untenable position of being bound by a legitimate international obligation but unable to carry out our responsibilities under it. Such a situation would, at a minimum, be damaging to our international image. Moreover, it could precipitate a constitutional crisis if the executive acted to implement the treaties by Executive order rather than await the needed action by Congress. There is no reason to precipitate such a crisis if we can avoid it. By adopting the pending reservation, a major step will have been taken to lessen the likelihood that such a problem would develop.

The PRESIDING OFFICER (Mr. PAUL G. HATFIELD). Who yields time?

Mr. SARBANES. Mr. President, I suggest to the Senator from Idaho that perhaps if he could proceed with his substitute I could then address both proposals together, since I have less time than was allocated, and I think it would make a more logical way to try and respond to the two proposals, if that is agreeable to the Senator.

Mr. McCLURE. Mr. President, I am happy to accede to the suggestion of the Senator from Maryland.

UP RESERVATION NO. 29

Mr. President, I have an amendment by way of a substitute to the reservation offered by the Senator from Massachusetts at the desk, and I ask for its immediate consideration.

The PRESIDING OFFICER. The reservation will be stated.

The legislative clerk read as follows:

The Senator from Idaho (Mr. McCLURE) proposes an unprinted reservation numbered 29 in the nature of a substitute for the Brooke reservation numbered 28.

Mr. McCLURE. Mr. President, I ask unanimous consent that the reading of the substitute reservation be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The substitute reservation is as follows:

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the reservation that, before the date of exchange of the resolution of ratification, the legislation necessary to implement the provisions of the Panama Canal Treaty shall have been enacted by the Congress of the United States of America".

Mr. McCLURE. Mr. President, for the convenience of Members who may not have followed the preliminary discussions, I might simply refer to this as the text of the original reservation numbered 12 which was intended to be proposed by Mr. BROOKE. It is printed and on every desk in that form.

Mr. President, I support the direction which the Senator from Massachusetts has taken, and I support fully the arguments that he has made with respect to the anomaly in which our country could find itself, having adopted a treaty which had been consented to by action of the Senate and then Congress either failing or refusing to enact the implementing legislation, which would place us in the awkward, untenable, and embarrassing position of having agreed to an international obligation which we were powerless to implement because of the failure or the refusal of the whole Congress to agree to the terms of the implementing legislation.

I think the reservation which he has offered has the virtue of at least saying for a period of time we are not going to deliver the documents to the Government of Panama until Congress has had the opportunity to look at the implementing legislation and act on it.

It has two failures, however, in my judgment which the original reservation did not have.

That would be cured if the Senate would adopt the substitute which I have now offered; that is, that, first of all, in the meantime prior to the date established by the Brooke reservation the Congress could have either failed, because they simply did not get around to it, to pass the implementing legislation or they could have failed because by design they did not wish to.

Oftentimes there is a consensus that develops in an utterly negative way outside of a debate and discussion and vote on the floor of the House or the Senate; the failure to schedule it, the failure in the House of Representatives to grant a rule by which it can be considered on the floor, the failure of the proposals in the committee before it gets to the floor. There are any number of ways in which Congress can act negatively, outside of a primal vote on the legislation.

Second, it also has the anomaly of saying in the event it did get to the floor of Congress in either the House or the Senate and was specifically rejected by either body, that the President would then be free, following that date, to deliver the instruments of ratification and of the treaty which, I think, is the worst of all worlds, and, perhaps, even worse than the anomaly of now ratifying and agreeing to one which we would not later implement.

But I think it has perhaps a worse effect, this idea of establishing a fixed date by which Congress must act, because we are involved in the most delicate of negotiations with the Government and the people of Panama. Our negotiations are with the Government, the discussions are, perhaps, with the people in Panama. They are being asked to accept reservations and changes that we have enacted in both the original treaty and in this one, and they will have to have time to react to those suggestions.

There are those who believe that the reservations we have adopted will require a separate plebiscite in Panama under their law, and that they will have to have the time in which to conduct the discussions and have the vote in Panama before they can accept what we have decided upon here. I hope that is true. I hope it is that binding on them, and without getting into that argument as to whether it is or is not, does or does not require that plebiscite, it is possible that that time will be required.

Beyond that, we will be, in the implementing legislation, discussing any number of details of the relationships between our country and theirs and the obligations which our country may be faced with under the implementing legislation.

Those may be time-consuming. They may be very delicate in their timing and in the negotiations themselves. There should be given to the people who will be conducting the negotiations an ample amount of time to bring them to a happy conclusion rather than constricting the time in such a manner that it may precipitate a crisis at the very worst possible time.

Finally, Mr. President, it seems to me that, if you set a deadline for action, that deadline, that date itself precipitates a crisis because it is the standard against which all of the agreement must be broken or passed. It is the final point at which, if we pass that date, we have thrown down the gauntlet if we have not yet agreed.

It seems to me in this kind of negotiation we would be well served not to have a deadline. We should not draw a line with our toe in the dust and say, "Don't step over it." Neither should we set a time in which we say, "You must by this time have agreed or there will be no agreement."

So, for all of those reasons, Mr. President, I hope the Senate will accept the wisdom of the Senator from Massachusetts in his original formulation of this suggestion, which is the form in which I have offered it as a substitute.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. SARBANES. I yield to the Senator from New York.

Mr. JAVITS. Mr. President, will the Chair advise me when I have used 3 minutes?

Mr. President, I understand that the reservation made by Senator BROOKE'S amendment is a reservation which we can live with. I understand the reservation made by Senator McCLURE'S amendment is a reservation which we cannot live with, and the reason is simply this: if the same procedure is engaged in respecting the implementing legislation, except more so, this treaty cannot take effect into some indefinite future, whatever that may be, and the reason is that vital elements in the implementation of the treaty, such, for example, as the appointment of the Panama Canal Commission, cannot be gone through with unless the implementing legislation is passed.

Now, it may very well be that the legal effect at the end of the road might be the same. But the failure to exchange instruments of ratification simply leaves the question wide open so that no matter what happens in Panama the treaty can be denounced before the instruments of ratification are exchanged. It is not a treaty in law until that happens, notwithstanding the action of the Senate.

So the implementation of legislation being up in the air, the whole question will be up in the air, and it could be for years, knowing how this body can, if it gets its teeth into it, operate.

This condition of instability and uncertainty is highly undesirable in such international affairs as involve our relations with Panama, and through this treaty to the whole of Latin America. It simply is an untenable position for us to get into and we should not permit ourselves to get into it.

One further thing, and that is that the implementing legislation which I have before me details with the question of the control of military forces in the Panama Canal Zone and conforms the dealing with the question of military forces and how they are dealt with according to the requirements of the treaty.

I cannot think of anything more unsettling to the relations, Mr. President, which we have with Panama than if this question is demagoged in Panama. That really, with one hand, means we are agreeing to this treaty, which puts certain emoluments, as it were, upon the sovereignty of Panama and corrects a problem which has remained with us since 1903 and, on the other hand, we hold it out because of the McClure reservation until such time as we actually make it legal by passing the implementing legislation.

So I think, Mr. President, on grounds of policy and on grounds of law the McClure reservation should be rejected.

As to the other one, I understand, as I say, that we can live with that and, therefore, what action the Senate takes will be up to individual Members. But I am very clear upon the fact that the substitute would be a grave mistake, and I hope it is rejected.

I thank my colleague for the time.

The PRESIDING OFFICER. The Senator from Maryland.

Mr. SARBANES. Mr. President, I want to contrast the approach which the Senator from Massachusetts has taken with that proposed in the substitute. It seems to me it represents a fuller consideration of the problems that are connected with the substitute.

The distinguished and able Senator from Massachusetts has been a very strong and effective spokesman addressing himself to the question of the implementing legislation. I think it is fair to say that we now know pretty well what the administration at least proposes to include in the implementing legislation, although, of course, it is up to Congress to enact the implementing legislation, and we will have the opportunity, we being both the Senate and the House of Representatives, to pass upon the implementing legislation and to shape or to mold it.

The substitute, in effect, would not allow the treaty to take effect at any point unless the implementing legislation had already been enacted and that, of course, opens the tremendous possibility of playing mischief with the implementing legislation.

It also, as the distinguished Senator from New York points out, really underscores simply holding out an empty promise to the other party to the treaty. I mean it is really almost an empty act, that may be impossible.

The proposal which the Senator from Massachusetts is now offering places the maximum impetus for arriving at the implementing legislation without making the treaty action an empty one or a hoax on the other party. He has calculated a timespan which I think is reasonable under the circumstances. It in effect embraces the balance of this Congress and, if we are really not able in that period of time to finally enact the implementing legislation, it gives us an opportunity at the beginning of the next Congress to have almost 3 months in which to enact the implementing legislation.

Furthermore, the provision he has now offered states that if the implementing legislation is enacted earlier than that, then we should proceed with the exchange of articles of ratification, and 6 months later, then, with the implementation of the treaty. However, it provides a safeguard against mischief with respect to the implementing legislation by saying that if we arrive at March 31, 1979, and have not been able to enact it, then the exchange of the article of ratification will take place and 6 months later the treaty will go into effect.

I am very frank to say to the Senator from Massachusetts that I find it a very imaginative and ingenious approach that he has taken to the problem to which he has repeatedly addressed himself on the floor of the Senate, and which he has underscored; and I think there is a very significant difference, a truly fundamental difference, between that approach and the approach taken in the substitute.

It is for that reason that I rise to articulate a position in opposition to the substitute and in support of the proposition which the Senator from Massachusetts has now placed before the Senate.

Mr. JAVITS. Mr. President, will the Senator yield to me?

Mr. SARBANES. I am happy to yield to the Senator from New York.

Mr. JAVITS. It seems to me that we have here the difference between acceleration and deceleration. I think the proposal of the Senator from Massachusetts accelerates the adoption of the legislation. I think by fixing no date, the Senator from Idaho (Mr. McCLURE) decelerates the adoption of the implementing legislation, and jeopardizes everything we have been doing in the last few months and until tomorrow.

I thank my colleague for yielding.

Mr. SARBANES. Mr. President, I reserve the remainder of my time.

Mr. McCLURE. Mr. President, how much time does the Senator from Idaho have remaining?

The PRESIDING OFFICER. There is 2 minutes remaining to the Senator from Idaho.

Mr. McCLURE. Mr. President, I think that 8 minutes I am supposed to have consumed must have included some minutes my friend from Massachusetts consumed, but I will not use up my time talking about that.

It is suggested that to adopt the substitute which I have offered will have the result of holding out an empty promise; but in truth and in fact precisely the opposite is true. To consent to the ratification of the treaties confessing the possibility that Congress will not adopt the implementing legislation is to do precisely what both the Senator from New York and the Senator from Maryland have suggested—promising something which Congress is not willing to fulfill, to put us in the position of having undertaken an obligation which Congress is unable or unwilling to discharge.

It has been suggested that it accelerates the adoption of the implementing legislation to have a time certain. That presupposes and presumes that Congress is going to adopt it. I would say to my friend from New York there ought to be at least some question about whether Congress has the right to debate it, and perhaps even the right to reject it. If as a matter of fact they have debated and rejected the implementing legislation prior to that date, we are then in the anomalous position of having rejected implementing legislation but having empowered the President to go ahead and ratify the treaty and allow it to go into effect after Congress has said, "No, we will not do what we had promised to do." That seems to me to be an anomaly which we should avoid by adopting the substitute, conditioning the delivery of the documents upon the adoption of implementing legislation.

I would suggest that when this matter was first brought up as an amendment to the treaty, I understood a number of the arguments against it to be that it ought to be involved with the delivery of the instruments, and not in the text of the treaty itself. Why, if it was an argument against the delivery of the treaty, do the proponents of the treaty object to doing, then, what would be an alternative?

The PRESIDING OFFICER. The Senator's 2 minutes have expired.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. SARBANES. I yield to the Senator from New York such time as he may require.

Mr. JAVITS. The point the Senator from Idaho makes is very adequately answered by the fact that any businessman will tell you, "If you want to settle something, give me an answer yes or no." The problem with his proposal is that it protracts it into the indefinite future. The virtue of Senator BROOKE'S proposition is that it gives you a definite time in the future, and you know whether you are on or off, and can do something about if the Senate rejects this legislation. Under the McClure reservation, it is forever, and you are out in the wild blue yonder and do not know what the result is going to be. Precisely for that reason it ought to be rejected.

Mr. SARBANES. Mr. President, I want to emphasize also the very perceptive point by the Senator from New York that one approach is acceleration and the other is deceleration. The implementing legislation deals with matters within our own jurisdiction, and some of those matters are of deep import. But I feel the likelihood that those matters will be resolved in a positive and constructive fashion is sensitive to a lot of concerns which Members of this body share on both sides of the treaty issue. You get the concerns involved in the rights of Americans who have worked in the zone, much of which is dealt with in the implementing legislation. The resolution

of those concerns is enhanced by the approach of the Senator from Massachusetts, because the sooner you can arrive at such a solution and enact the implementing legislation, the sooner you can move to the treaty arrangement.

Therefore, I think it will serve to help to structure the concerns of the implementing legislation in such a way that both the administration and Congress will be more responsive to some of the concerns the legislation seeks to deal with. The approach of the substitute holds out the prospect of no action whatever over an indefinite time and, therefore, carries with it, again, the possibility of making our action here an empty and vain one, and we really ought not to be seeking to do that by indirection if it cannot be achieved by direction, which I hope it cannot be.

For that reason, again, Mr. President, I oppose the substitute and support the proposal made by the Senator from Massachusetts.

Mr. BROOKE. Mr. President, unless the distinguished Senator from Idaho wishes to speak further on this issue, I am prepared to yield back my remaining time.

I ask unanimous consent that after the vote on the McClure substitute, the other two votes be 10-minute votes, if the other two are necessary. I know one will be necessary.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SARBANES. Mr. President, I move to table the McClure substitute.

Mr. McCLURE. Mr. President, will the Senator withhold that just long enough for me to propound a parliamentary inquiry?

Mr. SARBANES. Yes.

Mr. McCLURE. What is the effect on the Brooke reservation if the McClure substitute is tabled?

The PRESIDING OFFICER. If the McClure substitute is tabled, then a vote will occur on the Brooke reservation.

Mr. McCLURE. It leaves the Brooke reservation untouched?

The PRESIDING OFFICER. The Senator is correct.

Mr. McCLURE. I thank the Chair.

Mr. BROOKE. Mr. President, I yield back the remainder of my time.

Mr. SARBANES. Mr. President, I yield back the remainder of my time and move to table the McClure substitute. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. Is there objection at this time to limit the rollcall votes to 10 minutes? Without objection, it is so ordered.

Mr. SARBANES. That is the votes subsequent to the vote on the McClure reservation.

Mr. McCLURE. The first vote will be 15 minutes.

The PRESIDING OFFICER. The first vote is 15 minutes and the subsequent votes will be 10 minutes.

The question is on agreeing to the motion to table. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Delaware (Mr. BIDEN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Maine (Mr. HATHAWAY), the Senator from Massachusetts (Mr. KENNEDY), the Senator from South Dakota (Mr. McGOVERN), the Senator from Rhode Island (Mr. PELL), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Alabama (Mr. SPARKMAN), and the Senator from Mississippi (Mr. STENNIS) are necessarily absent.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. PELL) and the Senator from Connecticut (Mr. RIBICOFF) would each vote "yea."

Mr. BAKER. I announce that the Senator from Alaska (Mr. STEVENS), the Senator from Wyoming (Mr. WALLOP), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska (Mr. STEVENS) would vote "nay."

The result was announced—yeas 56, nays 31, as follows:

[Rollcall No. 101 Ex.]

YEAS—56

| | | |
|---|---|---|
| Anderson | Haskell | Metzenbaum |
| Baker | Hatfield, | Morgan |
| Bayh | Mark O. | Moynihan |
| Bellmon | Hatfield, | Muskie |
| Bentsen | Paul G. | Nelson |
| Bumpers | Hayakawa | Packwood |
| Byrd, Robert C. | Heinz | Pearson |
| Case | Hodges | Percy |
| Chafee | Hollings | Proxmire |
| Chiles | Huddleston | Randolph |
| Church | Humphrey | Riegle |
| Clark | Inouye | Sarbanes |
| Cranston | Jackson | Sasser |
| Culver | Javits | Stafford |
| Danforth | Leahy | Stevenson |
| Durkin | Long | Talmadge |
| Eagleton | Magnuson | Weicker |
| Glenn | Mathias | Williams |
| Gravel | Matsunaga | |
| Hart | McIntyre | |

NAYS—31

| | | |
|---|---|---|
| Allen | Ford | Melcher |
| Bartlett | Garn | Nunn |
| Brooke | Goldwater | Roth |
| Burdick | Griffin | Schmitt |
| Byrd, | Hansen | Schweiker |
| Harry F., Jr. | Hatch | Scott |
| Cannon | Helms | Stone |
| Curtis | Johnston | Thurmond |
| DeConcini | Laxalt | Tower |
| Dole | Lugar | Zorinsky |
| Domenici | McClure | |

NOT VOTING—13

| | | |
|---|---|---|
| Abourezk | McGovern | Stevens |
| Biden | Pell | Wallop |
| Eastland | Ribicoff | Young |
| Hathaway | Sparkman | |
| Kennedy | Stennis | |

So the motion to lay on the table was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. CHURCH. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The question is on agreeing to unprinted amendment No. 28. The yeas and nays have been ordered. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Delaware (Mr. BIDEN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Maine (Mr. HATHAWAY), the Senator from Massachusetts (Mr. KENNEDY), the Senator from South Dakota (Mr. McGOVERN), the Senator from Rhode Island (Mr. PELL), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Alabama (Mr. SPARKMAN), and the Senator from Mississippi (Mr. STENNIS) are necessarily absent.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. PELL) and the Senator from Connecticut (Mr. RIBICOFF) would each vote "yea."

Mr. BAKER. I announce that the Senator from Alaska (Mr. STEVENS), the Senator from Wyoming (Mr. WALLOP), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska (Mr. STEVENS) would vote "yea."

The result was announced—yeas 84, nays 3, as follows:

[Rollcall Vote No. 102 Ex.]

YEAS—84

| | | |
|---|---|---|
| Allen | Glenn | McClure |
| Anderson | Goldwater | McIntyre |
| Baker | Gravel | Melcher |
| Bartlett | Griffin | Metzenbaum |
| Bayh | Hansen | Moynihan |
| Bellmon | Haskell | Muskie |
| Bentsen | Hatch | Nelson |
| Brooke | Hatfield, | Nunn |
| Bumpers | Mark O. | Packwood |
| Burdick | Hatfield, | Pearson |
| Byrd, | Paul G. | Percy |
| Harry F., Jr. | Hayakawa | Proxmire |
| Byrd, Robert C. | Heinz | Randolph |
| Cannon | Helms | Riegle |
| Case | Hodges | Roth |
| Chafee | Hollings | Sarbanes |
| Chiles | Huddleston | Sasser |
| Church | Humphrey | Schmitt |
| Clark | Inouye | Schweiker |
| Cranston | Jackson | Scott |
| Culver | Javits | Stafford |
| Curtis | Johnston | Stevenson |
| Danforth | Laxalt | Stone |
| DeConcini | Leahy | Talmadge |
| Dole | Long | Thurmond |
| Domenici | Lugar | Tower |
| Eagleton | Magnuson | Weicker |
| Ford | Mathias | Williams |
| Garn | Matsunaga | Zorinsky |

NAYS—3

| | | |
|---|---|---|
| Durkin | Hart | Morgan |

NOT VOTING—13

| | | |
|---|---|---|
| Abourezk | McGovern | Stevens |
| Biden | Pell | Wallop |
| Eastland | Ribicoff | Young |
| Hathaway | Sparkman | |
| Kennedy | Stennis | |

So the amendment (UP amendment No. 28) was agreed to.

(Mr. HODGES assumed the chair.)

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. BROOKE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. PAUL G. HATFIELD). The question is on agreeing to unprinted amendment No. 27. On this question the yeas and nays

have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Delaware (Mr. BIDEN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Maine (Mr. HATHAWAY), the Senator from Massachusetts (Mr. KENNEDY), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Rhode Island (Mr. PELL), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Alabama (Mr. SPARKMAN), and the Senator from Mississippi (Mr. STENNIS) are necessarily absent.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. PELL) and the Senator from Connecticut (Mr. RIBICOFF) would each vote "yea."

Mr. BAKER. I announce that the Senator from Alaska (Mr. STEVENS), the Senator from Wyoming (Mr. WALLOP), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska (Mr. STEVENS) would vote "yea."

The result was announced—yeas 84, nays 3, as follows:

[Rollcall Vote No. 103 Ex.]

YEAS—84

| | | |
|---|---|---|
| Allen | Goldwater | McIntyre |
| Anderson | Gravel | Melcher |
| Baker | Griffin | Metzenbaum |
| Bartlett | Hansen | Morgan |
| Bayh | Haskell | Moynihan |
| Bentsen | Hatch | Muskie |
| Brooke | Hatfield, | Nelson |
| Bumpers | Mark O. | Nunn |
| Burdick | Hatfield, | Packwood |
| Byrd, | Paul G. | Pearson |
| Harry F., Jr. | Hayakawa | Percy |
| Byrd, Robert C. | Heinz | Proxmire |
| Cannon | Helms | Randolph |
| Case | Hodges | Riegle |
| Chafee | Hollings | Roth |
| Chiles | Huddleston | Sarbanes |
| Church | Humphrey | Sasser |
| Clark | Inouye | Schmitt |
| Cranston | Jackson | Schweiker |
| Culver | Javits | Scott |
| Curtis | Johnston | Stafford |
| Danforth | Laxalt | Stevenson |
| DeConcini | Leahy | Stone |
| Dole | Long | Talmadge |
| Domenici | Lugar | Thurmond |
| Eagleton | Magnuson | Tower |
| Ford | Mathias | Weicker |
| Garn | Matsunaga | Williams |
| Glenn | McClure | Zorinsky |

NAYS—3

| | | |
|---|---|---|
| Bellmon | Durkin | Hart |

NOT VOTING—13

| | | |
|---|---|---|
| Abourezk | McGovern | Stevens |
| Biden | Pell | Wallop |
| Eastland | Ribicoff | Young |
| Hathaway | Sparkman | |
| Kennedy | Stennis | |

So UP amendment No. 27 was agreed to.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. SARBANES. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Senator from North Carolina (Mr. HELMS) is recognized for 1 hour to be divided between Senator CHURCH and Senator HELMS on his reservation.

Mr. HELMS. Mr. President, is there a unanimous-consent agreement in force with respect to a vote on this reservation?

The PRESIDING OFFICER. There is not.

Mr. LAXALT. Mr. President, we are in the process of attempting to work it out.

Mr. HELMS. I understand.

Mr. LAXALT. In any event, we are trying to work out a vote on the reservation, if it is acceptable to the Senator from North Carolina, in the morning.

Mr. HELMS. That is perfectly satisfactory to the Senator from North Carolina, and I thank my colleague from Nevada.

RESERVATION NO. 18

Mr. HELMS. Mr. President, I have a reservation at the desk which I call up and ask that it be stated.

The PRESIDING OFFICER. The reservation will be stated.

The assistant legislative clerk read as follows:

The Senator from North Carolina (Mr. HELMS) proposes reservation numbered 18.

Mr. HELMS. Mr. President, I ask unanimous consent that further reading of the reservation be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The reservation is as follows:

Strike out the period at the end of the resolution of ratification and insert in lieu thereof a comma and the following: "subject to the following reservation:

"The Panama Canal Commission is obligated to pay to the Republic of Panama amounts under this treaty only to the extent that the operating revenues of the Canal exceed expenditures of the Panama Canal Commission. Any year in which expenditures exceed operating revenues, the Commission shall expend its funds, to the extent that funds are available, for the following purposes and in the following order—

"(a) operating expenses of the Panama Canal Commission;

"(b) capital expenses of the Panama Canal Commission;

"(c) payments to the Republic of Panama under paragraph 5 of article III;

"(d) payments to the Republic of Panama under paragraph 4(b) of article XIII;

"(e) payments into the Treasury of the United States of America of interest on the direct investment of the United States of America in the Canal;

"(f) payments into the Treasury of the United States of America representing amortization of the assets of the United States of America in the former Canal Zone before the date of termination of the Panama Canal Treaty;

"(g) payments to the Republic of Panama under paragraph 4(a) of article XIII; and

"(h) payments to the Republic of Panama under paragraph 4(c) of the article XIII.

No amount obligated to be paid by the Panama Canal Commission under the Treaty, except for payments made under paragraph 4(c) of article XIII, which, pursuant to this reservation, is not paid, may be paid in future years, except as the two Parties may agree."

Mr. HELMS. Mr. President, one of the greatest concerns of the American people about this Panama Canal Treaty is the cost of the giveaway. The people appropriately are asking: Why require the American taxpayers to pay to give something away? The proponents of the treaties pretend that the U.S. taxpayers will not have to pay; instead they say the payments will come out of the tolls charged by the canal. The users of the canal will pay, the proponents have assured us, not the taxpayer. Furthermore, the proponents say that the increase in toll rates required will result in negligible increases in cost to the U.S. consumer.

But to assert that the canal will earn all of the costs of operation and payments to Panama requires an incredible manipulation of accounting concepts. The canal will pay its way only—and I emphasize the word "only"—if the enormous costs are absorbed by the taxpayers of the United States.

These costs are almost equal to the payments which Panama is expected to receive over the life of the treaty. They amount to $60 million per year—or $1.32 billion over the 22-year life of the treaty now before the Senate.

Mr. President, if we look at the situation realistically, the United States pays twice. First, the U.S. Treasury forgoes the income from the canal, income which could be used to alleviate the burdens on the U.S. taxpayers. This alone amounts to some $66 million estimated for the first year alone; over the years, that amounts to $1.45 billion. The fact that that income belongs to the U.S. taxpayers would be even more evident if the implementing legislation provides for all revenues to be paid into the U.S. Treasury and disbursed by appropriation to Panama. We will be setting a dangerous precedent if we do not insist upon all payments going through the appropriations process in the Congress of the United States as the Constitution of the United States very clearly requires.

But then the United States pays again. The U.S. Treasury not only forgoes the payments made to Panama; it also forgoes the interest due on the net direct investment of the United States in the canal. The interest-bearing portion of this investment today amounts to $318.9 million. The annual interest is projected for the life of the treaty to be worth about $20 million. In addition, there is the question of the fixed assets of the canal organization, worth today about $567 million. About $92 million of these assets will be transferred on the effective date of the treaty, leaving assets of $475 million to be turned over in the year 2000. Unless the taxpayers—and I mean the U.S. taxpayers—are going to absorb that cost too, the U.S. Treasury must be reimbursed. Amortization of the $475 million would put $22 million in the U.S. Treasury every year.

Together, these two payments amount to $42 million every year which should be paid into the U.S. Treasury.

If that is the case, then why do not we provide in the implementing legislation for payments to the U.S. Treasury to be included in the toll base? The answer is that the canal cannot possibly earn enough to pay both Panama and the United States.

In fact, there is evidence that the canal will not even earn enough to pay Panama at the 19.5 percent toll rate in-

crease proposed by the administration. The assumptions that underlie the administration's projections of expenses do everything possible to understate the true cost.

For example, the projections assume that revenues from Alaskan oil will continue indefinitely; but even the Governor of the Canal Zone, Governor Parfitt, was deeply disturbed by such an assumption. If the proposed Los Angeles-Texas pipeline is built, the canal revenue projections would have to be reduced by $30 million every year.

Another assumption built into the propections is that the administration's target of reducing inflation to 5 percent will be met. The 5 percent target is an admirable hope, but it is hardly more than a pious wish. A much more conservative projection would be that inflation will continue to hover around 7 percent.

A third fallacious assumption by the administration and by the proponents of this treaty is that the necessary program of capital expenditures can be financed largely through depreciation. But the cash flow generated by depreciation on assets previously acquired and paid for has no relationship whatsoever to future expenditures for capital assets. That money is available for use for payment of any of the expenses of the agency; it does not reduce the total expenditures required, according to studies by one of the foremost experts in canal finances, Mr. W. M. Whitman. Mr. Whitman was Secretary of the Panama Canal Co. for over 20 years, and is presently a consultant with the House Merchant Marine Committee.

The capital program, therefore, should be built into the tolls structure and financed entirely through tolls. The danger is that, if this is not done, the cash will be used to make payments to Panama or for other expenses. It would be far better to use the money to make some return to the U.S. Treasury. However, by including the whole cost of the capital requirements in the toll base, rather than merely the cost in excess of depreciation, some $18 million per year must be added to operating expenses.

By truly stating the cost of the capital program, however, it is more difficult to project a balance sheet that looks good. For example, for the canal to break even would require a 28.5 percent toll rate increase, instead of the 19.5 percent increase proposed by the administration and the proponents of this treaty. This is another example of the understatement that has been used to try to convince Americans that the treaties are economically viable.

The Panama Canal cannot make enough revenue to pay both Panama and the United States. Yet it is not just and equitable that the United States should assume all the burdens of management, investment, and operation, while Panama gets only the benefits. The United States is taking the risk that the canal cannot even earn enough to pay Panama, yet alone the U.S. Treasury, the American taxpayers inevitably must pay through the nose. Yet Panama assumes no risk at all.

If we are going to have a meaningful partnership as so often discussed on this floor, a meaningful partnership, then Panama must share in the risks as well as the benefits. If Panamanians must be trained in proper management, they must learn the realities of finance. Moreover, something must be done to protect the taxpayers' interest.

My proposal with this reservation is this: to reverse the priorities of paying Panama and the United States. After making the two fixed payments of $10 million each to Panama, for a total of $20 million, we would then pay ourselves first to recover all costs of interest and amortization. Only after all costs to the U.S. Treasury were covered would Panama receive payments under the 30 cents a ton formula. It would be the understanding of the United States, added to resolution of ratification, that the United States would be obligated to make payments under the 30 cents a ton formula only to the extent that earnings were available after all costs to the U.S. Treasury were paid.

This would provide an equitable balance of risks and benefits between the two countries. Panama would be guaranteed $20 million a year, which is 10 times what she gets now; she would have a chance of earning up to $27 million more during the first years. The equities are a bit lop-sided when Panama is guaranteed up to $66 million a year, whereas the U.S. taxpayers are getting stuck for $60 million a year.

It must not be forgotten that the United States is bearing all the responsibility for investment, management, and operation. If a natural catastrophe or an act of war destroyed any of the locks and dams, the United States would be liable for replacement no doubt to the tune of hundreds of millions of dollars. If a severe depression hits the world economy and canal revenues slide as a consequence, the U.S. taxpayer has to make up the difference in the costs.

Panama takes absolutely no risk, contributes absolutely nothing to management policies, supplies absolutely no capital, and takes over the whole operation lock, stock, and barrel in the year 2000.

Mr. President, that is a bad deal for the taxpayers of the United States. Such a solution is neither businesslike nor moral. It is not fair to the United States and it certainly is not fair to the American taxpayer.

My proposal is a balanced proposal. To sum it up, this is what it would do:

One. It would provide that capital costs be included in the expenses to be paid by the toll base.

Two. After all operating expenses are paid, then Panama would be guaranteed $20 million—the $10 million for services under article III, paragraph 5, and the $10 million fixed payment under article XIII, paragraph 4(b).

Three. Once Panama was paid $20 million, then the U.S. Treasury would be paid approximately $20 million for interest on the U.S. direct net investment in the canal.

Four. After the interest was paid to the U.S. Treasury, a sum of approximately $22 million would also be paid to the U.S. Treasury representing the amortization of assets.

Five. Finally, after all the costs to the U.S. taxpayer have been paid, Panama would get any surplus up to an amount equal to that generated by the 30 cents a ton formula of article XIII, paragraph 4(a). On the basis of present information, this surplus would not be equal to the full payment under the formula ($46 million), because the canal simply can not earn that much. But it would be as high as $27 million, depending upon the level of toll rates. The toll rate would be the subject of consultation between the United States and Panama. Other factors would have to be considered beyond remuneration for Panama. The two parties doubtless would consider the impact of high toll rates on individual commodity markets, trade routes, regional economic associations, and individual countries.

This proposal is more fitting as a reservation rather than as an amendment, since it does not involve any active participation by the Republic of Panama. All that it requires from Panama is Panama's passive acknowledgement of our statement of intentions. The funds are wholly within our control at all times, and it is up to us—the United States Senate—to present the proper accounting and distribution of funds and to direct the Federal bureaucracy to do so.

Mr. President, detailed studies have gone into the preparation of this amendment to insure its feasibility and necessity. It would be pointless to attempt to give all the statistics orally in a general debate, but I have placed on every Senator's desk a detailed resume of the calculations which perhaps deserve a word or two of explanation. This objective study was prepared by the Institute of American Relations, and I am grateful for their thoughtful, nonpartisan work.

The first point to be noted is that there is a practical maximum, a ceiling which governs the limit of revenue that the canal can earn. The amount of potential business for the canal is expected to increase slowly over the years; but if this business is to be obtained by the canal, tolls must be competitive with other alternatives. If tolls are increased rashly, the potential business will be driven away.

International Research Associates has calculated that the maximum increase in revenue possible by increasing tolls is 40 percent. After that point, significant amounts of traffic would be diverted, lowering the amount of cargo tonnage which transits the canal. In other words, with excessive toll rates, the canal would receive more money per ton for fewer tons. You reach a point where the gain curve flattens out or begins to go down. The point of diminishing returns is reached somewhere between increases of 50 and 75 percent. Even increases of 100 or 200 percent would not provide more than a 40-percent net gain in total revenues.

The color chart on the first page of the study illustrates the components of fiscal year 1979 as color blocks stacked up according to the priorities presently rec-

ognized in the treaty. The first black line from the bottom represents the present level of revenue from the canal, $258.2 million. The second black line represents the level of revenue obtained by the proposed 19.5 percent toll increase. The yellow band across the page represents the amount of tolls that could be recovered by a 75-percent toll increase, namely $336.2 million. The red band represents the level of costs which are not recoverable, no matter how high tolls are raised.

The blue block, therefore, represents the operating expenses. The green block represents payments to Panama under the treaty. The chart makes it graphically clear that the cost of the payments to Panama would require revenues of $313.3 million, plainly exceeding the $296.2 million raised by the proposed toll increase of 19.5 percent. Interest payments and amortization payments to the U.S. Treasury could be made only partially, and then only if rates were raised excessively to 75 percent. The maximum possible revenue would require $336.2 million, whereas to pay all the true costs would require $357.3 million.

The second column shows what would happen if the priorities are balanced, with Panama guaranteed $20 million and the United States guaranteed $42 million before any payments are made to Panama under the 30 cents a ton formula. It would be possible to pay all costs for the $20 million to Panama and for the $42 million to the U.S. Treasury under a 28.5 percent increase. The amount left over for Panama would depend upon the level of toll increases.

In the succeeding pages and tables, detailed data is given not only for fiscal year 1979, but also for fiscal year 1980, fiscal year 1981, fiscal year 1982, fiscal year 1983, and fiscal year 1984. The study stops at fiscal year 1984, because the Panama Canal Company feels that accurate projections cannot be made further in the future.

Table I demonstrates that, just to pay Panama under the priorities set in the treaty, would require toll increases ranging from 28.2 to 43.2 percent, rather than the 19.5 percent suggested.

Table II demonstrates what would happen if the U.S. Treasury were given payment priority over payments to Panama under the 30 cents a ton formula. If Panama were guaranteed $20 million, and the U.S. Treasury were to receive $42 million, toll increases required would range from 25.8 to 35.9 percent, increases that are within the range of mathematical possibility. Of course, if the 30 cents a ton payments to Panama were added on top, the canal would be bankrupt.

Table III demonstrates the maximum revenue that would be available to Panama under the 30 cents a ton formula if such payments were made only from surplus. The maximum toll revenues possible by raising toll rates 75 percent for a net gain of 40 percent would range from $272.9 million in fiscal year 1979 to $291.3 million in fiscal year 1984. After expenses, the $20 million fixed payment to Panama would range from $27.7 million in fiscal year 1979 to $8.5 million in fiscal year 1984.

Mr. President, I ask unanimous consent that relevant portions of this study by the Institute of American Relations, including the three tables, be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HELMS. I might add in closing Mr. President, that neither my calculations nor these studies by the Institute of American Relations have taken into account the so-called contingency payment of $10 million to Panama, if earned. It has been agreed by Governor Parfitt and all who have examined the situation that the Panama Canal Commission will set toll rates at a level so that the necessary surplus will never be earned. The United States has no intention whatsoever of producing a surplus that will be paid to Panama under article XIII, paragraph 4(c). My reservation, therefore, places such payments in the final category, after payments under the 30 cents a net ton formula. Since the canal cannot earn even enough to pay the 30 cents a net ton formula, there will obviously be no surplus for the contingency payment. That provision of the treaty is, in any case, a mere rhetorical flourish, and is not to be taken seriously.

EXHIBIT 1

BALANCING RISKS AND BENEFITS—ESTABLISHING PANAMA CANAL PRIORITIES

It is a cardinal article of faith among the arguments put forward in explanation of the Panama Canal Treaty that the proposed Panama Canal Commission will be self-supporting on the basis of tolls.

However, if the accounting put forth by the official spokesmen for the Administration is examined carefully, it becomes evident that there are a number of fallacies in the methods used. Indeed, if a proper accounting is made of all costs involved, the PCC can be "self-supporting" only if the U.S. Treasury absorbs certain costs, costs which are almost equal to the benefits given to Panama.

Among the difficulties with the official projections are:

Assumption of inflation at 5 percent, instead of a more realistic 7 percent

Assumption that Alaskan oil revenues will be assured indefinitely, whereas the Canal Zone Governor has testified that they are expected to drop sharply after 1981

Assumption that the program for capital expenditures can be financed largely through depreciation

Assumption that the United States should forego earned interest on its direct net investment in the Canal

Assumption that the United States need not amortize its investment, choosing merely to write off its investment in the year 2000.

When projections are recomputed in the absence of these assumptions, the financial picture changes dramatically. Instead of breaking even by raising tolls 19.5 percent, as officially proposed, the Canal could not break even in FY 79 without an increase in revenues of 49.8 percent. By FY 84, the necessary increase would be 63.3 percent over current revenues. The magnitude of the financial problem is evident when one understands that the maximum increase possible in Canal revenues is 40 percent, no matter how high the tolls are raised. Once toll rates increases reach the level of 50 percent to 75 percent, the curve of gain flattens out; the high rates begin to force traffic to be diverted to other routes, and tonnage drops. No matter how high the rates are raised, according to the sensitivity studies by International Research Associates, the net gain can never rise appreciably above 40 percent.

The result is, as the color chart demonstrates, that not even the 19.5 percent increase can make the Canal break even. It will take a 28.5 percent increase to pay the three major payments to Panama ($10 mil. for services, $10 mil. fixed payment, $46 mil. from the 30-cent a ton formula). For the U.S. Treasury to recover an additional $20 million for interest payments, tolls would have to be raised nearly 75 percent (for a 40 percent net). The $22 million in annual amortization payments would be virtually not recoverable.

The two columns on the color chart FY 79 figures reworked to reflect costs ignored in the official projections. The first column shows FY 79 operating costs, with blocks of components showing expenses, payments, and costs. The blue blocks are expenses of the company, the green blocks are payments to Panama, and the red blocks are costs assumed by the U.S. Treasury. The first black line from the bottom is the level of revenue with tolls at the present rates; the second black line is the proposed level at a 19.5 percent increase. The yellow band is the level at which excessive toll increases of up to 715 percent would be necessary. The red band is the level at which costs are not recoverable.

The second column shows FY 79 revised, so that the risks and benefits are equitably balanced between the United States and Panama in proportion to the contribution of each to the enterprise.

The priority of payments would be to pay Panama $20 million first, and then to reverse the order of payments to the U.S. Treasury and payments to Panama. This would allow the U.S. Treasury to be reimbursed for interest on the U.S. direct net investment and amortization, both to be paid out of tolls. Any surplus could then be paid to Panama under the 30 cents a net ton formula. The amount of surplus would depend upon the level of toll rates, and would be the subject of consultation between the two countries.

The tables which follow give the precise estimates of deficits under a true accounting, and the amount of toll increase necessary over present rates for each of the six fiscal years for which official base data is available. All revenues and expenses, except as otherwise stated, are from Panama Canal Company projections.

Table I demonstrates that if proper rates of inflation and proper accounting of capital expenditures are included, PCC deficits will range from $55 million in FY 79 to $89.9 million in FY 84. Just to pay Panama alone would require toll increases ranging from 28.2 percent to 43.2 percent in FY 84. In just six years, the costs of running the Canal and paying Panama would have bumped against the threshold of the Canal's maximum earning capacity.

However, when the costs to the American taxpayers are added in, that is, the payments to the U.S. Treasury for interest and amortization, the viability of the Canal is destroyed. Deficits at the present rate of tolls would range from $97 million the first year to $131 million by FY 84. To break even would require revenue increases rang-

ing from 49.8 percent in FY 79 to 63.3 percent in FY 84. Such increases substantially surpass the revenues that can be generated. The U.S. Treasury, of course, would have to sustain the loss.

Table II demonstrates what would happen if the U.S. Treasury were paid first, before any payments were made to Panama under the 30 cents a ton formula. It assumes, however, that Panama would receive the fixed $20 million payment before any such payments are made to the U.S. Treasury.

Thus if Panama receives $20 million per year in fixed payments and the U.S. Treasury receives $42 million per year for interest and amortization, all such costs can be paid comfortably out of tolls. The deficit at present toll rates would range from $50.2 million per year in FY 79 to $74.7 million per year in FY 84; the deficit would require toll increases ranging from 25.8 percent to 35.9 percent, all within the mathematical range of possibility.

Of course, if the payments to Panama under the 30 cents a ton formula are added on top, the Canal would be bankrupt, since the deficits and amount of impossible toll increases necessary are the same as at the bottom of table I.

Table III demonstrates the maximum revenue that could be paid to Panama under the 30 cents a ton formula if such payments were made only from surplus. The maximum toll revenues possible by raising toll rates 75 percent for a net gain of 40 percent would range from $272.9 million in FY 79 to $291.3 million in FY 84. After expenses, the $20 million fixed payment to Panama and the $42 million payment to the U.S. Treasury are subtracted from the maximum revenue, the surplus available to Panama would range from $27.7 million in FY 79 to $8.5 million in FY 84.

Of course, other considerations would come into play in setting the toll rates, including the impact of high tolls on certain commodities, regions, or countries.

NOTES.—No assumption was made in this study of a decline in Alaskan oil revenues, despite the fact that such a decline is a distinct probability by 1981 if a pipeline is built. If such revenues are lost, some $30 million would be added to the PCC deficits each year. The probabilities are impossible to guess.

• • • • •

The assumptions about interest and amortization are taken from the analysis by Comptroller General Elmer Staats presented to the Senate Armed Services Committee, on February 1, 1978.

• • • • •

The need to include capital expenditures as an additional expense rather than be reduced by depreciation charges is explained in a study prepared by Mr. M. M. Whitman, former Secretary of the Panama Canal Company, and a Consultant with the House Merchant Marine Committee.

Mr. Whiteman states: "In the Company's tabulation, capital costs are appropriately differentiated from 'operating expenses' but they are not reflected anywhere in the enumeration of costs except in the calculation of the deficiency of revenues to cover expenses 'including capital requirements in excess of depreciation.' This results in a misleading implication that new capital expenditures somehow are not costs until they exceed the amount of depreciation accruing on assets acquired with funds previously spent.

"Revenues include tolls, i.e., the charge made for the use of the canal, and under the tolls formula now provided by Act of Congress, depreciation on assets previously acquired (and paid for) is included as a cost to be recovered from tolls. This depreciation accrual, including in tolls revenue has no relationship to future expenditures for capital assets. However, such expenditures are regularly made. . . . The fact that the cash flow generated by depreciation on assets already required will be available to finance part of those expenditures in no way reduces the total of the expenditures required. The cash flow generated from inclusion of depreciation as an element of costs in the tolls formula is not earmarked for future capital expenditures. It is available for use for payment of any of the expenses of the agency or for repayment of the U.S. Government's investment in the Canal."

• • • • •

All estimates for revenues, operating expenses, transition costs, and capital program are taken from the Panama Canal Company's Statement of Operations, February 1, 1978, and from the Company's Treaty Implementation Plan of the same date.

TABLE I: *Size of toll increases needed to pay all costs of Panama Canal (including payments to U.S. Treasury)*

Assumptions:

Panama is paid before the U.S. Treasury is paid.

Panama Canal Company projections of cost and income.

7 percent inflation factor.

GAO estimates on interest and amortization to U.S. Treasury.

W. M. Whitman study factor on capital program costs not recoverable by depreciation.

DEFICIT AS PERCENT OF TOLLS INDICATES SIZE OF TOLL INCREASE REQUIRED TO COVER ALL COSTS AS TRULY EXPRESSED

| | Fiscal year— | | | | | |
|---|---|---|---|---|---|---|
| | 1979 | 1980 | 1981 | 1982 | 1983 | 1984 |

|---|---|---|---|---|---|---|
| | 1979 | 1980 | 1981 | 1982 | 1983 | 1984 |
| Toll revenues (table I) | 194.9 | 198.4 | 200.1 | 202.8 | 205.5 | 208.1 |
| Maximum toll revenues | 272.9 | 277.8 | 280.1 | 283.9 | 287.7 | 291.3 |
| Other revenues (table I) | 63.3 | 64.6 | 62.8 | 62.5 | 64.0 | 61.7 |
| Maximum total revenues | 336.2 | 342.4 | 342.9 | 346.4 | 351.7 | 353.0 |
| Total expenses (table I) | 246.4 | 253.7 | 257.9 | 260.3 | 269.8 | 282.5 |

| | Fiscal year— | | | | | |
|---|---|---|---|---|---|---|
| | 1979 | 1980 | 1981 | 1982 | 1983 | 1984 |
| $20,000,000 to Panama | 20.0 | 20.0 | 20.0 | 20.0 | 20.0 | 20.0 |
| $42,000,000 to U.S. Treasury | 42.0 | 42.0 | 42.0 | 42.0 | 42.0 | 42.0 |
| Expenses plus payments | 308.5 | 315.7 | 319.9 | 322.3 | 331.8 | 344.5 |
| Surplus to Panama | 27.7 | 26.5 | 23.0 | 24.1 | 19.9 | 8.5 |
| Comparison with full 30 cents per ton formula | 46.8 | 47.6 | 48.0 | 48.7 | 49.3 | *70.0 |

*Includes 7 percent inflation factor adjustment per treaty in fiscal year 1984.

Note: Assumption of 75 percent toll increase (to achieve 40 percent net increase in toll revenues) does not take into account impact on U.S. economy or impact on sectors particularly sensitive to canal routes (e.g. agricultural products, petroleum, coal).

Mr. CURTIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. Who yields time?

Mr. SARBANES. Mr. President, may I inquire of the Chair how much time remains on both sides on the Helms amendment?

The PRESIDING OFFICER. The Senator from North Carolina has 14 minutes and the Senator from Maryland has 23 minutes.

Mr. SARBANES. Mr. President, I will take just a few minutes to address the substance of the amendment offered by the distinguished Senator from North Carolina.

First of all, I think it is important to point out that much of what is covered in his proposed reservation can be dealt with by Congress in the implementing legislation. In other words, it is within our control. As I recall, in the course of making his statement the Senator touched on that fact, that that area of control is available to us.

I am very frank to say that I think that is much the better way to handle this problem. We obviously would have to make some judgments in working on the implementing legislation as to how we relate commitments undertaken in the treaty to the Republic of Panama with other payments that we may or may not decide should be realized from the toll revenues, and, of course, some of what the Senator has set out here—operating expenses, capital expenditures, for example—have to be realized. Other things that we may choose to do or not to do—amortization of assets, which is something we have not done in the past, or the interest payments, something we have only done for a limited period of time in the past, in terms of our own financial management of the Panama Canal—those matters can be handled in the implementing legislation. We have to make a judgment on how seeking to realize them out of the tolls would affect the tolls over the period of time we have the primary responsibility—I should not say primary, I should say the responsibility of operating and maintaining the Panama Canal through the Canal Commission, which is, of course, from the time these treaties take effect until the end of the century, or noon on December 31, 1999.

Given those considerations, it seems to me not advisable to seek to place into the treaty or into the articles of ratification through a reservation, which, of course, will require the concurrence of the other party to the treaty before we actually have a binding document—not to place there matters which we can control here through implementing legislation. We might choose, even if one were to take exactly the approach which the Senator has suggested, and I do not know that one would, but, even if one were to do it at the outset, one later might wish to change it and, if it becomes a part of the agreement between the two parties, the change could not occur, of course, without the concurrence of the other party to the agreement; whereas, if we handled the matter ourselves here through implementing legislation, then we can change it as we deem appropriate at any subsequent time. Thus, in a sense, we give away some of our own freedom or control.

The priorities for payment to Panama are a different question, but they are intermixed, of course, with these other payments which the Senator seeks to draw out of the tolls. As I have pointed out, some of those payments are payments that are not even realized now by the United States with respect to the burden we place upon the toll structure of the Panama Canal.

I have made this point before with respect to other proposals and, therefore, I do not want to repeat it at great length. I do think that the very important distinction which is made with respect to matters we can deal with in implementing legislation as opposed to putting them into treaties is an important one. It is my own view that to the maximum extent possible we should observe our own control over subject matter that need not be included in the treaty. If we include it in one way or another in the treaty—and, of course, there are different ways to do so—it then is part of the agreement between the two parties and any modification, revision, alteration, and so forth, with respect to it requires the concurrence of the other party.

If it is a subject matter which we can handle through the implementing legislation, it seems to me that is where we ought to handle it. That imposes complete and ultimate control in ourselves, ourselves being the constitutional bodies of the Government of the United States that are necessary in order to bring about implementing legislation which, of course, is not the Senate alone as it involves the whole statutory process.

For that reason, which is a consistent one I have advocated with a number of proposals which have been made for alteration in the treaty documents, I would oppose the amendment to the Resolution of Ratification offered by the distinguished Senator from North Carolina.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. HELMS. Mr. President, perhaps my good friend from Maryland misunderstood the Senator from North Carolina. I intended to emphasize that we cannot count on the implementing legislation to cover the questions surrounding payments to the U.S. Treasury. Indeed I did raise the question of why we do not provide in the implementing legislation for these payments to the U.S. Treasury to be included in the toll base; but I raised it only to show that the question was irrelevant. The answer is that the canal cannot possibly earn enough to pay both Panama and the United States. If we wait for the implementing legislation, it will be too late.

Mr. President, the point is this: The Senate will make a grievous mistake if it delays the action that is sure to come on this question. Of course, the people who will pay for the mistake of the Senate in this connection will be the people who always pay for the Senate's mistakes—the taxpayers of this country.

I would say to the able Senator from Maryland that if the Senate accepts my reservation the United States can al-

ways decide later not to take payments to the U.S. Treasury first if circumstances warrant. I believe we will never have any difficulty with Panama, the other partner, as the Senator described it about that. But if we do not get authority to do it now, we will be unable to do it through implementing legislation. As for past practice, we did not have to take all of these payments in the past because we expected to own the canal in perpetuity, precisely as the 1903 treaty provides. As long as it was ours, we didn't have to worry about the cost of giving it away.

We will have to have a clear understanding with Panama at the time of ratification to agree to U.S. authority to pay the United States first; but I say again, Mr. President, that we had better face this question now instead of later, for later will be too late. We simply have to face the facts. The administration has cooked up some very pretty estimates in an attempt to show that the canal will be self-supporting, and that the treaty will not cost the taxpayers a dime.

When we look at the cold arithmetic of it, Mr. President, you are bound to come to the conclusion that, if you believe that, you will believe anything.

The only way that the administration and the proponents of the treaty can make the projections come out looking plausible is by understating the true cost. They understate the impact of the possible loss of Alaskan oil revenues. They understate the probable rate of inflation. They understate the cash needed for the program on capital expenditures. Even if the U.S. Treasury were to absorb the interest on the United States direct investment and the recovery of the cost of U.S. assets, there is very little likelihood that the proposed Panama Canal Commission can pay for itself.

Suppose there are several years of deficits, and tolls have already been raised to net the 40 percent maximum—a situation I have demonstrated is very likely to happen. It is not a "worst case" supposition, either; in the view of the Senator from North Carolina, based upon the economic analysis placed on every Senator's desk, it is the most probable supposition.

So suppose that there are chronic deficits and tolls have been raised to the maximum; what happens then? There are two alternatives: To borrow from the U.S. Treasury, or to come to Congress and seek appropriations. What kind of a choice is that? The taxpayers get socked in either case. It is not very likely that Congress could refuse to honor an international obligation.

And if deficits are remaining, debts of the Panama Canal Commission in the year 2000, then the Treasury simply will have to absorb them.

But then, as I have pointed out, the Treasury is already slated to absorb $20 million in interest a year and $22 million in amortization costs—a total of almost a billion dollars over the life of the treaty. That is not counting the capital costs of over $400 million, a grand total of $1.32 billion.

Let us not kid ourselves, Mr. President, the U.S. taxpayer will get the bill for all of the money involved. They will be getting the bill for any annual operating deficits, deficits that are bound to arise once the maximum toll increase has been achieved.

I suggest that we look objectively at the reality of the situation. Let us not talk about fairness to Panama. The Senator from North Carolina feels that we ought to have fairness to both sides, to Panama and to the taxpayers of the United States. My point in presenting this reservation is to attempt to balance the risks and benefits.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER (Mr. MORGAN). Who yields time?

Mr. SARBANES. Mr. President, I have listened carefully to the distinguished Senator from North Carolina. As usual, he makes a forceful argument.

I think it is a fact of the matter that we will have to look very carefully, and the Canal Commission, established by this treaty will have to look very carefully, at the projected traffic, expenditure, revenues, the toll base.

I read carefuly the testimony before the able Senator's committee, the Armed Services Committee, which, for 1 full day, I believe, dealt with the economic aspects of the treaty. There was some very interesting testimony there which requires a lot of careful analysis, including, of course, the testimony of a management consultant which the committee itself engaged, who reached this conclusion:

> We have concluded that there may be opportunities for reducing some of the projected expenditures by some $30 to $40 million per year.

Governor Parfitt challenged that, or disagreed with that.

I must say to the Senator my own reaction to it was one of some surprise. It sounded to me like quite a large figure in terms of the opportunities for reducing projected expenditures. But that is the testimony and it was by an expert witness.

I only make that point to underscore, rather than now trying to take something that we can handle by statute and locking it into the treaty, the need for it to be dealt with by statute, by implementing legislation.

We earlier today adopted the proposal of the Senator from Massachusetts which, of course, means that there will be no exchange of instruments of ratification prior to March 31, 1979, unless the implementing legislation has been enacted prior to that date, in which case the exchange of the instruments of ratification would occur on that date.

We have now a very strong incentive, I believe, for enactment of the enabling legislation. It will give us a better reading of this entire issue.

Aside from the priority arrangements which the Senator has established, about which I think one could quarrel because we do have questions of which obligations you meet and in which order, I do think we ought to reserve this matter to be dealt with in the legislation.

The Senator has characterized that as delaying the agony; I think that was the phrase that the Senator used. All I can say to that is that there has been an awful lot of agony associated with the consideration of these treaties. But I hope that we could, in this instance, in effect, carry this issue over into the implementing legislation. We shall be back again.

I hazard to predict, and I want to make this point because I think it is important, that, assuming that the Senate does advise and consent to these treaties, when we come to the implementing legislation, I, first of all, expect far less division and controversy among the Members of the Senate on the issues involving implementing legislation. I also hazard to predict that, to the extent that there may be division and controversy, the lines and the alinement will be then quite different from the lines of division that have existed while we have considered these treaties.

Mr. President, I reserve the remainder of my time.

Mr. HELMS. Mr. President, of course, the Senator from North Carolina hopes that the Senator from Maryland is correct and that everything works out fine and the tolls do provide enough revenue. But I shall have to repeat the question: What if they do not? If they do not, then the taxpayers of this country get stuck.

Mr. President, in conclusion I want to pay tribute to a man who has been of immense help in analyzing these costs. There is probably no individual in the United States—perhaps in the world—who has had more high-level experience and knowledge about the Panama Canal financial operations than Mr. W. Merrill Whitman. Mr. Whitman was Secretary of the Panama Canal Company for over 20 years. He has participated intimately in the development of the Company from its reorganization in 1950. Not even any Governor of the canal, with all due respect for the high capability of someone like Governor Parfitt, has had the years of experience which Mr. Whitman has had.

Mr. Whitman is presently an active consultant on canal affairs with the House Panama Canal Subcommittee and the House Merchant Marine Committee. He has given very generously to me of his expertise and knowledge, making available his detailed studies. It is appropriate to make special reference to what he has said about the need to include capital expenditures as an additional expense rather than being reduced by depreciation charges, and hiding the costs in the budget.

Mr. President, I ask unanimous consent that Mr. Whitman's statement be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY MR. WHITMAN

In the Company's tabulation, capital costs are appropriately differentiated from "operating expenses" but they are not reflected anywhere in the enumeration of costs except in the calculation of the deficiency of revenues to cover expenses "including capital requirements in excess of depreciation." This results in a misleading implication that new capital expenditures somehow are not costs until they exceed the amount of depreciation accruing on assets acquired with funds previously spent.

Revenues include tolls, i.e., the charge made for the use of the canal, and under the tolls formula now provided by Act of Congress, depreciation on assets previously acquired (and paid for) is included as a cost to be recovered from tolls. This depreciation accrual, including in tolls revenue has no relationship to future expenditures for capital assets. However, such expenditures are regularly made. . . . The fact that the cash flow generated by depreciation on assets already required will be available to finance part of those expenditures in no way reduces the total of the expenditures required. The cash flow generated from inclusion of depreciation as an element of costs in the tolls formula is not earmarked for future capital expenditures. It is available for use for payment of any of the expenses of the agency or for repayment of the U.S. Government's investment in the Canal.

Mr. HELMS. Mr. President, may I ask the time situation?

The PRESIDING OFFICER. The Senator from North Carolina has 7 minutes. The Senator from Maryland has 12 minutes.

Mr. HELMS. I thank the Chair.

Mr. President, I reserve the remainder of my time.

ORDER FOR RECESS UNTIL 7:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I make the following unanimous-consent request after consultation with Mr. LAXALT, Mr. CHURCH, Mr. SARBANES, Mr. BAKER, and various other Senators involved, I ask unanimous consent that when the Senate completes its business today, it stand in recess until the hour of 7:30 tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT REQUEST

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, after the prayer tomorrow morning, the following Senators be recognized, each for not to exceed 15 minutes: Messrs. DECONCINI, ROBERT C. BYRD, LUGAR, and DOLE; and that at 8:30 a.m. the Senate resume consideration of the treaty; that, at that time, Mr. DOLE be recognized to call up his amendment to the Resolution of Ratification; that there be 30 minutes on that amendment, and that the time be divided in accordance with the usual form; that at 9 o'clock, Mr. THURMOND be recognized for debate on his two amendments, that there be 1 hour of debate on those two amendments, that the time be controlled in accordance with the usual form, and that the votes on the Dole amendment and the Thurmond amendment not occur at the close of the debate, but that, at 10 o'clock a.m., the vote occur with respect to the Helms amendment which has already been debated or is in the process of being debated; that there be a 15-minute rollcall; that immediately behind the disposition of the Helms amendment, the following votes occur, each to be a 10-minute rollcall vote; with respect to the Curtis amendment, the Dole amendment, and the first Thurmond amendment, then the second Thurmond amendment, and the amendment by Mr. DECONCINI; and that, following the aforementioned votes—and I have discussed all of this with the distinguished minority leader, as I pointed out earlier; that following the votes that I have just referred to, there then be 40 minutes for debate on an amendment by Mr. BARTLETT and that, at the expiration of that time or upon its being yielded back, a vote occur with respect to the Bartlett amendment; that then, the debate begin on the so-called leadership amendment, with 15 minutes of control on the leadership amendment allotted to Mr. MELCHER and with the remaining 2 hours and 15 minutes for debate on that leadership amendment to be controlled in accordance with the usual form; that the vote in respect to the leadership amendment not occur, however, at the expiration of that time; that at 2:30 p.m., Mr. ALLEN be recognized to call up his amendment No. 1—I shall refer to it as No. 1 because he has two amendments; his first amendment—that there be a 30-minute limitation on the Allen amendment and that a vote occur then with respect to the Allen amendment at the expiration of that time or when the time is yielded back; that upon the disposition of the first Allen amendment, Mr. ALLEN then be recognized to call up a second amendment; that there be 30 minutes for debate on that amendment, and that, upon the expiration of that time or its being yielded back, a vote occur in relation to the Allen amendment; following which the vote occur on the leadership amendment; following which, Mr. GRIFFIN be recognized to call up an amendment; that there be a 30-minute limitation to that amendment; and that upon the expiration of that time a vote occur in respect to the Griffin amendment; following which there be 1 hour of general debate to begin at 5 o'clock p.m. on the Resolution of Ratification; that the first 15 minutes of that 1 hour be under the control of the proponents of the treaty, the next 30 minutes under the control of the opponents of the treaty, the final 15 minutes to be under the control of the proponents of the treaty—and in each instance I may have overlooked the division and control of time—in each instance with respect to amendments, the division and control of time be in accordance with the usual form; which would mean, Mr. President, that the final vote would occur at 6 o'clock p.m. if we can hold all the rollcall votes without stretching any of them even a minute, and, hopefully, some of the time on one or more amendments can be yielded back, which will give us some much needed flexibility.

That completes my request.

Mr. BAKER. Reserving the right to object, Mr. President, and I will not object, I wanted, though, to take this opportunity to commend the distinguished Senator from Nevada, the Senator from Maryland, the distinguished majority leader, and others who participated in constructing this schedule of activities for tomorrow. I think it is of great value to the Members of the Senate.

I would inquire of the majority leader and the distinguished Senator from Nevada as to their feeling about providing, say, for a 20-minute vote, or even a 30-minute vote, on the final vote on the Resolution of Ratification.

I doubt it will be necessary since I fully expect every Member of the Senate to be present and on the floor. But we did that in the case of the first treaty. I wonder if that might be provided for on this one.

Mr. ROBERT C. BYRD. Mr. President, I am very receptive to that suggestion, as is Mr. LAXALT, and I would include that in the request with the understanding that the warning bells would sound after 12½ minutes have expired, and with the further proviso that the clerk announce after each vote is cast how the Senator casting that vote voted.

This enabled all Members to be at their desk, to keep a running tally, it enabled the guests in the galleries, the press, the media, and the people listening throughout America, to hear clearly how the votes were cast, and it was conducive to order and decorum. I ask that be included in the request.

Mr. CURTIS. Reserving the right to object.

The PRESIDING OFFICER. The Senator from Nebraska.

Mr. CURTIS. And I hope that I will not have to object. I understood that at a certain hour tomorrow morning there would be a vote on the Curtis amendment. That means a vote on the amendment and not a vote on a motion to table?

Mr. ROBERT C. BYRD. No. The request I made was with respect to or in relation to the Curtis amendment, which does not waive the right of Senators to make such motions as they desire.

Mr. CURTIS. It seems to me when we are short of time that they should forego the idea of tabling amendments because some of them might require two rollcalls.

Mr. ROBERT C. BYRD. Mr. President, the managers of the treaty may very well decide to have an up or down vote, but it was my thought after discussing this matter with the Senators that we would not waive the right of Senators to move to table, if they so desired at that time.

Mr. CURTIS. Of course, we all have rights.

Mr. ROBERT C. BYRD. Yes.

Mr. CURTIS. To object.

Mr. ROBERT C. BYRD. Yes.

Mr. CURTIS. But I am willing to waive that right, but I want some compensation. I want some consideration.

Mr. ROBERT C. BYRD. Well, I just hope the Senator will not object and maybe tomorrow morning the managers of the treaty would be willing to listen

to the persuasive powers of the distinguished Senator from Nebraska.

Mr. CURTIS. Well, if he will consider it overnight, I will consider overnight the unanimous consent.

Mr. ROBERT C. BYRD. That is certainly within the Senator's rights and I do not question that at all.

The PRESIDING OFFICER. Is there objection?

Mr. BAKER. Mr. President, reserving the right to object, might I inquire of the Chair, is it not so that under the rules and precedents and the form of this unanimous-consent request that in the case of the amendment to be offered by the distinguished Senator from Nebraska that no tabling motion could be made, in any event, until the expiration of the full time allowed under this proposal and that nothing could be done under this formulation to reduce or diminish the amount of time for debate, at least, that the distinguished Senator would have?

The PRESIDING OFFICER. The Senator is correct.

Mr. BAKER. Further reserving the right to object, Mr. President, I must confess I am not acquainted with the substance of the distinguished Senator's proposed amendment. I would hope that we could arrive at some sort of accommodation on that point.

Might it be possible under this reservation of the distinguished Senator from Nebraska, would he give us some idea of what the amendment is?

Mr. CURTIS. Yes. I would be happy to.

This amendment adds to the resolution of ratification provision that subject thereto all outstanding claims by U.S. citizens or corporations owned and controlled by the U.S. citizens against the Republic of Panama for property belonging to such citizens or corporations which has been nationalized, expropriated, occupied, or seized by the Republic of Panama, such claims, and they were presented before September 7 last, shall be paid, or all grants, loans, guarantees provided under the treaty and related agreements shall be suspended.

I think it is important that the Senate go on record in favor or against insisting on these claims being paid. It will not call for a vote in the Republic of Panama. It imposes no impossible burden on them. It requires them to do what is now required by law, but the State Department has not forced them to do.

I do not think we are fair with these claimants or with the people we represent to have this disposed of by a motion to table. A motion to table carries with it a connotation that for some strategic reason or for some parliamentary reason, it should not be considered. In other words, it is a means of not facing the issue. I know the burdens on the leadership in trying to bring this to a conclusion, but it will not be me objecting. It will be those in charge of the bill forcing me to object. It is their responsibility, not mine.

Mr. ROBERT C. BYRD. Mr. President, may I state briefly the position in which the distinguished Senator from Nebraska puts the joint leadership, and I say this most respectfully.

If we agree that we will waive the rights of Senators to move to table the amendment by Mr. CURTIS, there are other Senators who, I think, would have justification for criticizing the leadership and for complaining that they were not given the same right of an up-and-down vote. That is the problem.

We do have only a limited time tomorrow. Mr. LAXALT, Mr. SARBANES, the minority leader, Mr. HELMS, and others have tried to work out a schedule which is very tight and very close, indeed, in order to give every Senator who has an amendment a chance to call it up and have a certain amount of time to debate it, so that no Senator, when 6 o'clock arrives, will have been deprived of the opportunity to call up an amendment and to have some time for debate on it.

So I hope that the distinguished Senator will not object. The problem outlined does represent a tremendous amount of work, especially on the part of Mr. LAXALT and Mr. SARBANES. I hope the Senator will not press his point, because if he does object, some Senator will conceivably be shut out of time for debate on their amendments tomorrow. If we were to consent to the Senator's request, we would put ourselves in a position of being criticized by other Senators who likewise would like to have up and down votes.

I hope we can leave it in the hands of the managers tomorrow, and the distinguished Senator from Nebraska may be able to discuss the matter with them, and it may be that they will not exercise their rights to move to table.

Mr. CURTIS. I say to the distinguished leader that it is not uncommon in unanimous-consent requests to agree that the amendment shall be disposed of by a direct vote. I do not think the request is unusual; I do not think it is without precedent. I do not like to object at all, and it will not be me objecting. It will be the leadership forcing me to object.

Mr. ROBERT C. BYRD. Before the Senator objects, I hope he will once again allow me to say this: It is not a precedent; the Senator is correct. But I do not believe there has been a single instance during the 37 days of debate on these treaties in which the right to table has been waived by unanimous consent.

Mr. CURTIS. I am sure they have not missed the chance to avoid facing an issue square on. I agree with the Senator.

Mr. SARBANES. Mr. President, if the Senator will yield, I think the point the majority leader is making is that in the course of this debate, on either treaty, he does not believe a Senator's rights in this regard were waived. There have been instances in which we have had up-and-down votes, as opposed to motions to table.

I appreciate the thrust of the Senator's argument, and we will certainly take a careful look at that. Of course, I have not studied his amendment, nor, even more important, have I listened to the Senator's argument with respect to it. It just seems to me that we have come this far in handling the matter in that regard, and I hope the Senator will allow us to proceed.

Mr. CURTIS. I return the compliment by saying I hope that the Senator will agree to what I seek and will allow us to proceed. It will take less time to waive the motion to table than it will take to have it.

Mr. ROBERT C. BYRD. Mr. President, I am advised that a request on the leadership amendment inadvertently was for a vote on the amendment. I change that to a vote in relation to the amendment.

Mr. CURTIS. Mr. President, further reserving the right to object, I am afraid that what the Senator is doing is heading for nothing but chaos here.

Any Member can exercise his right for a motion to recommit the leadership's amendment, and that will call for two rollcall votes. It will upset the Senator's schedule. I would expect cooperation in return for my cooperation and that I would be allowed a vote on my amendment.

For the purpose of orderly procedure in arriving at a vote and scheduling, and not cutting out the time of Senators, it would be my hope that the distinguished majority leader would switch the leadership amendment back to a vote up and down on it, because that is the one amendment that will take double time if there are two rollcall votes.

Mr. ROBERT C. BYRD. Mr. President, may I temporarily withdraw the request? I understand the Senator from North Carolina has the floor.

Mr. BAKER. Before the majority leader withdraws the request, I wonder if he will yield for a question.

Mr. ROBERT C. BYRD. I yield.

Mr. BAKER. In the course of propounding the request, was the time fixed for the final vote?

The PRESIDING OFFICER. The Senator is correct.

Mr. BAKER. To begin at 6 and to run how long?

Mr. ROBERT C. BYRD. That would be a 20-minute rollcall vote, beginning at 6 o'clock.

Mr. CURTIS. Mr. President, how much time remains on the Helms reservation?

The PRESIDING OFFICER. The Senator from North Carolina has 5 minutes remaining.

Mr. HELMS. Mr. President, I am prepared to yield back the remainder of my time if the Senator from Maryland is.

Mr. SARBANES. How much time remains to the managers of the treaty?

The PRESIDING OFFICER. The Chair is advised that all their time is used.

Mr. SARBANES. Mr. President, I am prepared to yield back my time, also, so the Senator from Nebraska, who has been waiting patiently, may proceed to call up his reservation and debate it.

So I have no further intention of debating the Helms reservation.

Mr. HELMS. Mr. President, I wonder if I might direct a question to my friend from West Virginia, the distinguished majority leader. Does the proposed

unanimous-consent request suppose that the yeas and nays will be obtained on all of these amendments or reservations?

Mr. ROBERT C. BYRD. Yes.

Mr. HELMS. That is so whether the author of the amendment or reservation is on the floor or not?

Mr. ROBERT C. BYRD. Yes.

Mr. HELMS. I thank the Chair.

The PRESIDING OFFICER. Is all time yielded back?

Mr. HELMS. I yield back the remainder of my time.

The PRESIDING OFFICER. All time is yielded back.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order at any time to order the yeas and nays on any of the amendments or any motions in relation to amendments.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CURTIS. Beg pardon? May I hear that again?

Mr. ROBERT C. BYRD. I merely asked that it be in order at any time to order the yeas and nays on any amendments or on any motions in relation to the same.

Mr. CURTIS. No objection.

(The following proceedings occurred during the consideration of Mr. HELMS' reservation No. 18 and is printed at this point by unanimous consent.)

Mr. DANFORTH addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. DANFORTH. Mr. President, will the Senator from Maryland yield?

Mr. SARBANES. I yield to the Senator from Missouri.

Mr. DANFORTH. Mr. President, I ask unanimous consent that I may be allowed to take up understanding No. 12 at this time. The statement accompanying it is two pages long. It will take about 5 minutes to read. I wonder if I could get unanimous consent to take it up at this time with the time not to be charged to either side on this particular reservation.

The PRESIDING OFFICER. Is there objection?

Mr. SARBANES. A parliamentary inquiry, Mr. President: Do I have to ask unanimous consent? Do I need to ask unanimous consent to temporarily set aside the Helms amendment in order to take up the proposal of the Senator from Missouri?

The PRESIDING OFFICER. That is required.

Mr. SARBANES. I so ask unanimous consent.

The PRESIDING OFFICER. Is there objection?

Mr. SARBANES. I ask unanimous consent that the Senator from Missouri be able to offer his amendment at this point and that it be in order that it be considered.

Mr. President, I am prepared to allow the time to come out of the time allocated to me on the Helms amendment and then I will, following the disposition of the Danforth amendment, return to the Helms amendment.

Mr. HELMS. Mr. President, reserving the right to object, and I shall not object, I would ask the Senator to stipulate that this interim activity be placed elsewhere in the RECORD.

Mr. SARBANES. I include that in the unanimous-consent request.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

UNDERSTANDING NO. 12

Mr. DANFORTH. Mr. President, I very much appreciate the courtesy of the Senator from North Carolina, the Senator from Maryland, and other Senators waiting to call up their amendments.

I call up my understanding No. 12.

The PRESIDING OFFICER. The clerk will report.

The second assistant legislative clerk read as follows:

The Senator from Missouri (Mr. DANFORTH) proposes an understanding numbered 12.

Mr. DANFORTH. Mr. President, I ask unanimous consent that further reading of the understanding be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The understanding is as follows:

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the understanding, which is to be made a part of the instrument of ratification, that nothing in subparagraph 4(c) of Article XIII shall be construed to limit the authority of the United States of America through the United States Government agency called the Panama Canal Commission to make such financial decisions and incur such expenses as are reasonable and necessary for the management, operation, and maintenance of the Panama Canal. In addition, toll rates established pursuant to paragraph 2(d) of Article III need not be set at levels designed to produce revenues to cover the payment to Panama described in subparagraph 4(c) of Article XIII".

Mr. DANFORTH. Mr. President, one of the hoped for results of ratification of the Panama Canal Treaty is to establish a new, mature relationship between the United States and the Republic of Panama. The new arrangements governing the operation of the Panama Canal will promote improved harmony of interest between our two nations and substantially increase the desire of Panama to insure an efficiently run canal. However, I am concerned that a possible misunderstanding concerning the $10 million contingent payment provided in subparagraph 4(c) of article XIII may occur which would provide the basis for continuing conflict between the United States and Panama. Such a conflict could undermine the spirit of cooperation brought about by these treaties.

Our negotiators have told me that they and their Panamanian counterparts agree about the authority of the Panama Canal Commission and this payment. But I believe it is prudent to set forth this understanding for myself, Senator BAKER, and Senator BELLMON as a part of the instrument of ratification so that no confusion can occur at some later time.

I am concerned, Mr. President, that in the future, objections may arise to certain financial and management decisions which may be made by the Panama Canal Commission for the efficient operation and maintenance of the canal on the grounds that such decisions would reduce the Commission's surplus so that $10 million, or any lesser amount, would not be available for payment to Panama as provided in article XIII, section 4(c).

The Commission must be free to make expenditures which it deems are required to insure the same level of canal operations as existed under the Panama Canal Company. The contingent payment must not in any way act as a constraint on Commission decisions. This understanding makes it clear that the Commission's authority shall not be burdened or limited in any way by considerations of the contingent payment.

The understanding also makes it clear that tolls for users of the canal need not be set at levels designed to produce sufficient revenues to cover the $10 million contingent payment, or any portion thereof. The wording does allow Congress, if it so desires, to permit tolls to account for this payment. I have noted that the draft implementing legislation proposed by the administration does not allow for this payment in the toll base. But I do not want to bind this or some future Congress in this regard. I do, however, wish to establish the fact that the United States, through the Panama Canal Commission, is under no obligation whatsoever to compel canal users to bear explicitly this financial burden.

Mr. President, this understanding has been cleared by the administration and they have no objection to it.

Mr. SARBANES. Mr. President, I simply wish to say that I know a great deal of care and thought has gone into developing this understanding on the part of the very able Senator from Missouri. I know of his concern to assure that the canal shall be efficiently operated and maintained, a concern which I think is shared by all parties. After all, the canal is the fundamental entity here, and I think the Senator has very carefully worked out an understanding to accomplish that objective and has done it with a great deal of skill and a great deal of care. We are prepared to accept the understanding which the able Senator from Missouri has offered.

I am prepared to go to a vote on it at this time, if that is agreeable to the Senator from Missouri.

Mr. DANFORTH. That is agreeable.

The PRESIDING OFFICER. The question is on agreeing to the understanding (No. 12) of the Senator from Missouri.

The understanding was agreed to.

Mr. HELMS. I move to reconsider the vote by which the understanding was agreed to.

Mr. SARBANES. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. DANFORTH. I appreciate the courtesy of the Senator from North Carolina and the Senator from Maryland.

(This concludes proceedings which occurred earlier in the day.)

The PRESIDING OFFICER. The Senator from Nebraska (Mr. CURTIS).

UP RESERVATION NO. 30

(Subsequently numbered reservation no. 19).

Mr. CURTIS. Mr. President, I send a reservation to the desk and ask that it be stated.

The PRESIDING OFFICER. The reservation will be stated.

The assistant legislative clerk read as follows:

The Senator from Nebraska (Mr. CURTIS), for himself and Mr. HATCH, proposes an unprinted reservation numbered 30.

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the reservation that if there are any outstanding claims by United States citizens or corporations owned or controlled by United States citizens against the Republic of Panama for property belonging to such citizens or corporations which was nationalized, expropriated, occupied or seized by the Republic of Panama, and such claims (a) were presented to the Republic of Panama prior to September 7, 1977, and (b) were found, or subsequently are found, by the Secretary of State of the United States to be compensable under international law, then all United States economic assistance to the Republic of Panama, including grants, loans, and guarantees, as provided under this treaty and related agreements, shall be suspended, and no further assistance may be made available to the Republic of Panama until such claims are compensated by the Republic of Panama. If the claimant and the Republic of Panama are unable to reach agreement on the amount of compensation to which the claimant is entitled, the Foreign Claims Settlement Commission of the United States (established pursuant to Reorganization Plan No. 1 of 1954, 68 Stat. 1279) shall, at the request of the claimant and within 60 days after submission of the request, evaluate the property, determine the amount of compensation to which the claimant is entitled, and transmit its determination to the Secretary of State. The amount of compensation which the Commission shall determine the claimant is entitled to shall be the fair market value of the property at the time of the nationalization, expropriation, occupation or seizure, which amount in no event shall be less than the book value of the property at such time determined in accordance with generally accepted accounting principles in the United States.

Mr. CURTIS. Mr. President, I call to the Senate's attention Panama's past seizure, without compensation, of property belonging to American citizens. In one of the two Panamanian expropriation cases I know of, a U.S. corporation had approximately 500,000 acres of land taken from it by the Government in 1970. Not one cent in compensation has been paid to date. Indeed, it was only because of the persistent intervention of the State Department that the Panamanian Government even agreed to discuss the case with the former property owner. More recently, I understand, the company was told by the Panamanian Government that no further discussion would take place until the treaties are ratified.

In the other case, in December of 1974, Panama seized all the assets of an American-owned citrus fruit company. The Government of Panama has yet to offer any semblance of just compensation for these assets, which it is operating today, and from which it is grossing millions of dollars annually. What are we going to do if someone decides to seize the Panama Canal?

Mr. President, we want to be fair to the Panamanians, but I think that they too have an obligation to be fair to us. Yet the treaty makes no provision for assisting American citizens who now have claims against the Panamanian Government. In my judgment, these treaties ought to contain some provision to help our citizens obtain from Panama the compensation to which they are legally entitled.

As Senators will recall, Senator HATCH recently offered an amendment to the treaty to protect American citizens from future expropriations of American-owned property. During the course of debate on that measure, Mr. CHURCH, the distinguished Senator from Idaho, stated that,

In our relations with sovereign governments, we have always recognized that those governments have the right of eminent domain. . . . We have only insisted, when other governments exercise the right of eminent domain as to us, taking over private property and converting it to public ownership, that the private owners, if they be American citizens, are fairly compensated.

It is well understood, then, that where American property has been expropriated by a foreign government, our policy has been to assist the private owners in gaining just compensation for their loss. Indeed, well established international law and U.S. law requires that when privately owned property is seized, the owners must be compensated.

For these reasons, Mr. President, I am offering a reservation to the resolution of ratification which provides that economic assistance to Panama, as provided for in connection with the treaty, shall suspend until Panama compensates American citizens for property it has nationalized, expropriated, occupied or seized.

In order to preclude multiple or spurious claims, the reservation would apply only to claims presented to Panama prior to September 7, 1977, the date on which the treaties were signed, which are found by the Secretary of State to be compensable under international law.

If the claimant and Panama are unable to agree on the amount of compensation, the Foreign Claims Settlement Commission of the United States would be authorized to determine how much compensation is due. Once Panama satisfies these claims, either in an amount agreed upon with the claimants or in an amount determined by the Commission, economic assistance to Panama would be resumed. The effect of this Reservation, in other words, is to assure that this treaty-related assistance to Panama is conditioned upon that country meeting its obligations, under international law, to American citizens whose property has been taken. As the treaty now stands, there are no conditions whatever attached to the economic assistance provisions of these treaties and related agreements. Unless the Senate approves this Reservation, past Panamanian treatment of the outstanding claims suggests that our citizens may never receive the compensation that is owed to them.

As we know, certain citizens can secure their rights of compensation against a foreign government only if the U.S. Government acts in their behalf. The acts of Congress which restrict or forbid aid to countries which seize the property of U.S. citizens without paying just compensation have been approved by Congress in recognition of this fact. It is in the same spirit of giving needed assistance to U.S. citizens who are seeking to secure their rights under international law that I urge my colleagues to approve this reservation.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished Senator yield?

Mr. CURTIS. I would be happy to yield to the distinguished majority leader.

UNANIMOUS-CONSENT ORDER

Mr. ROBERT C. BYRD. Mr. President, I discussed earlier a unanimous-consent request with the distinguished manager of the treaty on my side, Mr. SARBANES. In view of the fact that most of the reservations tomorrow or most of the amendments tomorrow will be offered by Senators from the same side of the aisle the Senator from Nebraska is on, Mr. LAXALT, the leader of the opposition in this instance, has indicated to me that it is his judgment that other Senators who have amendments will understand the peculiar circumstances in which we find ourselves at the moment, and that they will not feel constrained to criticize the joint leadership and the managers, the opposing managers, of the treaty for revising the unanimous-consent request to allow for an up and down vote on the amendment of the Senator from Nebraska.

Mr. CURTIS. I thank the distinguished leaders. In that case I shall not object.

Mr. ROBERT C. BYRD. That being the case, I so revise the request.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered, and the unanimous-consent request is agreed to.

Mr. ROBERT C. BYRD. I thank all Senators, the minority leader, and Mr. LAXALT, in particular, and Mr. SARBANES.

Mr. CURTIS. Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. SARBANES. Mr. President, with respect to the amendment which has been offered by the distinguished Senator from Nebraska, I think I ought to point out that there is an established procedure for dealing with such problems. The good offices of the U.S. Government are used in certain regards, and the resolution of claims through its inclusion in the treaty by amendment to the Resolution of Ratification would be, to say the least, extraordinary.

Now, late last year two American companies, Citricos de Chiriqui and Boston Panama—and, of course, I do not know whether it is the factual situation of either or both of these companies that may prompt the amendment—presented separate claims that their properties were expropriated without adequate compensation by the Government of Panama.

Each corporation formally requested that the Government of the United States invoke sanctions, which are presently required by U.S. law when an expropriation occurs and when the host government does not provide adequate compensation.

Another recently raised case is that of the Isthmian Timber Company claim which first came to the attention of the Department in 1941.

Now again I do not know whether that claim is in terms a factual basis for the perception that an amendment of this sort is called for, but at that time with respect to the claim of the Isthmian Timber Company, the Department of State found the claim to be wanting and requested the company to supply additional information.

The company has never substantiated its claim. It did again request the Department's assistance in the spring of 1977, even though it had not responded or followed up on the earlier request for information.

The Department then informed the company that because of this long delay it had really forfeited any rights it might have had under international law.

The U.S. law requires certain sanctions to be invoked against host governments which expropriate the property of U.S. citizens and fail to take appropriate steps to provide compensation as required under international law.

These sanctions are extensive. They include suspension of bilateral assistance programs, the so-called Hickenlooper amendment to the Foreign Assistance Act; they include votes against loans by international development institutions to the host government, the so-called Gonzalez amendment; and they require, and they include, suspension of GSP tariff status pursuant to the Trade Act of 1974.

Now, expropriation claims and other serious investment disputes are examined by an interagency group on expropriations. This group must determine if a host government action is expropriatory and, if so, whether the host government is taking appropriate steps to compensate the investor as required by United States and international law.

In addition, the interagency group coordinates U.S. Government action to insist on investors obtaining compensation.

Although the U.S. Goverment may become involved in detailed negotiations of a case, experience has shown that this is not usually desirable or necessary. Most often U.S. Government actions are limited to facilitate assistance such as arranging meetings for reminding the host government of its obligations to pay compensation or expressing concern over the lack of progress over resolution of a dispute.

So there is a procedure that is followed, including an interagency group on expropriations.

There are certain generalized sanctions in the law, and we really have established this process to get away from anything that may carry the overtones in effect of special legislation with respect to particular problems.

I think that is much the best way to proceed, and that is why this arrangement which I have outlined has been established.

Now, in the Citricos and Boston-Panama cases, it should be noted that both of these claims had remained dormant until the initiation of debate on the Panama Canal Treaties. The claims of both companies are now under review by the interagency group which are alluded to earlier, that had been established by our Government, and a legal review of each company's claim was started at a meeting in late February of the interagency group and is continuing.

Our Government has also encouraged the government of Panama to carry on negotiations with the companies. In the case of Citricos, negotiations have been underway since January, and the government of Panama has invited the company representatives to meet with the government commission on the 27th of April to establish the market value of the assets to be conceded.

With respect to Boston-Panama, meetings did occur with Government of Panama officials in February.

The Department of State is actively monitoring both claims, and, of course, can invoke existing legislative sanctions if and when appropriate, should it be determined that the obligations of the Government of Panama under international law to these investors have not been met.

I suggest to the Members of the Senate that it is both unnecessary and inappropriate to inject into the treaty ratification process issues which are adequately addressed under existing law with respect to the private interests of these two U.S. investors.

The State Department has encouraged the Government of Panama to resume negotiations with the representatives of these companies, and I, of course, have alluded to the meetings which have taken place and to one of the meetings which is scheduled to take place.

I think I also ought to underscore Panama's previous record for resolving expropriation disputes, and the fact that that record has been very good. Disputes involving United States, IT&T, Boise-Cascade, and the Panama Power and Light Company were each resolved in a manner fully acceptable to the company. In each instance, the U.S. Government played a facilitative role, but did not become directly involved in the merits of the dispute.

The U.S. Government recognizes the right of foreign governments to take over the property of U.S. investors so long as provisions are made for prompt, adequate, and effective compensation. As I indicated, negotiations are proceeding directly between the Government of Panama and the two parties of the only cases that have been brought to my attention, and the interagency committee established for this purpose in our own Government is monitoring this matter very closely.

In the light of those developments, and in the light of the existing statutory remedy, I do not think that the amendment which has been proposed to be added to the Resolution of Ratification to the Panama Canal Treaty is necessary or desirable.

Mr. President, I reserve the remainder of my time.

Mr. CURTIS. Mr. President, let us have the record clear. This reservation pertains only to those grants, loans, and guarantees as provided under the treaty and related agreements. It is relevant and pertinent to the treaty.

Also, the record should show that unless we take this action, the chances of American citizens being compensated are very, very dim.

This is an important principle. American citizens are urged to spend money all around the globe to help emerging countries to build up their economies. Unless the Senate goes on record tomorrow against the provision that if our property is expropriated they do not have to pay for it, it will be a sad day in the U.S. Senate.

Mr. President, I make no argument about some claim back in 1941 that there may have been laches and lack of diligence in presenting. That is not what is involved here.

I would also remind Senators that the very wording of my reservation causes it to deal with only those claims found by the Secretary of State of the United States to be compensable under international law. This is not taking advantage of Panama, or demanding anything that is not right. This will not destroy the treaties. This will not call for another plebiscite. This is a square-toed provision where the Senate will pass on the question of demanding that Panama pay. It is a square-cut choice. Tomorrow the Senate will vote for or against the principle that when Americans make investments in foreign countries and they nationalize, expropriate, or otherwise seize our property, they have to pay for it.

Maybe there will only be one vote for this amendment, but the Senator from Nebraska now speaking is not going to add to the retreat all around the world in protecting the interests of the United States, and say to the world, "You do not have to pay for our property if you seize it to nationalize it." That will be the only issue.

Mr. President, the distinguished Senator from Maryland has mentioned the Hickenlooper amendment, and says that there is provision in existing law to take care of this. Let us consider that. Why is not the proper remedy the invocation of the Hickenlooper and related amendments?

First, the Hickenlooper amendment to the Foreign Assistance Act provides that even in cases in which the Department has determined that an expropriation has occurred, the sanctions which are

prescribed may be waived by the President "on national interest grounds."

The Department has not been willing to provide assurances to the injured corporations that it will not waive these sanctions. For example—and I would like copies of this correspondence to be printed in the RECORD—the attorneys for one of the affected U.S. corporations wrote to the Department on March 9, 1978, specifically requesting assurances that these sanctions would not be waived on national interest or other grounds.

As you will note, the Department's tardy reply, dated April 11, 1978, does not provide these assurances, nor even address this issue.

The parties have sought to invoke the sanctions which are available to them, and to every U.S. citizen whose property has been expropriated without compensation to no avail for many, many months. For example, I hold here copies of letters from one of the affected corporations seeking the invocation of these remedies, dated May 10, 1977, and December 12, 1977.

It is not correct that these were dug up after the treaty was signed. It is not true at all.

The Department of State has simply and clearly dragged its feet in responding. I will place copies of these letters, plus an inconclusive reply to one of them, dated January 19, 1978, in the RECORD.

When the Senate voted to make the Hickenlooper amendment law, it meant that the Department of State was to enforce this law. It did not intend that the Department only enforce it when the bureaucrats there felt that enforcement was convenient to them.

The reservation is necessary to assure that U.S. citizens with meritorious expropriation claims receive the compensation due them. It is necessary because the Department of State is plainly unwilling to see to it that this is done. These U.S. citizens have no other remedy.

Mr. President, I ask unanimous consent to have the following letters printed in the RECORD: A letter from the attorney for the Boston Panama Co., dated May 10, 1977; another letter from the same parties dated December 12, 1977; a reply from the Department of State by Terence A. Todman, Assistant Secretary for Inter-American Affairs, dated January 19, 1978; a letter from the attorney for the same company dated March 9, 1978; and a reply from the same Assistant Secretary, dated April 11, 1978.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

HELLER & TEMPLE,
*Washington, D.C., May 10, 1977.*

Re Boston Panama Company,
TERENCE A. TODMAN,
*Assistant Secretary of State, Department of State, Washington, D.C.*

DEAR MR. ASSISTANT SECRETARY: I am writing in behalf of my client, the Boston Panama Company, a United States Corporation beneficially owned exclusively by United States Citizens.

As you are probably aware, the Company has long been seeking compensation for extensive Panamanian real property holdings expropriated without compensation by the Government of Panama. Until now, the Company believed that an amicable settlement with the Government of Panama could be reached through good faith negotiations. The Government, without providing any reasons, however, now indicates that it considers "the case closed". It has no intention of negotiating on the merits or compensating the Company.

The early history of this protracted controversy is summarized in a memorandum of September 20, 1974. A copy is attached hereto. Since October 1974, the Department of State has assisted the Company by encouraging the Government of Panama to enter negotiations.

In discussions throughout 1975–1976 with Panamanian officials, including the Ambassador to the United States, the Company was led to believe that if it could demonstrate that the expropriation by predecessor governments was unlawful and amounted to a denial of justice, that the current Government would consider the case on its merits and negotiate an equitable settlement. The Company has amply met this burden of proof.

In recent meetings between United States Ambassador Jordan and President Lakis of Panama, the President expressed an interest in equitably resolving this long-standing dispute. For this purpose, representatives of the Company, accompanied by Ambassador Jordan, met in Panama with President Lakis on May 3, 1977.

At this meeting President Lakis reiterated his interest in finding an equitable solution. However, he stated that the "political decision" as to whether the Government would enter into settlement negotiations rested with General Torrijos.

In subsequent discussions with Minister Manfredo and Doctor Reluz of the President's staff, Company representatives repeated their offer:

(1) to invest all compensation proceeds in Panama;

(2) to assure that the conduct of negotiations and the terms of any settlement would be held in strictest confidence; and,

(3) to accept compensation in any form convenient to the Government.

Minister Manfredo, who participated in its earlier phases, was familiar with the history of the case, and appeared confident that a solution was imminent. He too stated, however, that General Torrijos' concurrence was essential before negotiations could proceed.

The Company was thereafter advised by Minister Manfredo that General Torrijos was unwilling to negotiate a settlement and, moreover, as far as the Government of Panama is concerned, that "the case is closed". This decision was made upon "political grounds", without regard to the merits of the Company's claim.

It is with regret, therefore, that we now request the additional assistance of the Department of State.

We ask first that, pursuant to 22 UCS 2351, the Department review and commence to implement all measures reasonably available to it for discouraging the Government of Panama from the arbitrary course it has elected to follow. Among these measures, we ask that the Department formally express to the Government of Panama its strong dissatisfaction with its unwillingness to negotiate a settlement in good faith, and on its merits.

Second, we ask that the Department promptly initiate all steps, pursuant to 19 USC 2462, to assure that the Government of Panama be denied all benefits provided by the Trade Act of 1974.

Third, we ask that the Department promptly initiate all steps required under the Foreign Assistance and related Acts pursuant to 22 USC 283(r), 22 USC 284(j), and 22 USC 2370(e)(1), to assure that Panama is denied foreign assistance through AID, the IDB, and the IBRD.

Our request that the Department now invoke these drastic sanctions is made with reluctance and sorrow. We believe, however, that the Government of Panama's arbitrary treatment of this case as a "political" matter and its refusal to negotiate a settlement on the merits, has left us no alternative. Should the Department be successful in encouraging the Government to reconsider its position my client, of course, is prepared to resume negotiations at any mutually convenient time.

Sincerely,

JACK I. HELLER.

---

HELLER & TEMPLE,
*Washington, D.C., December 12, 1977.*

Re: Boston Panama Co.
TERENCE A. TODMAN,
*Assistant Secretary of State, Department of State, Washington, D.C.*

DEAR MR. ASSISTANT SECRETARY: A copy of this letter was sent to you on December 6, but apparently was lost in the mail.

I am writing in behalf of my client, the Boston Panama Company, a United States Corporation beneficially owned exclusively by United States citizens.

This letter follows upon my letter to you dated May 10, 1977, a copy of which is attached.

In my May 10 letter I requested the Department of State to invoke all statutory sanctions against the Republic of Panama which become operable in the event of an uncompensated expropriation of property owned by United States citizens. Several days before that date the Government of Panama determined, on "political grounds," that the long standing expropriation case involving Boston Panama Company properties "was closed."

After delivery of my May 10 letter I subsequently agreed to forego pressing our request for the application of statutory sanctions pending the reopening of negotiations. Negotiations were resumed in mid October at a meeting in Washington attended by the Ambassador of Panama, his legal advisor, principals in the Boston Panama Company, and myself.

This meeting was cordial and productive. The Ambassador, who was unfamiliar with the details of the controversy, agreed to familiarize himself with its history. A number of avenues for achieving compensation were explored. We agreed that a second meeting would be called in the near future after the Ambassador had studied the matter.

To my best information the Ambassador, in fact, researched the background of the case. Among other matters he discussed its detailed history with Dr. Lopez Guevarra, the ranking legal advisor to the Panama negotiating team. Dr. Guevarra had also been legal counsel to the Boston Panama Company and is intimately familiar with the details of the case. He confirmed to the Ambassador the factual bases of the Company's claim.

Despite my repeated efforts since mid October to arrange a second meeting with the Ambassador, none has been held. And, on December 1, I was told by a senior official at the Embassy of Panama that no further meetings would be held. The position of the Government of Panama is that it will not discuss, no less negotiate, a settlement until after United States ratification of the Canal Treaties.

Given this latest arbitrary action by the Government of Panama, my client is left with no alternative but to request herein, that you now initiate all steps towards invoking the statutory sanctions requested in my letter to you of May 10, 1977.

Sincerely,

JACK I. HELLER.

DEPARTMENT OF STATE,
*Washington, D.C.*

Mr. JACK HELLER,
*Heller and Temple,*
*Washington, D.C.*

DEAR MR. HELLER: I refer to your letter of December 12 as well as previous correspondence on behalf of your client, the Boston Panama Company. You requested that the Department of State take steps against the Government of Panama to invoke all sanctions called for by United States law in the event of an uncompensated expropriation of United States citizen-owned property by a foreign government.

Responsibility for recommending whether United States legislative sanctions should be applied in cases of this kind lies with the Interagency Staff Coordinating Group on Expropriations. This Group, which includes representatives of the Departments of State, Treasury, Commerce, Defense, and other agencies, is charged with examining unresolved investment disputes involving United States citizens and in each case recommending appropriate United States Government action. The Group generally meets once a month.

Accordingly, I have requested that at its next meeting the Group review Boston Panama's dispute and determine either whether invoking lgislative sanctions is warranted or what further steps should be taken at this time.

If you have any additional information you believe would assist in the interagency review, please address it to the Group's Staff Director;

Mr. Michael P. Boerner, Director, Office of Investment Affairs, Room 2533A, Department of State, Washington, D.C. 20520.

We would like to continue our efforts to facilitate a mutually acceptable solution to this matter through direct contact between the parties concerned. We have therefore asked our Embassy in Panama to determine the Government's position in this regard. I hope you will agree that this approach might still be productive if the Government of Panama indicates a willingness to continue discussions.

Sincerely,

TERENCE A. TODMAN,
*Assistant Secretary for Inter-American Affairs.*

---

HELLER & TEMPLE,
*Washington, D.C., March 9, 1978.*

Re: Boston-Panama Company
Mr. TERRENCE A. TODMAN,
*Assistant Secretary, Department of State,*
*Washington, D.C.*

DEAR MR. ASSISTANT SECRETARY: I am writing at the request of my client, the Boston-Panama Company to express the dissatisfaction of its officers and shareholders over inexplicable delays in the Department's consideration and disposition of the Company's request that statutory sanctions be applied against the Government of Panama because of that Government's failure to provide compensation for Company assets it has expropriated.

The Department has been aware of this controversy for many years. Our latest request for the application of sanctions was made to the Department on December 12, 1977. We have repeatedly emphasized to Department officials our concern that unless a disposition of this case is made before ratification of the Treaties now pending in the Senate, that the Government of Panama is unlikely ever to meet its obligations under international law to the Company.

Despite these repeated expressions of concern, the Department's lengthy familiarity with the case, and the fact that almost three months have elapsed since we made our request for the application of sanctions, the Department's progress towards achieving the disposition of this case is apparently still in its preliminary phases.

We believe that this desultory performance has materially jeopardized our chances of obtaining compensation due the Company from the Government of Panama.

I look forward to your assurances that this matter will now be vigorously pursued, and further, that once a determination is made that an expropriation has occurred, that the Department will not seek to waive the prompt application of the statutorily prescribed sanctions on either national interest or other grounds.

Sincerely,

JACK I. HELLER.

---

DEPARTMENT OF STATE,
*Washington, D.C., April 11, 1978.*

Mr. JACK I. HELLER,
*Heller and Temple,*
*Washington, D.C.*

DEAR MR. HELLER: I am responding to your March 9 letter concerning Boston Panama's request that the United States invoke sanctions against Panama. I hope that the following information will be useful to you.

In response to your letter of December 12, 1977, which requested that statutory sanctions be applied against Panama, the Inter-Agency Staff Coordination Group on Expropriations considered Boston Panama's claim on January 24. The Group decided it would need a legal analysis of the claim before reaching any conclusion as to whether an expropriation had occurred or whether the sanctions requested by the company should be invoked. Responsibility for preparing such a report resides with the Office of the Legal Adviser. That office has presented its preliminary views to the Group and is continuing to pursue the difficult issues of fact and law upon which your case appears to turn. I understand you have been in contact with that office to provide additional documentation. The Department has also been in touch with the U.S. Embassy in Panama and with officials of the Panamanian Embassy in Washington to collect all relevant available information.

Three major areas of inquiry have been identified which the Inter-Agency Group feels must be fully explored before it can render a decision. In general terms, they are:

Was the uncultivated land tax levied against Boston Panama discriminatory in either its assessment or its enforcement?

To the extent that there may have been procedural irregularities in the manner of executing the tax lien, were they so serious as to have denied Boston Panama justice under applicable standards of international law?

Has Boston Panama exhausted all remedies which can be or could have been pursued in Panama?

Because of the nature of the questions involved, and because of the serious effect such a decision will have on all parties involved, it would not be appropriate to reach any decision before having the opportunity to consider the views of the Legal Adviser's Office on these issues.

Sincerely,

TERENCE A. TODMAN,
*Assistant Secretary,*
*Bureau of Inter-American Affairs.*

The PRESIDING OFFICER. The time of the Senator from Nebraska has expired.

Mr. CURTIS. Mr. President, I ask unanimous consent that I may proceed for 1 minute additionally.

The PRESIDING OFFICER. Is there objection?

Mr. SARBANES. I have no objection, Mr. President.

The PRESIDING OFFICER. Without objection, the Senator may proceed for 1 additional minute.

Mr. CURTIS. Mr. President, the parties have pursued the remedy provided by law. It is not adequate. This reservation must be passed for them to be compensated. The State Department has had ample time to promise that they would not waive the power that they have. They have failed to use that power. Tomorrow, without destroying the treaty, with compelling an election to be held in Panama, the Senate will have to take a position that American citizens should be compensated or take a position that it is not necessary. I thank my distinguished colleague for the extra 1 minute.

The PRESIDING OFFICER. The Senator from Maryland has 5 minutes.

Mr. SARBANES. I yield 1 minute to the Senator from Utah.

Mr. HATCH. I am grateful to the Senator from Maryland. I would like to say that I associate myself with the remarks of the distinguished Senator from Nebraska.

Mr. President, as a primary cosponsor of this reservation, I believe one point that must be made in this debate is that expropriation without payment of compensation is not only unjust and contrary to international law, but also it is, in fact, self-defeating and counterproductive for countries such as Panama.

Panama, like all other developing countries, needs private investment in its economy. Often the point has been made that no matter how much money Panama receives from the canal toll revenues, it is going to need the help of private enterprise to build its economy.

Frankly, I can think of nothing which more discourages foreign investment in a country than the fear that one's property may suddenly be seized, and that compensation will be given, if at all, only after years of haggling. Regrettably, in the expropriation of property which have been referred to, and in other acts, the Government of Panama has shown hostility to private enterprise, and I am certain the economy of Panama has suffered as a result.

Thus if this reservation causes the Government of Panama to be more cautious in its attitude toward foreign investment, and to live up to its obligations under international law regarding expropriated property, then I think, in the end, that it will be the people of Panama who will benefit.

The PRESIDING OFFICER. The Senator from Maryland.

Mr. SARBANES. Mr. President, I appreciate the Senator from Nebraska inserting the letters into the RECORD. It does clarify that the particular case which has brought forth this proposal involves Boston Panama. I therefore am not going to address the Citricos de Chiriqui Co., which, in fact, has been in contact with the Government of Panama and had been invited to a meeting on April 27 to establish the value to be compensated.

I do not want to bring them into this debate. They were referred to earlier. I think I would like to get them back out

of the debate. I am sure they probably would like to be back out of the debate.

Boston Panama has a claim it thinks ought to be paid. I do not think they ought to come in here now and seek to have it done through a reservation on the treaty. If there was any seeking of a heavy-handed remedy by Boston Panama, that is it.

In 1956, Dominick F. Antonelli and Kingdon Gould Jr. bought a controlling interest in the Boston Panama Co., which owned some 500,000 acres in Panama, much of which was uncultivated. At the time of purchase, they knew of an outstanding uncultivated land tax assesment of approximately $1.8 million; they bought on the assumption that the tax claim could be settled. Although the tax claim was subsequently reduced through administrative procedures to roughly $260,000, Boston Panama never paid and continued to protest the tax on the grounds that it was discriminatorily assessed and improperly calculated. Despite frequent negotiations, no agreement was ever finalized.

In September 1969, the Ministry of Finance decided to sell the land at public auction. In October 1969, the Government of Panama acquired the property as payment for back taxes, Boston Panama received no compensation whatsoever. Efforts of Boston Panama to protest or set aside the sale were either rejected or not acted upon by the Ministry of Finance or the courts.

Since the 1960's the U.S. Government has actively encouraged the Government of Panama to settle the dispute. It has also played a facilitative role in arranging for negotiations which have taken place several times since 1969. In May 1977 our Embassy assisted the company in arranging a meeting with the Panamanian Government's legal advisers. Negotiations were going well, but the meeting ended without an agreement. Boston Panama's counsel subsequently requested the Department of State to invoke legislative sanctions. However, this request was withdrawn when negotiations with the Panamanian Embassy were resumed. In December 1977, Boston Panama's counsel contacted the State Department and reported that because there had been no progress in negotiations with the Panamanian Embassy, he must again request that the State Department invoke legislative sanctions.

Of course, one of the reasons we have these interagency groups is to review these things and not to have a situation in which investors or their attorneys can, as it were, use the Government of the United States as an additional weight or prod in negotiations which are underway.

The Interagency Expropriation group began a review of the claim in January 1978. We also informally urged the Panamanian Government to resume negotiations with the company's representatives. Negotiations between the parties did resume as of February 11, and followup meetings are expected. I understand the Government of Panama has appointed a Presidential Commission, comprised of several cabinet members, to review the claim and conduct discussions with the company.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SARBANES. Mr. President, we have a procedure. We ought to stick to it. We ought to reject this amendment.

The PRESIDING OFFICER. All time having expired—does the Senator from Arizona seek recognition?

UNPRINTED UNDERSTANDING NO. 31

Mr. DECONCINI. Mr. President, I send to the desk an understanding and ask for its immediate consideration.

The PRESIDING OFFICER. The understanding will be stated.

The assistant legislative clerk read as follows:

The Senator from Arizona (Mr. DECONCINI) proposes an unprinted understanding numbered 31.

Nothing in paragraphs 3, 4 and 5 of Article IV may be construed to limit either the provisions of paragraph 1 of Article IV providing that each party shall act, in accordance with its Constitutional processes, to meet danger threatening the security of the Panama Canal, or the provisions of paragraph 2 of Article IV providing that the United States of America shall have primary responsibility to protect and defend the Canal for the duration of this Treaty.

Mr. DECONCINI. Mr. President, the problem has arisen, to me, that article IV of the Panama Canal Treaty has some ambiguity as to the primary responsibility of the United States to defend the canal. Once again, to avoid any misunderstanding between the United States and Panama, or any other country, I find it necessary to clarify particularly paragraph 2. My understanding that is at the desk now, I shall take the liberty to read:

Nothing in paragraphs 3, 4 and 5 of Article IV may be construed to limit either the provisions of paragraph 1 of Article IV providing that each party shall act, in accordance with its Constitutional processes, to meet danger threatening the security of the Panama Canal, or the provisions of paragraph 2 of Article IV providing that the United States of America shall have primary responsibility to protect and defend the Canal for the duration of this Treaty.

What I want is to be sure that the reference to the United States having the primary responsibility to protect and defend the canal is paramount. This understanding makes that very clear.

Mr. President, of all the questions surrounding these treaties, few have troubled me as much as those involving our right to defend the canal. With regard to the period after 2000, the leadership amendments and the reservations attached to the Neutrality Treaty do now, it seems to me, sufficiently protect our right to take all necessary actions in order to protect the canal and keep it open, secure and accessible. With regard to the problem of defense rights under the Panama Canal Treaty, it would, at first glance, appear to be taken care of by the fact that we shall have a military presence in the Canal Zone area for the duration of this century. But, while we are given the "primary responsibility" to protect and defend the canal, it is unclear to me whether we can act independently in carrying out this obligation. Article IV, section 3 of the Panama Canal Treaty provides that:

In order to facilitate the participation and cooperation of the armed forces of both Parties in the protection and defense of the Canal, the United States of America and the Republic of Panama shall establish a Combined Board comprised of an equal number of senior military representatives of each Party.

It then goes on in section 3 to define the Board's function as follows:

The Combined Board shall provide for coordination and cooperation concerning such matters as:

(a) The preparation of contingency plans for the protection and defense of the Canal based upon the cooperative efforts of the armed forces of both Parties.

(b) The planning and conduct of combined military exercises; and

(c) The conduct of United States and Panamanian military operations with respect to the protection and defense of the Canal.

While coordination and cooperation in the preparation of contingency plans and the planning and conduct of combined military exercises are necessary prerequisites for an adequate joint defense of the canal, the treaty also mandates the combined Board to cooperate in the actual defense of the canal. This is certainly a laudable aim. It is also in agreement with the spirit of these treaties. If both Panama and the United States agree that the canal is endangered, then there is no problem.

But what if Panama concludes that it is not in her best interests to participate in defending against a particular action which we interpret as a direct threat to the canal? This phraseology can be construed as giving Panama the ability to veto our right to initiate any action. This, I find unacceptable.

It should be noted that, unlike the Panama Canal Commission, which has a majority of its members representing the United States, the joint board has an equal number of American and Panamanian senior military representatives. Thus, there is the real possibility of a deadlocked decision over whether or not to act to defend the canal. In times of crisis, this could be most detrimental to American interests.

The understanding which I am proposing is meant to deal with this problem. It guarantees that the United States, in carrying out its primary responsibility to protect and defend the canal, can act independently in fulfilling its obligation, by making clear that the joint board's authority in no way impinges on American defense rights.

The treaty proponents have argued that American rights in this area are protected by the provision which holds that:

Such combined protection and defense arrangements shall not inhibit the identity or lines of authority of the armed forces of the United States of America or the Republic of Panama.

I argue, however, that this provision might be construed to apply only after a military action is initiated. It does not, on its face, say that the United States can act independently against a threat to the canal. This understanding is meant to clarify that point.

Mr. President, the question of the exact extent of American rights in this most sensitive and important area has been a continuing source of controversy throughout these debates and, those of us who have proposed clarifications have sometimes been accused of somehow wishing to subvert the spirit of these treaties. Such is certainly not true in my case. I strongly endorse the concept of United States-Panamanian cooperation in this vital area. However, I have insisted all along that the responsibility conferred by the treaty upon our Government must be accompanied by an equivalent grant of authority to take all necessary and appropriate actions. It is with this in mind, that I commend this understanding to my colleagues.

Mr. President, I am prepared to have a voice vote on the understanding.

Mr. SARBANES. Mr. President, the understanding goes to the question which has been raised that the provisions in sections 3, 4, and 5 of article IV, which provide for a combined board between the United States and Panama by which we will consult and seek to develop cooperative protective and defense arrangements, somehow limits the provisions of sections 1 and 2 of article IV. This understanding is meant to clarify the fact that that is not the case, and I think a careful reading of article IV would indicate that that is not the case, although I can appreciate that the language with respect to the combined board contained in sections 3, 4, and 5 and the notion of coordination and cooperation in various matters may raise the question. What the understanding says is that nothing in paragraphs 3, 4, and 5 or article IV may be construed to limit the provisions of paragraph 1 of article IV or paragraph 2 of article IV. I should like to read those two paragraphs, because I think it does underscore the fact that the coordinating or the combined board does not, and this understanding makes that even clearer, does not impinge upon or limit those provisions.

Section 1 provides that "The United States of America and the Republic of Panama commit themselves to protect and defend the Panama Canal. Each Party shall act"—and I underscore "each party"—

> In accordance with its constitutional processes, to meet the danger resulting from an armed attack or other actions which threaten the security of the Panama Canal or of ships transiting it.

Section 2 provides:

> For the duration of this treaty, the United States of America shall have primary responsibility to protect and defend the Canal.

As the understanding states, it is designed to insure that nothing in paragraph 3, 4, and 5 of article IV—those are the paragraphs that deal with the combined board and the efforts of cooperation and coordination—that nothing in those paragraphs may be construed to limit either the provisions of paragraph 1 of article IV, providing that each party shall act in accordance with its constitutional processes to meet danger threatening the security of the Panama Canal, or the provisions of paragraph 2 of article IV, providing that the United States of America shall have primary responsibility to protect and defend the canal for the duration of this treaty. The treaty is clear that the United States has primary responsibility to protect and defend the canal and, in section 1, that each party shall act in accordance with its constitutional processes to meet danger threatening the security of the Panama Canal.

The understanding addresses the question that may be raised, that the subsequent paragraphs 3, 4, and 5, providing for the combined board and for coordination and cooperation somehow limit those two paragraphs. That is not the case, and the understanding is designed to make that clear. I am prepared, therefore, to go to a vote on the understanding.

The PRESIDING OFFICER. The question is on agreeing to the understanding.

The understanding was agreed to.

Mr. SARBANES. I move to reconsider the vote by which the understanding was agreed to.

Mr. DECONCINI. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP RESERVATION NO. 32
(SUBSEQUENTLY NUMBERED RESERVATION NO. 20)

Mr. DECONCINI. Mr. President, I send to the desk a reservation and ask for its immediate consideration.

The PRESIDING OFFICER. The reservation will be stated.

The assistant legislative clerk read as follows:

> The Senator from Arizona (Mr. DECONCINI) proposes unprinted reservation numbered 32.
>
> Strike out the period at the end of the resolution of ratification and insert in lieu thereof a comma and the following: "subject to the following reservation, which is to be made a part of the instrument of ratification to the Treaty:
>
> "Notwithstanding any other provisions of this Treaty, no funds may be drawn from the United States Treasury for payments under Article XIII, paragraph 4, without statutory authorization."

Mr. DECONCINI. Mr. President, while the question of American defense rights dominated the debates over the Neutrality Treaty, the questions concerning the economic implications of the Panama Canal treaties have been of primary concern to many of us over the last 4 weeks. I am cosponsoring an amendment which provides that the $10 million annual payment due Panama from surplus canal revenues will not accumulate over the next 22 years. This will prevent our owing Panama a $220 million lump sum payment at the termination of the basic treaty. But other problems still remain.

Of particular concern to me is the question of the U.S. Government's responsibility in meeting those obligatory payments set in article XIII, paragraph 4 of the Panama Canal Treaty. Under these provisions, Panama is expected to receive some $50 to $70 million annually. The administration has continually assured us that the pact does not obligate the United States to pay Panama any of these funds from the Treasury and that toll revenues will be sufficient to meet those financial obligations mandated by the treaty.

Yet the possibility of a deficit in canal operations, particularly after 1985, cannot be overlooked. According to a number of scholars, we are legally obligated to keep the canal open and operating. The general consensus appears to be that with toll increases and sufficient amounts of Alaskan oil, the canal will be solvent through 1984. Most analysts, however, do not want to project beyond that because there are too many unknowns, particularly technological developments in other modes of transportation. Dr. Ely Brandes, the authority who has written most extensively on canal toll matters, argues that his studies show that a toll increase of 25 percent would increase revenues by 19.6 percent; one of 50 percent, by 33 percent; and one of 75 to 100 percent would increase revenues the most—40 percent. Beyond this the concept of diminishing returns comes into play: Revenues will most likely drop because shippers will find alternative routes.

Furthermore, the construction of oil pipelines in the United States, or even in other parts of Latin America, such as the one proposed for Gautemala, could divert Alaskan oil bound for the east coast and thus upset the economic projections upon which many of the studies of the canal's economic viability are based.

If canal transits do fall short of what is currently estimated and there is a shortfall in revenues, then, according to Elmer Staats, the Comptroller General:

> The United States Government is likely to be required to provide financial assistance either through congressional appropriations or by allowing the commission to borrow from the United States Treasury.

This is the eventuality which concerns me and many American citizens the most—and it is this possibility which suggests the need for the present reservation. The reservation states:

> Notwithstanding any other provisions of this Treaty, no funds may be drawn from the United States Treasury for payments under Article XIII, Paragraph 4, without statutory authorization.

This provision assures, in a way that I feel the treaty does not, that in the event of a deficit, any payments made by the Panama Canal Commission which do not come from tolls but are necessary to keep the canal open and operating efficiently, will not be made without specific congressional authorization and appropriation. This will allow Congress, particularly through its oversight function, to exercise some discretion in determining where cost savings and operating improvements might be made. Thus, the taxpayers' interest in seeing that funds are used most efficiently will be protected.

Mr. President, one of the dominant images that Americans have with regard to these treaties is that we are paying the Panamanians to take the canal. You and I know that this is not correct, although they are gaining an enormously valuable economic resource. However, the rhetoric which has surrounded the treaties, particularly in the administration's attempt to show that these treaties

were the best which could be negotiated, important facts were not always made abundantly clear. Among these was the whole question of costs to the U.S. taxpayer incurred under the treaties. While it is no doubt technically true that toll revenues will be used for paying Panama and for operating the canal, it does not appear to be true, as Secretary Vance told the Senate Foreign Relations Committee, that—

> The treaties require no new appropriations nor do they add to the burdens of the American taxpayer.

Leaving out for a moment the $440 million in foregone interest payments, direct appropriations of some $318 million will most likely be paid out for early retirement and Department of Defense programs. This is a substantial sum and does put an extra burden on the taxpayer.

Mr. President, given the controversy then, which has surrounded this whole question, you must understand my being hesitant in accepting the position that this reservation is unnecessary—that congressional authorization is expected under the new arrangement. If any Treasury payments are to be made, I want an ironclad guarantee that Congress will make them. My reservation provides that guarantee, and I thus commend it to my colleagues.

Mr. President, I ask for the yeas and nays on this reservation.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. SARBANES. Mr. President, I understand that under the unanimous-consent request that the yeas and nays on the Senator's amendment have been scheduled for tomorrow morning, at what time? At 10:55 tomorrow morning?

Mr. DECONCINI. That is agreeable.

Mr. SARBANES. We are going to a vote. There will not be debate then. I simply want to say the Senator is addressing himself here to an important issue.

The PRESIDING OFFICER. The yeas and nays have been ordered to be held, according to the previous order of the Senate, at 10:55.

Mr. SARBANES. I thank the Chair.

Mr. CURTIS. Mr. President, reserving the right to object, may I inquire and direct a question to the distinguished Senator from Arizona, does this matter now offered have anything to do with the——

The PRESIDING OFFICER. The Chair will remind the Senator from Nebraska there is no request for unanimous consent at this time.

Mr. CURTIS. Then, Mr. President, I ask the distinguished Senator to yield to me for a question.

Mr. DECONCINI. I yield to the Senator from Nebraska.

Mr. CURTIS. I would like to inquire, does the matter now offered by the distinguished Senator from Arizona have anything to do with the DeConcini reservation to the first treaty?

Mr. DECONCINI. I would have to ask the Senator from Nebraska to define anything to do with the DeConcini amendment.

This does not apply or make any reference to the Neutrality Treaty.

Mr. CURTIS. Does it modify in any way the DeConcini reservation?

Mr. DECONCINI. No. To my judgment, it does not, and I would not support it if it did, or offer it.

Mr. CURTIS. I thank the Senator.

Mr. SARBANES. Mr. President, the amendment which the Senator from Arizona has offered deals with the question of payments under article XIII, paragraph 4. It is my view that those payments are to come solely from tolls and toll revenues and that that is the only source to which we would look for those payments. But this amendment is to guard against the possibility, as I understand it, that someone would contend that funds had to come from the Treasury to meet those payments. Therefore, it specifically provides that no such funds could be drawn from the Treasury without statutory authorization. It prevents that from happening in any automatic fashion and requires statutory action in order to do that.

In that regard, it seems to me that the amendment is an appropriate safeguard. Therefore, I intend to support the amendment when it comes before the Senate tomorrow morning for a vote.

Mr. CURTIS. Mr. President, Citricos de Chiriqui, S.A. ("Citricos") was established on November 11, 1960, as a Panamanian company located in the Province of Chiriqui, Republic of Panama, and was wholly American-owned and controlled. The purpose of establishing Citricos was to develop and operate a citrus plantation in Panama and to process orange juice into concentrate for export to world markets.

Approximately 11,000 acres of land were acquired from private sources on which more than 370,000 citrus trees were planted and a citrus concentrate plant and attendant facilities were constructed having a capability of producing 450,000 gallons of concentrate per year. Over $17,500,000 in private funds was expended in this effort between 1962 and 1974.

Because of adverse agricultural and economic conditions, Citricos reluctantly determined in 1974 that it could not continue operations, and it so informed the Government of Panama by letter dated September 17, 1974, in accordance with the terms of an agreement previously entered into with that Government. Thereupon Citricos and the Government entered into negotiations with respect to the orderly termination of operations by Citricos, severance payments by Citricos to its workers, which was done, and the possible transfer of the assets of Citricos to the Government of Panama for a term of 1 year, without cost to the Government, in order for the Government to determine whether it was feasible for it to purchase the Citricos assets at the end of that time and continue operations.

In early December 1974, the Government unilaterally terminated those negotiations and the President of Panama issued decree No. 119 on December 5, 1974, pursuant to which it physically seized all of the Citricos facilities and assets. Thereafter, from time to time, certain Panamanian Government officials participated in negotiations with Citricos for purposes of arriving at a fair price to be paid for the seized property. On September 11, 1975, the Government offered to pay United States $3,847,968 in full settlement, which offer was refused by Citricos. Two weeks later, on September 25, 1975, the Government, through its vice president, Mr. Gerardo Gonzales, who had been charged by General Torrijos with negotiating a fair price, revised the offer upward to United States $5.9 million. Citricos accepted this offer, subject to working out details of the method of payment. The Government of Panama subsequently reneged on this commitment, and in June 1976, 9 months later, the Government of Panama, acting through its Minister of Planning and Economic Policy, Mr. Nicolas Ardito Barletta, at the direction of General Torrijos, offered to settle for the total sum of United States $1 million. This offer was summarily rejected by Citricos. Since September 1975, the Government of Panama failed to engage in any serious or good faith negotiations with representatives of Citricos until after representations on behalf of Citricos were made to the U.S. Department of State in December 1977.

BOSTON-PANAMA CONTROVERSY

This controversy between the Government of Panama and the Boston-Panama Co. is one among several in which that Government has refused to pay compensation for assets which it has expropriated. Although sporadically entering into settlement negotiations in the past, the Government has been unwilling to sustain these talks, and currently appears to have no serious intention of equitably settling the matter.

General Torrijos, in the populist euphoria of the early days of his rule, announced on national television, radio, and in the press in mid-October 1969, that he had "confiscated" the company's land.

To accomplish this confiscation, the Government illegally, and without notice to the company, first substituted the company's attorney of record (registered on the National Registry) with a Government attorney. Next, without notice to the company, ostensibly acting for the company, this attorney facilitated a tax foreclosure by the Government of the company's properties. Upon learning of these events, the company's actual counsel attempted to stay these unlawful proceedings through petitions to all of the courts and tribunals, including the Supreme Court, with jurisdiction in such cases. Contrary to law, and presumably under political duress, the courts and tribunals refused to accept his petitions. Subsequent petitions, letters, and telegrams to the courts and relevant Government officials requesting that the company be permitted to examine the foreclosure documents (and the assessments which underlay them) were also ignored. The company has never been served, nor seen, these documents.

The underlying controversy was based upon a tax assessed upon the company's land in 1949 pursuant to the "Uncultivated Land Tax." This very old tax, al-

ways a dead letter in Panamanian law, has never been enforced except for collections of $216 in 1954, $88 in 1957, $2,700 in 1958, and $100 in 1959. The tax billed against the company's property in 1949 was $2,935,726. This discriminatory levy resulted directly from the tax denunciation of an attorney then representing parties interested in purchasing the company's land.

Apart from being wholly discriminatory, the tax levied was plainly unlawful. The levy ignored the statutory exemptions formula which exempts property according to the amount of land in use, in woodlands, et cetera.

The company long ago exhausted all of its administrative and legal appeals.

Mr. President, I would again point out that the reservation I have offered provides that the claim must be found by the Secretary of State of the United States to be compensable under international law.

UNDERSTANDING NO. 7

Mr. SARBANES. Mr. President, I call up understanding No. 7, proposed by Mr. SPARKMAN.

The PRESIDING OFFICER. The understanding will be stated.

The assistant legislative clerk read as follows:

The Senator from Maryland (Mr. SARBANES), for Mr. SPARKMAN, proposes understanding No. 7:

Before the period at the end of the resolution of ratification insert a comma and the following: "subject to the following understanding:

"Any agreement concluded pursuant to article IX, paragraph 11 with respect to the transfer of prisoners shall be concluded in accordance with the constitutional processes of both parties".

Mr. SARBANES. Mr. President, I ask unanimous consent to have printed in the RECORD a statement from the report of the Committee on Foreign Relations dealing with this matter, concerning prisoner transfer agreements, and explaining in detail the understanding, which makes clear that any such agreement shall be concluded in accordance with the constitutional processes of both countries.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

C. UNDERSTANDING REGARDING THE REQUIREMENT TO CONCLUDE A PRISONER TRANSFER AGREEMENT (ARTICLE IX (11), PANAMA CANAL TREATY

The Committee recommends that the resolution of ratification to the Panama Canal Treaty be amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "subject to the following understanding:

"Any agreement concluded pursuant to article IX, paragraph 11 with respect to the transfer of prisoners shall be concluded in accordance with the constitutional processes of both parties."

STATEMENT OF INTENT

Article IX (11) of the Panama Canal Treaty provides as follows:

11. The Parties shall conclude an agreement whereby nationals of either State, who are sentenced by the courts of the other State, and who are not domiciled therein, may elect to serve their sentences in their State of nationality.

The Committee intends, through the above understanding regarding this provision, to make clear (1) that any agreement negotiated on this subject be submitted to the Senate as a treaty for its advice and consent to ratification; and (2) that should the Senate not give its advice and consent to the ratification of such an agreement, the United States will not be in violation of this provision.

As paragraph 11 of article IX is drafted, it can be construed as authority for the President to enter into a prisoner transfer agreement with Panama as an executive agreement. This, in the Committee's judgment, would be undesirable; United States practice with respect to such agreements, limited though it is, has been that they be concluded as treaties. Sound policy reasons underlie this procedure. Prisoner transfer arrangements are significant international agreements; they involve important foreign policy judgments regarding the criminal justice systems and human rights practices of the countries proposed as parties to such arrangements. The Treaty Clause requires that, normally, significant international commitments be made with the concurrence of two-thirds of the Senate. Acting on the basis of this sole constitutional authority, the President would be without the power to enter into such an agreement. By removing any possibility that this provision may be relied upon as a source of authority for the conclusion of such an agreement, and by requiring that the agreement be entered into "in accordance with the constitutional processes" of the United States, this addition to the resolution of ratification will state the understanding of the Senate that any such agreement must be submitted to the Senate as a treaty, which is the mode contemplated by our "constitutional processes".

The understanding will, moreover, clarify the international commitment undertaken by the United States in this provision. As paragraph 11 has been drafted, it could be construed as requiring the United States to enter into a prisoner transfer agreement, and would thereby place the United States in violation of this treaty should the United States elect not to do so. Obviously, the authority of the Senate to advise and consent to a treaty is meaningless if it is required to be given; the authority to disapprove is implied if our "constitutional processes" are to be upheld. The effect of the reference to "constitutional processes" is thus to make clear that a right of choice is maintained. Although this understanding should not be interpreted as suggesting a disinclination to advise and consent to such a treaty, paragraph 11 should not be construed, pursuant to it, as circumscribing the authority of the Senate to exercise the full measure of its constitutional discretion.

Mr. SARBANES. Mr. President, I am prepared to vote on the understanding.

The PRESIDING OFFICER. The question is on agreeing to the understanding.

The understanding was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the understanding was adopted, and I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UNDERSTANDING NO. 10

Mr. SARBANES. Mr. President, I call up understanding No. 10, for Mr. SPARKMAN.

The PRESIDING OFFICER. The understanding will be stated.

The assistant legislative clerk read as follows:

The Senator from Maryland (Mr. SARBANES), for Mr. SPARKMAN, proposes understanding No. 10:

Before the period at the end of the resolution of ratification insert a comma and the following: "subject to the following understanding:

"The President shall include all amendments, reservations, understandings, declarations, and other statements incorporated by the Senate in its resolution of ratification respecting this Treaty in the instrument of ratification exchanged with the Government of the Republic of Panama".

Mr. SARBANES. Mr. President, this understanding, providing that the President shall include all amendments, reservations, understandings, declarations, and other statements incorporated by the Senate in its resolution of ratification, in the instrument of ratification exchanged with the Government of the Republic of Panama, was included as an understanding to the prior treaty and was adopted by the Senate without any dissent.

I ask unanimous consent that material from the report on the Committee on Foreign Relations discussing this understanding be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

F. UNDERSTANDING REQUIRING THE INCLUSION OF SENATE ACTIONS IN THE INSTRUMENT OF RATIFICATION OF THE PANAMA CANAL TREATY

The Committee recommends that the resolution of ratification of the Panama Canal Treaty be amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "subject to the following understanding:

"The President shall include all amendments, reservations, understandings, declarations and other statements incorporated by the Senate in its resolution of ratification respecting this Treaty in the instrument of ratification exchanged with the Government of the Republic of Panama."

STATEMENT OF INTEREST

The Committee intends, through the above understandings which it recommends be added to the resolutions of ratification of each treaty, to make clear that any material included by the Senate in its resolution of ratification for each treaty be included in the instrument of ratification for that treaty given to the government of the Republic of Panama.

This understanding has its origins in assertions made by representatives of the Department of State, following Senate approval in 1976 of the resolution of ratification respecting the Treaty of Friendship and Cooperation Between the United States and Spain, that the President possessed the authority to exclude from the instrument of ratification respecting that treaty the five-part declaration attached by the Senate to that resolution of ratification. (Members of this Committee advised that, in their judgment, no such discretion existed the declaration was incorporated by reference in the instrument of ratification, although its text was set forth in an annex to the instrument.)

It remains the position of the Committee that the President is without such authority. Although the Treaty Clause of the Constitution does not expressly address this question, neither does it expressly authorize the Senate to condition its advice and consent to treaties. Traditional United States practice has nevertheless been that the Senate may grant its approval conditionally, just as traditional United States practice has been that, when conditions are attached, those conditions are transmitted as an integral part of the instrument certifying Senate and Presidential approval. That such conditions must be so included is as much a part of

customary constitutional law in this country as the right of the Senate to grant conditional consent.

Accordingly, it is not the intent of the Committee to recommend the inclusion of an understanding such as this as a part of the resolutions of ratification respecting future treaties. The Committee was pleased to receive the assurance of the Department of State that the United States instruments of ratification of the Panama Canal Treaties would include all amendments of the treaties and of the resolutions of ratification that the Senate includes in the resolutions of ratification (letter from Douglas J. Bennett, Assistant Secretary for Congressional Relations, to John J. Sparkman, Chairman, Committee on Foreign Relations, January 26, 1978; hearings, part 5). The Committee does not doubt the Administration's good faith; it hopes that future presidents will adhere to this Administration's position, and thus wishes to establish no precedent with the recommended understandings. Nevertheless, the Committee believes that these understandings should be added to the resolutions of ratification respecting both treaties as a firm demonstration that the Senate will not countenance any interference with its constitutional prerogative of advice and consent and will take steps to counteract such interference on the part of any future Administration.

Mr. SARBANES. Mr. President, I am prepared to vote on the understanding.

The PRESIDING OFFICER. The question is on agreeing to the understanding.

The understanding was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the understanding was agreed to, and I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. SARBANES. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

(Mr. SARBANES assumed the chair.)

Mr. MATSUNAGA. Mr. President, I ask unanimous consent that the order for the quorum will be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ANNOUNCEMENT OF POSITION ON LONG AMENDMENT NO. 99

Mr. DOLE. Mr. President, earlier today the Senate considered the so-called Long reservation No. 99 and also the Heinz reservation, and the Senator from Kansas was attending a funeral for a member of his family and was unable to be here.

Had I been present I would have certainly supported the amendment to the Resolution of Ratification offered by the distinguished Senator from Louisiana (Mr. LONG).

Mr. President, I want to take a few moments to speak in support of the amendment to the resolution of ratification offered by the distinguished Senator from Louisiana, Mr. LONG.

This proposal is similar in purpose to the treaty amendment I offered 1 week ago, in that it would eliminate the restriction that prevents the United States from negotiating with any country other than Panama, for the right to construct a new interoceanic canal in the Western Hemisphere. At the same time, it eliminates the corresponding provision which purports to prevent Panama from allowing any country other than the United States to build a new canal through her territory.

While I would have preferred to see this important amendment adopted to the treaty itself, rather than to the separate resolution of ratification, the Long amendment should satisfy this Senator's concern so long as both parties agree to abide by resolution modifications as well as treaty amendments.

The Dole amendment, which received 40 Senate votes on April 10, was resisted by the administration and protreaty floor managers primarily because it was offered as a direct amendment to the language of the treaty. However, because there is such widespread concern about the restrictions placed upon the United States in article XII, I remain hopeful that we may have enough votes to adopt the same principle now as a treaty reservation, or "amendment" to the resolution of ratification.

THREE PROBLEMS

As I indicated on April 10, the Senator from Kansas feels there are at least three major problems involved with paragraph 2 of article XII, which has originally initiated by the Carter administration during treaty negotiations last year.

First, the mutual commitment is not balanced. Under article XII, the United States clearly cannot negotiate with any country other than Panama for a new canal site, unless Panama specifically authorizes us to do so. The Panamanian commitment, on the other hand, is imprecise and open to differnt interpretations. General Torrijos interprets the Panamanian commitment as giving "priority (not exclusiveness, for the building of a sea-level canal" to the United States. He says we are only given "the first option," and if for any reason we do not take that option at the time it is offered, Panama may let any other nation construct a new canal through her territory.

The second major flaw is this: Even if the United States does decide it wants to build a new canal in Panama during the next 22 years, Panama is under no obligation to permit it. My colleagues should note that article XII does not guarantee the United States a unilateral right to decide to build a new canal in Panama. In such a situation, we are stuck with the fact that we cannot build a new interoceanic canal anywhere other than Panama, and yet we cannot build a canal in Panama because Panama objects.

The third major flaw is that no other country in the world is bound, as the United States will be, from constructing a new interoceanic canal anywhere it wants in the Western Hemisphere. If the Soviet Union or the Arabs or any other nation should decide to build a new canal through Nicaragua or Colombia—for either economic or strategic reasons—they would naturally be free to make the appropriate gestures to the country in issue. The United States could not, because of this commitment in article XII. We would not even have the right to propose a competitive offer to Nicaragua or Colombia.

BASIC QUESTIONS

Why, then, should we voluntarily bind ourselves, as no other nation in the world is bound? Most Americans probably agree that it would be ridiculous to even think of building a new canal in Panama after all the trouble we have been given over the present one. But, even if we wanted to build a new canal through Panama for any reason, it would work to our advantage to have freedom to negotiate. It would provide us leverage in bargaining with Panama over construction costs and conditions.

Mr. President, all of the elements of good sense suggest that we should eliminate this restriction from the treaty. There is not likely to be any significant objection from the Panamanian Government over this move, for the Panamanian Government has already indicated that it does not like this "quid pro quo" arrangement either. So I just suggest that the Senate should adopt this modification, and thereby act on behalf of America's own interests in this situation.

Mr. President, I ask unanimous consent that the RECORD reflect that had I been present the Senator from Kansas would have voted "aye" on the so-called Long amendment and "aye" on the amendment of the distinguished Senator from Pennsylvania, Senator HEINZ.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROTH. Mr. President, over the past several months my constituent, Mr. Charles H. Breecher of Rehoboth Beach, has done a great deal of work on the question of the constitutionality of the Panama Canal Treaty. His study has led him to conclude that this treaty, if ratified, would eventually be declared unconstitutional by the Supreme Court and that the draft implementing legislation fails to correct its glaring constitutional defects.

In an address before the School of Law of the Washington and Lee University on March 2, Mr. Breecher outlined his views on three principal constitutional issues: First, the disposition of property issue; second, the "purse strings" issue, that is, the question of the role of Congress in appropriating payments by the Panama Canal Commission to Panama; and third, the "citizenship" issue, regarding the constitutionality of the appointment process of Panamanians to the Panama Canal Commission.

Because the third of three issues had not received much attention in the debate, I asked the Congressional Research Service to prepare an analysis of Mr. Breecher's arguments, and I also asked the Department of State for comments. I regret to say that the Department of State has so far failed to respond to my request.

So that all Senators may have an opportunity to acquaint themselves with the implications of the "citizenship issue" prior to the April 18 vote on this treaty, I ask unanimous consent that there be printed in the RECORD an excerpt on this question from Mr. Breecher's address at the Washington and Lee University, a copy of the CRS's analysis, and a related study on the constitutionality of limiting the scope of the President's

choice in nominating officers, a copy of comments on the CRS analysis by Mr. Breecher, and a statement by Mr. Breecher summarizing his arguments regarding the constitutionality of this treaty.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXCERPT FROM AN ADDRESS, "ARE THE PANAMA CANAL TREATIES CONSTITUTIONAL?"

(By Charles H. Breecher)

But now let me come to the third cluster of issues which I call the Citizenship issue, and let me say right away that in my view nothing can cure that one except a basic revision of the treaties. Also, if I may be pardoned to whet your appetite, none of the reasonably numerous and prominent lawyers with whom I have discussed that issue in the last few weeks has yet offered me any counterargument.

Let me read to you Art. III Sec. 3 (a) of the Panama Canal Treaty : It provides for a United States Government Agency of nine members called the Panama Canal Commission . . . and now I quote: four of whom shall be Panamanian nationals proposed by the Republic of Panama for appointment to such positions by the United States of America in a timely manner:. End quote. The U.S. can apparently not reject such Panamanian nominees for appointment and can remove them only, and here I shall quote again "after consultations in advance in order to reach agreement on such removal".

Now if this language in the treaty means anything, it means that the President of the United States can only appoint the nominees of the Panamanian Government, that he must appoint them "in a timely manner," that the United States Senate cannot reject or bottle up their appointment, and that the President cannot remove them without the consent of the Panamanian Government. Agreed?

Let us repeat that we are talking here about a United States Government Agency. We are not talking about some mixed Commission or about some private corporation. To give you an idea about the level of the appointees, on page 430 in the Hearings I cited, Part I, Richard Cooper, our Under Secretary of State says that he and the Under-Secretary of the Treasury, Anthony Solomon, would be two of the five U.S. members of that Commission, which is the Governing Board of the Panama Canal Commission, appoints the General Manager, fixes the tolls and exercises other Governmental functions.

This particular provision of the Panama Canal treaty then raises some fascinating questions under the U.S. Constitution:

Article II, Sec. 2, clause 2 of the Constitution provides that the President shall appoint all officers of the United States, with the advice and consent of the Senate. The Panama Canal Treaty restricts this right of appointment and advice and consent to a purely ministerial function. Can the President's right to appoint be so restricted by Treaty? Can the right of the Senate to give advice and consent? Can the recognized right of the President to remove officers of the United States be restricted?

Can an alien, particularly a non-resident alien, be appointed an officer of the United States? The Constitution prescribes various length of citizenship requirements for the President and Vice President, Senators and Representatives, but is silent on civil and military officers. U.S. Government practice is well known to restrict appointments to citizens, until recently various jobs were not even open to naturalized citizens until they held citizenship for a certain number of years, and to my knowldge that's still true of the U.S. Foreign Service. As to the constitutional requirement, though not spelled out, Art II Section 4 says: ". . . all civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors." How can an alient commit treason? How can the U.S. which has no jurisdiction over a non-resident alien, convict him of bribery, high crimes and misdemeanors? It seems to me that the Constitution does not envisage aliens, particularly non-resident, as civil officers of the United States.

Further, the 5th and 14th Amendment protects the privileges and immunities of citizens of the United States and forbids depriving them of property without due process of law. These provisions raise the constitutional question whether United States citizens, you and me, can be excluded from consideration for appointment to the Panama Canal Commission because they are U.S. citizens and not Panamanian nationals. Can it be made a condition for appointment to a U.S. Government Agency that the prospective appointee not be a U.S. citizen, but the citizen of a foreign country?

Without wanting to belabor the point too long, similar questions arise under Art. III, Sec. 3 (c) and (d) with regard to the Administrator or Deputy Administrator of the Canal Commission, with appointment restricted to Panamanian nationals. Then there is Art. X, par. 2 of the Panama Canal Treaty that establishes a system of preference for Panamanian nationals, to be employed by a United States Government Agency. Will this system stand up as due process under the U.S. Constitution, although it discriminates against U.S. citizens because of their citizenship? I respectfully question it.

Now this citizenship issue (so-called) is not just a legalistic point. What's involved in practice, is the defacto control of the Panama Canal Commission. As a practical matter, can you imagine all five U.S. appointees, including the ex officio U.S. Government appointees, standing fast against Panamanian demands? Say for sharply increased tolls? Or for hiring more Panamanians?

Let me conclude by saying what I think would be the worst of all possible worlds as far as the Panama Canal is concerned. Say the U.S. Senate ratifies, the treaties go into effect, and then the first shipowner charged increased tolls sues on the grounds that the Commission imposing the tolls is illegally constituted. I submit he would have a good chance to win, and the Supreme Court would declare the Panama Treaties unconstitutional. Then what? The Treaties still stand in international law under the Vienna Convention on Treaties of 1969, whether or not that one has been finally ratified by the U.S., but are invalid in U.S. municipal law.

It would seem that before any more consideration is given to the Panama Canal Treaties, the Senate and the Administration should assure themselves that they could with reasonable assurance pass a court test. Constitutional questions have been raised, I hope jurists will agree that they are not frivolous, and indeed that you will. The next step should be for the Attorney General of the United States to give his opinion if and why the treaties are constitutional with regard to the issues outlined. The Senate and Administration will then be in a better position to judge what to do and what risks are acceptable.

Thank you very much for your attention and interest.

---

MARCH 27, 1978.

To Honorable William V. Roth; Attention: Charles Morrison.

From American Law Division.

Subject Constitutionality of Proposed Panama Canal Commission

The following information is submitted in response to your request for an analysis of the constitutional arguments presented by your constituent, Charles Breecher, in opposition to the proposed Panama Canal Commission which would be established under Article III, § 3 of the Panama Canal Treaty.

The language in question provides:

ARTICLE III

*Canal operation and management*

3. Pursuant to the foregoing grant of rights, the United States of America shall, in accordance with the terms of this Treaty and the provisions of United States law, carry out its responsibilites by means of a United States Government agency called the Panama Canal Commission, which shall be constituted by and in conformity with the laws of the United States of America.

(a) The Panama Canal Commission shall be supervised by a Board composed of nine members, five of whom shall be nationals of the United States of America, and four of whom shall be Panamanian nationals proposed by the Republic of Panama for appointment to such positions by the United States of America in a timely manner.

(b) Should the Republic of Panama request the United States of America to remove a Panamanian national from membership on the Board, the United States of America shall agree to such request. In that event, the Republic of Panama shall propose another Panamanian national for appointment by the United States of America to such position in a timely manner. In case of removal of a Panamanian member of the Board at the initiative of the United States of America, both Parties will consult in advance in order to reach agreement concerning such removal, and the Republic of Panama shall propose another Panamanian national for appointment by the United States of America in his stead.

Mr. Breecher has raised several objections to the above provisions. Basically he feels that they violate the "Appointments Clause" of the Constitution (Art. II, Sec. II, cl. II) and also that it would be unconstitutional for a foreign national to serve on a U.S. agency such as that envisioned above.

As a preliminary point it should be noted that the treaty specifically provides that the Commission "shall be constituted by and in conformity with the laws of the United States of America." Also, if the treaty is adopted, implementing legislation, again in conformance with U.S. law, must be enacted before the Commission can come into existence. But even at this point it does not appear that any serious constitutional challenge can be raised to the quoted language.

The Appointments Clause provides:

The President shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the Supreme Court, and all other Officers of the United States whose Appointments are not herein otherwise provided for, and which shall be established by Law; but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

Thus this clause specifically provides that the President may by law be authorized to appoint officers without Senate consent (as provided in the treaty, and, presumably, in its implementing legislation). A Congressional Research Service multilithed report, "Statutory Positions Requiring Appointment by the President Showing Term, Compensation, and Any Other Special Provisions" (No. 76–26A, 586/226; January 1976) lists literally hundreds of Presidential appointments where no Senate confirmation is required. These include the Chairman and members of the Postal Rate Commission (39 U.S.C. § 3601); and members of the National Transportation Safety Board (49 U.S.C. § 1902). In most instances Congress would be free to require Senate confirmation of such appointees; see, for example, 28 U.S.C. § 532, enacted 82 Stat.

236 (1968), requiring Senate confirmation of F.B.I. Directors following the end of J. Edgar Hoover's term. This option might not be available with regard to members of the Panama Canal Commission without amending the actual treaty.

There is similarly no requirement that "Officers" of the United States be United States citizens. In its discussion of the Appointments Clause, "The Constitution of the United States of America—Analysis and Interpretation" (S. Doc. 92–82) notes that Congress may establish a "great variety" of qualifications for a particular office, including citizenship (see discussion at 523–24). U.S. citizenship is in fact required for holding many positions, such as Federal Aviation Administration Administrator (49 U.S.C. § 1652(e)) or General Trustees of the John F. Kennedy Center for the Performing Arts (72 Stat. 1698, 78 Stat. 4). The citizenship requirement may be added to other offices, as well. But nothing mandates that this be done.

Also, again depending to some extent on the implementing legislation, it is possible that the Panamanian members of the Commission would not be considered as "Officers of the United States" at all, if the Panama Commission is considered to be more of a Joint [i.e., intergovernmental] Commission. (It is stressed that this would have to be set forth in the implementing legislation.) For example 22 U.S.C. § 2281 establishes Joint Commissions on Rural Development. Each such commission is composed of one or more citizens of the United States appointed by the President and one or more citizens of the country in which the Commission is established, but a majority of the members of each such Commission must be citizens of the country in which it is established. No removal procedures are specified, whereas under the Panama treaty the United States and Panama would negotiate over the removal of a Panamanian citizen the United States found objectionable. Members of joint commissions retain their loyalty to their country of citizenship while working together on questions of mutual concern.

The only provision which we would foresee as possibly vulnerable to an attack on constitutional grounds would be that which requires the President to name members of the Commission "proposed by the Republic of Panama". Earlier this year a constitutional objection was made to a provision in S. 1437, 95th Congress, the Criminal Code Reform Act of 1977, which would require the President to appoint three members of the United States Sentencing Commission from a list of seven names to be submitted to him by the National Judicial Conference as violating the Appointments Clause (124 Congressional Record, Daily Edition, pp. S.281–8, 1/27/78). Although this question has never been considered by the judiciary, a Congressional Research Service report, "Constitutionality of Limiting the Scope of the President's Choice in Nominating Officers," dated January 30, 1978, concludes, "We think that the courts would answer this question [as to the unconstitutionality of the appointment process] in the negative" (p. 1). We are enclosing a copy of this report because of its lengthy Appointments Clause discussion and possible application to the Panama treaty.

Mr. Breecher's comments are herewith returned. We hope this information will prove helpful.

RITA ANN REIMER,
*Legislative Attorney.*

---

CONSTITUTIONALITY OF LIMITING THE SCOPE OF THE PRESIDENT'S CHOICE IN NOMINATING OFFICERS

Chapter 38 of S. 1437, the Criminal Code Reform Act of 1977, proposes the creation of a United States Sentencing Commission which would have the responsibility of establishing sentencing policies and practices for the entire Federal criminal justice system. As originally reported, three of the seven members of the Commission would have been appointed by the Judicial Conference of the United States. A constitutional objection was raised during Senate floor consideration of this reported provision on the ground that the method of appointment did not comply with the requirements of Article II, section 2, cl. 2 of the Constitution, the Appointments Clause, as interpreted by the Supreme Court in *Buckley* v. *Valeo*, 424 U.S. 1 (1976).[1] In apparent response to this objection, the provision was amended to provide that the President would designate three members of the Commission from a list of seven names to be submitted to him by the Judicial Conference.[2] The question is raised whether this method of selection unconstitutionally interferes with the presidential prerogative of appointment under the Appointments Clause by limiting his choice of potential designees. We think that the courts would answer this question in the negative.

The appointments clause of the Constitution, Article II, section 2, clause 2, designates the manner by which certain government officials shall be nominated and appointed. That clause provides that:

"The President shall nominate, and by and with the Advice and Consent of the Senate, shall appoint Ambassadors, other public Ministers and Consuls, Judges of the Supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law: but the Congress may by Law vest the Appointment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments."

Since the adoption of the Constitution there have been relatively few cases involving the import or reach of the language of the clause and none until 1976 which could be said to have rendered a definitive judicial explication of its text. Indeed, during the period from 1920 to 1975, which saw an enormous growth in the Federal bureaucracy and a concomitant extension of the President's power of appointment to thousands of major and minor offices and positions, the most significant rulings relating to the clause involved the question of the limits of the Chief Executive's removal power.[3]

However, in *Buckley* v. *Valeo*, 424 U.S. 1 (1976), the Supreme Court presented its first detailed analysis of the Appointment Clause. In that case the Court ruled that the manner of appointment (designation by congressional officers and approval by both Houses) of the voting members of the Federal Election Commission, in whom primary and substantial responsibility had been vested for administration and enforcement of the Federal Election Campaign Act of 1971,[4] as amended,[5] was unconstitutional. During the course of its decision the Court wholly redefined the constitutional concept of Federal officer and for the first time supplied substantive meaning to the constitutional terminology.

Specifically, the Court in *Buckley* greatly expanded the class of "officers of the United States." It did so by giving that term substantive content, defining it to include all these persons exercising some significant governmental authority. Such authority would include duties and functions relating to the administration and/or enforcement of public laws but would not encompass duties or functions which operate merely in aid of the legislative function such as investigations or information gathering. The Court also took pains to make it clear that such offices could be located elsewhere than under the hierarchical control of the cabinet departments. If it is found that a person is exercising the requisite quantum of "significant authority pursuant to the laws of the United States," he must have been appointed in the manner prescribed by Article II, section 2, clause 2, i.e., appointment by the President with Senate consent, or by the President alone, the courts, or the head of a department except where a selection is governed by a constitutional provision other than the appointments clause. Under this standard the Court struck down provisions of the Act which allowed for appointment of two members of the Commission by the President pro tempore of the Senate, two by the Speaker of the House, and two by the President, all of whom had to be confirmed by a majority of both Houses of Congress.

The *Buckley* decision, however, did not cast any doubt on the congressional power to establish offices. That the Constitution distinguishes between the *creation* of an office and *appointment* thereto has never been questioned. The former is *by law* and takes place by virtue of Congress' power to pass all laws necessary and proper for carrying into execution the powers which the Constitution confers upon the government of the United States and its departments and offices. As an incident to the establishment of an office Congress also has the power to determine the qualifications of the officer and in so doing necessarily limits the range of choice of the appointing power. Since the earliest days of our nation it has laid down a great variety of qualifications for holding office including citizenship, residence, professional attainments, occupational experience, age, property, and such sound habits as a demonstrated temperance in the use of alcohol, among others. It has required that appointees be representatives of a political party, of an industry, of a geographic region, or of a particular branch of government. It has confined the President's selection to a small number of persons to be named by others[6] and at times has contrived to designate a definite eligibility, thereby virtually usurping the appointing power.[7] Further, Congress has very broad powers in regulating the conduct in office of employees of the United States, especially regarding their politicial activities. *United Public Workers* v. *Mitchell*, 330 U.S. 75 (1947) (Hatch Act held constitutional); see also, *Arnett* v. *Kennedy*, 416 U.S. 134 (1974) (removal to promote efficiency of service not as unconstitutionally vague standard).

Some specific statutory enactments limiting the choice of the President may be noted. In establishing the original Railway Labor Board in 1920 Congress provided that the President would appoint three members from six nominees named by employees and three from six nominees named by carriers. 41 Stat. 456, 470 (1920). In establishing a commission to sell coal and asphalt deposits in Indian lands, two members of the commission were required to be Indians. 32 Stat. 641, 654 (1902). In establishing a Women's Bureau in the Department of Labor, Congress required that the director of the Bureau be a woman. The Civil Service Act of 1883 left the appointing officer the right to select from "among those graded highest on the result of" the competitive examinations for which the act provides, and executive orders and amendatory legislation have customarily restricted choice to the three highest. See, e.g., 5 U.S.C. 3317 (1970). Section 10 of the original Federal Reserve Act established a five member board to be appointed by the President, no more than one of whom could be from any single Federal Reserve district, and at least two of whom had to be experienced in banking and finance. 38 Stat. 251 (1913). In 1922

---

Footnotes at end of article.

the Act was amended to provide that one member be appointed who was representative of agricultural interests. 42 Stat. 620 (1922).

There have been no court decisions directly construing these or similar limitations. Dicta may be cited which indicates that presidential choice may be narrowed but not eliminated. Thus, Chief Justice Taney stated that while Congress may create offices, it "could not, by law, designate the persons to fill those offices." *United States* v. *Ferreira*, 54 U.S. (13 How.) 40, 51 (1851). Similarly, Chief Justice Taft noted that congressional prescription of qualifications for office does not conflict with the President's appointment power, "provided, of course, that the qualifications do not so limit selection and so trench upon Executive choice as to be in effect legislative designation", *Myers* v. *United States*, 272 U.S. 52, 128 (1926).

However, the distinction between the appointment authority and congressional power to set qualifications and preconditions for holding office was early and clearly recognized by the Supreme Court. In *United States* v. *Le Baron*, 60 U.S. (19 Row.) 78 (1856) the question was raised whether a postmaster was validly appointed so that a surety company would be liable on its bond of the appointee. In the course of its opinion the Court clearly recognizes that establishing preconditions for taking possession and acting in an office by Congress is distinguishable from the constitutional appointment process and that such preconditions do not burden that process (60 U.S. at 78):

"When a person has been nominated to an office by the President, confirmed by the Senate and his commission has been signed by the President, and the seal of the United States affixed thereto, his appointment to that office is complete. Congress may provide, as it has done in this case, that certain acts shall be done by the appointee before he shall enter on the possession of the office under his appointment. These acts then become conditions precedent to the complete investiture of the office; but they are to be performed by the appointee, not by the Executive; all that the Executive can do to invest the person with his office has been completed when the commission has been signed and sealed; and when the person has performed the required conditions, his title to enter on the possession of the office is also complete."

*Le Baron* and the above recited historical congressional practice appear to support the constitutional validity of a congressional requirement that the President designate three Sentencing Commission members from a list of seven nominees submitted by the Judicial Conference. In light of the specialized character of the functions of the Commission, the qualification prescribed is not so narrow as to, in effect, leave the President no freedom of selection at all. All that appears to be required by the Appointments Clause is that some choice, however small, must be left to the appointing authority. Congress cannot usurp the appointing function. *Buckley* v. *Valeo*, supra. The appointment provision under consideration would thus appear to be within constitutional limits.

COMMENTS TO CRS LETTER MARCH 27, 1978, SIGNED BY RITA ANN REIMER, LEGISLATIVE ATTORNEY, SUBJECT: CONSTITUTIONALITY OF PROPOSED PANAMA CANAL COMMISSION

1. Limitation of Presidential Appointment Power.

We do not even have to examine whether a treaty (rather than a law) can limit Presidential Appointment power at all.

The Memo by Martin Rosenberg, Legislative Attorney, CRS, 30 Jan. 1978, cited as authority by Reimer, concludes:

"All that appears to be required by the Appointments Clause is that some choice, however small, must be left to the appointing authority. Congress cannot usurp the appointing function".

The Panama Canal Treaty leaves no choice whatever to the President regarding the four Panamanian nominees. He must appoint them in a timely manner. This is contrary to the U.S. Constitution.

Similarly, the right of the Senate to confirm cannot be restricted to a ministerial function.

2. Limitation of Presidential Removal Power for non-judicial appointees serving an indefinite term.

No such limitation appears permissible, least of all through a treaty. The Reimer letter does not mention the subject at all.

According to the Treaty, and the Summary prepared by the U.S. Department of State, Panamanian approval is required for the President to remove any Panamanian on the Commission. That seems contrary to the U.S. Constitution and Court decisions.

3. Excluding the Senate's right to give advice and consent to appointments to the Panama Canal Commission.

(a) Art. 3 of the Panama Canal Treaty purports to do that. The Reimer letter says the implementing legislation can so provide. That's doubtful (see below). However, how can the Treaty force that option of excluding Senate confirmation on the Congress?

It is pertinent to cite here another CRS opinion (on the disposition of property issue), this one signed by Kenneth Merin, Legislative Attorney (123 Cong. Rec. S14932, daily ed. Sept. 15, 1977):

"It is clear that Congress has often asserted an exclusive right to dispose of federal territory and property. It is also apparent that both the Executive Branch and the Senate have recognized that claim in past dispositions of property in the Canal Zone to Panama. Therefore, while it is impossible to make a categorical assertion that Article IV Section 3, Clause 2 is either exclusive or concurrent, it appears that those powers have been recognized as exclusive for purposes of disposal of property in the Canal Zone to Panama. . . .

*It is a very serious matter for the treaty-making power to enter into an engagement calling for action by Congress unless there is every reason to believe that Congress will act accordingly.*" (Italic supplied)

(b) Reimer says: "This option (i.e. Senate confirmation) might not be available with regard to members of the Panama Canal Commission without amendment of the actual treaty". Agreed. But it then follows that if a treaty purports to abridge a right the Senate has under the U.S. Constitution, the Treaty is unconstitutional until suitably amended. Suitable amendment would however have to provide for outright Senate confirmation, or else the Treaty would bar the right of a future Congress to impose Senate confirmation. Or else the Treaty would have to recognize that right.

(c) Moreover, it is questionable whether implementing legislation could vest appointing authority in the President alone. The Constitution says this can be done by law for "inferior officers". Are civil officers at the Undersecretary of State level inferior officers?

4. Requirement that four members of the Commission be Panamanians.

(a) Can a treaty require that officers of a United States Agency may not be U.S. citizens? Can Congress, by law, exclude U.S. citizens from appointment to a United States Governmental Agency *because* they are U.S. citizens?

This Treaty Provision appears to violate the due process clause and the Privileges and Immunities clause. The issue is not as much as addressed by Reimer.

(b) Can a Treaty require that Congress make a non-resident alien a civil officer of the United States? Can Congress implement that provision, even if it wants to?

All civil officers of the United States are subject to impeachment. How can the U.S. impeach non-resident aliens over whom the U.S. has no jurisdiction and who are not subject to U.S. law?

That issue also is not addressed by Reimer.

(c) Trying to contend that the Panama Canal Commission might (sic) be more (sic) of a Joint Commission (i.e. Intergovernmental) is without merit, considering the unequivocal language of the Treaty, the similarily unequivocal language of the draft implementing legislation, and the Supreme Court definition of civil officers in *Buckley* v. *Valeo*. On the latter, the CRS 30 January Memo says:

"Specifically, the Court in Buckley greatly expanded the class of "officers of the United States." It did so by giving that term substantive content, defining it to include all those persons exercising some significant governmental authority."

In the light of the above, it seems futile to contend that members of the Panama Canal Commission are not civil officers of the United States.

One subsidiary question: Does the U.S. appoint the non-American members of a Joint Intergovernmental Committee?

Conclusion: On several important constitutional issues, the Reimer memo says nothing. On others, it admits non-constitutionality in the discussion, but fails to do so in the conclusion. On a third group of issues, Reimer admits that implementing legislation is needed to cure obvious defects in the treaty, which is another way of saying that ratification of the treaty absent such prior legislation runs the risk of being unconstitutional in U.S. municipal law.

---

STATEMENT BY CHARLES H. BREECHER ON THE CONSTITUTIONALITY OF THE PANAMA CANAL TREATY OF 1977

Before the Senate considers the Panama Canal Treaty of 1977, I believe we should examine in some depth whether it is in consonance with the Constitution of the United States. Let me say at the outset that I have arrived at the view that it is not, and that if ratified it would eventually be declared unconstitutional by the Supreme Court of the United States. Far from removing my doubts, the implementing legislation of 3 March 1978 as drafted by the Administration almost makes it appear that the Executive Branch might want to cover up what appear of their face to be grave constitutional defects in the Panama Canal Treaty.

The most glaring constitutional defect in this treaty might be termed the "citizenship issue". Let me read to you Sec. 3(a) Art. III of the Panama Canal Treaty. It provides for a United States Government Agency called the Panama Canal Commission managed by a board of nine members. . . . and now I quote: "four of whom shall be Panamanian Nationals proposed by the Republic of Panama for appointment to such positions by the United States of America in a timely man-

ner." The U.S. can apparently not reject such Panamanian nominees for appointment and can remove them only, and here I shall quote again, "after consultation in advance in order to reach agreement on such removal".

Now if this clear and unequivocal language in the Panama Canal Treaty means what it says, it means that the President of the United States can only appoint the nominees of the Panamanian Government, that he must appoint them "in a timely manner", that the United States Senate cannot reject or bottle up their appointment, and that the President can remove them only with the consent of the Panamanian Government, but not at his pleasure.

Let me repeat that this Panama Canal Commission is a United States Government Agency. It is not some Mixed Commission, nor an Advisory Commission nor a private corporation. To give an idea about the level of the appointees, on page 430 of the Hearings before the Committee on Foreign Relations, United States Senate, Part I, September 29, 1977, Richard Cooper, U.S. Undersecretary of State, says that he and Anthony Soloman, Undersecretary of the Treasury, would be two of the five U.S. members of that Commission, which is the Governing Board of the Panama Canal Commission, fixes the tolls and exercises other Governmental functions in operating the Canal.

Just so there should be no doubt about the nature of this United States Government Agency, Section 2(c) (3) & (4) of the draft implementing legislation make the Panama Canal Commission the successor to the present Canal Zone Government and the Governor of the Canal Zone, in addition to being the successor to the Panama Canal Company. And Sec. 201 of that legislation establishes the Panama Canal Commission "as a body corporate, and as an agency and instrumentality of the United States".

This provision in par. 3, Art. III of the Panama Canal Treaty raises the following serious questions under the U.S. Constitution:

1. Can the President's right to appoint officers of the U.S. Government be restricted by treaty? Article II, Sec. 2, clause 2 of the U.S. Constitution provides that the President shall appoint all officers of the United States, with the advice and consent of the Senate. The Panama Canal Treaty restricts the President's right of appointment to a purely ministerial function in the case of the nominees of the Republic of Panama.

2. Can the Senate's right to give advice and consent to Presidential appointments be restricted to a ministerial function, to be performed "in a timely manner"?

3. Can an alien, and in particular a non-resident alien as these Panamanian nominees would be, be appointed an officer of the United States? The U.S. constitution prescribes various length of citizenship requirements for the President, Vice-President, and members of the Congress, but is silent on civil and military officers. Past U.S. Government practice restricts to my knowledge appointments to citizens. As to any constitutional requirement, Art. II, Sec. 4 of the U.S. Constitution says: ". . . all civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors." How can an alien commit treason?

How can the United States which has no jurisdiction over a non-resident alien, convict him of bribery, high crimes and misdemeanors? It would seem that the makers of the U.S. Constitution did not envisage that non-resident aliens could become civil officers of the United States.

4. Can U.S. citizens be excluded under the U.S. Constitution from appointment to four of the nine positions on the Panama Canal Commission, a United States Government Agency, because they are U.S. citizens and not Panamanian nationals? The 5th and 14th Amendment protect the privileges and immunities of citizens of the United States and forbids depriving them of property without due process of law. Can it be made a condition for appointment, by treaty, that the prospective appointee be not a U.S. citizen but the national of a foreign country? Is that type of a classification permissible under the U.S. Constitution? I should think this type of a quota is not.

Without wanting to belabor the point too long, similar constitutional questions arise under Sec. 3 (c) and (d), Art. III of the Panama Canal Treaty, with regard to the Administrator or Deputy Administrator of the Panama Canal Commission, because appointment is restricted by the treaty to Panamanian nationals. Then there is par. 2, Art. X, of the Treaty that established a system of preference of Panamanian nationals, to be employed by a United States Government Agency. Will this system stand up as due process under the U.S. Constitution, although it discriminates against U.S. citizens because of their citizenship? I respectfully question that it will.

It is interesting that Sec. 307(b) of the implementing legislation does not exactly highlight the discrimination against U.S. citizens in employment by a United States Government Agency. I quote: "(b) The Panama Canal Employment System shall: (1) subject to and as limited by the Panama Canal Treaty of 1977 and related agreements, be based on the merit of the employee or individual and upon his qualifications and fitness to hold the position concerned." That sounds like the merit system of the U.S. Civil Service, whereas in actual fact Panamanians are given preference over better qualified U.S. citizens. One more case of style over substance in the implementing legislation.

Mr. President, I want to stress that this "citizenship issue" is not just a fancy legalistic point. On the contrary, it is of the greatest significance and goes to the heart of the Panama Canal Treaty. What's involved here is the actual control over the Panama Canal Commission and over the Canal, right after the treaties are ratified, not 22 years from now. To illustrate, can one realistically imagine that all five U.S. appointees, including the ex officio State Department appointee, will stand fast against any Panamanian demands? Say for sharply increased tolls, to make up for past alleged exploitation of Panama's resources by the U.S.? Or for the decline in the purchasing power of the U.S. dollar? Or for hiring more Panamanians even faster?

One further explanation what's really in this Article III. Dictators are not usually renowned for their sense of humor. But if General Torrijos possesses it, once the treaties are ratified, he might name his brother Moises to the Panama Canal Commission, to vindicate the honor of his family in the eyes of the United States public and of the world. And there is not a thing the United States President and the Senate could do except appoint Mr. Moises Torrijos in a timely manner, no matter that he is under criminal U.S. indictment. What's more, he could not be removed by the President, whatever more evidence should come to light, unless the Panamanian Government agreed to that removal.

The Administration keeps telling the American people that the U.S. will retain control over the Panama Canal until the year 2000. Legally and from a practical point of view, that is simply untrue. As the sovereign, Panama gains ultimate legal control the minute the treaties come into effect and the sovereign rights of the U.S. are thereby extinguished. And from the practical point of view, even if that Commission with a U.S. majority is allowed to function by Panama, that's like one person holding 45 percent of the stock in a corporation when the other 55 percent are not firmly in one other hand. The fellow with the 45 percent controls the board of directors and the corporation.

How does the implementing legislation read? It reads just fine on this crucial point, as if the U.S. Constitution were fully observed, that is unless one can recall exactly what's in the treaty. Here's Sec. 205(a) of the proposed legislation:

"(a) A board of directors shall manage the affairs of the Panama Canal Commission. The President of the United States shall appoint the members of the board in accordance with paragraph 3 of Article III of the Panama Canal Treaty of 1977, and neither this chapter nor any other law prevents the appointment and service as a director, or as an officer of the Commission, of an officer or employee of the United States, or of a person who is not a national of the United States. Each director so appointed shall, subject to paragraph 3 of Article III of the Panama Canal Treaty, hold office at the pleasure of the President, . . ."

Why, may I ask, did the Administration in the implementing legislation not repeat the short phrases of par. 3, Art. III of the Panama Canal Treaty? Who can guess from this artful language, unless he has the Treaty in front of him and refers to it, that the President and the Senate are restricted in appointing and confirming, and that the Panamanian appointees serve at the pleasure of the Panamanian Government, not at the pleasure of the President of the United States? Is this just poor drafting technique so that one has to refer to two documents, or is this an attempt to conceal in particular from the media and the public what this draft legislation really says?

It is my view that this citizenship issue alone is more than sufficient to cast the most serious doubts on the constitutionality of the Panama Canal Treaty. If the Administration or individual Senators disagree with me, I hope they will speak up now and tell me why they think par. 3, Art. III would stand up in U.S. Supreme Court.

But there is another very serious issue under the U.S. Constitution which should be mentioned and which can be called the Purse String Issue.

This Purse String Issue involves the powers of the full Congress, including the House of Representatives. Art. I, section 9, clause 7 of the U.S. Constitution says "no money shall be drawn from the Treasury but in consequence of appropriations made by law". However, par. 5, Art. III and par. 4, Art. XIII of the Panama Canal Treaty provide for certain payments to be made by the Panama Canal Commission, a United States Government Agency, to Panama.

To my knowledge, it is the weight of authority that no valid obligation can be imposed on the United States by a treaty to pay any money unless such obligation is not at least already authorized by the Constitution itself or by statute. Whether in international law such a treaty obligation would be binding, thus giving the Congress the choice to violate international law or to appropriate the money, is not relevant here when we examine the constitutionality of the Treaty in U.S. municipal law. What is relevant is that it appears under the U.S. Constitution that any such obligation in a treaty is not self-executory and that the prior authorization of the Congress must be sought.

Here I would like to quote from Attorney General Griffin Bell's testimony Sept. 29, 1977, Hearings before the Committee on Foreign Relations, United States Senate, pge. 200 ff. Part. I.

"Similarly, the President and the Senate may be powerless to accomplish by treaty what the Congress can accomplish by statue. . . . Some lower courts and many serious students of the law have expressed the view that certain matters are subject to regulation by Congress only; and that—a

treaty, if it purports to deal with such a matter, can be given effects only to the extent that it may be authorized or implemented by statute. The two matters that are frequently mentioned in this regard are the raising of revenue and the appropriation of funds. . . ."

The Panama Canal Treaty attempts to escape this apparent constitutional requirement by providing that the payments under Art. XII shall be made out of "Canal operating revenues." However, even this feeble need of an excuse is not available for the $10 million payment under Art. III which according to testimony by Administration witnesses would have to be made even if the Canal were closed say by an earthquake, and there are no "canal operating revenues."

Section 204 of the implemeting legislation seeks to cure this glaring defeat by providing:

"(h) Payments by the Commission to the Republic of Panama for providing public services in accordance with paragraph (5) of Article III of the Panama Canal Treaty of 1977 shall be treated for all purposes as an operating cost of the Commission."

That's a nice try, but does not change the language of the treaty. It also does not appear to change the fact that as long as this implementing legislation has not been passed, par. 5 Art. III is in violation of the U.S. Constitution, by the weight of legal authority cited by the Attorney General of the United States.

It would also appear that all this reference to "canal operating revenues" does might be to give Panama a claim to be paid ahead of other creditors of the Panama Canal Commission. But for the U.S. liability, it appears to be a distinction without a difference to talk about paying with "canal operating revenues" or with a check drawn on the U.S. Treasury. Revenues collected by a United States Government Agency are held to become miscellaneous receipts of the United States, similar e.g. to interest payments received by the Export-Import Bank, or repayments on past loans received by the Agency for International Development.

They could not be drawn on by the Panama Canal Commission (by Treasury check, I presume) except pursuant to authorization and appropriation by the U.S. Congress. If it were otherwise, the Congress would lose its control over the purse strings of the United States.

It is interesting to compare the language in the Panama Canal Treaty which omits in the case of payments to Panama any reference to Congress, with the carefully drafted, legally required language for certain Executive Branch promises thoughtfully called "Economic and Military Cooperation". That language is on page 575, Part I of the Hearings before the Senate Foreign Relations Committee I cited above. It provides for large-scale U.S. aid to Panama outside the Treaties through Federal guarantees of a few $100 Million and military credit sales, and now I quote "within the limits of applicable U.S. legislation, and subject to compliance with applicable legal requirements, and where necessary, to the availability of appropriated funds." This raises the interesting question whether Senate ratification of a treaty can do away with all these requirements imposed by the full Congress under its authority in the U.S. Constitution.

Again, the drafters of the implementing legislation may not have been unmindful of these constitutional questions. In Section 203 of the implementing legislation I find a word of art "directly" which is not in the Treaty, to wit that "the Panama Canal Commission shall pay *directly* from Canal operating revenues to the Republic of Panama. . . ." Perhaps this is designed that the Panama Canal Commission shall not pay by Treasury check so it ostensibly does not draw money from the U.S. Treasury. But how can these devious provisions be squared with the language in the treaty and the U.S. Constitution? There is a great difference, in my view, between the citizenship issue and the Purse String issue. The citizenship issue cannot be cured except by renegotiating the Panama Canal Treaty. The purse string issue could probably be cured retroactively by the full Congress if it passed the implementing legislation. But suppose the House of Representatives, pursuant to its rights under the U.S. Constitution, refuses to have its hand forced in a fashion which a majority of the members of the House may consider illegal? Then we would be left with ratified treaties that are invalid under U.S. municipal law and can't be executed. This would create the most horrendous international legal and diplomatic problems to which I shall come in a moment.

A third serious constitutional issue is already in our courts. It may be called the "Disposition of Property Issue" and arises under Art. IV, Sec. 3, clause 2 of the United States Constitution which reads: "(Congress) shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States . . .". A suit has been brought in the District Court for the District of Columbia (Civil Action No. 77–1733) by sixty Congressmen. Briefly, the suit contends that the power of the full Congress (including the House of Representatives) is exclusive, and that prior Congressional approval is required before the Treaties can be ratified. The suit may or may not go down in history as Edwards v. Carter.

The Administration contends that the President's Power to make Treaties is concurrent with that of Congress to dispose of U.S. property, and that the Treaties (only the Panama Canal Treaty is directly involved) are self-executory. It should be stressed that what is at issue is how property, title of which is now in the United States and which the U.S. has acquired by means other than a treaty, can be transferred to Panama. Any rights we obtained in the 1903 Treaty can of course be transferred or extinguished by a new treaty.

In testimony before the Senate Foreign Relations Committee and in Court, Attorney General Griffin Bell has presented a reasoned, respectable case for the President. He relies in the main on certain Indian treaties, much older than the 1903 treaty with Panama. It seems an involved case and I would not hazard to predict the outcome with any assurance. At present, the U.S. District Court has denied the standing of these 60 Congressmen to bring the suit, and an appeal on this procedural issue is going to the Court of Appeals for the District of Columbia.

There are two facts however, which I would like to stress in relation to the merits of this suit:

1. A substantial majority of the members of the House of Representatives seems to share the views of the 60 members that brought the suit. A House Resolution to this effect has reportedly already more than 218 sponsors and seems assured of passage in the near future.

2. There is the respectable authority of 34 United States Senators, under the leadership of the Senior Senator from South Carolina, expressed just three years ago in S. Res. 97, of 4 March 1975 which states explicitly that the U.S. Constitution requires the prior approval by the full Congress including the House of Representatives for the disposition of U.S. Property.

Let me cite from that Resolution which is entitled: Resolution Urging retention of undiluted United States sovereignty over the Canal Zone, 94th Congress, 1st Session:

"Whereas the United States, in addition to having so acquired title to and ownership of the Canal Zone by constitutional means, purchased all privately owned land and property in the zone making it the most costly United States territorial possession. . . .

"Whereas under Article IV, section 3, clause 2 of the United States Constitution, the power to dispose of territory or other property of the United States is specifically vested in the Congress, which includes the House of Representatives; and . . . "Now, therefore, be it

RESOLVED, That it is—the sense of the Senate of the United States of America that—(3) there be no recession to Panama, or other divestiture of any United States-owned property, tangible or intangible, without prior authorization by the Congress (House and Senate) as provided in article IV, section 3, clause 2, of the United States Constitution."

The distinguished Majority Leader cosponsored this Resolution. I regret that in his case as in that of some other Senators, I have not been able to ascertain exactly what new legal knowledge they acquired in the last three years which they did not possess in 1975 so that they now hold the precisely opposite view on an important provision of the United States Constitution.

I have dealt with three major constitutional issues which appear to point out clearly that the Panama Canal Treaties could not survive a court test. Now let me now deal in conclusion with a vital legal point which may not be all that widely known.

It might be said by some: So what? Suppose the Treaties are really eventually declared invalid by the U.S. Supreme Court. Then we just have to go back to Square 1, to new negotiations, as with the Federal Election Law. That's no different than if the treaties are not ratified, so that's better than rejecting the treaties.

Oh no! Once the treaties are ratified, the ball game is over in international law. For one, all U.S. rights under the 1903 treaty would be gone forever. The treaties would be perfectly valid in international law, even though declared invalid in U.S. municipal law.

On some reflection, this is not as startling as it may sound. The 1969 Vienna Convention on the Law of Treaties which is declaratory of customary international law, provides that once a treaty is ratified be competent legal authority, it cannot be undone by a decision of a domestic court. The reason for this rule of international law is obvious: there are just too many Governments throughout the world that might find it perfectly feasible to have their Supreme Court declare any treaty unconstitutional and void once the Government itself changed its mind on the continued desirability of that treaty.

So here is what could happen on the Panama Canal Treaties. Say the U.S. Senate ratifies, our rights under the 1903 Treaty are gone, and then the first shipowner charged increased tolls uses on the grounds that the Panama Canal Commission is illegally constituted under the U.S. Constitution. I submit he would stand an excellent chance to prevail and that the U.S. Supreme Court would have no choice but to declare the Treaty in violation of the U.S. Constitution and therefore void. Then what? Unless Panama kindly lets the U.S. off the hook by also declaring the treaties null and void ab initio, we would have on our hands what can only be described as a first-class legal and diplomatic mess. Panama would not mind, I think, they'd have the Canal and could charge whatever they wanted, being the sovereign with nothing to constrain them. How could anyone want to run the very real risk of that major calamity?

Most constitutional questions are controversial and the outcome is difficult to predict with any degree of assurance. But I would

submit that the legal case against the Panama Canal Treaties is extremely strong, as I have outlined it. For instance, how many Senators would agree that under the U.S. Constitution their right to give advice and consent to Presidential appointments can be abridged by a treaty?

We should also not be surprised that the treaties are drafted so as to be in conflict with the U.S. Constitution. The negotiators were given an impossible task if they were to reach agreement with the Panamanians. The Panamanians wanted to be absolutely certain that any money promised to them under the Treaties would not be contingent on a vote by the full Congress, it would seem. It would equally seem that the Republic of Panama, perfectly logically from their point of view, insisted on getting actual control over the Canal right now, not in the year 2000, but were willing to go along with some sort of arrangement under which the U.S. would still seem to have legal control in style, though not in substance. The U.S. Constitution, with its elaborate system of checks and balances, just does not seem to lend itself to these propositions, however ingenious the drafters of the treaties might be.

● Mr. MATHIAS. Mr. President, since the debate over ratification of the Panama Canal Treaty is rapidly drawing to an end, it is a good time to consider the elucidating comments of one our country's most distinguished elder statesmen, the Honorable John J. McCloy. Having devoted much of his life to the service of our country, as Assistant Secretary of War during World War II and later, as High Commissioner for Germany, his perceptions are clearly worthy of note. His expertise and erudition in the area of foreign policy is well known, and give his words extra weight.

The Panama Canal issue is one of vital importance, not only in its implications for our diplomatic and strategic posture, but also in its effect on our relations with Latin America and the rest of the world. We have exhaustively considered all sides of the question here on the floor, and so I am certain that my colleagues as they marshall their thoughts and summarize the arguments will profit from a review of the refreshingly lucid comments of the Honorable John J. McCloy.

The statement follows:

A FRESH VIEW ON PANAMA

My name is John J. McCloy and by way of qualification for having a view on the pending Panama Canal treaties before the Senate let me say that during World War II, I was The Assistant Secretary of War and I had from time to time occasion during that war to give thought to the place the Panama Canal played in our overall strategic and security policy. Moreover, I have been on a number of occasions an advisor to the President and other Government agencies dealing with defense matters relating to the country and the North Atlantic Treaty Organization. Following the war I was the U.S. Military Governor of Germany and acted later as U.S. High Commissioner for Germany in which capacity I was in frequent contact with problems relating to our and our Allies' defense problems. I was an advisor on disarmament policies during the Kennedy, Johnson and some part of the Nixon Administrations in which connection I obtained a rather comprehensive view of our entire defense posture. In World War I, I served as a junior officer overseas in the A.E.F. and later in the then U.S. army of occupation in Germany.

I have read the proposed treaties and a considerable amount of comment on them, but I have not followed in any detail the course of the negotiations leading up to the draft of the proposed treaties.

I do have some rather well defined views, however, regarding the timeliness of the proposed treaties and the advantageous role I think they could play in our overall diplomacy and strategic position at this stage in our history.

In the first place, let me say a word as to my view of the continued strategic importance of the Panama Canal to the United States and its national interests. I do not minimize the present economic and military importance of the Canal. I do not think it particularly significant that the big ships cannot now transit the Canal due to its present size and depth. Nor do I presume to predict that role the Canal will play in the world strategic developments of the future. I assume that with the geographic composition of the Western Hemisphere the Canal is bound to pay, or at least we are bound to assume that it could play, an important element in our defense and that of the Free World. I served through two World Wars when it did play an important part and I believe it would be most presumptous for anyone to take the position that it would not play an important role in the future. The trend, as I see it, is to move from larger to smaller ships in today's naval strategy. The frigates with their nuclear tipped missiles may be a more important surface weapon than a big carrier for all that I can predict. In short, I believe the Canal may well play quite as large a role in the future as it has in the past. I certainly would not assume a significantly lessened strategic value for the Canal in the future and for that reason accept a really less secure arrangement for our relations to it.

Next let me say I repeal any suggestion that we are in any sense under obligation to compensate for, or much less atone for, anything we or Theodore Roosevelt did in the past in the way of creating, building and making the Canal available to world trade. It was one of the great engineering, economic and political feats of all time and it was a boon to North America, Central America, South America and to the world.

In short, because I believe the Canal is, or could be, of great importance to us in the future, that I think we should adopt measures designed to remove any unnecessary irritations in regard to our present control over it. And I believe the time has come when we should commence preparations to remove the foreign enclave character of the present arrangement. It is probably an outdated arrangement under present international trends in the Free World. I believe that there may have been some deliberate and largely undeserved propaganda efforts made to charge American exploitation of Panamanian interests in connection with the Canal. Yet I think the time has come to remove any possible reflection on the dignity, full maturity or independence of Panama. I believe, with a suitable "break-in" period. Panama will, as a nation, be capable of efficient operation of the Canal and will have added interest in its own defense of it.

The military, I believe, have testified as to the difficulties of defending the Canal and its installations against local guerilla and sabotage attacks. They could be harassing and damaging, but they probably could be dealt with. To have United States forces in place prepared to resist such attacks might be advantageous militarily, but it would be far better if we could rely on the cooperation and goodwill of the Panamanians and their neighbors to afford the defense against such tactics than to rely solely on any on-site United States capacity to do so.

Moreover, there is another aspect of this matter which appeals to me as being most persuasive. That is the need we have as a country to reestablish the confidence, goodwill and cooperation of our Latin American neighbors which we have had through such a long part of our history. Not long ago we were able to count on a very solid weight of support from South and Central American states in the United Nations. For one reason or another that support seems somewhat eroded, although our respective political bases have much in common, the Panama Canal or at least the enclave aspect of it with its uniformed forces and rather preferred types of residences for the foreigner have furnished a symbol of colonial administration that is distasteful and it is a distaste which is shared by a substantial element in neighboring countries. The ratification of these treaties is not going to set in train a sudden reversal of U.N. voting or the elimination of all anti-American feeling in all Latin America, but it could be an eloquent example of non-dominating behavior which could lead to a greater recognition by the Western hemisphere states of our essential unity and common interest.

If the treaties should be rejected, I believe it might be a serious setback to the growing realization that most members of the Free World sense of the need for improved cooperation with the United States in the face of what appears to be growing Communist threats in under developing areas of the world. In a real sense I believe we could be losing an encouraging opportunity to restore in significant part our Western hemisphere sense of unity and common purpose. Therefore, both from a positive and a negative point of view I believe it is to our national advantage to enter into these treaties. First because it is a better way to defend the Canal than to hang on to the enclave concept with armed forces in place very likely provoking guerrilla tactics and sabotage and second because if rejected, we might well lose an opportunity which now seems aborning to revive the united political support of our hemispheric neighbors which has recently been somewhat lacking.

There is one other element in this matter which appeals to me as being of added weight in considering the value of ratification. It arises from my experience with the reopening of the Suez Canal after the first Suez crisis. You will recall the Egyptians seized the Canal and all its installations sinking a substantial number of ships in the Canal as they did so. The Canal was closed to all transit and world trade suffered as a result. In due course it came time to give thought to reopening the Canal and Mr. Hammarskjold of the United Nations asked me to organize the operation. The general feeling was that the Egyptians would not prove capable of operating it. The French installations in Ismaila of a rather elaborate character had given rise to the same sort of irritating enclave atmosphere which seems to be resented at least to some degree in Panama.

At any rate with the help of General Wheeler, an excellent engineer and an old World War I and II colleague of mine who had at one time commanded the Panama Canal Zone, the ships were raised, the canal reopened and the cost of it paid for out of the traffic, with the Egyptians assuming full charge of all operations. The results, as I recall, were somewhat spectacular in terms of lowered cost and increased use. The point I wish to make here is that the Egyptians quickly began to take great pride in their operation of the canal which it turned out was quite as efficient, as far as one could judge, as that of the prior foreign administration. The canal became an increased factor in the Egyptian economy and all local efforts were directed toward its successful operation. I do not see why the Panamanians could not do the job in Panama as well as

the Egyptians did it in their country although the lock system may present greater complications. I am sure it does require certain skills, discipline and training but once the local people at Suez got the responsibility they reacted well to it and I believe we would see the same phenomenon take place in Panama. The fact that so many other Latin American states have closely associated themselves with the conclusion of these treaties may also be a stimulating factor in Panama's safe and efficient operation of its canal.

In summary, I would favor ratification of the treaties. I believe the original drafts have been improved by the understandings which I believe are being accepted by both sides and I am satisfied from a military and defense point of view that we would not be jeopardizing our national interest or our good future use of the Canal if the treaties were ratified and concluded in the form which I believe they are now being considered. Indeed, I believe our interests could well be advanced.

Whether we use our right to defend the Canal will depend on our will to act whenever the freedom of the Canal is threatened. I do not think our will to defend it would or should depend on whether the present arrangement were in effect.●

● Mr. HARRY F. BYRD. The New York Times today published an excellent profile on the splendid Senator from Nevada, Mr. LAXALT, and the important role played by him in the 9 weeks of debate on the proposed new Panama Canal treaties.

PAUL LAXALT, in my judgment, is an outstanding Senator.

TOP ADVERSARY OF CANAL FACTS

(By Adam Clymer)

WASHINGTON, April 16.—Although he was campaign chairman for the Presidential candidate who brought audiences to their feet by reciting "We bought it, we built it, and we're going to keep it!" Senator Paul Laxalt avoids slogans and emotions when he talks about the Panama Canal.

But his work as leader of the Senate opposition to the canal treaties, which as frequently involves the cautioning of overenthusiastic partisans as attempts to persuade the uncommitted, has put him even more in the conservative limelight than he was in Ronald Reagan's 1976 campiagn.

However the final vote on the second canal treaty comes out on Tuesday, Mr. Laxalt has won as much respect from the pro-treaty forces as from his own side, not only for his openness in dealing with his fellow senators but also for his recognition, not shared by all the treaty opponents, of the sensitivities of the Panamanians.

For example, he voted against a treaty reservation asserting the United States right to send troops anywhere in Panama, feeling that an open statement of interventionist policy would needlessly anger Panama. His sympathy for Panamanian nationalism sounds sincere, but is overridden by his view that "it's absolutely essential that we retain the canal for security purposes, or else it might become a Russian choke-point."

SWIMMING AGAINST THE TIDE

Paul Dominique Laxalt (the middle name was the first name of his father, a Basque immigrant) comes by his conservatism naturally. . . . He is a Republican because his father, unlike most of the Basque shepherds who emigrated to Nevada, was one. "Pop just loved to swim against the tide," he said in an interview.

Born in Reno on Aug. 2, 1922, he spent summers on the sheep range with his father, who was away from the family's home in Carson City, the state capital, much of the year. Mr. Laxalt recalls an upbringing emphasizing "total respect for institutions and the family," and early fights with "the American kids" who picked on him for not knowing English until he went to school.

Although his mother ran a family-style restaurant that brought all the state's politicians into their home while he was growing up, Mr. Laxalt did not become interested in politics until after he had graduated from Denver University and its law school in 1949. He was elected district attorney for Ormsby County in 1951, then city attorney for Carson City, and in 1962 lieutenant governor.

He was elected Governor of Nevada in 1966, and encouraged Howard Hughes, whom he dealt with by telephone and memorandum, to buy heavily into the state's gambling industry. He praises Mr. Hughes, and said his influence helped get gangsters out of the casinos, as did legislation he pushed successfully to allow corporations to come in—legislation that has brought chain hotels with adequate capitalization into Las Vegas and Reno.

BRIEF FAREWELL TO POLITICS

That and the establishment of a community college system were the major concerns of his term as governor, but he decided not to run again. "I had a gut full of politics," he said. "My kids were nearly strangers to me. My marriage was breaking up." So he quit politics and opened a family-owned hotel venture.

He said that period, 1971 to 1974, had two main values. While his first marriage did end in divorce (in January 1976 he married his secretary, Carol Wilson), he re-established himself with his six children, three of whom are adopted—Gail Laxalt, 28 years old, Mrs. Sheila Lokan, 27, John Paul Laxalt, 25, Michelle Laxalt, 23, Mrs. Kevin Bernard, 22, and Mrs. Nina Thompson, 21.

It also helped him see that what politicians did was not going to change the world suddenly. He said he could go for weeks in Carson City without a politicial discussion "unless I started it." "That was an amazing insight into how importantly we take ourselves," he said.

But in 1974, despite Watergate and a divorce, he was persuaded to jump back in. He defeated the Democratic Lieutenant Governor, Harry Reid Sawyer, in the Senate race after "we were able to get him into a position where he appeared to endorse repeal of right to work." It was the only Democratic Senate seat Republicans won that year.

Mr. Laxalt walks a lot and plays tennis and, when he gets home to Nevada, he will be off into the Sierras, sleeping on the ground, rising at dawn, reading, hiking, then collecting with others at a central tent for "talking, eating and drinking."

Mr. Laxalt's role in the canal fight has increased the ranks of conservatives who urge him to run for President some day. But while the Nevadan says he is a "fatalist in politics," believing that things just happen to politicians, those close to him believe him when he says "the Presidency just has no appeal to me—not for a comment would I begin to seek it." ●

## ROUTINE MORNING BUSINESS

(Routine morning business transacted and additional statements submitted today are as follows:)

## MESSAGES FROM THE PRESIDENT RECEIVED DURING RECESS

Under authority of the order of April 13, 1978, the Secretary of the Senate, on April 14, 1978, received a message from the President of the United States submitting the nomination of William B. Edmondson, of Nebraska, to be Ambassador Extraordinary and Plenipotentiary of the United States to the Republic of South Africa, which was referred to the Committee on Foreign Relations.

## MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

## EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the Committee on Armed Services.

(The nominations received today are printed at the end of the Senate proceedings.)

## MESSAGE FROM THE HOUSE RECEIVED DURING THE RECESS

ENROLLED BILL AND JOINT RESOLUTION SIGNED

Under authority of the order of April 13, 1978, a message from the House of Representatives was received on April 14, 1978, stating that the Speaker has signed the following enrolled bill and joint resolution:

H.R. 7744. An act to amend the acts of August 11, 1888, and March 2, 1919, pertaining to carrying out projects for improvements of rivers and harbors by contract or otherwise, and for other purposes; and

H.J. Res. 770. A joint resolution to authorize and request the President to issue a proclamation designating April 18, 1978, as "Education Day, U.S.A."

The enrolled bill and joint resolution were subsequently signed by the Vice President.

## MESSAGE FROM THE HOUSE

At 12:30 a.m., a message from the House of Representatives delivered by Mr. Berry, one of its reading clerks, announced that the House has passed the following bill, in which it requests the concurrence of the Senate:

H.R. 11003. An act to clarify the authority for employment of personnel in the White House Office and the Executive Residence at the White House, to clarify the authority for employment of personnel by the President to meet anticipated needs, and for other purposes.

## HOUSE BILL REFERRED

The following bill was read twice by its title and referred as indicated:

H.R. 11003. An act to clarify the authority for employment of personnel in the White House Office and the Executive Residence at the White House, to clarify the authority for employment of personnel by the President to meet anticipated needs, and for other purposes; to the Committee on Governmental Affairs.

## CHANGE OF REFERENCE

Mr. ABOUREZK. Mr. President, I ask unanimous consent that S. 2854, a bill to amend certain provisions of titles 18 and 28 of the United States Code relating to jurisdiction over certain Indian country, be rereferred to the Select Committee on Indian Affairs. This has been cleared on both sides with the Judiciary Committee.

The PRESIDING OFFICER. Without objection, it is so ordered.

## REPORTS OF COMMITTEES RECEIVED DURING RECESS

Under authority of the order of April 13, 1978, the following reports of committees were received on April 14, 1978:

By Mr. MUSKIE, from the Committee on the Budget, without amendment:

S. Con. Res. 80. An original concurrent resolution setting forth the congressional budget for the U.S. Government for the fiscal year 1979 (together with additional and minority views) (Rept. No. 95–739).

## INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. HOLLINGS:

S. 2920. A bill to amend the Trade Act of 1974; to the Committee on Finance.

By Mr. BARTLETT:

S. 2921. A bill to amend the Internal Revenue Code of 1954 to reduce the excise tax based on investment income of private foundations; to the Committee on Finance.

By Mr. BARTLETT (for himself and Mr. BELLMON):

S. 2922. A bill to revise present nursery exemption in section 447(a), title 26, U.S.C., to apply regardless of form of business or present method of accounting; to the Committee on Finance.

By Mr. ABOUREZK:

S. 2923. A bill for the relief of Romeo K. Aboo; to the Committee on the Judiciary.

By Mr. ABOUREZK (for himself and Mr. MCGOVERN):

S. 2924. A bill to amend the payment formula for grain sorghum and barley for the 1977 crop of such commodities; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. ABOUREZK (by request):

S. 2925. A bill to supplement and clarify the Federal reclamation laws, to promote the settlement of family farmers in Federal irrigation projects, to provide for acreage equivalency between class 1 lands and lands of lesser productive capability, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. LEAHY:

S. 2926. A bill to authorize and direct the Secretary of Agriculture to provide cooperative forestry assistance to States and others, and for other purposes; to the Committee on Agricuture, Nutrition, and Forestry.

By Mr. CASE:

S. 2927. A bill for the relief of Edna Kalenik; to the Committee on the Judiciary.

By Mr. INOUYE:

S. 2928. A bill to amend the International Investment Survey Act of 1976, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. HELMS:

S. 2929. A bill to provide for the safeguarding of taxpayer rights, and for other purposes; to the Committee on Finance.

By Mr. MOYNIHAN:

S. 2930. A bill to authorize the home production of beer and wine; to the Committee on Finance.

## STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. HOLLINGS:

S. 2920. A bill to amend the Trade Act of 1974; to the Committee on Finance.

● Mr. HOLLINGS. I am today introducing legislation to protect America's vital textile industry from the danger of tariff cuts and increased foreign imports. My measure is simple and to the point and amends the Trade Act of 1974 so that textiles can qualify, as so many other goods qualify, for relief under that act.

Section 127(b) of the Trade Act of 1974 automatically excludes from tariff reductions any items accorded import relief under the "escape clause" of the Trade Act or the Trade Expansion Act of 1962 or import relief under the "national security clause" of the latter legislation.

Textile goods have been accorded certain relief under section 204 of the Agricultural Act, but relief under that measure has not been recognized as a basis for exempting products from the tariff-cutting process. This makes no sense. If a product such as textiles qualifies for relief, then it is nothing short of folly to entertain the prospect of cutting tariffs on such an endangered product. In short, it is inconsistency of the worst kind for such products to receive import relief and then have that relief vitiated by cutting the tariffs on such products. The measure I introduce today adds to the list of articles which the President must reserve from tariff-cutting talks those articles with respect to which action has been taken pursuant to section 204 of the Agricultural Act of 1956.

As the situation stands today, goods such as shoes, television sets, stainless steel, and so on have been exempted from these negotiations, because they are covered under the Trade Act. My measure simply puts textiles and apparel on an equal basis with those other commodities.

Mr. President, the merits of the case are clear. Our U.S. textile industry faces serious danger. And textiles are of such importance to our economy that any injury they suffer sends shock waves reverberating everywhere. The textile-apparel complex is the largest employer of manufacturing labor in the United States—accounting for one of every eight manufacturing jobs. It is a $70 billion a year business, with 2,300,000 paychecks going out every payday. And these paychecks go to critical areas of our economy and our work force. They go at double the national average to women and minority groups, who comprise such a large and disproportionate share of our unemployment problem. And they go to rural area and inner city, where jobs are scarce and where dislocation has wreaked such terrible economic and social havoc. In terms of what this industry produces, of whom it employs, of where the work is actually done, we are talking about something fundamental to the well-being of America.

Yet this vital industry has had to face one obstacle after another. It has been confronted with dire threat from continuing high rates of imported goods. From 1967 through 1977, the value of textile and apparel imports jumped from $1.5 billion to nearly $6 billion, a staggering increase of 300 percent. And while these are just figures to some, they mean jobs and livelihoods to others. Import levels today have displaced 400,000 American jobs.

Mr. President, since the Second World War, the United States has been on a binge. We have exported our jobs, our dollars, our technology. We have exported our economic preminence, and we have been without a realistic trade policy for longer than I can remember. Here is an industry declared by the Defense Department to be the second most important to our national defense—coming only after steel. And yet we allow plants to close, jobs to disappear, and we have opened the floodgates to a suffocating tide of foreign imports. And now, Mr. President, comes the administration with proposals for cutting tariffs. It is enough to make the mind boggle.

The United States is currently involved in trade talks of the utmost significance to the future of American textiles. Proposals envisioning tariff reductions have been tabled at the Tokyo Round in Geneva which, if approved, would confront us with an additional burden which should not have to be borne. Our American textile industry can be completely competitive in a fair trade environment. It has modernized its facilities; its plant and equipment enable it to hold is own—if we do not completely stack the deck in favor of other countries. And that is what we have unfortunately been doing. To be free, trade needs also to be fair. But when foreign governments underwrite and subsidize and in dozens of ways support their own home textile industries, then we must ask where the equity is. And when we are talking about low-wage countries to boot—with the Korean textile worker receiving hourly compensation of 55 cents while our textile worker gets $4.53—the situation becomes just about impossible. You can call that free trade if you want to—as for me, I see it as a giveaway whereby we give the freedom, and they get the trade.

Mr. President, I think it is as clear as anything can be that America's textile and apparel industry cannot withstand the shock of deep tariff cuts. Nor should it be asked to, given its fundamental importance to our economy, and given its own efforts to modernize and remain competitive. Tying its hands, is in fact, tying America's hands.

Let us head straight down the right road for a change. It makes no sense to spend billions to create jobs and then turn right around and pursue a trade policy that eliminates them faster than they can be created. No one else in this world is going to look after America's

well-being. It is our job to do. We still have the chance, late in the day though it is. But if we keep going down the dangerous road of giveaway and of cave-in to the one-sided trade policies of our competitors, then we court peril for our Nation. And I say this not to be dramatic, but to express my very genuine concern. We pay all too little heed to our trade situation. We have proposals and initiatives and bills for just about every conceivable approach to cure our country's ills—but where is our trade policy, where are the bills to develop exports, where is the willingness to use some plain business sense to put in place the kind of realistic trade policy which America must have if it is to remain competitive and prosperous?

With these concerns in mind, and asking the earnest consideration of my colleagues for this measure, I introduce my bill to amend the Trade Act to protect our textile goods from the unconscionable burden that tariff reductions would impose.●

---

By Mr. BARTLETT:

S. 2921. A bill to amend the Internal Revenue Code of 1954 to reduce the excise tax based on investment income of private foundations; to the Committee on Finance.

TAXATION OF PRIVATE FOUNDATIONS

● Mr. BARTLETT. Mr. President, today I am introducing a bill to reduce from 4 to 2 percent the excise tax on investment income of private charitable foundations. This bill, if enacted, will significantly add to the total amount of funds available for charitable purposes.

In my own State of Oklahoma there are approximately 200 private charitable foundations with a wide array of beneficial purposes. They range from specific grants for student education to actual treatment of medical disabilities. Recently, I received information from some 34 of these foundations indicating that their annual taxes amounted to approximately $600,000. This may seem an insignificant figure when compared to the Federal budget, but when applied as direct assistance to individuals or local beneficiaries even a few thousand dollars can mean the difference between continued operation and failure.

The excise tax on private charities was designed to cover administrative costs of Government audits on foundation books. However, the present 4-percent tax can represent several hundred thousand dollars annually on large charities. Obviously, this is far in excess of the amount necessary to maintain annual audits.

The 2-percent tax provided in this bill will more than cover all administrative costs of supervising private foundations. They are fulfilling on a voluntary basis functions which Government would otherwise have to finance and perform.

It is my hope that, after all of the hearings that have been held on this matter for the past several Congresses, the issue of this particular tax reduction can be resolved in favor of this country's foundations, and I look forward to the Finance Committee's inclusion of this provision in upcoming tax legislation.●

---

By Mr. ABOUREZK (by request):

S. 2925. A bill to supplement and clarify the Federal Reclamation laws, to promote the settlement of family farmers in Federal irrigation projects, to provide for acreage equivalency between class 1 lands and lands of lesser productive capability, and for other purposes; to the Committee on Energy and Natural Resources.

RECLAMATION LANDS OPPORTUNITY ACT

● Mr. ABOUREZK. Mr. President, I am introducing today, by request, a bill drafted by National Land for People. The bill would reform reclamation law, particularly with respect to the law's acreage limitation provisions. While I am a sponsor of S. 1812, a bill dealing with the same subject, and do not agree with all that this bill suggests, I do believe that their approach merits consideration. I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2925

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act, divided into titles and sections in accordance with the following tables of contents, may be cited as the "Reclamation Lands Opportunity Act".

TABLE OF CONTENTS

TITLE I—FINDINGS, PURPOSES, DEFINITIONS
Sec. 101. Findings and purposes.
Sec. 102. Definitions.
TITLE II—ACREAGE LIMITATIONS AND EQUIVALENCY
Sec. 201. Lands other than class 1 lands—acreage equivalency.
Sec. 202. Purchase of land for dependents of qualified purchaser.
TITLE III—EXCESS LANDS AND IRRIGATION RIGHTS
Sec. 301. Rights to water and termination or suspension of rights; moratorium on sale of excess lands.
Sec. 302. Disposition of excess lands.
Sec. 303. Speculation and profiteering prohibited.
TITLE IV—REPAYMENT OF PROJECT COSTS
Sec. 401. Project cost repayment provisions of contracts.
TITLE V—LEASING OF CERTAIN EXCESS LANDS
Sec. 501. Purchases of excess lands by the Secretary in order to lease these lands to family farmers.
Sec. 502. Leasing of Lemoore Naval Air Station land to family farmers.
TITLE VI—MISCELLANEOUS
Sec. 601. Guarantees by Department of Agriculture of loans made by private lenders to qualified leaseholders.
Sec. 602. Copies and explanations of this Act to be freely available.
Sec. 603. Negotiations of project contracts to be conducted in open sessions following public notice.
Sec. 604. Secretary's rules and regulations to be published.
Sec. 605. Department of Agriculture programs for family farmers.
Sec. 606. Authorization of appropriations.

TITLE I—FINDINGS, PURPOSES, DEFINITIONS

FINDINGS AND PURPOSES

SEC. 101. (a) The Congress finds that:

(1) a populous, prosperous rural society is essential to the preservation of the national character, and rural prosperity must be based on a pattern of broadly distributed ownership and operation of productive agricultural land;

(2) the purpose of reclamation law is and has been to encourage the settlement of federally irrigated land by family farmers living on or near their land;

(3) the administration of a substantial amount of the acreage currently affected by reclamation law has not accomplished and is not likely to accomplish the statutory policy of settling family farmers on the land;

(4) the construction of reclamation projects, by law, involves substantial subsidies to landowners; and the subsidies are intended to provide landowners with an incentive to sell excess land, presumably to family farmers, but too often land has been sold instead to nonfarming investors;

(5) there are large numbers of potentially successful family farmers, both with and without financing, who, as a consequence of practices approved by the Secretary of the Interior for the sale of reclamation land, are unable to move onto the land and thus fulfill the original purposes of reclamation law;

(6) appraisal techniques to determine the approved selling prices of excess land do not fully exclude enhancements in value attributable to projects;

(7) while vendors of excess land can dispute price approval decisions of the Bureau of Reclamation, no procedure exists for prospective purchasers to challenge these decisions; and

(8) due to a variety of weather conditions, soil qualities, and other natural characteristics affecting the productivity of farmland, it is inequitable to apply the same acreage limitations to every parcel of land.

(b)(1) It is the purpose of this Act to reaffirm as law and policy that:

(A) the congressional intention in reclamation law is and has been to foster the settlement of bona fide family farmers living on or near the land in Federal irrigation projects;

(B) those who do not comply with this purpose should be excluded from the right to receive federally supplied water;

(C) the intent of the law is to exclude project benefits from the price at which excess land initially receiving federally supplied water is sold;

(D) there should be established procedures to assure sounder repayment practices from those receiving federally supplied water; and

(E) the Federal irrigation project benefits should be distributed as widely as possible.

(2) It is the further purpose of this Act to provide that—

(A) the limitation shall be applied to less productive lands in a manner, and in accordance with clear regulations, that will compensate for their less productive quality; and

(B) federal financial assistance shall be provided to potential family farmers who would otherwise be unable to own or operate the land.

DEFINITIONS

SEC. 102. As used in this Act, the term—

(1) "family farm" means a farm (A) owned and operated or leased and operated by a family farmer or family farmers; (B) of a size small enough to be maintained and operated by such family farmers with members of their families or with hired labor and in no event larger than six hundred and forty acres except as provided for in section

201; (C) which provides sufficient income by itself in average or better agricultural years to enable the farmer to meet necessary family and operating expenses, including the maintenance of essential chattel and real property and the payment of debts; and

(2) "family farmer" means an individual who (A) owns and operates, or leases and operates for his or her own account, a farm of no more than six hundred and forty acres except as provided for in section 201; (B) lives on or within fifteen miles of the land which constitutes the farm; and (C) derives a major portion of his or her income during periods of normal agricultural productivity from the operation of that farm. The term does not include an individual whose participation in farming operations is primarily limited to management decisions with respect to land operated by or leased to another person; but the term many include an individual, otherwise meeting the provisions of this definition, who operates a family farm in the partnership, corporate, or other form of business organization, as long as each partner, officer, trustee, shareholder, owner, or other interest holder is a family farmer as defined by this section and does not own, operate, lease, control, or have any interest in, more than six hundred and forty acres of land receiving Federal irrigation water.

(3) "qualified purchaser" means any individual, partnership, corporation, group of individuals, or other legal entity who (A) is eligible under the Federal reclamation laws to purchase lands; (B) would be eligible, after having made such a purchase, to receive from a project or division, water for the land purchased; (C) certifies that lands purchased pursuant to the Federal reclamation laws, including this Act, will be used as a family farm, that the individual, partnership, corporation, group of individuals, or other legal entity will operate that farm as a family farm, that each partner, shareholder, owner, officer or other interest holder shall live on or within fifteen miles of said land within a year of purchase, shall make farming his or her principal occupation as defined by section 102(2)(C), and shall not be a partner, shareholder, owner, lessee, or other interest holder in any other farming operation receiving Federal irrigation water, unless the total acreage, including the acreage being purchased, in which an ownership or other interest is held is less than six hundred and forty acres.

(4) "qualified leaseholder" means any individual who (A) is eligible under the Federal reclamation laws to purchase excess lands; (B) would be eligible, after having made such a purchase, to receive from a project or division water for the lands purchased; (C) certifies that lands leased pursuant to this Act will be used as a family farm, and that that individual, group of individuals or legal entity, will operate that farm as a family farm; (D) does not have the financial resources necessary to purchase a farm of an economically feasible size; (E) has been unable to obtain adequate financing to purchase such a farm; (F) has the ability to farm those lands as a family farmer; and (G) who obtains the land through the lottery system.

(5) "blood relative" means a grandparent, parent, child, brother, sister, aunt, uncle, niece, nephew, or spouse;

(6) "Secretary" means the Secretary of the interior;

(7) "Federal reclamation laws" means the Act of June 17, 1902 (32 Stat. 388), as amended (43 U.S.C. 391), and Acts amendatory thereof or supplementary thereto, including this Act;

(8) "project" means a Federal irrigation project authorized by or subject to the Federal reclamation laws;

(9) "division" means a substantial irrigable area of a project designated as a division by order of the Secretary;

(10) "Administrator" means the Administrator of the Farmers Home Administration; and

(11) "class 1" land: has the meaning defined in paragraph 2.5.2, "Class 1", of chapter 2.5, "Land Classes", of part 2, "Land Classification", of volume V, "Irrigated Land Use", of the United States Department of the Interior Bureau of Reclamation Manual, or comparable definition contained in a subsequent manual that is officially designated as the successor in function to that manual.

(12) "Federal irrigation water" shall include underground water supplemented by a Federal irrigation project and all water commingled with Federal irrigation water.

(13) "Land sale" shall include the sale of any mineral rights on the subject parcel owned by the seller.

## TITLE II—ACREAGE LIMITATIONS AND EQUIVALENCY

### LANDS OTHER THAN CLASS 1 LANDS—ACREAGE EQUIVALENCY

SEC. 201. (a) Notwithstanding any other provisions of law, the Secretary, for purposes of administering Federal reclamation laws, may establish the acreage of land held in private ownership by any one individual owner or group of owners, which is eligible as nonexcess lands to receive project water from, through, or by means of project works, at six hundred and forty acres of class 1 land, or the equivalent thereof in other lands of lesser productive potential and also growing seasons of less than 180 days: *Provided*, That in no case and for no class of land shall the equivalent acreage exceed nine hundred and sixty. Standards and criteria for the determination of land classes pursuant to this authority shall be based, where possible, on land classification surveys that have been made or shall be made in feasibility studies at or before the time the project involved was begun. Where previous land classification surveys do not exist, the Secretary may establish acreage equivalency formulas on a project-by-project basis. In any classification for equivalency purposes, including those cases where preproject surveys already exist, the Secretary shall hold public hearings in the area affected before promulgating regulations. The regulations will go into effect sixty days after their final promulgation. This section shall not apply to any project, unit, or division of a project, or repayment contracting entity located in an area in which the average frost-free growing season, as determined from published Department of Commerce records, exceeds one hundred and eighty days.

(b) The Secretary is authorized upon request of the holder of an existing contract under Federal reclamation laws to amend the contract to conform to the provisions of subsection (a) of this section, and to otherwise perform any and all acts appropriate to carrying out the purposes of this Act. All such amendments shall be negotiated and executed in keeping with the purposes and procedures set forth in sections 602, 603, and 604 of this Act.

## TITLE III—EXCESS LANDS AND IRRIGATION RIGHTS

### RIGHTS TO WATER AND TERMINATION OR SUSPENSION OF RIGHTS; MORATORIUM ON SALE OF EXCESS LANDS

SEC. 301. (a) One year after the date of enactment of this Act, no water from any project or division shall be delivered to any lands unless (1) those lands comprise a family farm, (2) those lands are described in subsection (b) of this section, or (3) those lands are within a project or division which prior to the enactment of this Act had been exempted by statute from the limitation. The Secretary, through the Commissioner of Reclamation, shall take appropriate steps to insure that water deliveries to lands not in compliance with the preceding sentence are terminated.

(b) In addition to lands comprising family farms, the following lands shall be entitled to receive or continue to receive Federal irrigation water:

(1) land currently under recordable contract;

(2) land parcels of less than six hunderd and forty acres for the period during which they are held by the owners of record at the date of enactment of this Act.

(3) land owned by a family farmer or former family farmer who otherwise conforms and complies with the provisions of this Act, but who leases that land through the lottery system, or in instances approved by the Secretary on the basis of extreme hardship to that family farmer, for no more than two years of a ten-year period, except that the lessee at the date of the enactment of this Act of an absentee owner holding less than six hundred and forty acres may continue to lease said parcel (i) indefinitely if he or she is a family farmer as defined in Section 102(2), (ii) for three years if he or she is not a family farmer as defined in Section 102(2);

(4) subject to the provisions of subsection (c) of this section, land acquired by foreclosure or other process or procedure in satisfaction of a mortgage or any other legal instrument securing a creditor's rights;

(5) subject to the provisions of subsection (c) of this section, land acquired by inheritance or devise; and

(6) subject to the provisions of subsection (c) of this section, land not under recordable contract purchased prior to the date of enactment of this Act and actually receiving or lawfully entitled to receive water on that date.

(c) Lands that receive or are entitled to receive water pursuant to clause (4), (5), or (6) of subsection (b) of this section shall cease to receive or be entitled to receive water from any project or division unless those lands are sold to the Secretary pursuant to section 501 or to a family farmer to be operated as a family farm—

(1) in the case of lands described in clause (4) or clause (5) of subsection (b), one year after the date of acquisition of title to or other possessory rights in those lands by a person or persons not family farmers or for operation otherwise than as a family farm; and

(2) in the case of lands described in clause (6) of subsection (b), five years after the date of enactment of this Act.

(d)(1) Not less than sixty days prior to terminating deliveries or entitlement to deliveries of water to any lands pursuant to this section, the Secretary shall give notice by personal service or by certified mail to the record owner or owners of those lands, to any person or persons known to have a leasehold or other lawful possessory or security interest therein, and to the head or heads of any household or households of persons known to be resident thereon. The notice shall specify the legal reason or reasons for and the intended date of the termination. Each person having a right to receive such notice shall have a right, within the period after notice and prior to termination, to present to the Secretary or his delegate oral or written argument that those lands are in compliance with this section and that deliveries of water accordingly should not be terminated.

(2) The Secretary, by regulation, shall establish procedures, for the settlement of contested rights to water under this section. Those procedures shall provide for final determination of such rights at the administrative level not later than one year after the issuance of the sixty-day notice of intended termination. While any such contest is pending, lands involved in that contest may receive water for the duration of the growing season during which the intended termination date fell. After that growing season has ended, no deliveries of water shall be made to those lands during the pendency of the contest at the administrative level or in the courts: *Provided,* That, if the Secretary shall upon inquiry find and by order declare that, in a particular case, the termination of deliveries of water would cause hardships to the recipients of water that substantially outweigh the benefits to enforcement of the policy and purpose of this Act, the date of suspension of deliveries of water during the pending contest may be deferred for not to exceed one additional growing season. Thereafter, no water shall be delivered to those lands until they have been duly found or adjuged to be in compliance with this section.

(e) Not later than three months after the enactment of this Act, the Secretary shall publish proposed regulations for the administration of this section and shall provide for hearings on those proposed regulations during the following six months. There shall be at least one day's public hearing in each region of the Bureau of Reclamation. The Secretary shall also provide for the filing of written comments on the proposed regulations during the six-month period following their publication. The Secretary shall promulgate final regulations, taking into account testimony heard and suggestions received, not prior to six months, not later than one year, after the date of enactment of this Act.

(f) No excess lands in any project or division receiving or eligible to receive federally supplied water shall be sold for a period of one year following the date of enactment of this Act: *Provided,* That, if the Secretary, upon inquiry finds and by order declares that, in a particular case, the moratorium on the right to sell land would cause hardships to the owner or owners of that land which substantially outweigh the benefits of the moratorium to achievement of the policy and purpose of this Act, the moratorium on land sales shall be waived in that case.

DISPOSITION OF LANDS

SEC. 302. (a) A seller of land shall have the right to determine to which purchaser or beneficiary he or she will sell, give, or devise six hundred and forty acres of land if said purchaser or beneficiary is a blood relative of said seller: *Provided,* That, only qualified purchasers of that land may receive federally supplied water therefor under this Act, and Federal reclamation laws. If the seller is unable or unwilling to sell, give, or devise his or her land to a blood relative, or in the sale of land of more than the six hundred and forty acres sold, given, or devised, the purchaser shall be determined by lot, in accordance with subsection (b)

(b) The Secretary shall determine by lot which of two or more offers from qualified purchasers for the same parcel land shall be accepted by the seller. The Secretary shall promulgate regulations for the conduct of lotteries for that purpose. Those regulations shall provide that—

(1) An applicant for the lottery system, whether as individual, partnership, corporation, or other legal entity, directly or indirectly shall be entitled to one and only one chance in that lottery in any one year if that prospective occupant is a qualified purchaser.

(2) Lands to be sold through the lottery system shall be divided by the Secretary on an annual basis into parcel sizes of from twenty to six hundred and forty acres. The average size of said parcels shall be no more than two hundred acres in Federal irrigation project areas with more than 210 frost free days.

(3) Lottery chances shall not be transferable in any manner.

(4) The parcels of land to be sold or leased through the lottery system shall be announced on January 1 of each year and shall be chosen on April 1 of each year. Purchase lottery winners must obtain financing and complete all other legal transactions to take title to the land no later than August 1 of the year in which they drew the successful lot. If the purchaser fails to obtain financing by August 1 the subject parcel may be placed in the purchase lottery for the following year or it may be placed in a special October 1 lease lottery for rental commencing the following January 1. The seller may not impose terms on the purchase other than a demand for cash payment. Purchasers and lessees shall take possession in the following January 1.

(5) The lottery system shall be conducted to facilitate land transfers between season and to avoid disruption and delay in planting and harvesting operations. Adequate notice shall be given to sellers, buyers and lessees. Sellers shall provide lottery purchasers and lessees timely and reasonable access to the land after the harvesting to prepare it for planting of the following year's crops. However, sellers shall retain their existing water and property rights until the buyers or lessees take possession of the land.

(c) The appraisal of lands for sale thereof shall be made without reference to any chattel, fixture, or other property which can be liquidated by the seller in a sale unrelated to the sale of lands, such as tractors, trucks, leasehold rights, securities and other items or materials, nor shall the purchase of any such items be a condition of sale. In all cases the price for land shall be no higher than the price the Secretary determines would result from taking the fair market value of the land without reference to the Federal irrigation project benefits.

(d) Disagreements between the seller and a qualified purchaser of lands as to price or any other condition of sale shall be resolved by arbitration. The Secretary shall promulgate regulations, pursuant to section 604, for the conduct of such arbitration.

SPECULATION AND PROFITEERING PROHIBITED

SEC. 303. Between the date of enactment of this Act and the date upon which the allocated costs of a Federal irrigation project have been fully repaid, no owner of land receiving or entitled to receive water from that project or division who purchased that land at a price limited by the Federal reclamation laws shall sell that land at a price greater than that owner's costs for the land, indexed by the Consumer Price Index for the period between that owner's purchase and sale of the land.

## TITLE IV—REPAYMENT OF PROJECT COSTS

PROJECT COST REPAYMENT PROVISIONS OF CONTRACTS

SEC. 401. (a) Notwithstanding any other provision of law, the Secretary, in the case of water right contracts or amendments to contracts entered into after the date of enactment of this Act, shall be required to stipulate in any such contracts that all rates and assessments to be paid by the contracting entity or the landowners in that entity shall be renegotiated every five years. The repayment capacity studies on which such rates and assessments may be based shall also be conducted every five years.

(b) Notwithstanding any other provision of law, the Secretary, in case of water right contracts or amendments to contracts entered into after the date of enactment of this Act, shall require that repayment for the distribution infrastructure systems shall commence for each section of the system when it begins regularly and permanently to deliver water. No section of the system shall be used to deliver water for more than one year unless repayment for that section has commenced.

## TITLE V—LEASING OF CERTAIN LANDS

PURCHASES OF LANDS BY THE SECRETARY IN ORDER TO LEASE THOSE LANDS TO FAMILY FARMERS

SEC. 501. (a)(1) During the fiscal year beginning October 1, 1978, and each succeeding year, the Secretary is authorized and directed to utilize all moneys appropriated for that purpose to purchase five thousand acres or twenty percent of the irrigated land in a Federal irrigation project service area, whichever is greater, and fixed equipment thereon, for lease to family farmers in accordance with the provisions of this section. Such purchased land shall be divided by the Secretary into parcel sizes of from twenty acres to six hundred and forty acres for lease to new farmers who neither own nor operate for themselves any farm receiving Federal irrigation water. Said lottery shall be conducted as provided for in section 302(b).

(2) There is authorized to be appropriated for the fiscal year commencing October 1, 1978, and for each of the next following four fiscal years, the sum of $10,000,000 to carry out the provisions of this subsection.

(b)(2) Each such lease shall contain a requirement that the leasehold will be used as a family farm and the leaseholder will farm the lands as a family farmer.

(c) In determining the amount of rent which a leaseholder shall be required to pay, the Secretary shall charge the going market rate for land in the area absent project benefits. The Secretary, in determining the amounts, shall be authorized to adopt variable rental schedules in order to take into account both bountiful and natural-disaster conditions.

(d) Leases under this section shall not exceed, originally or by any extension or extensions, a total term of seven years, and in no case shall any such lease be issued for a term of less than two years. No leaseholder shall sublease lands covered by his or her lease unless approved by the Secretary on the basis of an extreme hardship to that leaseholder.

(e) The Secretary shall be authorized to terminate any lease for any failure to pay rents or other substantial violation thereof by the leaseholder in accordance with such regulations as he shall prescribe.

(f) In accordance with such regulations as the Secretary shall promulgate, a leaseholder shall be authorized, during the term of that lease, to make improvements within a five-acre area approved by the Secretary for that purpose. Upon the termination of that lease, the Secretary shall compensate the leaseholder for such improvements in an amount not to exceed the fair market value thereof.

(g) In those cases where two or more qualified leaseholders make application for lease of the same tract of land, the Secretary shall determine which of those applicants shall be entitled to that lease by lot in the same manner as provided under subsection (b) of section 302 of this Act.

(h) In any case in which a qualified leaseholder certifies in a manner satisfactory to the Secretary that he or she does not have the financial resources necessary to operate

the lands covered by that lease as a family farm, including nonfixed assets, such as tractors, trucks, and other items or materials, the leaseholder shall be entitled to receive financial assistance in accordance with the provisions of section 601 of this Act.

(i) In any case in which the Secretary determines, on the basis of a qualified leaseholder's use of the lands covered by his or her lease during the term thereof and such other factors as the Secretary, by regulation, shall prescribe, that that leaseholder can successfully manage and operate the lands covered by the lease as a family farm, the the Secretary shall, upon application of that leaseholder submitted to the Secretary within six months prior to the expiration of the term of that lease, sell those lands to that leaseholder at the same price the Secretary paid for the land at the time of its acquisition indexed by the Consumer Price Index for the period between acquisition and sale of the land and minus the lease payments. If the leaseholder certifies in a manner acceptable to the Secretary that he or she does not have and has been unable to obtain adequate financial resources to make the purchase, the leaseholder shall be entitled to receive financial assistance in accordance with section 601 of this Act. All proceeds of those sales shall be placed in a fund to be administered by the Secretary for the purpose of purchasing additional lands for lease under the provisions of this title.

(j) Upon the purchase of land pursuant to subsection (i), the former leaseholder shall be subject to all of the conditions, limitations, and restrictions imposed by the Federal reclamation laws, including in particular title III of this Act, on excess lands and qualified purchasers thereof.

(k) Notwithstanding any other provision of law, a qualified leaseholder shall be entitled to contract for water for lands covered by the lease in the same manner and to the same extent as if that leaseholder were the owner of those lands.

(l) In any action of the Secretary involving the denial or rejection of an application for a lease under this title, the Secretary shall require that the applicant be notified of that action by both oral and written communications. If the applicant believes that the Secretary has wrongfully denied or rejected the application, the applicant shall have thirty days following that denial or rejection within which to file a petition for review of the application and denial. By regulations promulgated pursuant to section 604, the Secretary shall establish procedures for the initial processing, granting, and denial of those applications, and, following rejection, for review thereof by a different authority.

(m) If the leaseholder does not purchase the land, it shall be placed in the lottery for the year in which the lease terminates. Said leaseholder shall not be eligible to enter any future lottery conducted pursuant to this Act either as an individual's partner, shareholder, leasee, or other interest holder, unless a special exemption is granted by the Secretary.

LEASING OF LEMOORE NAVAL AIR STATION LAND TO FAMILY FARMERS

SEC. 502. Within ninety days following the date of enactment of this Act, the Secretary of the Navy shall transfer to the Secretary of the Interior administrative jurisdiction over the leasing of all lands owned by the Secretary of the Navy within the Westlands Water District which qualify as excess lands, for purposes of leasing those lands pursuant to this title. The Secretary of the Navy shall, however, be permitted to issue such rules and regulations as he may deem necessary for the operation of the Lemoore Naval Air Station, and the Department of the Navy shall retain title to the land. On and after that transfer, those lands shall be available to the Secretary of the Interior for disposition under this title in the same manner and to the same extent as those lands purchased by the Secretary pursuant to section 501, except that those lands with respect to which the Secretary of the Navy retains title under this section shall not be available for purchase in accordance with subsections (i) and (j) of section 501. Notwithstanding the provisions of section 501(d) of this Act, the Secretary of the Interior is authorized, upon the expiration of any such lease, to renew the lease for a further term or terms.

## TITLE VI—MISCELLANEOUS

GUARANTEES BY DEPARTMENT OF AGRICULTURE OF LOANS MADE BY PRIVATE LENDERS TO QUALIFIED LEASEHOLDERS

SEC. 601. (a) In order to furnish financial assistance for purposes referred to in section 302 and subsections (h) and (i) of section 501, the Administrator may, in accordance with the provisions of this section, guarantee loans made by non-Federal lenders to qualified leaseholders for those purposes. No loan guarantee under this section for any such purpose may apply to so much of the principal amount thereof as exceeds 90 per centum of the cost of carrying out any such purpose.

(b) Individuals seeking guarantees of loans under this section shall submit to the Administrator applications, in a form which the Administrator shall prescribe, containing such information and assurances as may be required by the Administrator. The Administrator may approve any such application only if—

(1) there are in the application satisfactory assurances that the applicant will, if the loan is granted, keep those records, and afford such access thereto, and make those reports in the form and containing the information, as the Administrator may reasonably require; and

(2) the Administrator determines, in the case of a loan for which a guarantee is sought, that the terms, conditions, maturity, security (if any), and schedule and amount of repayments with respect to the loan are sufficient to protect the financial interests of the United States and are otherwise reasonable and in accord with regulations, including a determination that the rate of interest does not exceed the per centum per annum on the principal obligation outstanding as the Administrator determines to be reasonable, taking into account the range of interest rates prevailing in the private market for similar loans and the risks assumed by the United States.

(c) In the case of any such loan guaranteed under this section, the United States shall be entitled to recover from the applicant the amount of any payments made pursuant to any such guarantee, unless the Administrator for good cause waives the right of recovery, and, upon making any such payment, the United States shall be subrogated to all of the rights of the recipient of the payments with respect to which the guarantee was made.

(d) Guarantees of loans under this section shall be subject to such further terms and conditions as the Administrator determines to be necessary to assure that the purposes of this section will be achieved, and, to the extent permitted by subsection (e), any of those terms and conditions may be modified by the Administrator to the extent he or she determines such modification to be consistent with the financial interest of the United States.

(e) Any guarantee of a loan pursuant to this section shall be incontestable in the hands of an applicant on whose behalf the guarantee is made, and as to any person who makes or contracts to make a loan to the applicant in reliance thereon, except for fraud or misrepresentation on the part of the applicant or such other person.

(f) The cumulative total of the principal of the loans outstanding at any time with respect to which guarantees have been issued under this section is authorized to be any amount not in excess of $50 million.

COPIES AND EXPLANATIONS OF THIS ACT TO BE FREELY AVAILABLE

SEC. 602. The Secretary, on request of any individual, shall furnish without cost to that individual a copy of this Act, together with a summary explanation of the provisions thereof written in simple English or in simple Spanish, as the requesting individual desires.

NEGOTIATIONS OF PROJECT CONTRACTS TO BE CONDUCTED IN OPEN SESSIONS FOLLOWING PUBLIC NOTICE

SEC. 603. After the date of enactment of this Act, all contract negotiations involving construction, reconstruction, enlargement, operation, repayment of costs, excess lands, rights to water, or other aspects of any project or division existing under or subject to the Federal reclamation laws, or any combination of those subjects, shall be conducted in public sessions and pursuant to public notice given in a form and manner calculated to provide the widest practical actual notice to interested parties. All parties conducting such negotiations, including but not limited to the Secretary and his delegates, shall share responsibility for implementing the policy of this section, to assure notice to and participation or observation by the public in all negotiations involving contracts, including amendatory and supplemental contracts, affecting projects or divisions.

SECRETARY'S RULES AND REGULATIONS TO BE PUBLISHED

SEC. 604. Beginning not later than one year after the date of enactment of this Act, the Secretary shall take no action pursuant to or in implementation of the Federal reclamation laws, except in accordance with published, formal rules and regulations promulgated by the Secretary. Those rules and regulations shall, in addition to other matters, be explicit in making provision for the disposition of excess lands. All such rules and regulations shall be published in the Federal Register not less than thirty days before becoming effective. All such rules and regulations, including amendments thereto, shall be subject to the provisions of subchapters I and II of chapter 5 of title 5, United States Code.

DEPARTMENT OF AGRICULTURE PROGRAMS FOR FAMILY FARMERS

SEC. 605. In order to facilitate the successful operation of the other titles and purposes of this Act, the Secretary of Agriculture is authorized and directed to make available, to the maximum extent authorized by law, to family farmers in each irrigation district, those benefits provided to farmers and stockmen under programs administered by the Farmers Home Administration, the Agricultural Stabilization and Conservation Service, the Soil Conservation Service, the Federal Crop Insurance Corporation, the extension service, and by such other agencies and offices of the Department of Agriculture as may be appropriate.

AUTHORIZATION OF APPROPRIATIONS

SEC. 606. For the fiscal year beginning October 1, 1977, and each fiscal year thereafter, there are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.●

---

By Mr. INOUYE:

S. 2928. A bill to amend the International Investment Survey Act of 1976,

and for other purposes; to the Committee on Commerce, Science, and Transportation.

● Mr. INOUYE. Mr. President, today I am introducing a bill to amend the International Investment Survey Act, which is the basic statutory authority for the collection and dissemination of information on foreign investment in the United States and American investment overseas.

When I introduced the original bill, an authorization of $1 million annually for fiscal year 1978 and fiscal year 1979 was provided. However, it has come to my attention that the Departments of Commerce and Treasury believe that this sum is inadequate to carry out the responsibilities authorized by the act.

The bill which I am introducing today increases this authorization to reflect the Treasury and Commerce requests. In the case of the Commerce Department, the figures have been adjusted to reflect an inflation rate of 6 percent per year. I have attached the correspondence from the two Departments with the proposed adjustments and an addendum to this statement showing the breakdown of figures.

Section 4(d) of the 1976 act also authorized the President to conduct a feasibility study of establishing a system to monitor foreign direct investment in agricultural, rural, and urban real property. As the tempo of foreign investment in American land has increased, this study has taken on new importance.

Regrettably, no request for funding this project was made until this year, and consequently there are no funds available for this study at the present time although a supplemental appropriation is now pending. However, the late start of the study will impinge upon the final reporting date, which was to have been October 11, 1978. Consequently, rather than have a hastily prepared report by the Department of Agriculture, I believe it would be in our best interests to amend the act to make the Department submit only an interim report by October and to extend the final reporting deadline by 1 year to October 11, 1979.

Finally, this bill takes cognizance of growing public concern by many Americans about large-scale purchases of agricultural land by foreign investors. It has been estimated that approximately $800 million was invested in real estate by foreigners in 1977, and it has been further suggested that the rush to land investment is the biggest, continuing wave of investment in American farmland since the turn of the century.

Nor does it appear that sales are slowing significantly. One reads constantly of large real estate purchases, many in urban areas as well, and brokers appear to have increased their activities abroad. A drastically devalued dollar and international political instability are contributing to a rush toward real estate investments in the United States.

As a result of foreign investment, land prices in some parts of the United States have increased rapidly. Transactions formerly tended to be concentrated in Corn Belt States, but recently have spread to other States such as Missouri, Arkansas, Kansas, and Nebraska. Opponents of foreign investment have contended that price increases have pushed land purchases out of reach of family farmers and young farmers. If this is so, it ought to be of concern to the entire country.

There is some evidence that foreign investors are in a superior position partly because of tax breaks either in their home countries or in tax havens. Some supporting documentary evidence has been produced, and this subject should be studied at greater length by the Departments of Commerce, Treasury, and Agriculture. To the extent this is true, possible remedies should be evaluated by the Congress and the executive agencies.

The publicity surrounding foreign investment in American real estate should not obscure several facts. First, and most important, is the fact we actually do not know how much land is being purchased by foreigners. Only one State, Iowa, has a reliable monitoring system. It is simple in other States for both foreigners and domestic purchasers to be the beneficial owners without being the holders of record.

Without accurate recording or monitoring systems, it is simple for rumors to germinate and thrive. Moreover, much of the investment has taken place in urban areas for shopping centers, single-family houses, apartments, and offices, so aggregate figures or guesses may be deceptive.

Second, it is unclear what the benefits and drawbacks of foreign investment in real estate are. We know that in the manufacturing sector foreign ownership can bring in new technology, new ideas, improved management, and so forth. In agricultural real estate, although land prices may be driven up, there could be concomitant beneficial results from foreign ownership.

Third, the surge of foreign investment may be a temporary phenomenon which will subside. We should not react with panic if the investments will be limited to a short duration.

There are 7 States with general prohibition on ownership by nonresident aliens; 5 States with substantial restrictions; 8 with minor restrictions; and 30 with no restrictions. As I stated earlier, only Iowa has in place an accurate monitoring system which traces the beneficial owner. Certainly other States can take steps to improve their recording and monitoring programs to obtain improved information about foreign investments in their own borders.

Land use planning and recording have traditionally been within the jurisdiction of the States. It would be an undesirable precedent for the Federal Government to intrude on this authority.

This bill, therefore, establishes a limited program to enable the Federal Government to assist the States in the following: First, to establishh or improve their own monitoring and data collection programs; second, to assist States in the enforcement of their own laws where such aid might be feasible; third, to provide legal information to States on the international implications of their activities. For example, with respect to this last point, some actions taken by the States may adversely affect our relations with friendly countries. The Federal Government, through the Department of State, could offer advice and assistance on this issue.

Finally, the bill would authorize the President to establish a clearinghouse of information to share with the States and general public. Ideally, this clearinghouse function could be given to the Office of Foreign Investment in the United States, which is located in the Department of Commerce. There is already a body of information and expertise in that Office, and I think that it could be readily used to carry out this provision, for example, by improving its State liaison program; increasing its real estate expertise by hiring knowledgeable experts; improving data on real estate transactions; and serving as the focal point for information on current Federal and State government activities and research into this area. In short, there need be no drastic changes as a result of this provision.

I should emphasize that this program is not designed in any way to predetermine the study being conducted by the Department of Agriculture. Several States have begun to act even without the study, and if enacted, this limited Federal program would assist those which are making decisions about foreign investments in farmland. It would further express the Congress' determination that the Federal Government work closely with the States to assist them in their deliberations. Moreover, this program is limited in scope and would still leave to the study such issues as the feasibility of establishing a nationwide multipurpose land data system.

I ask unanimous consent that the budget figures, the bill, and articles on this subject be printed in the RECORD at this time.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

Fiscal Year 1979

| | |
|---|---|
| Commerce | $2,538,000 |
| Treasury | 1,725,000 |
| Total | 4,263,000 |

Fiscal Year 1980

| | |
|---|---|
| Commerce | *2,690,000 |
| Treasury | 2,338,000 |
| Total | 5,028,000 |

Fiscal Year 1981

| | |
|---|---|
| Commerce | *2,852,000 |
| Treasury | 1,132,000 |
| Total | 3,984,000 |

*Includes a 6-percent inflation adjustment

S. 2928

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That—

SECTION. 1. Section 4 of the Act (22 U.S.C. 3103) is amended by inserting the following new subsection (e) and redesignating subsections (e) and (f) as (f) and (g) respectively:

"Sec. 4. (e) The President is authorized to establish a program to assist officially designated State agencies, including academic institutions, in establishing or improving land data collection or monitoring systems, in improving State enforcement of laws regarding real estate purchases, and in providing legal assistance and advice on international law on the treatment of land purchases by nonresident aliens. The President is further authorized to establish a Federal clearinghouse of information on significant real estate investments by nonresident aliens whose information may be shared with the States and general public."

SEC. 2. Section 4(d) is amended to read as follows: "(d) The President shall conduct a study of the feasibility of establishing a system to monitor foreign direct investment in agricultural, rural, and urban real property, including the feasibility of establishing a nationwide multipurpose land data system, and shall submit an interim report of his findings and conclusions to the Congress not later than two years after the enactment of this Act and a final report not later than three years after the enactment of this Act.

SEC. 3. Section 9 is amended to read as follows:

"SEC. 9. To carry out this Act, except for section 4(e), there is authorized to be appropriated $4,300,000 for the fiscal year ending September 30, 1979; $5,000,000 for the fiscal year ending September 30, 1980; and $4,000,000 for the fiscal year ending September 30, 1981. There is authorized to be appropriated to carry out section 4(e) of this Act $1,250,000 for the fiscal year ending September 30, 1979; $1,500,000 for the fiscal year ending September 30, 1980; and $1,750,000 for the fiscal year ending September 30, 1981."

---

U.S. DEPARTMENT OF COMMERCE,
*Washington, D.C., March 31, 1978.*

Hon. DANIEL K. INOUYE,
*U.S. Senate,*
*Washington, D.C.*

DEAR SENATOR INOUYE: I am writing in response to a telephone inquiry from Eric Lee of your staff. He has requested information on the Department of Commerce costs for activities conducted as part of the International Investment Survey Act of 1976 (P.L. 94-42) for 1979, 1980 and 1981.

The Bureau of Economic Analysis (BEA) and the Industry and Trade Administration (ITA) perform duties under the Act. The estimated costs are as follows:

[Dollar amounts in thousands]

| | 1979 | 1980 | 1981 |
|---|---|---|---|
| BEA | $1,552 | $1,552 | $1,552 |
| ITA | 986 | 986 | 986 |
| Total | 2,538 | 2,538 | 2,538 |

The estimates reflect the 1979 budget request submitted to Congress and the planning targets for 1980 and 1981. The planning targets do not include any projected inflationary costs.

Sincerely,

ELSA A. PORTER,
*Assistant Secretary for Administration.*

---

AUGUST 15, 1977.

DEAR MR. CHAIRMAN: Thank you for taking the time to discuss with us the problems of the foreign portfolio investment surveys required under the International Investment Survey Act of 1976 on August 2; we very much enjoyed meeting with you and Mr. Lee.

You asked me to lay out some alternative approaches to these surveys, together with their estimated costs, for your consideration, in order that you and other members of the Commerce, Science, and Transportation Committee could consider the implications for possible amendment of the 1976 Act.

It seems to me that there are only two major questions to resolve: that of coverage of the surveys, and that concerning authorization of funds (section 9 of the 1976 Act) and appropriations. The two interact, since the more elaborate the surveys, the higher the costs.

I shouldn't think it would be necessary to amend the Act to address the coverage question, since the legislation appears to provide sufficient flexibility for the President to determine the scope under the phrase "to the extent he determines necessary and feasible" in Section 4(c). Under this authority, I believe it is possible to select the definition of portfolio investment most appropriate for the ultimate users of the survey.

Basically, three approaches to coverage are implied by three variant definitions of "portfolio investment". These three definitions are (a) the market definition (essentially stocks and bonds), (b) the balance of payments definition (essentially the 1974 approach, which covered other financial instruments, and provided about 12 percent more data than the market definition but at an additional survey cost of 15 to 25 percent), and (c) the definition contained in the 1976 Act, which added in short-term flows such as bank loans and deposits, short-term corporate claims and liabilities, and Treasury bills and certificates.

I enclose a table showing the three definitions of portfolio investment as reflected in the 1974 inward survey and other data collected by the Treasury at that time. As can be seen from this table, the traditional market and balance of payments definitions have included only long-term instruments, which account for about 40 percent of all portfolio investment as defined in the 1976 Act. The Act, by including short-term instruments as well, more than doubled the amounts defined as portfolio investment.

We believe, however, that the regular monthly and quarterly Treasury International Capital (TIC) surveys provide adequate coverage for all but the securities market flows, and certain obscure items accounting for about four tenths of one percent of the whole, e.g., partnership interests, capitalized leases, and conditional sales agreements. The TIC reports give us good monthly and quarterly figures on the levels of all other foreign portfolio investment. In the case of securities, we have monthly reports on transaction flows with foreign residents, but not on levels of foreign investment. It is thus these data which require the calibration of a benchmark survey, partly because of the inherent uncertainty of estimates of fluctuations in market value.

We would thus propose that the benchmark survey collect information on levels of securities market instruments only, and that we supplement the survey with the data collected on levels of ownership of financial market instruments from our existing monthly and quarterly TIC surveys. We believe this would meet the analytic requirements of almost all potential users of the survey, and at the same time result in significant cost savings.

Turning more directly to the subject of costs, our budget estimates are based on the experience of the 1974 inward survey, and on the assumption that the same staff will be able in sequence to handle the outward survey, despite its apparently greater complexity. Our estimates have also been posited on our being able to begin work in the near future on the inward survey, which would be done on the basis of investment positions as of December 31, 1977. This would enable us to complete this analysis in 1979, in time to undertake collection of outward survey data as of December 31, 1979. Such a schedule would enable us to complete the analysis of the second (outward) survey by October 11, 1981. If, as now seems likely, we are unable to begin the first survey as of December 1977, we will be forced back to 1978, which would require additional resources during 1979 and 1980, thus increasing our budgetary requirements for those two fiscal years.

These are our present budget requirement estimates under various coverage options:

1977 AND 1978 SURVEYS

I. Coverage by market definition (stocks and bonds):

Fiscal year:

| | |
|---|---|
| 1977 | $76,732 |
| 1978 | 967,397 |
| 1979 | 1,460,974 |
| 1980 | 1,539,241 |
| 1981 | 1,132,255 |
| Total | 5,177,099 |

II. Coverage by balance-of-payments definition (1974 pattern):

Fiscal year:

| | |
|---|---|
| 1977 | $76,732 |
| 1978 | 1,138,702 |
| 1979 | 1,713,793 |
| 1980 | 1,810,872 |
| 1981 | 1,332,065 |
| Total | 6,077,164 |

III. Coverage by 1976 act definition (includes short-term):

Fiscal year:

| | |
|---|---|
| 1977 | $76,732 |
| 1978 | 1,405,703 |
| 1979 | 2,121,815 |
| 1980 | 2,235,484 |
| 1981 | 1,644,407 |
| Total | 7,484,141 |

1978 AND 1979 SURVEYS

IV. Coverage by market definition (stocks and bonds):

Fiscal year:

| | |
|---|---|
| 1978 | $325,343 |
| 1979 | 1,725,125 |
| 1980 | 2,337,839 |
| 1981 | 1,132,255 |
| Total | 5,520,562 |

V. Coverage by balance-of-payments definition (1974 pattern):

Fiscal year:

| | |
|---|---|
| 1978 | $325,343 |
| 1979 | 2,029,559 |
| 1980 | 2,750,399 |
| 1981 | 1,332,065 |
| Total | 6,437,366 |

VI. Coverage by 1976 act definition (includes short-term):

Fiscal year:

| | |
|---|---|
| 1978 | $325,343 |
| 1979 | 2,505,449 |
| 1980 | 3,395,312 |
| 1981 | 1,644,407 |
| Total | 7,870,511 |

We feel option IV is the most practical and efficient and the least burdensome on the public. It is probably too late to be able to undertake the first survey as of December 1977, since we would have to obtain appropriations, recruit staff, design survey forms (a well-considered forms design process, embodying research proposals, consultations with the public, etc., can take several months), and mail them out with sufficient

lead-time before the date as of which the data are to be collected.

The figures suggest that the $1 million authorized in Section 9 to "carry out this Act" should be amended. These figures, of course, do not include Commerce and Agriculture requirements, and you will undoubtedly want to consult directly with those Departments on their financing requirements.

If you or your staff would like to discuss any aspect of this further with me or Mr. Keyser, we would be more than happy to be of assistance in any way we can.

Sincerely yours,

DANIEL H. BRILL,
*Assistant Secretary for Economic Policy.*

COMPARISON OF SURVEY COVERAGE OF FOREIGN PORTFOLIO INVESTMENT IN THE UNITED STATES BY INSTRUMENTS

[1974 basis; billions of dollars]

| Instruments (percent of total in parentheses): | | 1974 Survey | 1976 Act | Current Treasury Coverage |
|---|---|---|---|---|
| Common and preferred stock and other equity | $24.7 (14.7%) | X | X | 14.5% |
| Bonds and debentures | 34.1 (20.3%) | X | X | 20.3% |
| Total portfolio (market definition) | 58.8 (35.1%) | X | X | 34.9% |
| Long-term notes and loans | 6.9 (4.1%) | X | X | 4.1% |
| Long-term CD's and other private long-term debt | 1.4 ( .8%) | X | X | .6% |
| Total other long-term debt | 8.3 (4.9%) | X | X | 4.7% |
| Total long-term portfolio (BoP definition) | 67.1 (40.0%) | X | X | 39.6% |
| Short-term bank deposits and other liabilities | 59.1 (35.2%) | -- | X | 35.2% |
| U.S. Treasury bills and certificates | 35.7 (21.3%) | -- | X | 21.3% |
| Non-bank liabilities (ST bank loans, trade payables, etc.) | 5.9 (3.5%) | -- | X | 3.5% |
| Total short-term | 100.7 (60.0%) | -- | X | 60.0% |
| Total portfolio (1976 Act definition) | 167.8 (100.0%) | -- | X | 99.6% |

By Mr. HELMS:

S. 2929. A bill to provide for the safeguarding of taxpayer rights, and for other purposes; to the Committee on Finance.

TAXPAYERS' BILL OF RIGHTS ACT

Mr. HELMS. Mr. President, tonight at midnight is the deadline for the American people to file their individual Federal income tax returns, and I have selected this evening as symbolically appropriate to send to the desk a bill entitled the "Taxpayers' Bill of Rights Act."

It is now 3½ months into the year but it will not be for another 3 weeks that Americans will start working for themselves for 1978. All this year, up to 3 weeks from now, the American taxpayers will have been working to pay their taxes. In other words, it will take the average American until May 6 of this year to earn enough money to pay his share of the cost of Government.

The Tax Foundation, an organization that publishes some outstanding analyses of tax issues has calculated that taxes on all levels will consume the output of the average working American for the first 4 months and 6 days of 1978. Thus, "Tax Freedom" day will be on May 6.

The massive size of the Federal tax alone is sufficient to make many citizens regard it as confiscatory and unconscionably high. It is indeed too high. It discourages initiative. It encourages unemployment. It makes savings and investment unattractive and it rewards consumption and indebtedness.

Since the Federal Government began taxing income, the rates have grown bit by bit, but they have grown until the total bite is of massive proportions. The procedures that might have been proper for the relationship between the Government and the taxpayer when the rates were 2 or 3 percent, are still being used.

It is my view that the procedures must be changed when the Government takes from the American taxpayers 20 or 30 or 40 percent, or more, of their earnings—using the coercive power of the Federal Government.

"MIRANDA" RIGHTS

One of the basic freedoms afforded individuals when they are arrested by the police is the notification that they can have an attorney, that they have a right to remain silent, and that anything said might be used in later action against them. This was the result of the Supreme Court's Miranda decision. Up until now, that right has not been granted to taxpayers.

The taxpayers' bill of rights requires IRS officials to fully inform taxpayers at the beginning of any interview or conference that the taxpayer has the right to have an attorney present during any meeting in which the taxpayer's liability is discussed. Further, the bill also provides that at any time during the conversation if the taxpayer decides he does not want to continue the conversation without the counsel of an attorney, then the taxpayer has the right to refuse to answer any further questions.

In short, the taxpayers' bill of rights provides a modified "Miranda warning" for taxpayers during their meetings with IRS officials. However, unlike the application of the Miranda warning in the criminal context when a suspect is undergoing questioning during a custodial interrogation, IRS would not be required to provide an attorney or to exclude any statement made by the taxpayer because such a warning was not given completely.

Mr. President, certainly it is not my intent to transform every communication between IRS officials and taxpayers into an adversary confrontation. Rather, the affirmative duty of informing each taxpayer of his rights at the beginning of any meeting should do much to convince the taxpayer of the fairness in which his case is being handled, and therefore, do much to reduce the adversary nature of such meetings.

The present law provides strong criminal penalties for anyone who makes and signs a materially false statement to IRS officials in order to evade the payment of any tax.

TAXPAYER SERVICES

The bill, the Taxpayers' Bill of Rights Act, would set up a special office with the rank of Assistant Commissioner of the Internal Revenue Service for Taxpayer Services. At this time there is a small office within IRS that is supposed to provide for aids to taxpayers. The magnitude of the problem is such, however, that a major Division should be established.

The office would not only help a taxpayer find an answer to a question and help taxpayers fill out required forms, but it would serve as a complaint office and an ombudsman to the taxpayer. Today, some taxpayers give up in despair of ever obtaining correct settlements of some bills. Months can be spent trying to track down a lost check or an incorrect computer entry. The new Office of Taxpayer Services would provide vital help in these cases.

In connection with certain cases, there have been instances of the seizure of a taxpayer's assets resulting in great harm to the taxpayer. My bill would provide for taxpayer assistance orders which would postpone seizures or actions that would impose undue hardships on taxpayers.

NOTIFICATION OF TAXPAYER'S RIGHTS

Perhaps one of the most basic needs is the assignment in the bill, of the responsibility to assure that taxpayers know their rights. This would probably be the most widely recognized new service performed by the IRS. It would require that clearly written pamphlets be provided outlining the taxpayers' rights. It would require that the taxpayers' rights be spelled out in cases of audits, assessments and appeals.

The IRS already provides some information on these topics but presently a full notification of rights and a clear explanation of them is not required.

LIMITS ON INVESTIGATIONS

My bill would prevent the IRS from conducting investigations of individuals and organizations unless the investigations have to do with the enforcement of the laws under the perview of the IRS. In other words, the IRS would be strictly forbidden to conduct harassment investigations.

The exceptions to this rule would be in cases of an individual seeking employment with the IRS, in cases where a person or organization sought IRS contracts, and in cases of otherwise lawful

investigations concerning organized criminal activities.

The taxpayer who believed his rights under this provision were denied could seek civil penalties against individuals in the IRS who violated this provision.

TAXPAYER'S ATTORNEYS FEES

My bill would extend an established principle of civil law to cases involving a taxpayer and the IRS. It would provide that in cases before the tax court, a taxpayer who wins his case to be awarded attorney's fees.

This is an important consideration, because today, a taxpayer who believes he is in the right may just give up the fight rather than incur the legal costs of fighting the matter.

The skyrocketing costs of litigation today are well known, and my bill would simply go a little way toward giving the two parties to a legal question before the tax court equal footing.

Any taxpayer today who faces losing $1,000 in attorney's fees to fight what he considers to be an unjustified claim against him of $900 just could not "win." My bill would provide that if the court found in his favor, he would also be awarded reasonable attorney's fees.

INTERVIEWS AT TAXPAYER'S CONVENIENCE

Today, the IRS has the authority to call up a taxpayer and demand an interview at the IRS office inconvenient to the taxpayer, or at a time inconvenient to the taxpayer. The IRS by this method puts another "tax" on certain taxpayers. It is a tax of added time and expense to the taxpayer that is never reimbursed.

The IRS contends that an interview on Government property makes a taxpayer more cooperative. My bill would not prevent such interviews in IRS offices, but it would stipulate that the taxpayer could, if he wished, have the interview at his home or office and at a reasonable time of his choosing.

GAO AUDIT OF IRS

Finally, my bill provides that the General Accounting Office has authority to conduct audits and investigations of IRS operations. The IRS has denied the authority of the GAO to conduct such audits although most legal scholars believe the GAO already has such authority. My bill clears up this situation and would require an annual report on the efficiency, uniformity, and equity of the administration of the internal revenue laws.

TAXPAYER'S BELIEF IN EQUITY OF SYSTEM

Mr. President, it is a widely acknowledged fact that the success of the Internal Revenue Service in obtaining needed funds for the operation of our Federal Government is in large part due to the fact that the great majority of American people pay their taxes promptly and without hesitation.

Unfortunately, the size of the tax bite, the complexity of the tax code, and the appearance of arbitrary administration have all undermined much of the faith the average taxpayer has put in his Government. The procedures outlined in my bill would require added services at some cost to the IRS. It would, however, restore some of the faith the taxpayer has had in the equitable administration of our tax laws by aiding the taxpayer in his struggle with the complex, and unintelligible tax code. In this regard the bill might reduce long-run costs of the IRS, by increasing the taxpayer's confidence in the equity of IRS operations.

A FREE SOCIETY AND EQUITABLE TAXES

A free society depends on a government that is both limited and equitable. In order for our tax system to be regarded as equitable, reforms must be made. If people are going to be treated equally under the tax code, we must act to insure better service to the taxpayer.

Taxes represent the greatest influence of government on the lives of the average American. The Government chooses how a major percentage of the output of the taxpayer will be utilized. This great confiscation of economic resources—if it is justifiable at all—is only justifiable if it is rational and if it is fair. When government grows too complex for anyone to understand, and when taxes are regarded as incomprehensible and inequitable, then we do not have government for the people. We have government for some people. We have government for the aggrandizement of government.

As I stated, a free society can only exist when government is both limited and equitable. If it is possible to have equitable government when government is as massive as ours, then it is vital that the small step I have proposed be taken. I believe the "taxpayers' bill or rights" is an overdue, needed reform.

Certainly, the early supporters of the income tax would be shocked if they learned that the average working person devoted the output of his efforts from January 1 until May 6 just to pay taxes.

The massive confiscation of resources, and indirectly, of the time of working men and women in America via taxation has been likened to involuntary servitude. Perhaps some of the authors of the constitutional amendment which authorized income taxes would look upon today's tax bite in the same manner. It is as if the first 4 months of every year are spent under sentence by the Internal Revenue Service. Unlike the criminal proceedings, the first offender does not get off with a suspended sentence and there is no time off for good behavior.

The massive amount of money taken by the Federal Government today requires that the taxpayers' right be spelled out.

In conclusion, the "taxpayers' bill of rights" would extend for the first time to law-abiding taxpayers rights that the Supreme Court has said must be given to common street criminals. A taxpayer would be told that he has a right to an attorney, that he has a right to remain silent, and that any statement made might be used against him.

My bill would set up a new Commissioner of Taxpayer Services to serve as an ombudsman to the harried taxpayer. It would establish a right that a taxpayer that wins a suit against the IRS be awarded reasonable attorneys fees.

This bill would help insure taxpayers are treated equitably and fairly. The big-spending Federal Government should give the best treatment possible to the fellow who picks up the tab.

Mr President, I ask unanimous consent that the bill, The Taxpayers' Bill of Rights Act, be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2929

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SECTION 1. SHORT TITLE.

This Act may be cited as the "Taxpayers' Bill of Rights Act".

SEC. 2. AMENDMENT OF 1954 CODE; MEANING OF TERMS.

(a) 1954 CODE.—Except as otherwise expressly provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1954.

(b) MEANING OF TERMS.—For purposes of this Act, terms used in this Act which are also used in such Code shall have the same meaning as when so used.

SEC. 3. DISCLOSURE OF RIGHTS AND OBLIGATIONS OF TAXPAYERS.

(a) IN GENERAL.—The Secretary of the Treasury shall, as soon as practicable, but not later than 180 days after the date of the enactment of this Act, prepare brief but comprehensive pamphlets which set forth in simple and nontechnical terms—

(1) the rights and obligations of a taxpayer and the Internal Revenue Service (hereinafter in this section referred to as the "Service") during an audit;

(2) the procedures by which a taxpayer may appeal any adverse decision of the Service (including administrative and judicial appeals);

(3) the procedures for prosecuting refund claims and filing of taxpayer complaints; and

(4) the procedures which the Service may use in enforcing the internal revenue laws (including assessment, jeopardy assessment, levy and distraint, and enforcement of liens).

(b) TRANSMISSION TO COMMITTEES OF CONGRESS.—The Secretary of the Treasury shall transmit drafts of the pamphlets required under subsection (a) (or proposed revisions of any such pamphlet) to the Committee on Ways and Means of the House of Representatives, the Committee on Finance of the Senate, and the Joint Committee on Taxation on the same day. Any draft (or any revision of a draft) of a pamphlet may not be distributed under subsection (c) until 90 days have elapsed from the date it was transmitted to such committees.

(c) DISTRIBUTION.—The pamphlets prepared in accordance with subsections (a) and (b) shall be distributed by the Secretary of the Treasury to any taxpayer upon request, and notice of the availability of such pamphlets shall be displayed prominently in all public offices of the Service. Copies of appropriate pamphlets shall be provided to any taxpayer with the first communication from the Service to the taxpayer regarding the taxpayer's liability for tax for a taxable year, if such communication occurs during a meeting or is in writing. If such a communication is by telephone,

copies of the appropriate pamphlets shall be mailed to the last known address of such taxpayer within 24 hours after such a communication.

SEC. 4. ASSISTANT COMMISSIONER FOR TAXPAYER SERVICES; TAXPAYER ASSISTANCE ORDERS.

(a) ASSISTANT COMMISSIONER FOR TAXPAYER SERVICES.—

(1) IN GENERAL.—Section 7802 (relating to Commissioner of Internal Revenue) is amended by adding at the end thereof the following new subsection:

"(c) ASSISTANT COMMISSIONER FOR TAXPAYER SERVICES.—There is established within the Internal Revenue Service an office to be known as the Office of Taxpayer Services to be under the supervision and direction of an Assistant Commissioner of Internal Revenue. The Assistant Commissioner shall be responsible for—

"(1) providing to taxpayers—

"(A) assistance in obtaining easily understandable tax information and information on audits, corrections, and appeals procedures (including pamphlets prepared under section 3 of the Federal Taxpayers' Rights Act of 1978);

"(B) assistance in answering questions on tax liability and preparing and filing returns; and

"(C) assistance in locating documents or payments filed with or submitted to the Internal Revenue Service by taxpayers;

"(2) providing personnel in local offices of the Internal Revenue Service to receive and evaluate complaints of improper, abusive, or inefficient service by Internal Revenue Service personnel and, with due regard for the rights of both the taxpayer and the Internal Revenue Service personnel and under regulations prescribed by the Secretary, to take action to correct such service;

"(3) surveying taxpayers to obtain their evaluation of the quality of the service provided by the Internal Revenue Service;

"(4) compiling data on the number and type of taxpayer complaints in each internal revenue district and evaluating the actions taken to resolve such complaints;

"(5) issuing Taxpayer Assistance Orders under section 6306; and

"(6) carrying out such other functions which relate to assisting taxpayers as the Secretary may prescribe.

The Assistant Commissioner shall submit an annual report to the Ways and Means Committee of the House of Representatives, the Finance Committee of the Senate, and the Joint Committee on Taxation on the activities of the Office of Taxpayer Services.".

(2) SALARY.—Section 5109(c) of title 5, United States Code, is amended to read as follows:

"(c) The positions held by employees appointed under subsections (b) and (c) of section 7802 of the Internal Revenue Code of 1954 are classified at GS–18, and are in addition to the number of positions authorized by section 5108(a) of ths title.".

(b) TAXPAYER ASSISTANCE ORDERS.—Subchapter A of chapter 64 (relating to collections) is amended by adding at the end thereof the following new section:

"SEC. 6306. TAXPAYER ASSISTANCE ORDERS

"(a) AUTHORITY TO ISSUE.—Upon application filed by a taxpayer with the Office of Taxpayer Services, in such form, manner, and at such time as the Secretary shall by regulations prescribe, the Assistant Commissioner for Taxpayer Services may issue a Taxpayer Assistance Order if, in the determination of the Assistant Commissioner, the taxpayer is suffering from an unusual, unnecessary, or irreparable loss as a result of the manner in which the internal revenue laws are being administered by the Secretary.

"(b) EFFECT OF ORDER.—The Secretary may not take any action adverse to such taxpayer under—

"(1) chapter 64 (relating to collection).

"(2) chapter 70 (relating to jeopardy, bankruptcy, and receiverships),

"(3) chapter 78 (relating to discovery of liability and enforcement of title), or

"(4) any other provision of law, which is specifically described by the Assistant Commissioner in such order during such period (not to exceed 60 days) of time as may be so specified in such order.".

(c) CONFORMING AMENDMENTS.—

(1) The section heading for section 7802 is amended to read as follows:

"SEC. 7802. COMMISSIONER OF INTERNAL REVENUE; ASSISTANT COMMISSIONER."

(2) The table of sections for subchapter A of chapter 80 is amended by striking out the item relating to section 7802 and inserting in lieu thereof the following:

"Sec. 7802. Commissioner of Internal Revenue; Assistant Commissioner."

(3) The table of sections for subchapter A of chapter 64 is amended by adding at the end thereof the following new item:

"Sec. 6306. Taxpayer Assistance Orders.".

(d) EFFECTIVE DATE.—The amendments made by this section shall take effect on the 90th day after the date of the enactment of this Act.

SEC. 5. AUTHORIZING, REQUIRING, OR CONDUCTING CERTAIN INVESTIGATIONS, ETC.

(a) PROHIBITION, ETC.—Section 7214 (relating to offenses by officers and employees of the United States) is amended by redesignating subsection (c) as subsection (d) and by inserting immediately after subsection (b) the following new subsection:

"(c) AUTHORIZING, REQUIRING, OR CONDUCTING CERTAIN INVESTIGATIONS, ETC.—

"(1) IN GENERAL.—Except as provided in paragraph (2), an officer or employee of the United States acting in connection with any revenue law of the United States shall not knowingly authorize, require, or conduct—

"(A) any investigation into, or surveillance over, any person or records regarding the beliefs, associations, or activities of any individual or organization which are not directly related to such revenue laws, or

"(B) the maintenance of any records containing information derived from such an investigation or surveillance.

Any person violating the preceding sentence shall be fined not more than $10,000, or imprisoned not more than 2 years, or both.

"(2) EXCEPTION.—The provisions of paragraph (1) shall not apply with respect to any otherwise lawful investigation, including investigations concerning organized crime activities, of any individual who is an applicant for, or who holds, any position in the Internal Revenue Service or any position in the Government the duties of which relate to the administration or enforcement or internal revenue laws of the United States, or who is a contractor, or prospective contractor, with the Internal Revenue Service.

"(3) DEFINITIONS.—For purposes of this subsection—

"(A) INVESTIGATIONS.—The term 'investigations' means any oral or written inquiry directed to any person, organization, or governmental agency.

"(B) SURVEILLANCE.—The term 'surveillance' means—

"(i) the monitoring of persons, places, or events by means of electronic interception, overt or covert infiltration, overt or covert observation, or photography, and

"(ii) the use of informants.

(b) CIVIL REMEDIES.—

(1) IN GENERAL.—Subchapter B of chapter 76 (relating to judicial proceedings) is amended by redesignating section 7430 as section 7431 and by inserting immediately after section 7429 the following new section:

"SEC. 7430. CIVIL CAUSE OF ACTION FOR VIOLATION OF SECTION 7214 (c).

"(a) REMEDIES.—

"(1) DAMAGES.—Whoever violates any provision of section 7214(c) (relating to certain offenses by officers and employees of the United States) shall be liable for damages to any individual or organization which, as a result of such violation, has been the subject of a prohibited investigation, surveillance, or recordkeeping, in an amount equal to the sum of—

"(A) any actual damages suffered by plaintiff or $100 per day for each day the prohibited activity was conducted, whichever is greater;

"(B) such punitive damages (not in excess of $1,000) as the court may allow; and

"(C) the costs of any successful action, including reasonable attorney fees.

"(2) EQUITABLE RELIEF.—Any individual or organization which has been the subject of any investigation, surveillance, or recordkeeping in violation of section 7214(c), may bring a civil action against the United States for such equitable relief as the court determines appropriate to enjoin and redress such violation.

"(b) VENUE.—An individual or organization may bring a civil action under this chapter in any United States district court for the district in which the violation occurs, or in the United States district court for the district in which such person resides or conducts business, or has his principal place of business, or in the United States District Court for the District of Columbia.

"(c) JURISDICTIONAL AMOUNT.—Any Federal court in which a civil action under this section is brought pursuant to subsection (b) shall have jurisdiction over such action regardless of the pecuniary amount in controversy.".

(b) CLERICAL AMENDMENT.—The table of sections for such subchapter is amended by striking out the item relating to section 7430 and inserting in lieu thereof the following new items:

"Sec. 7430. Civil cause of action for violation of section 7214(c).

"Sec. 7431. Cross references.".

(c) EFFECTIVE DATE.—The amendments made by this section shall take effect on the date of the enactment of this Act, except that such amendments shall not apply with respect to the maintenance of records during the 90-day period beginning on such date of enactment if such records were in existence on such date.

SEC. 6. AWARD OF COSTS TO PREVAILING TAXPAYER.

(a) RECOVERY OF COSTS.—Part II of subchapter C of chapter 76 (relating to Tax Court procedure) is amended by adding at the end thereof the following new section:

"SEC. 7465. RECOVERY OF COSTS.

"(a) IN GENERAL.—In any proceeding before the Tax Court for the redetermination of a deficiency, the prevailing party, unless the prevailing party is the United States, may be awarded a judgment of costs in connection with such proceeding and any administrative proceeding relating to such deficiency to the same extent as is provided in section 2412 of title 28, United States Code, for civil actions brought against the United States.

"(b) JUDGMENT.—A judgment of costs entered by the Tax Court under subsection (a) in favor of the prevailing party shall be

treated, for purposes of this subtitle, in the same manner as an overpayment of tax. No interest or penalty shall be allowed or assessed with respect to any judgment of costs.

(b) CLERICAL AND CONFORMING AMENDMENTS.—

(1) The table of sections for such part II is amended by adding at the end thereof the following new item:

"Sec. 7465. Recovery of costs.".

(2) Section 2412 of title 28, United States Code, is amended—

(A) by inserting "(a)" before "Except", and

(B) by adding at the end thereof the following new subsection:

"(b) In any civil action which is brought by or against the United States for the collection or recovery of any internal revenue tax, or of any penalty or other sum under the internal revenue laws, and in which the United States is not the prevailing party, a judgment for costs may include reasonable attorney's fees.".

(c) EFFECTIVE DATE.—The amendments made by this section shall only apply with respect to civil actions and proceedings for the redetermination of deficiencies commenced after the date of the enactment of this Act.

SEC. 7. CIVIL ACTION FOR DEPRIVATION OF RIGHTS BY INTERNAL REVENUE SERVICE EMPLOYEES.

(a) IN GENERAL.—Any officer or employee of the Internal Revenue Service who, under color of any Federal law, subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress.

(b) CONFORMING AMENDMENT.—Section 1343 of title 28, United States Code, is amended—

(1) by striking out the period at the end of paragraph (4) and inserting in lieu thereof a semicolon; and

(2) by adding at the end thereof the following new paragraph:

"(5) To recover damages or to secure equitable or other relief under section 7 of the Federal Taxpayers' Rights Act of 1978.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to actions arising on or after the date of the enactment of this Act.

SEC. 8. PROCEDURES INVOLVING TAXPAYER INTERVIEWS.

(a) IN GENERAL.—Chapter 77 (relating to miscellaneous provisions) is amended by adding at the end thereof the following new section:

"SEC. 7518. PROCEDURES INVOLVING TAXPAYER INTERVIEWS.

"(a) IN GENERAL.—Upon request of any taxpayer, any officer or employee of the Internal Revenue Service in connection with any interview with such taxpayer in connection with the assessment of a deficiency shall—

"(1) conduct such interview in the principal residence or place of business of the taxpayer, and at a reasonable time convenient to the taxpayer, and

"(2) allow the taxpayer to make a recording of such interview.

An officer or employee of the Internal Revenue Service may record any such interview if he informs the taxpayer of such recording prior to the interview and provides the taxpayer with a transcript of such recording upon the request of the taxpayer and reimbursement for the cost of reproduction of such transcript.

"(b) SAFEGUARDS.—An officer or employee of the Internal Revenue Service shall prior to any interview described in subsection (a) warn the taxpayer—

"(1) he has a right to remain silent;

"(2) any statement he makes may be used against him; and

"(3) he has the right to the presence of an attorney.

The taxpayer may waive the rights described in the preceding sentence if such waiver is made voluntarily, knowingly, and intelligently. If, however, he indicates in any manner and at any time during the interview that he wishes to consult with an attorney or that the interview be discontinued there can be no questioning regardless of whether he may have answered some questions.".

(b) CONFORMING AMENDMENT.—The table of sections for such chapter is amended by adding at the end thereof the following new item:

"Sec. 7518. Procedures involving taxpayer interviews.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to interviews conducted on or after the date of the enactment of this Act.

SEC. 9. PROPERTY EXEMPT FROM LEVY.

(a) IN GENERAL.—Section 6334(a) (relating to property exempt from levy) is amended by adding at the end thereof the following new paragraph:

"(10) INCOME PRODUCING PROPERTY.—Any property of such individual from which income is derived to the extent that such income is taken into account under paragraph (9) as part of the applicable exempt amount of such individual.".

(b) EFFECTIVE DATE.—The amendment made by this section shall apply with respect to levies made after the 90th day after the date of the enactment of this Act.

SEC. 10. GENERAL ACCOUNTING OFFICE OVERSIGHT OF THE ADMINISTRATION OF THE INTERNAL REVENUE LAWS.

(a) AUDITS AND INVESTIGATIONS.—The Comptroller General shall establish a program to provide for a continuing audit and investigation of the efficiency, uniformity, and equity of the administration of the internal revenue laws of the United States.

(b) ANNUAL REPORTS.—The Comptroller General shall annually prepare and transmit to the Congress a report on the program established under subsection (a), together with such recommendations for legislation as the Comptroller General may consider necessary or appropriate. Such report shall include a statement by the Comptroller General on—

(1) the type and extent of assistance which the Internal Revenue Service (hereinafter in this section referred to as the "Service") provides to taxpayers in the preparation of returns, and the accuracy and consistency of any advice which the Service provides in connection with such assistance;

(2) the adequacy of the procedures by which the Service responds to taxpayer complaints, and the number and nature of such complaints;

(3) the equity of the procedures by which the Service conducts audits, collections, and taxpayer appeals, the means by which the taxpayer is advised of such procedures, and the adequacy and consistency of such advice;

(4) the uniformity of the Service's administration of the internal revenue laws, including the uniformity of the standards and legal interpretations it employs;

(5) the number and specific circumstances of disclosures, if any, of returns or of information derived from such returns which the Comptroller General determines to be in violation of law;

(6) the investigation and prosecution by the Service and the Department of Justice of alleged civil and criminal violations of the internal revenue laws;

(7) the implementation by the Service of section 552 of title 5, United States Code (relating to freedom of information); and

(8) any other matter which the Comptroller General determines to be necessary or appropriate.

(c) OTHER INVESTIGATIONS.—The Comptroller General shall conduct any special audit or investigation of the administration of the internal revenue laws requested by any committee of the Congress or any Member of Congress. The Comptroller General may conduct any other audit or investigation of the administration of the internal revenue laws which he considers appropriate.

(d) DISCLOSURE OF INFORMATION TO THE COMPTROLLER GENERAL.—The Comptroller General, for purposes of conducting any audit or examination under subsection (a) or (c), shall have access to any Federal agency's books, documents, papers, and records on the administration, operations, and effects of the internal revenue laws and to inspect returns. Requests for such inspection of returns must be made in writing and must specify the identity of each taxpayer whose return is to be inspected.

---

By Mr. MOYNIHAN:

S. 2930. A bill to authorize the home production of beer and wine; to the Committee on Finance.

HOME PRODUCTION OF BEER AND WINE

● Mr. MOYNIHAN. Mr. President, I am today introducing a bill permitting production, without incurring the beer and wine excise taxes, of limited amounts of beer and wine for personal consumption. This bill eliminates the registration requirement for home wine production, simplifies administration of the law, and reduces paperwork, both for the public and the Government. An identical bill, H.R. 2028, was introduced by Representative BARBER CONABLE, of New York, on January 19, 1977, and passed the House of Representatives on March 14, 1978. The Departments of Treasury and Justice advised the House Ways and Means Committee that they did not object to passage of this bill.

Mr. President, in a small and entirely appropriate way this bill reduces the intrusion of the Government in the lives of our citizens. I urge my colleagues to support it.●

---

## ADDITIONAL COSPONSORS

S. 1967

At the request of ROBERT C. BYRD, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 1967, a bill to amend section 218 of the Social Security Act to require that States having agreements entered into thereunder will continue to make social security payments and reports on a calendar-quarter basis.

S. 2020

At the request of Mr. CRANSTON, the Senator from California (Mr. HAYAKAWA) was added as a cosponsor of S. 2020, a bill to amend the Longshoremen's and Harbor Workers' Compensation Act to clarify the act's coverage.

S. 2369

At the request of Mr. ANDERSON, the Senator from New Hampshire (Mr. DURKIN) was added as a cosponsor of S. 2369, the Dutch Elm Disease Control Act of 1977.

S. 2533

At the request of Mr. CHURCH, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 2533, a bill to provide for the use of of alcohol produced from renewable resources as a motor vehicle fuel.

S. 2565

At the request of Mr. MATHIAS, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 2565, a bill to provide for further research and services with regard to victims of rape.

S. 2600

At the request of Mr. RANDOLPH, the Senator from Washington (Mr. MAGNUSON) and the Senator from Michigan (Mr. RIEGLE) were added as cosponsors of S. 2600, the Rehabilitation Amendments of 1978.

S. 2605

At the request of Mrs. HUMPHREY, the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of S. 2605, the National Infant Screening Act of 1978.

S. 2626

At the request of Mr. BUMPERS, the Senator from Georgia (Mr. NUNN) was added as a cosponsor of S. 2626, a bill to provide price and income protection for agricultural producers by assuring such producers a price for their agricultural commodities of not less than the cost of producing such commodities; to assure consumers an adequate supply of food and fiber at reasonable prices, and for other purposes.

S. 2722

At the request of Mrs. HUMPHREY, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 2722, a bill to amend the Mental Retardation Facilities and Community Mental Health Centers Act of 1963 to establish State mental health advocacy programs.

S. 2730

At the request of Mr. WILLIAMS, the Senator from Indiana (Mr. BAYH) was added as a cosponsor of S. 2730, a bill to establish a Hubert H. Humphrey Fellowship in Social and Political Thought at the Woodrow Wilson International Center for Scholars at the Smithsonian Institution and to establish a trust fund to provide a stipend for such fellowship.

S. 2733

At the request of Mr. MCINTYRE, the Senator from Indiana (Mr. LUGAR), the Senator from Kansas (Mr. DOLE), the Senator from New Mexico (Mr. DOMENICI), and the Senators from Michigan (Mr. GRIFFIN and Mr. RIEGLE) were added as cosponsors of S. 2733, the Small Business Energy Loan Act.

SENATE JOINT RESOLUTION 21

At the request of Mr. WILLIAMS, the Senator from South Dakota (Mr. MCGOVERN) was added as a cosponsor of Senate Joint Resolution 21, to authorize the President to proclaim annually the last Friday of April as "National Arbor Day."

SENATE JOINT RESOLUTION 65

At the request of Mr. KENNEDY, the Senator from Maryland (Mr. MATHIAS) was added as a cosponsor of Senate Joint Resolution 65, to amend the Constitution to provide for representation of the District of Columbia in the Congress.

SENATE JOINT RESOLUTION 117

At the request of Mr. GARN, the Senator from South Dakota (Mr. MCGOVERN) was added as a cosponsor of Senate Joint Resolution 117, designating the fourth Wednesday of October as "Seventy-Plus in High School Day."

SENATE JOINT RESOLUTION 122

At the request of Mr. ANDERSON, the Senator from Nebraska (Mr. ZORINSKY) was added as a cosponsor of Senate Joint Resolution 122, to direct the Office of Technology Assessment to undertake a comprehensive evaluation of energy policy alternatives.

SENATE CONCURRENT RESOLUTION 79

At the request of Mr. MCCLURE, the Senator from Idaho (Mr. CHURCH), the Senator from Arizona (Mr. GOLDWATER), the Senator from Utah (Mr. HATCH), and the Senator from Pennsylvania (Mr. HEINZ) were added as cosponsors of Senate Concurrent Resolution 79, disapproving proposed regulations of the Department of the Treasury requiring centralized registration of firearms and other matters.

## SENATE CONCURRENT RESOLUTION 80—ORIGINAL CONCURRENT RESOLUTION REPORTED DURING RECESS SETTING FORTH THE 1979 BUDGET

Mr. MUSKIE, from the Committee on the Budget, reported the following original concurrent resolution, which was placed on the calendar:

S. CON. RES. 80

*Resolved by the Senate (the House of Representatives concurring)*, That the Congress hereby determines and declares, pursuant to section 301(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1978—

(1) the recommended level of Federal revenues is $443,300,000,000 and the amount by which the aggregate level of Federal revenues should be decreased is $29,200,000,000;

(2) the appropriate level of total new budget authority is $566,100,000,000;

(3) the appropriate level of total budget outlays is $498,900,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $55,600,000,000; and

(5) the appropriate level of the public debt is $853,800,000,000, and the amount by which the statutory limit on such debt should accordingly be increased is $101,800,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares pursuant to section 301(a)(2) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1978, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):

(A) New budget authority, $129,800,000,000;

(B) Outlays, $116,600,000,000.

(2) International Affairs (150):

(A) New budget authority, $12,800,000,000;

(B) Outlays, $7,200,000,000.

(3) General Science, Space, and Technology (250);

(A) New budget authority, $5,200,000,000;

(B) Outlays, $5,000,000,000.

(4) Energy (270);

(A) New budget authority, $10,200,000,000;

(B) Outlays, $10,100,000,000.

(5) Natural Resources and Environment (300);

(A) New budget authority, $13,700,000,000;

(B) Outlays, $12,500,000,000.

(6) Agriculture (350):

(A) New budget authority, $12,400,000,000;

(B) Outlays, $7,800,000,000.

(7) Commerce and Housing Credit (370):

(A) New budget authority, $5,900,000,000;

(B) Outlays, $3,600,000,000.

(8) Transportation (400):

(A) New budget authority, $19,500,000,000;

(B) Outlays, $17,500,000,000.

(9) Community and Regional Development (450):

(A) New budget authority, $10,400,000,000;

(B) Outlays, $9,000,000,000.

(10) Education, Training, Employment, and Social Services (500):

(A) New budget authority, $31,600,000,000;

(B) Outlays, $31,200,000,000.

(11) Health (550):

(A) New budget authority, $52,700,000,000;

(B) Outlays, $49,500,000,000.

(12) Income Security (600):

(A) New budget authority, $192,500,000,000;

(B) Outlays, $159,900,000,000.

(13) Veterans Benefits and Services (700):

(A) New budget authority, $21,000,000,000;

(B) Outlays, $20,800,000,000.

(14) Administration of Justice (750):

(A) New budget authority, $4,300,000,000;

(B) Outlays, $4,200,000,000.

(15) General Government (800):

(A) New budget authority, $4,100,000,000;

(B) Outlays, $4,100,000,000.

(16) General Purpose Fiscal Assistance (850):

(A) New budget authority, $9,700,000,000;

(B) Outlays, $9,600,000,000.

(17) Interest (900):

(A) New budget authority, $46,800,000,000;

(B) Outlays, $46,800,000,000.

(18) Allowances (920):

(A) New budget authority, $700,000,000;

(B) Outlays, $700,000,000.

(19) Undistributed Offsetting Receipts (950):

(A) New budget authority, —$17,200,000,000;

(B) Outlays, —$17,200,000,000.

## AMENDMENTS SUBMITTED FOR PRINTING

### FEDERAL INCOME TAX RETURN FILING METHODS—S. 2747

AMENDMENT NO. 1780

(Ordered to be printed and referred to the Committee on Finance.)

Mr. HASKELL submitted an amendment intended to be proposed by him to the bill (S. 2747) to provide for a study of methods by which individuals could be aided in filing their Federal income tax returns.

● Mr. HASKELL. Mr. President, on March 15, 1978, I introduced S. 2747, a bill to provide for a study of methods by which individuals could be aided in filing their Federal income tax returns.

As chairman of the Subcommittee on Administration of the Internal Revenue Code, I recently chaired a hearing on the subject of tax simplification. During this hearing, a very disturbing problem came to light.

Many people in our country who have income withheld from their paychecks deserve refunds, but for many reasons, never file for the refund. They do not file tax returns, because they cannot understand the forms. They are afraid of the Internal Revenue Service, and the cost of using a commercial preparer to help fill out the forms is prohibitive. Very often, these people are poor, not well educated, and sometimes cannot understand written English at all. Often, these are the people who are eligible for the earned income credit.

There are of course difficulties in having the correct amount of money withheld at the source of employment rather than adjusting by filing a return; for instance, the problem of the multiple employer. But, they can conceivably be worked out. And, there might be some administrative advantage to the Internal Revenue Service to not having to deal with the earned income credit tax form.

I think it is incumbent upon this body to study the feasibility of working into the withholding tables a means of taking into account the earned income credit so that these people who rightfully deserve and need this money can have it returned to them in the simplest manner.

I ask unanimous consent that the amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT NO. 1780

On page 2, line 25, insert the following:

(a)(7) the feasibility of adjusting the income tax withholding tables to take into account the earned income tax credit.●

### AIR TRANSPORTATION REGULATORY REFORM ACT OF 1978—S. 2493

AMENDMENTS NOS. 1781 THROUGH 1785

(Ordered to be printed and to lie on the table.)

Mr. MCGOVERN submitted five amendments intended to be proposed by him to the bill (S. 2493) to amend the Federal Aviation Act of 1958, as amended, to encourage, develop, and attain an air transportation system which relies on competitive market forces to determine the quality, variety, and price of air services, and for other purposes.

### LABOR LAW REFORM ACT OF 1978—S. 2467

AMENDMENT NO. 1786

(Ordered to be printed and to lie on the table.)

Mr. HELMS submitted an amendment intended to be proposed by him to the bill (S. 2467) to amend the National Labor Relations Act to strengthen the remedies and expedite the procedures under such Act.

### NAVIGATION DEVELOPMENT ACT—H.R. 8309

AMENDMENT NO. 1787

(Ordered to be printed and to lie on the table.)

Mr. CRANSTON submitted an amendment intended to be proposed by him to amendment No. 1689 intended to be proposed to the bill (H.R. 8309) authorizing certain public works on rivers for navigation, and for other purposes.

### PANAMA CANAL TREATIES, EX. N, 95–1

AMENDMENTS NOS. 104 THROUGH 106

(Ordered to be printed and to lie on the table.)

Mr. ALLEN (for himself, Mr. THURMOND, and Mr. HELMS) submitted three amendments intended to be proposed by them, jointly, to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

## RESERVATIONS SUBMITTED FOR PRINTING

RESERVATIONS NOS. 16 AND 17

(Ordered to be printed and to lie on the table.)

Mr. CANNON submitted two reservations intended to be proposed by him to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

RESERVATION NO. 18

(Ordered to be printed.)

Mr. HELMS proposed a reservation to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

RESERVATION NO. 19

(Ordered to be printed.)

Mr. CURTIS proposed a reservation to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

RESERVATION NO. 20

(Ordered to be printed.)

Mr. DECONCINI (for himself, Mr. PAUL G. HATFIELD, and Mr. HODGES) proposed a reservation to the resolution of ratification of the Panama Canal Treaty, Ex. N, 95–1.

## NOTICES OF HEARINGS

COMMITTEE ON COMMERCE, SCIENCE, AND TRANSPORTATION

● Mr. INOUYE. Mr. President, the Committee on Commerce, Science, and Transportation has scheduled hearings on foreign investment in American real estate. The hearings will commence at 9:30 a.m. on Wednesday, April 19, 1978, in room 235 of the Russell Senate Office Building.

For further information, interested parties may call (202) 224–6742.●

SUBCOMMITTEE ON AGING

● Mr. EAGLETON. Mr. President, the Subcommittee on Aging of the Human Resources Committee will hold a hearing on S. 2850 and S. 2609, legislation to revise and extend the Older Americans Act on Friday, April 21, 1978, from 1 to 3 p.m. in room 457, Russell Senate Office Buildings.

## ADDITIONAL STATEMENTS

### ALL-AMERICA CITY

● Mr. HOLLINGS. Mr. President, I am extremely proud today to announce to my colleagues the fact that my hometown of Charleston, S.C., has recently been named an "All-America City" by the National Municipal League.

I doubt that there is another city in America so rich in heritage and tradition as Charleston. I know of no other city that has been as successful as Charleston in preserving its historical treasures, as anyone who has ever toured its antebellum landmarks can attest.

But that is half the story of Charleston.

For while my city celebrated its tricentennial in 1970, and while it has a firm commitment to preserving its past, it has its face turned determinedly toward the future. The fact that Charleston has been named an All-America City testifies not only to the commitment and dedicated work of its citizens in preserving the old, but to their imagination and innovative approach to creating the new.

Charleston is a major city. It contains one of the Nation's busiest seaports. And it has experienced the same problems of growth, financial strain, and population shift as our major urban centers, though possibly to a lesser degree.

But it has been blessed with good leadership and good citizens, and together

they have designed and implemented a variety of programs to improve the quality of life for all. A few of these programs—such as the East Side redevelopment and preservation project and Trident 2000—are covered in the league's National Civic Review publication which contained the announcement information.

There are many, many other programs and organizations which are working in tandem to make Charleston a remarkable 20th-century town.

I congratulate Mayor Joseph P. Riley, Jr., the members of the city council, and to the people of Charleston who have joined together as partners to make our city a real success. And I would like to extend an invitation to all who have not visited there to travel to Charleston to see for themselves why it is so deserving of the designation as an "All-America City."

Mr. President, I also ask to include in the RECORD Mr. George Gallup's letter to me announcing Charleston's selection, along with the information concerning the "All-America City" awards to 11 other municipalities which is contained in the National Civic Review.

The material follows:

APRIL 5, 1978.

Hon. ERNEST F. HOLLINGS,
*Russell Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR HOLLINGS: It is my great pleasure to inform you that an All-America City citation has just been awarded to Charleston, South Carolina.

The award is conferred for the imaginative and vigorous action its citizens have taken to improve their community, thus demonstrating an example of effective citizenship to the nation. We believe their effort is even more important today, for it illustrates the potential that responsible action of citizens in their home communities has for rebuilding confidence in our total system.

As you may be aware, the awards are sponsored annually by the National Municipal League to recognize and encourage constructive citizen action. The 1977–1978 program selected twelve communities in open competition from a wide field of entrants.

The names of the winners will be released officially by the media on Thursday, April 13, and articles highlighting the award winning stories will appear nationally in the April issue of the NATIONAL CIVIC REVIEW and forthcoming issues of AMERICAN CITY MAGAZINE.

The National Municipal League is proud to announce the 1977–1978 All-America City award communities. I am enclosing an advance set of sheets from the NATIONAL CIVIC REVIEW article which summarizes the basis on which this well deserved honor was awarded. I am sure that you will want to join us and send along your own congratulations to the Mayor of Charleston on behalf of all its citizens for their outstanding achievements.

Sincerely,

GEORGE H. GALLUP,
*Forman, All-America Cities Jury, Chairman, NML Council.*

---

THE 1977–78 ALL-AMERICA CITIES

What's in a name? COUL in Anniston. Trident 2000 in Charleston, The Heights Community Congress in Cleveland Heights, Priority Boards in Dayton, the Dennis Growth Policy Committee, I–35 Citizens Advisory Committee in Duluth, Goals and Policies Committee in Lincoln, the Marquette Neighborhood Association in Madison, ACT in Mankato, Riverside Neighborhood Association in Oklahoma City, the Ottumwa Area Task Force and the Medical Mobilization Group in Ravenna. These groups represent the "vital signs" of civic America and show how organized citizens can be effective change agents surmounting serious community problems.

The 12 award winning communities in the 29th annual All-America Cities program reveal how neighborhood, community-wide and regional issues are confronted. Moreover, they show the importance of understanding the linkages among community problems and how these determine resolution strategies.

The 1977–1978 winners were chosen tentatively from among a group of 22 finalists following formal presentations to the All-America Cities jury last November in Denver, Colorado. Subsequent field verifications confirmed the selections.

These stories demonstrate the critical role of the voluntary sector in helping to chart direction for effective community governance. As innovator, researcher, convenor, fund raiser, communicator, the citizen organization does things which other elements of the public and private sectors may be constrained from doing.

These communities do not represent civic perfection. They are examples of fortitude, persistence and risk taking to create processes or "machinery" which can provide a consistency that transcends changes in the other sectors of the community's life.

The accomplishments of the winners are outlined briefly below.

Anniston, Alabama (population 34,533). Anniston is located about midway between Birmingham and Atlanta and as the central city of its SMSA is a manufacturing, trade and service center.

The costs of civil rights and social action in Anniston during the 1960s included the burning of a Freedom Rider bus, overt racial demonstrations and a dramatic murder. The immediate response to these events was swift justice for the guilty and establishment of a biracial committee to deal with the results of generations of inequality. As issues of social justice and equal opportunity became more complex, emotions again heated to the point of near riot in 1971. In response, the broadly representative Committee of Unified Leadership (COUL) was formed to provide a public forum to address critical community issues. Through its intervention and crisis management roles, COUL has dealt with subjects as diverse as assuring water service to low-income families, mediating local labor disputes and increasing the involvement of minorities in local government.

Other people were working on cultural issues. Growing from the ideas and action of a small group of citizens, the Alabama Shakespeare Festival now involves an elaborate organization in which 300 to 600 hundred people participate each summer in the producion of four plays. The festival supports itself through ticket sales, donations and state grants.

In 1976 the Southern Christian Leadership Conference held its annual meeting in Anniston and cited the community for its advances in racial relations. At the same time the Alabama Shakespeare Festival presented what was a nationally acclaimed production of King Lear.

Currently, COUL and public officials are addressing problems related to improved housing conditions and capital improvements for drainage, fire protection, airport expansion, downtown redevelopment and more adequate recreation facilities.

Cleveland Heights, Ohio (60,767). An older, inner ring suburb. Cleveland Heights was an All-America City for 1975–1976. At that time the city council in consultation with the community's leadership drafted and approved a resolution pledging Cleveland Heights to continued efforts to overcome such problems as racial isolation in schools, deterioration of housing stock, neighborhood resegregation, racial steering and financial disinvestment.

The Preferred Agents Program works to educate and orient real estate agents about the advantages of the Heights life style. Agent participation indicates a commitment to maintain integration, and people in the housing market are encouraged through advertising programs to patronize those agents. Program quality is monitored by the citizen based Heights Community Congress.

Initiated by the League of Women Voters and the Congress, the Financial Institutions Advisory Committee comprised of bankers, educators, city officials and citizen organization representatives promotes private sector investment and reinvestment. Among other issues, by research and action the committee has established a substantial home improvement loan program for the elderly, monitored lending practices of 19 financial institutions and studied the feasibility of developing a housing preservation center.

Other fair housing achievements include the incorporation of the previously volunteer Heights Housing Service into the city's division of real estate programs; approval of ordinances and creation of a housing board to counter unfair real estate practices; and introduction of a systematic house interior inspection program and strengthened enforcement of city codes. An evaluation committee periodically measures the results.

There has been a 25 percent increase in housing values since 1975, approval of new bond and tax measures, organization of block clubs in 60 percent of all streets, creation of a new city department of human services and reduction of crime for two consecutive years.

A magnet school concept is to be implemented to overcome racial isolation, crime reduction measures continue, studies of more efficient fire and refuse services are under way and a comprehensive commercial redevelopment plan was adopted by the city council.

Charleston, South Carolina (68,149). Charleston is the state's second largest city and a major deep water port. Founded in 1670, the city, according to representatives, is more known for what it has preserved and maintained than for innovation and change.

Change, has affected the city dramatically, however. Since 1950 white flight to the suburbs has resulted in the loss of 24,000 people from the inner city with all the economic and social consequences produced by such movements—high unemployment and crime rates in some sections of the city, and inequality in education. Charleston's citizens turned its unique ambiance into the springboard for revitalization.

The East Side Redevelopment and Preservation program is treating a blighted ghetto area through housing improvement and capital improvements for community facilities, clean up and landscaping, better police-community relations, development of summer work programs for the young and strong code enforcement programs. Effective-

ness is attributed to the fact that residents did the planning and a citizen based commission oversees the programs. Community development block grant funds and low interest loans and grants from the city are the backbone of program funding.

The success of the East Side project prompted action in another declining area where a Neighborhood Housing Service program will be initiated, to be run in part by the residents.

A citizens group called the Human Services Council created Trident 2000 in 1975 to provide a perspective on the future and involve a broad cross section of citizens in deciding its shape. Through surveys, citizen task force studies, group meetings and workshops, recommendations have been produced on education, transportation, government process, land use, communications, criminal justice and others. A priority recommendation for the creation of neighborhood councils has been implemented by the city.

Dayton, Ohio (243,601). Situated between Cincinnati and Columbus, Dayton's economy is based primarily on manufacturing, principally automotive production.

Dayton shares the ills affecting other aging centers: population loss, shrinking tax base, older housing in disrepair, serious unemployment and rising crime rates. Those left behind decided to organize. Citizen participation mechanisms have been evolving for more than a decade, beginning with an informal network of neighborhood councils and growing to the present system of six priority boards. The boards work on budget development and other major policies. Board leaders meet weekly to discuss problems and solutions, which they communicate in periodic meetings with the city manager.

An Administrative Council of representatives from the city's major operating divisions has been constituted in each priority board area. It meets monthly to review and act on neighborhood issues. The priority boards are assisted by staff assigned to neighborhood offices. Complementing the priority boards is the Downtown Dayton Association whose director meets weekly with the board leaders.

The existence of the boards and about 120 neighborhood organizations has facilitated work in six neighborhoods on rezoning, subsidies for home and business improvement, changing traffic patterns, improving neighborhood identity and upgrading public facilities. The boards prepare an annual assessment of neighborhood needs and recommend necessary changes in city programing.

Attention to crime prevention is reflected in two programs. The Neighborhood Assistance Officers are a volunteer police auxiliary. Dispatched by the police, their duties include responding to traffic accident calls, checking playgrounds and vacant homes, patrolling school areas, etc. Also, 90 neighborhood watch groups have been formed in the last year. The police give orientation on crime patterns and security measures. Since the program's inception there has been a 12 percent decline in burglaries.

Neighborhood organizations were helpful during implementation of a busing program to achieve racial balance in local schools. The program operated without incident in 1976 and 1977.

Dennis, Massachusetts (6,500 permanent, 45,500 est. summer). Located on Cape Cod, 85 miles from Boston. Dennis confronted a rising growth rate intensified by seasonal population changes. One-third of its 20-square-mile area was unzoned, and as hundreds of new homes were built valuable natural resources were lost.

People became aware that government by a full-time, three-member citizen board of selectmen was not sufficient to deal with the growth. Following election of a reform candidate to the board a government study committee was formed resulting in a change to a five-member, part-time board and a professional administrator as executive secretary.

The selectmen created 37 committees with more than 300 members to deal with issues, many of which focused on different aspects of historic preservation, land use planning and natural resource conservation. Two historic districts covering a large part of the town have been created and neighborhood representatives review all proposed new buildings. The town has purchased two historic houses which are open as museums.

Several citizen committees, working with the planning board, recommended steps to upgrade zoning, developed a master plan for future development, conducted a natural and visual resources inventory, brought almost 1,000 acres of important land under town ownership and supervision, provided for protection of well-head sites for the future, and purchased additional land for resident and visitor recreation. Other committees at work on issues related to health, low-income housing for the elderly and budgeting practices. These measures have encouraged even more people to come to Dennis.

Duluth, Minnesota (100,578). Duluth is located 150 miles north northeast of the Twin Cities. It is confined largely to an area between steep hillsides and waterways. Three-quarters of its major development is along Lake Superior and the St. Louis River. Duluth is a commercial and industrial service center for parts of three states and Canada.

As important natural resources which fed many of Duluth's industries dwindled, industrial and commercial activities shut down. With a decline in the availability of iron ore and lumber, rail consolidations and military cutbacks, the city lost 10,000 jobs within a decade.

Improving the economic outlook became the mission of the Northeastern Minnesota Development Association. The corporation, with the help of the Chamber of Commerce, has brought six major industries to the city in the last three years. Citywide organizations conduct studies of neighborhood relocation problems and the environmental impact of the new facilities. In some cases residents assist in evaluating plant location to minimize the impact on the neighborhood.

In efforts to strengthen cultural life, citizen organizations recycled the abandoned railroad station to house eight organizations, including theater, dance, music, art and specialized museums in what is now the St. Louis County Heritage and Arts Center (The Depot). Adjacent to the Center will be a $6-million public library. (It took much spirited public debate and a special citizen study committee to locate the library there.)

An aging downtown and a stalled urban freeway studied by citizens. A freeway advisory committee developed and gained support for an alternative to taking the road out of the downtown area. At the same time, business, labor and public officials formed the Downtown Development Corporation. Projects planned and being executed include development of commercial, hotel and parking facilities to be called the Lyric Block; Lake Superior Plaza, a multi-million dollar commercial and office facility; and Skywalk, a climate controlled pedestrian concourse linking a nine block area. Also in planning stages is a project to locate a new retail activity on a platform over the new freeway.

A housing task force is investigating ways to develop more favorable home construction costs. A nonprofit sponsor is working to create new and rehabilitated units for low and moderate income families in the city.

Lincoln, Nebraska (149,518). The state capital, Lincoln has a strong economic base in agriculture, office activity, manufacturing and government.

Community development in Lincoln has focused on neighborhoods, downtown and the region. To date, 24 neighborhood associations have developed goals and implemented improvement programs. City hall created a Neighborhood Assistance Office. Citizens are largely responsible for planning improvements and city hall joins to lend technical and financial assistance, including loans and grants for housing rehabilitation, upgraded public facilities, new housing construction and a code enforcement program. An appointed citizen task force reviews neighborhood proposals and annually submits recommendations to the mayor and council. In addition to these activities supported by block grant funding, neighborhood organizations have influenced city zoning policy, modified street widenings, improved health and transportation services for the elderly and held special activities for all residents.

Complementing the work of neighborhood associations, the Downtown Advisory Committee has worked since 1973 to execute the Lincoln Center Development program, a major undertaking combining beautification, street rearrangement, new office and commercial activity, and special cultural and entertainment events. The plan has been made possible by strong public-private sector cooperation, owner involvement and the efforts of citizen task forces.

Citizens have participated for seven years in the development of a comprehensive regional plan. In 1970, a Goals and Policies Committee was formed by representatives of 425 organizations and other citizens. Goals were established through household attitude surveys, newspaper ballots and video town meetings. The goals statement was approved by officials and served as the basis for the development of the plan. These steps were repeated for different elements of the plan. The Goals and Policies Commitee is monitoring implementation and helping to develop new zoning regulations. The plan reconciles agricultural and urban needs, promotes neighborhood preservation, and provides for a variety of housing types and transportation elements.

Efforts are underway to encourage the private sector to become more involved in housing rehabilitation and the city is examining the feasibility of joint facilities for some services, while bond issues are being planned to finance capital improvements.

Madison, Wisconsin (171,769). The state capitol, Madison is located eight miles from Milwaukee. The city serves as a center for wholesale and retail trade, government, education, medicine, insurance and finance.

Meeting special housing needs, public transportation access, neighborhood improvement and downtown redevelopment all are part of the Madison story.

Karabis, named for a leader for rights of the handicapped, is a 20-unit apartment designed for young adults confined to wheelchairs. Potential tenants and three citizen organizations worked to plan and finance construction. The Methodist Hospital Retirement Center, consisting of 210 apartments, provides comprehensive health care and social services to its residents who represent various ethnic groups and income levels.

Transportation access is difficult. An almost bankrupt bus system and strangulating auto traffic set the stage for several citizen

groups to move for modernizing service. Through legislation the system was made public and advocates highlighted advantages of using it. In the past decade, ridership has increased by 100 percent. Specialized transportation has been set up for women at night and for the elderly and handicapped.

A school closing triggered action and subsequent mobilization of citizens in the Marquette Neighborhood Association to develop a comprehensive plan. Old homes are being rehabilitated and younger people are moving into the area. Most recently, the association got a traffic diverter established to keep nonlocal traffic off neighborhood streets.

The Central Madison Committee, a coalition of 150 businesses, labor, government, religious and student leaders, identifies specific goals and objectives for the downtown area. Ultimately, 700 people were involved in making decisions on plans for integrated pedestrian and transit malls. Renovation of the Civic and Art Center building, once an old theater and vacant store, continues.

Mankato, Minnesota (30,895). Mankato is situated 80 miles southwest of the Twin Cities. It is one of the largest agri-business centers in the southern part of the state and the home of Mankato State College.

In 1965, in the process of recovering from a serious flood, citizens began to see that there was more than those damages to deal with: the tax base was weakening as the central area declined, long-range planning was absent, water pollution control was posing serious problems, housing supply was inadequate, traffic congestion was frustrating, flood control work was needed, and park and recreation needs were unfulfilled.

Active Community Thought (ACT) was formed in 1965 and 1,000 people appeared for its first meeting. In following meetings, problems were identified, priorities were set and plans took form.

One of the top priorities was renewed retail activity downtown. Plans were set for a multimillion-dollar, bilevel mall which is now under construction. It will house 18 new and 16 relocated businesses.

Federal urban renewal provided the financial momentum. While the business community was involved heavily in making financial commitments, citizens also participated in design.

Others in the downtown area worked to preserve and restore Mankato's "Old Town." Tradition was preserved and enhanced when street rearrangements threatened to divide the local historical society's properties. The society, along with government, managed to consolidate its buildings on one site and add a new Victorian garden.

Bond issues have been approved for water pollution control and park expansion, housing for the elderly is being built, an airport has been completed and land for business expansion has been reclaimed. There is now consolidated hospital care, areawide assistance for the disabled and a million dollar renewed "Y". Formerly separate functions of social services, mental health, corrections, welfare and counseling have been brought together in one agency.

Oklahoma City, Oklahoma (366,253). The state capital, Oklahoma City is the second largest city (635 square miles) in the nation in terms of land area. It serves as a transportation, light industrial and retailing hub.

The city faced increasing demands to extend services to fringe areas and at the same time to preserve and service older neighborhoods.

For almost two years, the city conducted a comprehensive planning process in which individual citizens and community organizations played leading roles. A broadly representative citizens steering committee was organized. Citizen and professional planners conducted surveys and research, and held meetings with neighborhood representatives and community groups. A full range of communications techniques was used.

The Preservation Policy and Action Program was adopted with emphasis on older neighborhood revitalization and cost effective suburban growth policies. Forty percent of community goals listed related to the involvement of citizens in public decision making. The process also served a civic training function. New leaders are emerging and neighborhood organization has grown from fewer than 20 to almost 90 in three years time. The Oklahoma City Plan Advisory Committee (the Steering Committee's successor) will soon begin monitoring implementation.

The Neighborhood Preservation Project, run by residents, has as its objectives central city rehabilitation, training unemployed residents, and removing abandoned housing and recycling useable materials. The selective program is funded through HUD and the comprehensive employment training act. The neighborhood association reviews applications for home repair and evaluates rehabilitation work and training activities. The Demolition Materials Recycling Program removes hazardous structures identified by neighborhood associations and recycles materials for use in home repair and revitalization projects.

The Southeast Area Health Clinic was developed in a place where such services were virtually non-existent. The Southeast Area Council, composed of representatives from six low income neighborhoods, worked for two years to improve health care delivery. The full service clinic was set up in a former fire station and with inkind services and financial donations, Clinic administrators meet monthly with the area council's health committee to review program.

Ottumwa, Iowa (29,610). Located 80 miles southeast of Des Moines, Ottumwa serves as a center for the region which also covers northeastern Missouri.

Traditionally, a one industry town relying on meat packing and with an image for poor labor relations, dramatic change was triggered by the closing of the John Morrell plant and the loss of more than 3,500 jobs in 1973. A committee of 45 people formed to develop what is now the Ottumwa Area Task Force. This umbrella group mustered enough support to research and promote employment opportunity and commercial and industrial development. Fourteen new industries have been attracted to the area and unemployment, once at 13.4 percent, was down to 4.1 percent late last year.

The victim of two serious floods (the last one in 1954 covered 700 acres), city residents supported a $16-million bond program for flood protection, road relocation, and construction of a modern water supply plant and sewage treatment facility. The former flood plain has been partially developed for industrial and business expansion, and another part has been reserved for recreation.

Downtown redevelopment and neighborhood revitalization are being acted on concurrently. Urban renewal has provided a new pedestrian mall and, through strong citizen efforts, a neighborhood development program covering 700 acres is nearing completion.

Property value increased from $159 million in 1973 to $204 million in 1977, tax rates have been reduced, three new schools have been constructed and one completely remodeled. Housing starts are double the rate of a year ago.

Ravenna, Nebraska (1,360). Situated 130 miles west of Lincoln, Ravenna is in an area of diversified farming, including large cattle raising and feeding operations.

With 65 percent of the town's population over age 65, the loss of its doctor became a central issue. The nearest doctor was 16 miles away and the closest health care facility 30 miles. Citizens formed the Medical Mobilization Group to recruit a new doctor and supply the office. Enough money was raised to purchase the former doctor's furniture and equipment.

Environmental concerns also play an important part in community activity, from assuring conformance with EPA water quality standards to participating in recycling drives and beautification efforts. A new senior citizen park has been developed and facilities in other parks have been improved.

Students in the trades and industry class in the local high school and members of the Future Homemakers of America are embarked on a homebuilding and decorating program with the help of a local contractor.

The Mid-Nebraska Community Action Program was organized to deal with problems of the elderly, those with low incomes and young people. It provides legal service, health services, a women and children food supplement program, outreach and counseling, referral services, summer work and recreation programs, a chore service, crisis intervention and home winterization.

Included among new and improved public facilities and service delivery are a new fire house and second emergency unit, the local library building, new equipment for police and public works and street improvements. New homes are being built and three light industries have moved into the community.

THE PROCESS OF CITIZEN INVOLVEMENT

(EDITOR'S NOTE. The following is an excerpt from the forthcoming *Profiles of Participation*, a workbook on citizen organization and research, and community decision making, to be published by the National Municipal League later this year.)

How do citizens get involved in their community? It is difficult to define this process. It is the result of accumulated feelings about an issue, a problem or a project. Citizen involvement also has a lot to do with perceptions about the threats or benefits that a particular project or issue embodies.

Each person works out involvement according to his or her own idea of effectiveness. The resources each brings to bear, the

culture in which he or she lives and the amiability of the social structure all affect the "how" in involvement. The motive for being involved may never be clear cut—a general "call to civic duty," enlightened self-interest, moral outrage, the need to help a neighbor or any combinations.

Intense preoccupation with local decision making in our early history did not mean that all groups were participating in those decisions. Ironically, as more and more people overcame the legal obstacles that bound them as second-class citizens, trends and forces distracting them from staying involved in the local arena.

Changing technology and economic patterns helped to destroy strong identity with neighborhoods or communities. With the development of a national rather than local economy people followed their careers from city to city. With increasing vertical and horizontal mobility, people lost a sense of place.

Although low-income residents who remained in older urban neighborhoods had the legal rights to participate in local affairs, they often failed to have the necessary skills and social and political clout. Modern government seemed too distant and complex to allow them access. This began to change in the 1960s.

Official attempts to cope with the problem of reshaping society into something that works for us all have been reflected in a variety of national programs—"The New Frontier," "The Great Society," "New Federalism." The economic opportunity act of 1964 required that the community action program provide maximum feasible resident participation. The model cities program of 1966 required widespread citizen participation and the 1968 urban renewal program required project area committees composed of neighborhood residents. Revenue sharing and community development blocks grants represent refinements in program and process to ensure greater citizen impact in public decision making.

It is against this backdrop that the character of involvement is changing. Now we are left with established communities, as new pioneers who must reshape old frontiers. Unlike the earlier pioneers who moved to new ground when resources were exhausted, we are challenged to reform what is in place in a way which recognizes humanness in coping with competing demands, scarce resources and conflicting values.

The healthy functioning of a democratic society relies on the effective execution of the office of citizen in which individual views are respected and citizens have some control over their fate, particularly in shaping the immediate environment that affects them. Out of this process is developed a sense of community, a mutual support system. Public decisions reached by authentic involvement of those who are affected are enriched by that involvement. On the one hand involvement is a means to an end, but it also can be an end in itself.

California Governor Edmund G. Brown, Jr., has said about the problem of humanizing government that involvement is not a luxury but a necessity for a civilized society that truly wants to meet its human needs. In a speech before the Voluntary Action Center and Junior League in San Jose, reported in *The New York Times*, June 6, 1977, he said: "And when we have to expand it in a dramatic way across a broad front of government and human activity, we have to find some way to recreate the spirit of neighborliness and mutual self-support that existed before the mobility and anonymity and increasing information flow that has been the product of this very prosperous society."

Assuming that healthy communities allow for a wide range of involvement, there must be careful cultivation of values that support the concepts of equal access for all citizens regardless of race, sex or income level. A foundation for this is a quality educational system that cultivates the capacity for citizens to express their needs and desires and to develop their abilities to share their concerns. This must be backed up by a structure capable of accommodating many views and ideas. And, finally, there must then be an organization structure to carry out plans.

In developing this process of citizen involvement, communities must be careful to avoid forces that work against it—unmediated competition among unbalanced forces. Certain groups without property, access to education and jobs remain at a decided disadvantage. And unbalanced reliance on experts can never fully describe the feelings and wishes of people to be directly affected by a project or policy.

Much work is being done in urban neighborhoods and rural communities across the country to look beyond professionalism and into the hearts and minds of citizens. Local officials, established civic groups and newly emerging activists are learning that they must talk together to develop and find common values so that they can work together to build communities that meet all their members' needs.

The paradox, however, is the tension that this process implies. Achieving citizen involvement has its attendant risks for a group as well as its individual members. But, conflict is a regular part of the change process, not an aberration. Much of the creative energy which fuels the process is absent without it.●

## MR. REES-MOGG ON BEING A PRODUCTIVE MORMON

● Mr. GARN. Mr. President, on March 29, the chamber of commerce on the Salt Lake Area held a dinner for Elder Nathan Eldon Tanner. Elder Tanner, who serves as the first counselor in the presidency of the Church of Jesus Christ, of Latter-day Saints, has long been active in government, business, and civic affairs. His service is in the best tradition of Mormonism, which has long taught its members to devote a considerable portion of their time and energy to the community at large. President Tanner's service prompted this award dinner in his honor, and attracted as the principal speaker the editor of the London Times, Mr. William Rees-Mogg.

As was appropriate in a speech honoring a man whose life has been dedicated to productive work, Mr. Rees-Mogg spoke of the motivation for work. In the course of his speech, he said a number of things which are of interest to us in the United States, as well as to his own countrymen. No doubt the recent British experience has provided Mr. Rees-Mogg with ample opportunities to observe bad economic policies, and he has profited by the experience.

At the base, a dedication to productive work comes through self-discipine, but there can be no question in my mind that outside, objective impulses play a very important part. Significant is the degree to which hard work results in real benefits to the worker. Increasingly, in the United States as in Great Britain, hard work results in higher tax rates, with no perceived link between the tax rates and the services of Government is supposed to provide. The result is a terrific diversion of energy out of productive labor and into a search for tax shelters, or a shift to a barter economy which by definition is less efficient than a money economy. As Mr. Rees-Mogg points out, that result always follows when governments give less attention to keeping their economic houses in order and more to placating the political demands placed upon them. The budget deficits we have come to know in the United States are one result; another is the inflation which drives taxpayers into higher and higher tax brackets.

Mr. President, so that others may profit from the wisdom of Mr. Rees-Mogg, I ask that the full text of his speech in honor of President Tanner appear at this point in the RECORD.

The material follows:

MOTIVE FOR WORK TERMED GREATEST ECONOMIC PROBLEM

(The following is an address by William Rees-Mogg, editor of The Times of London, at the Salt Lake Area Chamber of Commerce award dinner honoring President N. Eldon Tanner as "A Giant in Our City":)

Mr. Chairman, President Kimball, President Tanner, ladies and gentlemen:

I feel very touched and flattered to have been invited here this evening. Touched particularly because it is so much a domestic occasion of your community. It is a very happy day on which you honor someone with President Tanner's historic career in government and business and in service to the community. You are indeed fortunate to have such a man of honor and I am fortunate to be invited here on the occasion on which you are honoring him.

It has also been a delight to me to come to Utah and to Salt Lake City. It is a very remarkable place. Perhaps even more remarkable than you who live here fully realize. I, myself, have some American blood on both my parents' side. My mother is American, was born in New York, and my father had some rather more remote American ancestry. And that has given me an understanding of what the people who were building America in the last century had in mind, what their ideals were. I know what my own ancestors believed in, why those who came to America chose to come, and what they hoped they would achieve and this nation would achieve. And I think I know what there is about the modern United States which they would most have admired and what there is which they would not have admired all that much. And in visits to the United States, going back now for nearly thirty years and extending to most parts, I have never come across any place where it seemed to me that the traditional ideals which the American ancestors sought had been more fully realized than where I now am. I think that makes a great contribution to your whole nation and country.

I've been asked to discuss the economic questions of the world and I must say I rather agreed with the heading that was put on the lead story in the Deseret News today, which was: "Economy Baffles the Economists." It seemed to me to be a good prelude to talking to you about economic affairs and to be absolutely correct. Up till a few years ago economics seemed fairly simple. On the whole, between the end of the war and the

early 1970s, there were no economic problems that we did not feel that we were able to solve. Of course, it's true that some things were not right. We had inflation running at some terrible level like 2 percent in the bad years. We occasionally went through a year in which the economy of the United States or Great Britain did not actually expand very fast. But there was consistent development, high employment, and pretty stable prosperity for most of the period of 25 years after the end of the war.

We now find that since 1973, since the world went into the recession of '74 and '75, that most countries have not made a full recovery and that those countries which have made a full recovery are facing problems much more severe than the problems that they had to face in the post-war period earlier on. We now face challenges to the world of the most important and serious kind.

We face the challenge of working out a world system of currencies that does not impose intolerable strains and burdens on individual countries. We face the closely related challenge of bringing under control and keeping under control the threat of inflation with all the damage that that does to national economies and at the same time to individual lives we face the problem, eased a little at the present moment, perhaps, of the future energy supplies of the world, which are finite and which we know to be finite in the forms which we most substantially use at present. We face a problem of a complete new order of world competition, of countries competing with cost structures and advantages which put the older established industrial economies in a position of the greatest difficulty. And we face, though I should like to go, if I may, briefly through these problems, we face a problem which may well be much more profound, much more serious, much more difficult to solve than these specific problems. And that is the problem of finding ideals which make men feel that it is worth their while to work on the development of their economies. The motive for work, the absence of an adequate motive for work, can be the one problem which can destroy a national economy if no solution is found to it.

First of all, one has to look at the currency problem. It is the problem very much in the center of our minds at the present time. It is a problem which we in Britain have been facing earlier and perhaps more acutely (In my view, if that is so, it must have been our own fault.) than most other nations. Now we have made some recovery, partly thanks to more cautious policies, partly thanks to the benefits to our balance of payments of North Sea oil. Though even now when you are worried about your rate of inflation rising, we have not quite got our rate of inflation down to the level at which yours is now. But at present, for the moment, and without making any specific forecasts about the future, it is not the pound, but the dollar, which is the currency which is in the center of the battle. And there's one difficulty about that, there's one disadvantage in world terms, and that is that the pound is a much smaller currency in total amount, and therefore the aid that can be given to stabilize the pound by the power of other currencies is proportionately that much greater. It is difficult when the dollar gets sick precisely because the dollar is such an enormous currency, representing what is such a powerful section of the world's economy. And sums which would have seemed, in the days when we were supporting the pound, to be colossal sums, can be and are now spent in supporting the dollar in a few days.

I believe, myself, that the problem which used to afflict the pound and the problem which does now afflict the dollar is in essence a simple one. It is a matter of choice. It is possible either to give your economic priority to having stable money or to give your economic priority to meeting whatever other demands are put upon you. If countries choose to run large budget deficits and if countries choose to expand their money supplies, they will create a situation in which their currencies are in excess supply and when currencies are in excess supply, they will fall in terms of their internal purchasing power and they will fall also in terms of their exchange value into other currencies. That is an inevitable consequence of policies of budget deficit and money supply expansion.

There is a choice here to be made and it is not an easy choice. It is a choice which we in Britain have made reluctantly and late and repeatedly under the pressure of events, and have never quite been able to convince ourselves that we should make, in the splendid Swiss style, permanently and securely and absolutely. Yet, it is only nations who pursue the economic policies of Switzerland that will get the benefit in terms of stable and strong currencies that the Swiss enjoy. That is the essential character of the dollar problem now as it was the essential character of the sterling problem only a short time ago. Of course, you could learn from our mistakes, but I will forecast that you will not. It is rare enough for nations to learn from their own mistakes and absolutely unknown for them to learn from the mistakes of other people.

The eventual solution for the problem of world reserves will, I believe, lie in taking it out of the field of national currencies. No national currency can be an ideal reserve medium because the requirements imposed on a national government by its political situation must always mean that a national currency is only as good as its last election or its next election. We need to restore an international system of currency. It is my view that that world currency will need either to be based on gold or linked to it, but it is at least theoretically possible to create an international currency which is controlled by limited issue by some international agency.

The second problem the world has to face is the problem of energy. Here too, I believe, that it is the rule of the market which should be the determining factor. We do not, I think, have to fear that energy will run out, if we are prepared to allow the market to determine the price at which energy supplies are sold. There can, however, be no excuse for a policy which sells energy more cheaply than its international market price because such a policy, while it may appear to be helping the people of one country or another, is in fact a policy of subsidizing the wastage of a scarce resource, and of subsidizing the wastage of a resource which must in the course of things become scarcer. If we are prepared, and granted that in periods of recession this does not necessarily mean that energy prices will be leaping upwards, if we are prepared to pay the market price of energy, that will have the effect of encouraging people to use energy in the most careful way and waste it, on the one hand, and encouraging people to discover and develop new supplies of energy on the other.

And if we take only the conservation effect, there is one very remarkable example of a country which enjoys one of the highest standards of living in the world with an energy use substantially lower than the international average. This country is Sweden. There they had an acute shortage of energy supplies during the war, and they adopted energy-saving policies because the energy wasn't coming through and they enjoy now a standard of living per head equal, roughly, to that of the United States and they use about half as much energy per head, although they have a very cold climate, as the United States is currently using. So, it shows what can be done and the obvious way to achieve this objective is to allow the forces of the market to work their own essentially benevolent effect.

The next problem, the next challenge we have to grapple with and deal with is, I think, going to be the problem of world competition. We all know about the problem of competition from Japan, how they have built up the most remarkable industrial economy in a very short time, a very short time in its later stage of development, by concentrating in succession on certain industries where they could establish very efficient, very large scale production. But Japan is perhaps a form of competition which we're now relatively used to, though still exerting very substantial pressure on certain industries. What is worrying, and I think has not yet been sufficiently widely understood is what is happening in those nations who have read the lesson of Japan, who are taking advantage of all the work that the Japanese have done, who are taking as their starting point the methods of production which the Japanese have developed and are basing it all on costs of labor which are way below the Japanese, way below the European, and, of course, way below those of the United States. In these countries the rates of pay range between $2 and $5 a day. That is the situation in Taiwan, in South Korea, and on your own borders it is, though to a lesser degree, the situation in Mexico and in Latin America and in Brazil. The Brazilians claim behind that of Japan. That is their current estimate. Which means that taking Brazil alone, and the Brazilian population is about the same as the Japanese and their raw material supplies are much better, we have the potential of another competitor on the scale of Japan coming in by about the end of the 1980s. And that is only one of the countries of the hyper competitive developing countries which are moving into world markets, and are likely to move in at an accelerating rate.

I think, in these circumstances, that it is more or less inevitable that we are going to have increasing world pressures, indeed we are already getting increasing world pressures, for protection. Protection is only of limited value. It may give you time to adjust. It may give us time to adjust, if Europe moves in the same direction at about the same pace as the United States. But one always has to remember that there is no way in which one can protect one's export markets and that while one's home market may be protected, one may all the time be allowing the gap in real efficiency and real costs to be moving against one. If we do have protection, if we do have an increase, we must make every effort to see that it does not have the effect of the protectionist movements between the wars of crippling world trade. A limited movement toward protection may not be desirable, but may be unavoidable, but if so, it must be based on the planned expansion of world trade and not on allowing world trade to fall back.

These problems are all problems which are going to present the most serious challenge to our industrial world and there is the challenge too of beginning to rebuild the confidence which the world had after its 20–25 good years and which it lost and has not yet regained in the period of the 1970s. But I would like to come back to something which seems to me to be more important yet. It is the question of what makes men work.

Now we have very real problems in Britain about productivity. But I sense an

unease in most of the industrial countries which one visits, not I think in Japan where they are still riding the crest of their first great industralization, though even there the riots opposed to the idea of opening the new Tokyo Airport are not signs that they are free from the strains and stresses of modern industrial life. But I come again to this feeling of the ideals which our society in Britain and in the United States developed first of all together and then in parallel in the years after the 1630s and coming down through the development of our free history and our democratic institutions. There was this ideal, still I thing the most hopeful and important ideal that there is in the world, which rested itself on the democratic organization of free men and it depended upon something particular about the character of those men. Freedom is not something which just happens to a community, nor is it something which is preserved by accident. It is not a privilege which is ever long retained by those who are idle, who lack responsibility, who lack self-discipline. Those who prefer state discipline to self-discipline lose their freedom in the end and usually before very long. How stands this ideal of the free society with free men depending upon their own self-discipline to maintain the responsibility which the community requires if it is to survive? It is still in existence. If it were not in existence we should not be here. But it is impossible to pretend that it exists with the same vigor and self-confidence as it did a generation, or two generations, ago. There are those who wish to erode it, who wish to make their attack upon it. There are those who do not share this ideal. But, I believe more insidious are those who would in fact pay some sort of shrugging lip service to this ideal but are not remotely prepared to pay the price which it involves.

I find coming here that there is running through your community the idea that self-disciplined people must take responsibility for community affairs and take that responsibility as free men. That I believe, is the principle which gave your nation its greatness in the world and made it, perhaps, the most successful experiment in political soceity that the world has even seen. When I am here I know that that spirit is still strong. Long may it remain so, and long may its enemies be confounded.●

## HUMANITARIAN ASSISTANCE TO LEBANON

● Mr. KENNEDY. Mr. President, reports from Lebanon continue to underscore the need for additional relief and reconstruction assistance in the wake of the recent conflict in southern Lebanon. In addition, there remains an urgent need to more actively support, under international auspices, the voluntary and orderly return of displaced civilians to their home areas.

Some return movement has already been achieved under the protection of the United Nations, and I commend the efforts of the administration for contributing some $2 million in humanitarian assistance to date. More clearly needs to be done, and I am confident that Congress will support whatever additional funds may be required for the United States to contribute to peace and relief in southern Lebanon.

Mr. President, I would like to share with the Senate the most recent situation report on conditions in Lebanon, and the status of international assistance, prepared by the Office of U.S. Foreign Disaster Assistance in the Agency for International Development. I submit the text of this report for the RECORD.

The material follows:

[From Office of U.S. Foreign Disaster Assistance, Situation Report No. 5—Friday, Apr. 14, 1978]

LEBANON—DISPLACED PERSONS

Date: Beginning March 14, 1978.

Location: Southern Lebanon Four cazas of Bint Ibeil, Nabatiyeh, Marjoyoun, and Tyre), Sidon Beirut, and Bekaa Valley.

People Affected: Population of the Disaster area of southern Lebanon—450,000 (majority Lebanese); Affected—400,000; Dead (civilians)—50–176 (reliable updates not yet compiled); Injured (civilians)—120–392 (reliable updates not yet compiled); Displaced—estimated 250,000 (Lebanese and Palestinian).

GENERAL SITUATION

A large part of the population of southern Lebanon fled their homes as a result of an Israeli military campaign aimed at punishing Palestinian terrorists. The city of Tyre, for example, was deserted by about 45,000 of its 50,000 inhabitants. It is still unclear exactly how many people were displaced by the recent fighting since some "old" displaced persons (i.e., those displaced during the civil strife) mixed with the "new" displaced persons to receive assistance in relief centers. The Lebanese government has used the figure 30,000 families or 210,000 people, counting seven people to a family, in its calculations of how many were displaced recently. In its resettlement plans, however, the government has used the figures 50,000 families (including 20,000 families that remained in the South) and 250,000 people (which would be only five to a family).

Lebanese displaced from southern Lebanon fled to the following areas: Beirut (50,000 displaced persons), Sidon (15,000), Chouf (60,000), and Baalbeck-Hermel (40,000).

Palestinians displaced from their camps in southern Lebanon numbered about 65,000. Some 34,000 of these fled to Sidon and 5,000–10,000 went to Beirut.

With the introduction of the United Nations Interim Force in Lebanon (UNIFIL) and the subsequent pull-back of Israeli forces, some of the displaced persons have begun to return to their homes in the South. Many have been reluctant to go until assured that security will be provided. To date, about 20,000 to 25,000 Palestinians and about 50,000 Lebanese are reported to have returned.

Priority needs (as defined by the Government of Lebanon) to support the returning displaced persons for one month include some of the items requested for the emergency period and may duplicate some of the items already distributed to the displaced. The requirements for the return-to-village period include the following: blankets (180,000), mattresses (100,000), water jugs (50,000), sugar (1,500 MT), bulgur (3,300 MT), lentils (1,500 MT), cheese (2,000 MT), chicken (1,500 MT), sardines (2,000 MT).

Current fighting between Lebanese Christians and the Syrian deterrent force cannot but complicate the return of the displaced persons.

ACTION TAKEN BY THE GOVERNMENT OF LEBANON (GOL) AND LEBANESE GROUPS

An Interministerial Committee on Relief (IMCR) was formed on March 15, 1978, consisting of Ministers Rizk, Salman, Cheaito, and Bizri. The Committee has overseen all relief activities including those of the GOL Office of Social Development and the High Relief Committee. The GOL has been concerned primarily with displaced Lebanese, leaving displaced Palestinians in the case of the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA).

Control registration points were set up to register families displaced by the most recent fighting. Of the estimated 30,000 displaced families, only 3,000 had registered by April 7, 1978.

Temporary housing (tents and prefabricated buildings) have been provided in Beirut at the municipal stadium and golf club camps and in and near Sidon at the Awal, Sidon Hotel, and Ghazzia camps. All of the camps are equipped with water and sanitation and are organized by village of origin. In addition to the above, mosques, churches, schools, local universities, and finished and unfinished buildings have been used for temporary shelter. About 10,000 persons have been housed in the camps where food is generally distributed daily.

Twenty centers to distribute supplies to displaced persons have been set up in Beirut and its suburbs. Three additional centers are located in Chouf, Aley, and Bekaa. These centers give families enough food for 15 days plus comfort items such as blankets.

Through the combination of camps and centers, the distribution system has reached 50,300 families (41,000 in Beirut, 1,350 in Chouf and Aley, 7,500 in Sidon, and 450 in Bekaa). If only 30,000 families were displaced by the recent fighting, then some "old" displaced persons were served as well.

All hospitals were instructed to provide care for all patients and to bill the Ministry of Health if necessary. The American University Hospital in Beirut has supplied a medical team to each relief camp each afternoon. The League of Private Hospitals also called upon hospital operators to offer assistance.

Estimated costs to the GOL of the relief provided so far are LL 2 million (US $682,-593.85). The GOL has allocated LL 100 million (US $34.1 million) to relief operations.

Resettlement plans are being handled by three bodies—the Military Commission to Facilitate Return, the High Relief Committee, and a newly formed Council for South Lebanon. The Lebanese Army is registering returnees at the distribution centers by village or origin. Bus transportation is to be arranged from three locations in Beirut and from two locations in Sidon with an emergency vehicle repair point in Zahrani. The High Relief Committee is in charge of distributing support commodities which consist of one month's ration of food, kitchen utensils, blankets, and temporary shelter. Returnees will also receive support for housing repair. The Council for South Lebanon will handle reconstruction projects and income replacement schemes (e.g., an income advance for tobacco farmers). Total costs of resettlement/reconstruction are estimated to be LL 32 million (US $10.9 million).

The Ministry of Public Works has begun repair of roads, bridges, and public buildings.

Arab Insurance Company—$5,085 to the IMCR.

Association of Industrialists—500 cases of canned meat.

Association of Social Works—$8,475 to the IMCR.

Beirut Chamber of Commerce—$33,900 to the IMCR.

College Patriarchal—$1,015 to the IMCR.

Employees of North Lebanon—decision to contribute 15% of their salaries for the displaced persons.

General Union of Palestinian Women—distribution of food and blankets and assistance in camps.

Lebanese Mothers' Committee—distribution of food.

Lebanese Red Cross—first-aid and evacuation services.

Lions Club—3,000 undergarments to the Sidon authorities and assistance in distribution.

Makassed Association—$8,475 to the IMCR.

Middle East Council of Churches—milk powder, cheese, and used clothing from its stocks sent to Sidon; purchase of an anesthesia machine for the Palestinian Red Crescent Hospital in Sidon; reactivation of local committees formed for relief during the recent civil strife.

Municipality of Beirut—fund of LL 300,000 (US $102,389) for urgent measures related to displaced person support in Beirut; fund of LL 500,000 (US $170,648) for IMCR disposition.

Organization of Overseas Lebanese—appeal for assistance.

Palestinian Red Crescent—medical assistance to the injured.

Students of the American University in Beirut—volunteers in distribution centers.

YMCA—volunteers to erect tents in Sidon and Beirut.

YWCA—500 blankets and 1,000 cans of soup.

Self-help reported to date—$34,429,987.*

ASSISTANCE PROVIDED BY THE UNITED STATES GOVERNMENT (USG)

In response to a request for USG assistance from Lebanese Prime Minister Salim Al Hoss, the U.S. Ambassador to Lebanon, Richard Parker, declared a disaster on March 19, 1978, and exercised his $25,000 discretionary disaster relief authority.

From the Italy stockpile of the Office of U.S. Foreign Disaster Assistance (OFDA), the following have been provided: tents (1,850), tent flys (1,850), wool blankets (30,823), cotton blankets (13,756), muslin sheets (2,976), plastic sheeting (20 rolls), five-gallon water jugs (2,200), tetracycline capsules (200,000), penicillin tablets (120,000), multi-vitamin tablets (250,000), cooking stoves (50), and gas cans (50). The value of these commodities, including air transportation, is estimated to be $930,672. These supplies were consigned to the GOL; however, the GOL promised 500 of the tents to UNRWA.

From its Singapore stockpile and from California, OFDA has provided additional tents and flys (217 each), cotton blankets (15,504), wool blankets (26,572), and six ICOSA prefabricated shelters. The value of these commodities, including air transportation, is estimated to be $679,346.

Transportation for the replacement of the above items will cost about $404,426.

Technical assistance in disaster relief and prefabricated shelter construction has cost $7,826.

Total USG assistance to date—$2,047,270.

ASSISTANCE PROVIDED BY U.S. VOLUNTARY AGENCIES

The American National Red Cross has airlifted ten cases of sterile bandages donated by Johnson and Johnson.

American Near East Refugee Aid has granted $5,000 each to the Lebanese Red Cross and the Palestinian Red Crescent.

Baptist World Relief has sent $5,000 to the Southern Baptist Mission in Lebanon.

*Partial figure since services have not been valued.

Catholic Relief Services/New York has sent $25,000 to its representative in Lebanon to purchase relief goods for 800–1,000 displaced persons camped on the outskirts of Beirut in a Caritas/Lebanon Camp.

Church World Service has advanced $25,000 to the Middle East Council of Churches (MECC) for its relief activities. An appeal for $70,000 to meet CWS's share of a World Council of Churches (WCC) appeal ($200,000) has been made. To date, CWS has received $25,000 in cash and $58,000 in pledges in response to its appeal. Five tons of canned meat, donated by the Church of the Brethren and valued at $9,480, have been shipped to Lebanon. Other groups which have responded to the CWS appeal are the Episcopal Church, Presbyterian Church in the U.S., Reformed Church in America, United Methodist Church, United Presbyterian Church USA, United Church of Christ, and CROP/CWS.

The Community Development Foundation/Save the Children Federation has alerted the other members of the Save the Children Alliance (U.K., Canada, Norway, Denmark, and Austria) to needs. Their training center in Lebanon is being used as a standing area for relief supplies and 5,000 displaced persons are being cared for.

Lutheran World Relief has granted $10,000 to the Middle East Lutheran Ministry in Beirut.

The Mennonite Central Committee has allocated $50,000–$60,000 for baby food, canned food, blankets, and mattresses to be distributed through the Sidon provincial government. In addition, 8,000 pieces of bedding, five tons of beans, and five tons of canned beef are being distributed through the MECC.

Seventh-day Adventist World Service has distributed blankets and clothing from their 40 tons in stock in Beirut. An additional 400 bales of clothing will be shipped to Lebanon.

Total assistance reported to date—$134,480.*

ASSISTANCE PROVIDED BY THE INTERNATIONAL COMMUNITY ORGANIZATIONS

The Arab League—$150,000 for medicaments and supplementary medical services.

The Arab Ministries of Health—$3,000,000.

The European Economic Community (EEC) will authorize 20,000 MT of cereals as a supplement to its regular program. In addition, 100,000 MUA (US $125,000) have been contributed to the International Committee of the Red Cross (ICRC) appeal.

The International Committee of the Red Cross is using its staff currently in Lebanon (15 Swiss delegates and 25 local employees, N.B. one delegate has been killed in a car accident) to care for the displaced persons in its region and to carry out village-by-village assessments of damage and numbers displaced. An appeal was made for baby milk (180 tons), cash to purchase medical supplies (400,000 Swiss francs), blankets (20,000), and cash for operational expenses (900,000 Swiss francs). The financial part of the appeal has been met.

The International Union for Child Welfare—$10,170 to the IMCR.

Up to $500,000 is available for this emergency from the United Nations Special Trust Fund for Lebanon. An appeal for supplementary funds to benefit all U.N. agencies in Lebanon, except UNRWA, is expected.

UNHCR—$100,000 to the IMCR.

UNICEF—blankets (44,900), soap (825,000 bars), layettes (7,000), water containers (20,000), kitchen sets (11,350), water tanks (9), Halazone tablets (500,000), children's clothing (22,800 sets), plastic sheeting (195 rolls), basic drugs (500 sets), water piping, and medical supplies (4.5 MT). A portion of the cost of this assistance is $689,097.

UNRWA made an urgent appeal on March 23, 1978, for cash ($30,000 per week), foodstuffs, tents (3,000), blankets (30,000), and clothing and shoes for 8,000 children. In Sidon, UNRWA has been feeding 34,000 displaced Palestinians. UNRWA classrooms have been used as temporary shelter.

The World Council of Churches launched an appeal for $200,000 to purchase locally: blankets (18,000), kitchen Utensils (4,000 sets), plastic sandals (15,000 pairs), high protein food, dry beans, and milk. Distribution costs ($65,000) would also be covered. WCC has received $116,500 in cash and has forwarded $125,000 to Lebanon.

GOVERNMENTS

Algeria—two planeloads of medical supplies for the Palestinian Red Crescent.

Argentina—nature and value of assistance not reported (N. R.).

Australia—$227,275 through the World Food Program.

Belgium—N. R.

Brazil—N. R.

Canada—$1 million (Canadian dollars) to ICRC. Three churches in Toronto have sent $11,000 (Canadian dollars) to Lebanon.

Egypt—12-member medical team and $150,000 to the IMCR.

France—8,000 MT of wheat.

Germany (Democratic Republic)—N. R.

Germany (Federal Republic)—two planeloads of blankets, clothing, baby food, and medicines all valued at DM 1 million (US $499,900) and $200,000 to UNRWA. Within the scope of EEC aid, Germany plans to allocate 2,275 MT of powdered milk; 1,240 MT of butter oil; and 25,000 MT of cereals.

Iran—3,500 blankets, clothes for 4,600 displaced persons, and two planeloads of relief supplies such as oil, sugar, tea, and flour.

Iraq—21 truckloads of relief supplies and a medical team.

Jordan—assessment team of six physicians, four truckloads of medicines, and 1,200 bottles of blood.

Kuwait—medical team of ten doctors and nurses, ten ambulances, and 25 trucks.

Morocco—medicines, plasma, and medical equipment for the Red Crescent.

Netherlands—9,500 blankets; 1,000 cases of food; 6,000 bottles of powdered milk; and $455,000 to the IMCR.

Norway—187,260 to the IMCR.

Senegal—N. R.

Syria—7,000 MT of wheat.

United Arab Emirates—medical mission, composed of 20 doctors, 40 nurses and pharmacists, and ten administrative staff and drivers to Syria and $300,000 to the IMCR.

United Kingdom—5,000 blankets and 150 tents.

VOLUNTARY AGENCIES

Australian Council of Churches—$5,000 through WCC.

Austrian Save the Children Fund—$3,000.

Caritas/France—N.R.

Caritas/Germany—N.R.

Caritas/United Kingdom—N.R.

Catholic Fund for Overseas Development (United Kingdom)—$980 to ICRC.

Christian Aid (United Kingdom)—$9,500 through WCC.

Danchurchaid (Denmark)—40 tons of milk powder, fish, beef, and cheese to Beirut by truck.

*Only a partial figure since some assistance in kind not valued as yet.

Danish Save the Children Fund—$10,000.

Das Diakonische Werk (Germany)—$50,000 through WCC and airfreight of 4,000 blankets and six tons of milk powder.

HEKS (Switzerland)—$52,000 through WCC.

Middle East Lutheran Ministry—distribution of 8,000 blankets, 90 bales of clothing, and 1,100 pounds of medical and surgical supplies.

Nordaid (Norway)—$20,000 through WCC.

Norwegian Red Cross—$203,390 to the IMCR.

Norwegian Save the Children Fund—$100,000.

Oxfam (United Kingdom)—$4,890 to ICRC.

Primates Relief Fund (Canada)—$5,000 through WCC.

Swedish Lutheran Federation—100,000 krona (US $21,673) through WCC.

Switzerland (Caritas, Protestant League, Swiss Red Cross, World League)—$101,010 to the IMCR.

United Kingdom Red Cross—$1,960 to ICRC.

Total reported to date—$7,668,105.*

ANNE C. MARTINDELL,
*Director.*●

## SOIL CONSERVATION

● Mr. HART. Mr. President, while soil conservation is one of our most important national priorities, it is an expensive undertaking. There is no guarantee that a rural landowner or farmer who implements such practices will recover, through the prices he receives for his products, his investment of time, labor, and money.

Recent reports underscore the serious nature of the soil erosion problem. Several studies indicate that we are less effective in controlling erosion today than we were 15 years ago, and several prominant geologists have reported that, by the middle of the next century, the typical farm may not have any topsoil left.

An equally serious aspect of this problem is the water quality degradation that results from poor soil management. A recent GAO report concludes that over half of the pollutants entering this country's waterways comes from "nonpoint" or diffused sources, chiefly agricultural runoff, and that continued inattention to this problem will prevent the achievement of the water quality goals set out in the Clean Water Act.

To solve both of these problems, Senator CULVER, during last year's consideration of the Clean Water Act, successfully proposed an amendment establishing a cost-sharing program to help fund soil conservation measures that reduce agricultural runoff. This amendment was widely supported by both environmental and agricultural interests, and authorizes $200 million for fiscal year 1979 and $400 million for fiscal year 1980.

Recently, in an address to the 32d annual convention of the National Association of Conservation Districts, Senator CULVER outlined both the urgent need for effective soil conservation and the importance of the new cost-share program.

Mr. President, in order to bring this important subject to the attention of my colleagues, I ask that Senator CULVER'S speech be printed in the RECORD.

The speech follows:

As an Iowan who has long believed that soil conservation is our most under-rated national priority, I am privileged to participate in this thirty-second annual convention of the National Association of Conservation Districts.

In my state, I am proud to say, conservation of our natural resources has been a religion since anyone can remember. Since our state is blessed with a large portion of the Grade A farmland in the nation, it is plain that, next to our people, our fertile land is our principal resource.

I don't recall ever talking to a farmer who didn't profess to believe in sound soil conservation practices. But in our state, as in other states, there are a lot of farmers and other rural land-owners who talk good conservation but don't practice it. Only one third of Iowa's 27 million acres of cropland is adequately protected against soil erosion—despite the fact that we have conservation programs that are second to none.

The truth is that farmers and certainly the general public do not recognize the urgency of the need. Recent planted cropland increases have equaled, if not exceeded, the additional acres of land each year that were protected by sound conservation.

We hear a great deal—and properly so—about the energy crisis. We should also be excited and concerned about the soil crisis—which is a less complex and more manageable problem for our country than devising an effective energy program.

I think a useful comparison can be made between the oil reserves of the OPEC countries and our own "black gold" in the form of topsoil.

Neither their oil nor our topsoil is inexhaustible. The oil producers export their oil at a profit to us and the other nations of the world. We export, at no profit and horrendous loss, more than 200 million tons of the world's finest topsoil from Iowa alone to the Gulf of Mexico each year through soil erosion and agricultural runoff. Ironically, the natural forces that rob us of our irreplaceable topsoil cause the major pollution to our waterways.

When the Arab wells are some day depleted, the game will be over permanently. But sound conservation practices can save our soil and protect its quality for generations to come.

The situation is getting worse, rather than better. Modern farm technology and the shift away from soil-conserving crop rotation has taken a heavy toll from the soil. A report by the Council for Agricultural Science and Technology (CAST) found that Corn Belt farmers are less effective in controlling erosion than they were 15 years ago. CAST, which has its headquarters at Iowa State University, also found that the United States lost 4 billion tons of topsoil in 1972 as compared to 3 billion in 1934.

I remember going back to Iowa in the spring five years ago and noting that farmers, for the first time, were plowing clear up to the fencerows. Federal agriculture policy called forth maximum production, the farmers responded, and, as a result, the plow was put to land that hadn't been turned in years—if ever.

And then the rains came. Millions of tons of topsoil were lost even from land that had been treated with careful conservation practices for years. And from the land that saw its first plow in that year, the loss was twofold and threefold. On the unprotected land, a loss of 15 to 20 tons per acre was not unusual, and some farms lost in excess of 50 tons.

We should have learned from this experience, but the sense of urgency is still not there.

I know that saying these things to you conservationists is like quoting scripture to members of the clergy. But somehow, between those of us who see the grim prospects of the future if we continue wasting one of our most valuable resources, we must find a way to wake up the nation to the critical need.

Effective conservation measures are admittedly expensive, but when you compare them with many other governmental expenditures in terms of size of outlay and probable public good, they are one of the soundest investments we can make. The total amount spent for soil conservation for the entire country is only a miniscule fraction of the bills the Pentagon routinely spends on a single weapon system. Yet when it is budget-cutting time in Washington and the state capitals, soil conservation programs are among the most vulnerable.

For as many years as most of us have been involved in soil conservation, federal costs sharing assistance has hovered around $200 million. Most of this money came through the Agricultural Conservation program and the Great Plains Conservation program. As you well know, sustaining even this amount has been a hard fought battle, year after year.

The Administration's budget proposal for Fiscal Year 1979 recommends only $100 million for both the ACP and the Great Plains program. In addition, the budget proposes to combine these two programs under the ACP and phase out funding for resource conservation and development projects.

I hardly need to tell you that I don't like, nor do I plan to accept, this meager level of funding. More money is needed, and I am convinced that Congress will provide it.

While we are disappointed with this meager funding proposal for important soil conservation programs, perhaps we should take a hint from our late, beloved friend, Senator Humphrey, and look on the bright side of things. After all, this is only the second time in my fourteen years in the Congress that there have been any funds for these programs in the President's budget proposal. Maybe OMB is finally getting soft in its war on soil conservation assistance.

A related topic is the proposed natural resources reorganization that is being considered by the Administration. As you know, in the December 19, 1977, Federal Register, the office of Management and Budget outlined a wide range of options and asked for public comments on the various alternatives being evaluated.

Some of these alternatives involve shifting functions out of the Department of Agriculture into other departments and agencies. Others proposed consolidating a wide range of activities within the USDA.

I believe natural resource protection programs need to be strengthened. I am not yet persuaded that reorganization is the best way to accomplish that objective.

Specifically I flatly oppose the proposal to move the Soil Conservation Service functions from the USDA.

Any contemplated reorganization should take into consideration the vital linkage between production programs and natural resource protection programs. For the farmer, resource protection and the production of food are simply two sides of the same coin. Any attempt to separate these functions

*Only a partial figure since much of the assistance in kind and in services has not been valued as yet.

within the governmental structure promises no more success than an attempt to separate them in the farmer's field.

Agriculture remains in the bankbone of our economy. It needs and deserves a strong federal agency that can coordinate interlocking activities affecting the farm economy, encourage exports, protect the competitive forces in American agriculture that have generated efficiency and innovations, and safeguard our natural resource base.

I believe these goals can be best served by strengthening, not dismembering, the U.S. Department of Agriculture. I do not question that some reorganizational changes within the department may be in order and useful, but I do not see any advantage in transferring major components of the agriculture department to other agencies.

I believe modest progress in awakening public attention to the urgency of conservation needs will result from some of the events of the past year.

The Land and Water Resource Conservation Act, which was vetoed in 1976, and signed into law last year should significantly increase our knowledge of soil and water conservation needs. In the past, we were aware of the problems, but we had no effective national mechanism for evaluating progress or lack of it. When the first results of the Department of Agriculture's appraisal, under this act, of our land and water resources is presented to the Congress, I believe it will send some shock waves across the nation with regard to the urgency of these needs.

On another front, there has been an increased effort, stimulated by Section 208 of the Water Pollution Control Act of 1972, to determine the scope and severity of the nonpoint pollution problem. This effort, I believe, is providing substantial support to the soil conservation cause.

I think most of you are familiar with the agricultural cost sharing amendment to the Clean Water Act which I sponsored in the Congress last year.

As you know, this amendment establishes a cost-sharing program to assist farmers and other rural land owners in controlling nonpoint source pollution.

Congress authorized $200 million for fiscal year 1979 and $400 million for FY 1980, for technical and financial assistance in carrying out these rural clean water projects.

Responsibility for setting local priorities for those projects was given to the soil conservation districts working together with the Department of Agriculture. National and local priorities for assistance are to go to those areas and sources of pollution that cause the most severe water quality problems.

Overall responsibility for the program lies with the Secretary of Agriculture. In addition, important aspects of the program are given to the Administrator of EPA, the Section 208 management agencies in each state, state water quality and soil conservation agencies, and to the conservation districts.

Last Friday, Secretary Bergland announced that the Soil Conservation Service will be given the primary responsibility for administering the program. Under the Secretary's announcement, the ASC county committees, with the technical advice of the local soil conservation service agents, will assist the districts in establishing local priorities.

This decision may not meet everybody's ideal concept for administering the new program. But I am convinced that it is an arrangement that will work and that all parties can live with. The thing that impresses me is that it establishes a maximum of local input into the most important aspect of this program—what is to be done with the limited resources available. In principle, I commend the Secretary for his decision. A great deal will depend, of course, upon the regulations which will be published and open to comment and suggested change.

The new program combines the talents and expertise of all three of the major arms of our national conservation effort—the conservation districts, the county ASCS committees and the SCS.

I would hope that the frictions and rivalries that have existed within this triad in the past can now be buried in the common purpose. For every state represented here today, the stakes are high.

I know that you people will do your part. I know of no group of public servants who have worked with more energy and devotion to a cause than you people and the SCS field representatives have. I think, moreover, there is no area in which federal, state and local officials have worked more closely in harmony and cooperation.

I congratulate you on this new responsibility and know you will handle it well.

Adequate funding for natural resource protection, as you all know, is still a staggering, uphill problem.

We are all familiar with the traditional arguments against the ACP program. The farmer benefits from good soil conservation; therefore he should pay for it.

The farmer does benefit from the conservation of his soil. But so does everyone else. If the farmer were able to recapture through higher prices for his products the money he invests in soil conservation, he could spend the money with the assurance that he could recover his investment. But he has no such assurance.

As a member of Congress, I strongly support the concept of investing public funds in cost-sharing programs for soil conservation. In the long run, the land is essentially a public resource and its protection is a public as well as private responsibility.

In the Federal Soil Conservation Service's pamphlet, "How Will We Use Iowa's Land," is a marvelous quotation from a Nigerian Chieftain that tell it all. "I conceive," the Chieftain said, "that land belongs to a vast family of which many are dead, few are living, and countless numbers are unborn."

Some critics have argued that the rural water quality program is a duplication of existing services provided under the ACP. This, I am sure you recognize, is not so. While the two programs can, and should, complement each other, neither can substitute for the other.

If priorities under the ACP were turned too heavily toward water quality, many areas of the country with severe wind erosion problems would not receive adequate attention. The same would hold for lands where runoff moves large quantities of soil but does not deposit that soil in streams and lakes.

On the other hand, a program which allocates funds to areas and projects on the basis of pure soil erosion criteria will never adequately meet the water quality problem. The rural water quality program provides, for the first time, a formal institutional linkage among three vital goals: food production, soil conservation and water quality.

It would be the fulfillment of a great dream for all of us if the period between now the year 2000 could turn into a golden age of natural resource conservation. To achieve this conservationists, farmers, environmentalists and other concerned citizens will need to combine their forces to communicate the message of urgency to the general public.

Admittedly, communication is a delicate art, as Dr. John Melcher, a colleague of mine in the Senate recently found out. A single word can make a difference. A few weeks ago, Senator Melcher began receiving an avalanche of angry letters from cattle producers in Montana whose cause he had long supported. Melcher simply couldn't understand what his constituents were angry about. Finally, he found the cause. In a syndicated feature about him in Montana newspapers, the article meant to say Senator Melcher is a veterinarian. It come out "vegetarian".●

## HERE COMES THE JUDGE

● Mr. HOLLINGS. Mr. President, in the April issue of RF Illustrated, the official publication of the Rockefeller Foundation, there is an article appropriately titled "Here Comes the Judge."

I found the article particularly interesting, because the judge in this case is the Honorable Arthur McFarland. He is 28 years old, black, and a municipal judge in my hometown of Charleston, S.C.

Now those facts alone speak volumes about the direction South Carolina and the South as a whole have taken in the last two decades in relations between blacks and whites, and it is a healthy direction indeed. But they also reflect new attitudes about the capabilities of young people and their dedication to justice and equality, and they also point to the abilities of people to very quietly but very effectively adapt to changing conditions.

Judge McFarland is a Charleston native who compiled a very distinguished academic record and was an Earl Warren Fellow and who decided to take his talents back home to help his people—and by helping them, help us all.

I am proud of his decision and the work he is doing, and I ask that the article in RF Illustrated be printed in the RECORD for the benefit of my colleagues.

The article follows:

HERE COMES THE JUDGE

(By Sylvia Kronstadt)

Judge Arthur Cecil McFarland looks dapper as he strides into Charleston, South Carolina's municipal building wearing a suit the color of peach ice cream. Neither the courthouse nor the judge blends into the lush fabric of southern splendor and entrenched power that drapes Charleston like spanish moss on a grand old tree. The new building is about as elegant as a high school cafeteria. The judge, moreover, is a lanky, unpretentious, 29-year-old lawyer. And a black man.

As Judge McFarland—who came back to Charleston in 1974 as an Earl Warren Fellow—makes his way toward his chambers, the greeting, "Mornin' judge," flutters at him from white lips all along the way. He signs a stack of arrest warrants and billows into the courtroom in his judicial robes, preceded by a middle-aged redhead who declares, with genuine hospitality, "Good mornin' ladies and gentlemen! The municipal court is now in session, Judge Arthur McFarland presiding."

For the first few months after he was appointed to the bench, McFarland's entrance into the courtroom provoked a medley of reactions: policemen smirked, prosecutors muttered, onlookers gasped.

"They couldn't believe I was the judge; it wasn't until I handed down a few sentences that the credibility set in," McFarland recalls.

One morning a defendant was brought before him charged with criminal trespass. The man took one look at McFarland and began shouting, "Let me out of here! I ain't going to let no black judge try me! He ain't no judge! Help me . . . get me out of here!"

"We eventually got him settled down to where we could proceed," McFarland says. "The incident really only bothered me in one

respect. That particular defendant was black."

DOING JUSTICE

A year after his appointment, it is clear that Charleston's youngest municipal judge has had an impact on the style and substance of justice in this tradition-drenched city. There has been a dramatic improvement in the quality of arrests as a result of his "throwing out cases right and left" when he first assumed office.

"I also take pains to bring out the defendant's side of the story . . . to let him know that I don't just assume the policeman is right," McFarland says.

The judge has ordered officers in open court to cease referring to defendants by their first names. He has irritated law enforcement officials by suspending sentences on marijuana possession charges and by sentencing youthful offenders to spend Saturday mornings observing courtroom proceedings. Recently he outraged Charleston's upper crust by fining one of its aristocratic ladies $200 for a housing violation.

"Nobody would have dreamed that anything could happen to her," a local white lawyer observes. "Not only did Arthur fine her; he got the city behind him and made it stick."

On this particular morning the corporation counsel is attempting to enforce the housing code in a different, more run-of-the-mill fashion. Charleston neighborhoods that are now all black have become highly desirable because of their historic significance, and selective, beefed-up, housing code enforcement is being used to force blacks out of these properties. The corporation counsel is posing his standard argument to a middle-aged black defendant—that the required repairs will cost more than the defendant can afford, that he is better served by selling the property than demolishing it. In fact he just happens to have the name and address of someone (white) who wants to buy.

"What is my responsibility to black people in these circumstances?" McFarland asks later. "Am I participating in a legal rip-off? Have I become the guardian of the oppressor?"

If McFarland feels insecure about the implications of what he does, it is not evident when he is on the bench. He has jurisdiction over all offenses punishable by up to $200 and thirty days in jail, and he listens to the procession of accusers and accused with grace and attentiveness. Today, McFarland hears cases involving illegal possession of drugs and weapons, public intoxication, destruction of government property, and traffic violations. One defendant, a short, stocky, black man, trembles uncontrollably during his questioning and McFarland quietly tells him that he needn't be afraid. Another—when asked how he wishes to plead—sniffles, hiccups, and slurs, "Drunk Yeah, I been drunk. I still *am* drunk." McFarland suspends a jail sentence on condition that the man seek treatment in an alcohol abuse program.

NEW FACES

Judge McFarland is carefully watched by black colleagues as well as white. One of them is Bernard Fielding, who returned to Charleston after law school back in the 50's, when courtrooms in the South were segregated and black lawyers were banished to the black spectator section, far from the venerable proceedings of the bench. Today, Fielding—who barely escaped going to jail for "being sassy with the judge" in the past—is himself an associate judge—the first black in South Carolina's probate court.

"There's been tremendous cosmetic change in the South," Fielding says. "But there are still deep-seated efforts to minimize the number of black lawyers and diminish their impact.

"There is great pressure on young black lawyers to succumb, to become wheeler-dealers, scheming and conniving with whites to suppress the black community for their own gain," he adds. "That's why Art McFarland is so valuable to Charleston. He practices with dignity. He's a scholar and a skilled practitioner."

"Arthur's a real catalyst here," says Joseph Shine, a young black who was recently named Charleston City Prosecutor. "He had a major impact on my decision to come back here after law school."

Tony O'Neill, another young black attorney, adds, Arthur is demonstrating to the black community that you don't need to be afraid to bring your business to a black lawyer. As judge, he's showing them that we're competent . . . and that we possess a special understanding of their problems."

McFarland is a judge three mornings and two afternoons a week. The remainder of his time is spent on the other side of the bench—as one of the nineteen practicing black lawyers in Charleston.

Recently he represented two black students expelled for a fight on the basis of a written statement from the principal, who didn't witness the fight. McFarland's expression of outrage over the expulsions was extensively quoted on television and in the local press. He lambasted the Trustees of the School Board for "the incredible abridgement of due process that is these, students' constitutional right.

"Here you are, an arm of the state . . . that can affect a student's whole lifetime . . . that can deprive him of his future," he declared.

At the 66th annual commencement ceremonies of Burke High School, he spoke in equally strong terms of graduating seniors. outrage over that expulsions was extensively

"Today I stand before you—22 years after the *Brown* decision—and this that was all black then remains all black," he said. "The responsibility is ours and no one else's . . . to demand our rights. To decide not to get involved is a decision for continued discrimination, continued oppression, continued second class citizenship."

ROOTS

Arthur McFarland grew up in government-subsidized housing projects, one of nine children. His father was a janitor at the local Chamber of Commerce for nearly forty years. Heady though his judgeship, his appearances in Federal Court, and his inclusion on various boards and commissions must be, he has not, as he puts it, "forgotten from whence I came."

"My personal progress is all to naught if I don't use what I've gained for the benefit of my people," he says.

So one Saturday afternoon McFarland drove fifteen miles outside of Charleston, to a two room shack surrounded by forests. There was an outhouse and a water pump, chickens pecking among the wild orchids, and a dirt path lined with seashells leading up to the front door.

McFarland had come to convey the intricacies of estate law to the Queelay family. There are 71 acres of land at stake here—the original owner of which died forty years ago without leaving a will. His children have come and gone, and there is now a list of heirs that looks like a pyramid. On this Saturday afternoon several of them were gathered in the dark and musty room eating red rice and fried chicken, listening while McFarland proposed the formal, contractual division of the property.

"We're family, man," an old one with one leg says from his bed. "No need to cut up the land and sign things."

But McFarland leans forward and in his warm animated voice tells stories of folks who felt the same way, and how they lost their land, or couldn't sell it when they wanted to. The formalities of the law, need not be an affront to personal relationships. Indeed, they can protect them by helping to prevent conflict.

By the time McFarland leaves the Queelays, he has untangled a complex family tree, reconstructed the chronology of a tempestuous past, and secured an aspect of the future for people who never had a lawyer before. The Queelays realize they can no longer ignore the reality that life today is permeated by law. And it's lucky for them, when they decide to venture into that wilderness, that there is an Arthur McFarland in Charleston.

THE EARL WARREN FELLOWS

Only about 1.7 percent of the nation's lawyers are black, many of them are young, and virtually all the newcomers to the profession find it hard enough getting started without taking on the additional burdens of practicing in the South. But a few young lawyers are determined to practice where the need is greatest. Arthur McFarland is one of just nineteen practicing black lawyers in Charleston, South Carolina.

The Earl Warren Fellowships, funded by the NAACP Legal Defense and Educational Fund with the help of a $300,000 grant from The Rockefeller Foundation in 1974 were begun to help young black law school graduates who were interested in legal careers in places where the black population is large and black lawyers are in short supply. The Fellows are given a year of intensive training in civil rights law, followed by an additional three years of part-time training. Judge McFarland was in one of the original classes assisted by the RF grant.●

## MS. MARIANNE MEANS ON FULL VOTING REPRESENTATION IN CONGRESS FOR THE DISTRICT OF COLUMBIA

● Mr. KENNEDY. Mr. President, recently on "Spectrum," the CBS network radio program, Marianne Means warmly praised the recent action of the House of Representatives in approving a constitutional amendment to provide full voting representation in Congress for the District of Columbia.

In her comments, Ms. Means also spoke eloquently about the historical injustice that has been perpetrated on the 700,000 citizens of the District by the denial of their right to vote for Members of the Senate and House of Representatives.

The House measure, House Joint Resolution 554, is now awaiting action by the Senate. Today, Senator BAYH's Subcommittee on the Constitution began its hearings on the companion Senate resolution, Senate Joint Resolution 65, which I introduced with Senator BAYH and eight other Senate cosponsors last year.

Mr. President, I believe that all of us concerned about this issue will find Marianne Means' comments of interest, and I ask unanimous consent that they may be printed in the RECORD.

(CBS Radio Network, March 14, 1978)

MARIANNE MEANS ON "SPECTRUM"

I'm Marianne Means.

I'm most obliged to the House of Representatives for kindly voting to allow me—and the other 700,000 residents of the District of Columbia—the right to full voting representation in Congress.

Self-determination for the nation's capital has been painfully slow in coming, but bet-

ter late than never. It is an outrage that the people who live in the District have been singled out and forbidden, on the basis of residence, to participate in the political process just like all other citizens do.

It has only been for three years that we have been allowed to vote for our own city officials. Before that, they were appointed by the President. And it's only been six years that we've had the right to elect a unique delegate to the House of Representatives, where the poor fellow has a voice but cannot vote.

The District has historically been disenfranchised because of its dual role as both a national and local entity. The federal government has more than a passing interest in the city's security and stability. The government owns most of the city's valuable real estate. In return, the city received $749 million in benefits last year from the federal treasury.

But the injustice of the present arrangement has finally begun to soak in. The population of the District of Columbia, after all, is larger than that of seven states. City residents pay one billion dollars a year in federal taxes. It's a little unrealistic to pretend we aren't here.

Two years ago, the House defeated a similar effort to win congressional representation for the District, but this time the measure passed that body handily. It now goes to the Senate, where the outcome is in doubt. Some Senators are reportedly not eager to see their elite club expanded from a tidy 100 to 102. The change requires a constitutional amendment, so, if passed by the Senate, it must then be ratified by 38 states within seven years before it can go into effect.

In the past, the issue of representation for the District has been complicated by racial discrimination. The vast majority of residents are black, and they will almost certainly elect black liberal Democrats as their congressmen. This time, however, the District's racial composition may be more of an asset than a disadvantage. Even conservative white Southern senators now appeal for the votes of blacks as well as whites. Sympathy for the District's plight may just win for them some black votes back home.

It would really be satisfying, at my advanced age, to cast a ballot for a United States senator for the first time in my life.

This is Marianne Means for Spectrum.●

## SALT II TREATY

● Mr. HART. Mr. President, one of the key features of any acceptable SALT II Treaty will be its verifiability. Since arms control agreements are, by their very nature, forged between adversaries, the principals will not, and indeed, should not, entrust their security to the good intentions of each other. We must be sure that we have the ability to independently verify and monitor those aspects of the agreement that are essential to maintaining strategic balance.

To determine whether we can carry out this task, we must first identify the aspects of the agreement for which verification in detail is essential; those for which it is useful, but not essential; and those for which detailed monitoring is not crucial. We then will need to make a careful technical assessment of our ability to achieve satisfactory levels of monitoring assurance for each of these items, an effort in which the technical specialists of the defense and intelligence communities will, of course, play a special role.

One of our colleagues in the House of Representatives, LES ASPIN, has opened this aspect of the debate by preparing a thoughtful, perceptive analysis of the verification requirements inherent in SALT II and of the kinds of capabilities that will be needed to monitor compliance with SALT II provisions. His report entitled "SALT Verification: Prudence and Paranoia," released last month, points the way to the kind of assessment that the Senate must undertake when the treaty comes before us.

I commend Mr. ASPIN's report to the attention of my colleagues, and ask that it be printed in the RECORD.

The report follows:

SALT VERIFICATIONS PRUDENCE & PARANOIA

(By Representative LES ASPIN)

The keystone of any Strategic Arms Limitation Treaty is our ability to be sure the Russians stick to it. Without verification, SALT is bound to collapse. But as the SALT II agreement is emerging from the negotiating cocoon, charges that the Russians will seek to evade its provisions are beginning to be heard. These charges raise the fundamental questions of verification:

How could the Russians go about cheating;

Could we uncover violations by the Soviets; and

What would the Russians gain and we lose if they did violate the agreement.

Figure 1 outlines the components of the SALT II package as they have been negotiated so far. There is a treaty lasting through 1985 and a protocol lasting through 1980.

This study will look at each one of these components in turn to ascertain just what the verification problems are:

FIGURE 1.—*The anticipated SALT II package*

(As outlined through March 1978)

PART I: THE TREATY (VALID THROUGH 1958)

(1) Ceiling on total launcher numbers: (Launchers include land-based ICBMs, submarine launched ballistic missiles (SLBMs) and long range bombers. The Soviet Backfire bomber is excluded.)

| | |
|---|---|
| At ratification | 2,400 |
| By 1980 (US proposal) | 2,160 |
| By 1982 (US proposal) | 2,250 |

(2) Limits on MIRVed missiles plus bombers armed with cruise missiles:

| | |
|---|---|
| Total | 1,320 |
| Subceiling on MIRVed Missiles | 1,200–1,250 |
| Subceiling on MIRVed mis-ICBMs | 820 |
| (3) Total number of modern large ballistic missiles | 308 |
| (4) Rapid reload systems | banned |

PART II. THE PROTOCOL (VALID THROUGH 1980)

(1) Ban on deployment of mobile ICBM launchers and on the flight testing of ICBMs from such launchers.

(2) Ban on the flight testing and deployment of cruise missiles capable of ranges in excess of 2,500 kms (1,550 statute miles) and on the deployment of cruise missiles on sea- or land-based launchers with a range in excess of 600 kms (370 statute miles).

(3) Limitations on the flight testing and deployment of new types of ballistic missiles.

PART II. THE TREATY

(1) Ceiling on Total Launcher Numbers.—The Treaty includes an initial aggregate ceiling of 2,400 strategic systems, to be reduced to an agreed number between 2,160 and 2,250 during the term of SALT II.

The Soviets could attempt to evade this limit in three ways by:

(a) deploying new strategic systems;

(b) deploying more of their existing systems; or

(c) converting non-strategic or theater systems into strategic ones.

(a) Deploying new strategic systems is the least feasible and most easily detectable way of violating SALT II. Producing a new strategic weapon involves five stages: research, development, testing, production and deployment. At each of these stages, our ability to detect clandestine activity varies from fair to excellent. The key point is that the odds the Soviets could successfully disguise all of these actions are extremely remote.

Consider just our ability to monitor the third step, testing. Line-of-sight radars read the distinctive "signature" that the body of each missile type reflects. Over-the-horizon radars can penetrate deep into the Soviet Union and recognize the signature each missile type makes when it disturbs the ionosphere.[1] Early warning satellites, designed originally to detect an ICBM attack by the Soviets, make instant readings of missile tests as well; the infrared sensors on these satellites can detect the rocket-exhaust plumes of a missile being test-fired. On top of this there are sensors and photographic gear carried by ships and planes which monitor missile test impact areas on the periphery of the Soviet Union and in the open oceans.[2]

Our methods of reading Soviet missile tests are multiple, redundant and complementary. They provide a capability to detect all long-range missiles fired from test sites in the USSR.[3] They are, in fact, far better than most human intelligence, which may come second hand and filtered or which might even be false, planted information.

Yet testing is only one of the five steps involved when a new weapons program is launched. Other means of detection could uncover Russian preparations to evade the treaty during the research and development phases before testing, not to mention the production and deployment stages afterwards.

(b) A second method of cheating on the overall ceiling—deploying more of existing systems—is more difficult to detect than the first, but our detection capabilities are still extremely good.

Our capabilities are especially good in detecting the production and deployment of additional missiles aboard submarines and in detecting the deployment of additional heavy bombers.

Strategic submarines displacing 8,000 to 9,000 tons and measuring longer than a football field are very hard to hide. Moreover, there are only two shipyards that currently produce such complex equipment,[4] and other potential sites for strategic sub construction are closely monitored. Even if built under impenetrable cover (with simultaneous disguising of support activities) a submarine must eventually leave its shipbuilding ways. From that point on, there would be innumerable occasions for observation. Deploying more missiles aboard submarines cannot go undetected.

Similarly, the detection of additional heavy bombers is a relatively simple task. The production lines for the two existing Soviet types—the Bear and the Bison—have long been closed. Renewed production could be detected with a high degree of confidence, as is evident from our ability to monitor production of much smaller pieces of equipment like tanks.[5]

Added deployments of heavy bombers would also be hard to hide. There are only a limited number of existing heavy bomber airfields (fewer than 10); all are closely monitored. If the Soviets decided to construct new airfields equipped to handle such planes, that would be readily detectable; runways can't be hidden underground. If, as some

Footnotes at end of article.

anticipate,[6] the USSR deploys a new heavy bomber by the early 1980s, that would also be readily detectable.

Detecting the additional deployment of land-based missiles is only a bit more difficult. With current Soviet practices, the United States can verify ICBM silo construction and the transport of missiles to deployment sites through satellite photography and can verify the emplacement of command and control systems and associated support equipment.[7]

Should the Soviets attempt to hide these activities, they would probably have more luck than with strategic submarines. Land-based ICBM launchers are individually smaller and, unlike submarines, there are vast areas of the Soviet Union in which they might be built or based.

But even with ICBMs the likelihood of a successful large scale deception is very small. The Soviets might try to build more ICBM launchers in the open, hoping that the vastness of their country would hide the violation, but the United States has photographic coverage of the entire country.[8] The Russians could deploy ICBMs under camouflage or at night, but U.S. satellites are equipped with multispectral and infrared sensors that can detect or penetrate camouflage and monitor nighttime activity.[9]

Because of the nature of these systems and the time it takes for the United States to process data from them, small-scale violations would be hard to detect. However, any sizable effort to cheat—a clandestine addition of, say, 100 ICBMs—would be detected.

(c) The third means of cheating on the overall ceiling—converting non-strategic or theater systems into strategic ones—poses a more challenging verification problem.

There are two examples of weapons that are theater systems but which could be made strategic: the Backfire bomber and the SS–20 intermediate range ballistic missile.

There is little disagreement within the intelligence community that the primary purpose of the Backfire is to perform peripheral attack, i.e., attacks against nations on the periphery of the Soviet Union, such as China, theater and naval missions.[10] (Roughly half the Backfires have been assigned to naval aviation, the rest are part of the medium bomber force.) However, there is also little question that the bomber has some intercontinental capability—specifically on one-way missions with recovery in a third country, on round trip attacks against the western United States, and if refueled.[11]

SALT II will exclude Backfires from the count of strategic launchers, but reportedly it will contain a variety of assurances—perhaps as part of a unilateral statement—limiting the strategic value of the aircraft. These might include:

Limits on production and deployment of the aircraft;

Restrictions on employment of the bomber in conjunction with tankers;

Limits on Backfire range and payload.

Of these assurances the easiest to detect would be production and deployment limits—even assuming deception—because of the size and complexity of these activities. This is as true for the Backfire as it is for the Bear and Bison bombers already discussed.

Verifying tanker restrictions is a little harder. U.S. Air Force pilots testify to the difficulty of midair refueling. It is extremely doubtful that the Soviets would actually try to refuel Backfires during a war without having attempted some practice runs. Practices can be monitored by such means as listening in on aircraft communications and detecting the distinctive signatures of tankers and Backfires. But if the Russians wanted to take their chances and attempt wartime refuelings without rehearsals, there is no iron-clad means of verifying restrictions on tanker employment.

The most difficult assurances to verify concern the plane's characteristics, such as range and payload. Even with unhindered observance, there has already been some dispute among American analysts over the range of the Backfire.[12] Against skillful and determined cheating, both range and payload could probably be disguised.

The other theater system that might be converted to a strategic system is the SS–20 intermediate-range ballistic missile (IRBM). This SS–20 is not covered by SALT II since its range (3,000 kms or 1,860 miles) is under the 5,500-km (3,420-mile) floor used to define ICBMs.[13] The problem stems from the fact that the SS–20 comprises the first two stages of the three-stage SS–16 ICBM and the mobile launcher for the SS–20 is identical to that for the SS–16.[14] This poses the "breakout" potentiality. By surreptitiously stockpiling SS–16 third stages and payloads, the Soviets might be in a position to upgrade SS–20s into –16s on short notice. This could provide a significant increase in numbers of ICBMs with a minimum of warning.

The SALT II agreement reportedly would ban further production, testing and deployment of the SS–16 ICBM and existing SS–16s would be dismantled. So if the Soviets were to augment their ICBM force by adding the third stage and a different payload to the SS–20, making them SS–16s, they would be doing it with no ability to test them. Even the existing SS–16s have not undergone tests for over a year and the last test was apparently a failure.

So the issue of upgraded SS–20s is really a testing issue. To have any confidence in upgraded SS–20s, especially enough confidence to satisfy traditionally conservative Russian planners, the Soviets would have to test some. And, as we have already seen, surreptitious testing by the Soviets is a practical impossibility.

The problem of preventing the Soviets from converting theater systems into strategic systems is complicated by one other factor—the existence of 90 to 10 Soviet reconfigured heavy bombers.[15] They have been modified for reconnaissance and antisubmarine warfare roles, but they still retain their bomb bays. The status of these variants is still under negotiation; the American position is to include them in launcher counts while the Soviets want to exclude them.

If the Russian position prevails, a detection problem could arise. Any permanent change in the configuration of these aircraft could be detected over time.[16] However, about a dozen of these planes are built in such a way that they could be rapidly converted into heavy bombers at their airfields—making verification extremely difficult.

(2) Limits on MIRVed Missiles plus Bombers Armed with Cruise Missiles.—Besides limits on the number of launchers, SALT II contains numerical limits on missiles equipped with multiple independently-targetable reentry vehicles (MIRVs) and bombers equipped with strategic air-launched cruise missiles (ALCMs). The sum of these two types of systems must not exceed 1,320. No more than 1,200–1,250 MIRVed missiles will be allowed and MIRVed ICBMs would be limited to 820.

There are four ways the Soviets might try to increase their MIRV/ALCM capability beyond the treaty limits:

(a) constructing new MIRVed missile silos or subs;

(b) substituting MIRVed missiles for unMIRVed ones in existing silos or subs;

(c) deploying MIRVed payloads onto unMIRVed missiles in existing silos or subs;

(d) placing strategic cruise missiles on additional bombers.

(a) Constructing new MIRVed missile silos or subs would be one way the Soviets might try to exceed the MIRVed ceiling. But, as previously discussed in 1 (a) and (b) above, any cheating on numbers of launchers can be detected with a very high degree of confidence.

(b) A second way the Soviets might try to exceed the MIRV ceilings is by substituting MIRVed missiles for unMIRVed ones in existing silos or subs. The Soviets have a number of silos and subs containing unMIRVed missiles. Detecting their surreptitious replacement with MIRVed missiles depends on our knowing which Soviet missiles are MIRVed and what silos and subs contain which missiles.

In SALT II both sides have agreed that all missiles of a type that has been tested in a MIRVed mode or fired from a launcher with a MIRVed warhead will be counted against the MIRV ceiling. The United States proposed this counting rule precisely because it assures verification. We already know from extensive obervation which of today's Soviet missiles are MIRV capable.[17] Future MIRV-capable ICBMs and SLBMs can be detected at the test stage.[18]

But while we know which Soviet missiles are MIRVed, the question arises: Can we tell which subs and silos contain which missiles? The answer is again provided by the differences among missile systems. First, Soviet silos carrying MIRV-capable missiles are significantly different from ones carrying unMIRVed missiles.[19] Second, MIRVed launchers require different command and control systems, support equipment, and other facilities, all of which are observable to U.S. satellites.[20] The "signatures" tell the story again.

Similar to ICBM silos, ballistic missile submarine tubes can be identified. An attempt to retrofit existing MIRVed Soviet SLBMs onto submarines with unMIRVed systems would require alterations in launching tubes, replacement of fire control systems, and other extensive modifications. These would take time; after all, even a routine overhaul of a nuclear submarine takes 30 to 36 months. The changes would be detectable.[21]

(c) Another method of evading the MIRVed missile limits is to take an unMIVed missile and replace just its warhead. Deploying MIRVed payloads onto unMIRVed missiles in existing silos or subs would be very hard to detect. Fortunately, no such transferable payloads exist now and new Soviet missiles have design characteristics that make it virtually impossible to transfer MIRV payloads from the current generation of MIRVed missiles to old unMIRVed ones (e.g., from SS–19s to SS–11s).[22]

(d) A final method of evading the MIRV ceiling involves placing strategic cruise missiles on additional bombers. The treaty places a ceiling of 1,320 on the number of MIRVed missiles plus bombers equipped with air-launched cruise missiles (ALCMs). Can the Soviets exceed that ceiling by producing more than the allowable numbers of ALCMed bombers?

For the foreseeable future, the United States can tell which Soviet bombers are equipped with cruise missiles, since Russian cruise missiles are externally mounted and therefore visible. Internal mountings would pose a problem, but as yet the Soviets have none. Internally mounted cruise missiles would best be detected at the time they are introduced because the aircraft involved would presumably have to be sent to some central facility to be modified and because we follow activities at rework facilities quite closely.

Verification of internally mounted cruise missiles could be eased considerably by the adoption of a "type" rule: if one bomber of a given type carries ALCMs, all bombers of

Footnotes at end of article.

that design would be counted as ALCMed bombers. This rule is expected to be included in the SALT II accord.

However, counting which bombers have cruise missiles is not the same as verifying which bombers are strategic. Bombers might be fitted with cruise missiles that had short ranges, which would not qualify them as bombers armed with strategic cruise missiles. Also, bombers might be fitted with long-range cruise missiles carrying nonnuclear payloads.

Thus, a separate and far more complicated problem is determining whether cruise missiles on bombers have strategic ranges (600+kms or 370+miles) and strategic payloads.

Under normal conditions, we can obtain adequate if rough estimates, but there is no systematic way to verify cruise missile ranges. Significant differences will be revealed neither by the missile's exterior nor by its flight test.[23] In contrast to ballistic missiles, cruise missiles need not be tested at or near full range for a country to have confidence in their performance. Like aircraft, they can be flown for a limited time under cruise conditions and their range estimated based on the amount of fuel consumed.[24] Fortunately, the Joint Chiefs of Staff have good estimates of the range of existing Soviet missiles and the Soviets do not yet have air-to-surface missiles of strategic range. Nor are the Soviets expected to have many long-range ALCMs for a number of years,[25] so it is unlikely they could exceed the numerical restrictions in the treaty before it expires.

As for the payloads of cruise missiles, there is no way to distinguish a nuclear cruise missile from a non-nuclear one by external observation. But once again, the Soviets are not expected to have either nuclear or conventional warhead long-range ALCMs for a number of years, so violations of the treaty before it expires are unlikely.

Assuming the Russians do perfect strategic ALCMs, the United States would not be totally at a loss. If the Soviets began refitting existing aircraft with new ALCMs, our suspicions would be aroused and we would be aware of the potential for cheating. If a new bomber were equipped with ALCMs, and even if the Soviets falsely claimed it was not strategic and we were not able to contradict them, it is doubtful that more than 70 to 120 bombers would be available before 1985 [26]—the expiration date of the treaty.

(3) Modern Large Ballistic Missiles.—SALT II is also expected to contain a sublimit on the number of Soviet modern large ballistic missiles (MLBMs). Any missile larger than the SS–19 (throw-weight: about 8,000 lbs.) will count as an MLBM; any missile larger than the largest ICBM currently in the Russian inventory (the SS–18, with a throw-weight of roughly 16,000 lbs.) will be prohibited. The debate over the substitution of SS–19s for SS–11s after the signing of SALT I gives evidence of the sophistication of U.S. monitoring techniques. The dispute involved whether the placement of SS–19s into SS–11s silos violated SALT I provisions covering the substitution of "heavy" missiles for "light" ones. The consensus after that debate was that the Soviet substitution did not violate the SALT I treaty, but was inconsistent with one of our unilateral statements. But the point is that discussion revealed the United States knew precisely how much larger the SS–19 was compared to the SS–11 missile.[27]

(4) Rapid Reload Systems.—Finally the treaty reportedly will also prohibit rapid reload systems. The purpose of this provision is to protect against the possibility that the Soviets would stockpile extra ICBMs and fit them into existing launchers once a first salvo had been fired. Loading a 100,000-plus pound missile into a silo is a bit more complicated than putting a bullet into a rifle. The elaborate equipment around existing silos necessary for such a system—along with storage sites for extra missiles—would certainly be detectable through satellites.[28] The Soviets could scatter the equipment and extra missiles far from the silos and probably avoid detection, as long as they didn't test them. But then they wouldn't have a rapid reload capability anyway, so there wouldn't be a violation.

PART II: THE PROTOCOL

Besides the treaty lasting until 1985, SALT II contains a protocol lasting until 1980. There are verification issues in the protocol too.

(1) One part of the protocol would ban the deployment and testing of mobile ICBM launchers. The potential for violation of this section lies in the use of the existing Soviet SS–16 ICBM in a mobile mode; no other mobile ICBM is expected before the protocol expires. There is no question of our ability to detect that the Soviets have deployed a mobile land-based system.[29] However, under certain deceptive basing schemes, such as "multiple aim point" options (involving the construction of hundreds or even thousands of shelters, a small portion of which contain missiles—in other words, a strategic shell game) verifying the number of missiles deployed would be very difficult.

(2) The proposed protocol also bans flight testing and deployment of cruise missiles capable of ranges in excess of 2,500 kms (1550 miles). Since ranges could not be determined accurately, in the event of conscious deception, such a ban is not verifiable.

However, flight testing of American long-range cruise missiles has only recently started and their Initial Operational Capability (deployment in militarily significant numbers) is not scheduled until 1981,[30] after the protocol expires. The Soviets are unlikely to be able to test—let alone deploy—a cruise missile capable of a range in excess of 2,500 kms (1,550 miles) until after the protocol expires. Current Soviet cruise missiles are very primitive technologically. The United States has advanced compact warhead, computer guidance, and turbofan engine technologies that make possible small but very long-range cruise missiles. The Soviets are years behind in all of these fields.[31]

For the same reason, the protocol ban on the deployment of sea- or land-based cruise missiles of strategic range has largely voided the problem of verification. There are, however, some existing Soviet sea-launched cruise missiles that exceed the 600-km (370 mile) limit by up to 250 kms (155 miles).[32] Fortunately, because of their primitive design, they are very large.[33] Since any attempt to begin new deployments is observable, and since the Soviets have no capability to deploy new, long-range, ground-launched and sea-launched cruise missiles until after 1980, there is virtually no potential for violation.

(3) Finally, the protocol is expected to include some limitations on the flight testing and deployment of new types of ballistic missiles. While a verification assessment would depend on the details of such limitations, there is reason for optimism. As previously discussed, new ballistic missiles can be detected at the test stage and added deployments of new missiles would be one of the easiest treaty violations to detect.

The Potential for Violation.—The following chart summarizes the potential for individual violations of a SALT II agreement.

FIGURE 2.—*Verification Capability*

(Potential for undetected activity)

I. Treaty:
(1) Ceiling on Total Launcher Numbers:
a. Deploying new strategic systems, nil.
b. Deploying more of existing systems:
i. SLBMs, nil.
ii. Heavy Bombers, nil.
iii. ICBMs, +100 maximum.
c. Converting non-strategic systems:
i. Backfire assurances:
(a) Production, deployment, nil.
(b) Tankers, minor.
(c) Range, payload, sizable.
ii. SS–20 upgrade, minor.
iii. Bomber Variants, a dozen (if Sov. position). nil (if U.S. position).
(2) Limits on MIRVed Missiles Plus Bombers: Armed with Cruise Missiles
a. Constructing new MIRVed missile silos or subs, nil.#
# Other than 1 –b–iii above.
b. Substituting MIRVed missiles for un-MIRVed ones in existing silos or subs, nil.
c. Deploying MIRVed payloads onto un-MIRVed missiles in existing silos or subs, nil w/present systems potentially large with future systems.
d. Placing strategic cruise missiles on additional bombers, none in near future minor in early 1980s.
(3) Upgrading non-MLBMs to MLBMs, nil.
(4) Rapid reload systems, nil.
II. Protocol:
(1) Mobile ICBMs, nil.
(2) Cruise Missiles:
a. Test/deploy 2,500 km + range, nil during protocol.
b. Deploy strategic GLCMs or SLCMs, nil during protocol.
(3) Ballistic missile developments, probably nil, but depends on specifics.

The table shows that our ability to detect potential violations falls into three broad levels of confidence.

First, there are the numerous areas where our verification capabilities are excellent and the possibility of cheating remote. These include all the areas where major violations could upset the balance of terror. For example:

deployment of new strategic systems;

additions of even small numbers of bombers and SLBMs;

ICBM deployments on a moderate or large scale;

an upgraded SS–20 system unless never tested;

MIRVed missile and ALCMed bomber deployments, in the absence of radically different systems;

upgrading smaller missiles into modern large missiles;

the existence of rapid reload systems.

Second, there are several areas where our verification capabilities are weak today. In all these cases the problem is not militarily significant, as explained later in the text. These include:

small scale ICBM deployments;

monitoring the operational characteristics of the Backfire;

verifying that an untested SS–20 upgrade system does not exist;

verifying the status of a limited number of bomber variants, (under the Soviet position).

Third, there are a few areas—involving cruise missiles and transferable MIRV payloads—where we may face very serious verification problems in the next generation of SALT negotiations.

Soviet cruise missiles today are primitive. But with future systems it will be virtually impossible to determine whether the range of a cruise missile is strategic. Nor will we be able to determine whether its payload is nuclear or conventional. Furthermore, counting cruise missiles will be most difficult.

At present Soviet MIRV payloads are so different from their single warhead payloads that the MIRVs cannot be backfitted on the old missiles. Should the Soviets eventually develop a transferable warhead, we would face a very serious verification problem.

The issues of strategic cruise missiles and

Footnotes at end of article.

transferable payloads are not problems of any magnitude for SALT II. But down the road, if we seek a SALT III pact in the mid-1980s, the verification problems are certain to be much larger.

Conservative Nature of Assessment.—United States detection capabilities as shown in figure 2 are almost certainly underestimated. That is because this assessment considers only the intelligence collection methods that can be firmly relied upon, such as satellite photography.

There is, in fact, a great deal of other information that the intelligence community receives but which cannot be guaranteed in advance. For example, U.S. monitoring of internal Soviet communications and signals might pick up evidence of activity that was not detectable by satellite photography. At the extreme, an undetected violation might be revealed by a defector, whose defecton could never be assumed in advance. Data obtained under fortuitous circumstances—while not predictable—would undoubtedly reduce even further the potential for violations.[34]

The potential for violations is also overstated because inordinately skillful cheating by the USSR has been assumed. An adroit effort to cheat must be assumed in assessing our verification capabilities. It is not necesarily a realistic asumption because even the best-laid plans can go awry.

Take, for example, the one known case where the Soviet Union undertook a significant, covert strategic buildup. That was in Cuba before the missile crisis of October 1962. Although the Soviets almost surely wanted to hide the imposition of offensive missiles,[35] they were quite inept at doing so. On several occasions, standard operational procedures and routines—necessary for the functioning of any large organization and notoriously inflexible—betrayed Russian plans.[36]

For cheating to be successful, everything must go perfectly. But in the real world, unforeseen events upset plans. To be sure, we cannot count on any particular plot going awry, but the Soviets would be foolish to count on that not happening.

We have already had a heated debate with respect to Soviet violations of the SALT I agreement. That experience has raised a number of questions about Soviet compliance with existing treaties, but not about our ability to monitor what the Soviets are doing. Indeed, the basis for allegations of violations is the detailed data we have gathered on Soviet actions since SALT I was signed. The debate has centered on what Soviet actions mean, not on what the Soviet activities have been. If the Russians had engaged in illegal behavior that had gone unnoticed, this would obviously raise doubts about our detection capabilities. But no one has even hinted that this might be the case.

The Likelihood of Violations.—Thus far, only the potential for undetected violations has been examined. An equally important issue is whether the Soviets would attempt to cheat if they felt they could get away with it. While the potential for evasion is small, the likelihood of violations seems even more remote.

First, the SALT II framework now under discussion provides enormous leeway for both sides to pursue strategic programs without cheating. While the Soviets without SALT II would be able to build substantially larger forces, they can still do much under treaty terms. They can junk existing missiles and replace them with more reliable and more accurate models. They can greatly increase their inventories of multiple warhead missiles. They can pump more effort into areas not prohibited by SALT II that could be very threatening, such as antisubmarine warfare.

Second, even if the Russians became disgruntled with SALT II after signing, they would still not necessarily cheat. Several alternatives might seem at least as attractive, if not more so: requesting a renegotiation of a provision; seeking to modify the terms in SALT III negotiations; reneging on a part of the treaty (or even, at the extreme, withdrawing from the treaty); partially modifying their programs to comply; and so on.

Third, there is the question of what benefits accrue to the Soviet Union from cheating. There could be no political gain unless the Soviets made public their transgressions. No one is scared by weapons they don't know exist. Yet if the Soviets did make public the fact of their cheating there would be an enormous political backlash. The U.S. government, for example, would find itself conducting an unprecedented arms buildup in response to an incensed American public.

The dangers from Soviet violations of SALT II arise if there is a significant military advantage to be gained by cheating—if the Russians could cheat for a few years and then unveil a devastating superiority that would force our immediate surrender. But that is impossible. The United States under SALT II will have a very formidable strategic arsenal: almost 2,000 launchers and roughly 10,000 independently targetable warheads.—To upset the balance of terror would require very large numbers that would be impossible for the Soviets to acquire without cheating on so massive and pervasive a scale as to be detectable with certainty.

It helps to consider a plausible "worst case" where the Soviets could actually cheat and evade detection.

The Soviets might add up to 100 ICBM launchers clandestinely, but this would be less than a 5 percent increase in their launcher force and would provide no discernible edge. In fact, the Soviets now have over 2,440 missiles and bombers.[37] Under SALT II this would drop to at most 2,250—a cut of about 200. So cheating would be more than outweighed by the reduction in forces required by the treaty.

The Soviets might be able to divert some Backfires to strategic missions in case of war. This would add marginally to their second-strike forces. But it would diminish their most threatening naval anti-ship capability and would undercut their capability against bordering enemies [38]—hardly a fair trade.

The Soviets may have an untested SS–20 upgrade potential. Even if this potential were realized, the resulting SS–16 missiles are the least accurate and powerful ICBM of the current generation. Diversion of SS–20s to intercontinental attack missions would substantially cut the threat to Europe and China.[39]

The Soviets might convert a handful of naval aircraft variants into bombers. Again, this would marginally increase their strategic retaliatory strength while diminishing the threat to our Navy.

The Soviets might develop an untested, non-rapid reload capability. The benefit from having a launcher reloaded at the very best 12 hours after a first firing [40] is questionable; the silo could be destroyed in the interim and by that point the missile is likely to be no more than a "rubble-bouncer."

In other words, even if the Soviets cheat in every single way that might evade detection, they will add little to their strategic power, and may actually reduce their military strength elsewhere.

In sum, the ability to verify compliance with the accord is essential to a successful SALT agreement. But upon investigation, we find that the "problems" of verification are more imagined than real.

Our multiple and duplicative methods of detection are sufficient to detect any cheating on a scale sufficient to threaten us militarily.

Small violations of the treaty could very possibly be made by the Russians without detection—but a handful of additional missiles or bombers add too little to their arsenal to be militarily significant.

In the political realm, the Russians stand to lose more than they would gain by violating the most important single treaty they would have with a foreign power.

Where verification problems could become critical is in the future. Technological advances—particularly with respect to cruise missiles and transferable MIRV payloads—will stretch our monitoring capabilities once the protocol and treaty expire. Dealing with these systems under a SALT III agreement may well require a substantial lowering of our standards of confidence for detecting violations. At that point, a renewed examination of verification will be amply justified.

[24] Capt. Walter Locke, *H.R. 8390* Hearings, p. 59.

[25] William Clements, while Deputy Secretary of Defense, stated that U.S. cruise missile technology was "ten years ahead of the Russians" and that U.S. cruise missiles under development are "two or three generations" ahead of what the Russians have. See DoD Transcript of News Conference, San Diego, Calif., June 7, 1976, p. 2.

This year Harold Brown, *op. cit.*, p. 51 indicated that the Soviets could *develop* an ALCM similar to ours "within the next five-to-ten years." Thus, it should be several years before these systems are *deployed* in even small numbers.

[26] The *total* Soviet heavy bomber force is only projected to be about 80 aircraft by 1965 (see CIA testimony in *Allocation of Resources in the Soviet Union and China—1976*, Hearings before the Joint Economic Subcommittee on Priorities and Economy in Government, 94 Cong. 2 Sess. (1976), p. 72), and only a portion of these would be likely to carry long-range ALCMs. See also fn. 25.

[27] See, e.g., testimony of James P. Wade, *Overall National Security Programs and Related Budget Requirements*, Hearings before the House Armed Services Committee, 94 Cong. 1 Sess. (1975), p. 270.

[28] At least, if it had undergone testing or were deployed reasonably close to missile silos (if not, the system would hardly provide "rapid" reload).

[29] Lodal, *op. cit.*, pp. 54–55.

[30] Harold Brown, *op. cit.*, p. 119.

[31] See fn. 25 above.

[32] Gen. George S. Brown (1978), *op. cit.*, p. 33. Shaddock missiles, with a reported range of about 550 miles, were deployed on approximately 30 Echo II class Soviet submarines. (See John W. Finney, "Cruise Missiles Provoke Conflict Within the Military As Well As With Soviet," *New York Times*, Jan. 21, 1976, p. 26.)

[33] On the large, slow and vulnerable nature of these designs see, e.g., R. T. Pretty and D. H. R. Archer (eds.) *Jane's Weapon Systems 1974-5* (New York: Franklin Watts, 1974), pp. 52–56 and 119–120.

[34] Colby, *op. cit.*, p. 122.

[35] Graham T. Allison, *Essence of Decision: Explaining the Cuban Missile Crisis* (Boston: Little, Brown and Co., 1971), p. 107.

[36] For example, medium- and intermediate-range ballistic missile (MRBM and IRBM) sites constructed in Cuba were built "according to the book" and thus looked exactly like MRBM and IRBM sites in the Soviet Union. The latter consisted of four launch pads, grouped in two pairs, 750 feet apart, served by a central control bunker. Each launch pad had a launch ring and flame deflector at the center. A fenced, 114-foot-by-60-foot nuclear warhead storage bunker was positioned at the side. It was the established Soviet four-slash "signature" of excavations for concrete revetment and associated equipment that alerted American intelligence agents to the IRBM deployments.

By the time the U.S. quarantine was imposed, which was ten days after U–2s had confirmed the existence of the missiles, the USSR had managed to set up just six MRBM sites with a total of 24 launchers (and 42 missiles) and had under construction three IRBM sites with a total of 12 launchers (no IRBMs reached Cuban soil.) This total was all that was accomplished against detection techniques that were downright primitive when compared to today's capabalities. Moreover, since a U–2 had been captured in 1960, the Soviets undoubtedly knew a great deal more about our detection capabilities then than they do today. Yet, they were not able to design a complete operation to thwart them.

See Allison, *op. cit.*, Chapter 4.

[37] Harold Brown, *op. cit.*, p. 47.

[38] E.g., on the naval threat posed by the Backfire, see Statement of Adm. James L. Holloway concerning the FY 1979 Military Posture and Navy Budget to the House Armed Services Committee, 1978, p. 67.

More generally, the Soviet has an aging and declining force of Badger medium bombers (305, according to the International Institute for Strategic Studies) and Badgers assigned to naval forces (280, according to the IISS.) The Badger was first deployed in 1955 and is becoming obsolete. The void caused by the departure of these and similar aircraft will eventually need filling, and Backfire is ideally suited for filling it.

[39] IISS figures show 620 aging intermediate- and medium-range ballistic missiles now in the Soviet inventory; these were first deployed around 1960 and are about due for replacement. Without SS–20s, the expected decline in non-intercontinental ballistic missiles would not be offset.

[40] See information supplied for the record by Harold Brown, *H.R. 8390*. Hearings, p. 208.●

## RESOLUTIONS OF THE KENTUCKY GENERAL ASSEMBLY

● Mr. FORD. Mr. President, the Kentucky General Assembly recently concluded its legislative session. The State legislature adopted several resolutions that were directed to be transmitted to the Congress.

On behalf of Senator HUDDLESTON and myself, I ask that these resolutions be printed in the RECORD.

The resolutions follow:

HOUSE RESOLUTION No. 12

Whereas, the U.S. Environmental Protection Agency has taken steps which could result in a prohibition against the use of maleic hydrazide or MH, an active ingredient used for tobacco sucker control; and

Whereas, the cancellation of MH would place in jeopardy a dependable supply of high quality tobacco to tobacco products companies; and

Whereas, the cost of labor, even if available, to hand sucker tobacco would be prohibitive at present crop values; and

Whereas, the loss to Kentucky tobacco farmers could be as much as $76 million annually without MH; and

Whereas, the cancellation of MH would generally disrupt the tobacco industry in Kentucky and the country;

Now, therefore,

*Be it resolved by the House of Representatives of the General Assembly of the Commonwealth of Kentucky:*

SECTION 1. That the members of Kentucky's Congressional delegation work for the continued registration of MH.

SECTION 2. That the members of the delegation inform the Environmental Protection Agency what effect cancellation of MH would have on the economy and a very important crop and industry in Kentucky.

SECTION 3. That a copy of this resolution be sent to each member of Kentucky's Congressional delegation and the Environmental Protection Agency.

HOUSE RESOLUTION No. 14

Whereas, the nation has become increasingly dependent on imported oil, and now imports about one-half of the oil it consumes; and

Whereas, gasohol, a mixture of alcohol from domestic grain and gasoline, can be used as a substitute for pure gasoline and thereby can lessen our need for imported oil; and

Whereas, Kentucky grain production has doubled since 1969, and grain has become a mainstay in the agricultural economy of the state; and

Whereas, the United States Secretary of Agriculture has requested four pilot projects to produce and test gasohol;

Now, therefore,

*Be it resolved by the House of Representatives of the General Assembly of the Commonwealth of Kentucky:*

SECTION 1. That the members of the House of Representatives support Governor Carroll's efforts to obtain a pilot gasohol project for Kentucky.

SEC. 2. That a copy of this resolution be sent to the Governor of the Commonwealth, the President of the United States, the U.S. Secretary of Agriculture, and members of Kentucky Congressional delegation.

HOUSE RESOLUTION No. 21

Whereas, approximately one-third of the world's population is undernourished; and

Whereas, the health and welfare of our nation depend to a large degree on the American farmer; and

Whereas, the net farm income in Kentucky in 1976 was $4,200 per farm and the poverty level set by the federal government for a farm family of four persons is $4,980 in net annual income, meaning that many Kentucky farm families are living below a poverty level of existence; and

Whereas, the ratio of prices received by the American farmer to the prices he pays is about ninety percent, making farming unprofitable; and

Whereas, American farming is a high-risk occupation because of volatile fluctuations in the market; and

Whereas, farming in Kentucky accounts for an annual gross income of about $2,000-000,000; and

Whereas, it is imperative for the prosperity, and ultimately the survival, of the nation that the American farm economy be healthy;

Now, therefore,

*Be it resolved by the House of Representatives of the General Assembly of the Commonwealth of Kentucky:*

SECTION 1. That the "American Farm Movement" be supported wholeheartedly in its efforts to strengthen the American farm economy.

SEC. 2. That a copy of this resolution be sent to the President, to Kentucky's Congressional delegation, to the Secretary of the U.S. Department of Agriculture, and to the Kentucky Commissioner of Agriculture.

SENATE RESOLUTION No. 52

Whereas, during the past 5 years there have been 85 floods in Kentucky causing actual damages amounting to $181,848,000 according to the U.S. Army Corps of Engineers; and

Whereas, it is estimated that the floods of April 4–7, 1977 caused property damages well

over $100,000,000 to 15 southeastern Kentucky counties and took the lives of 10 persons; and

Whereas, it is estimated that the floods of April 4–7, 1977 injured 2,255 persons, caused property losses to 9,715 families, and destroyed or severely damaged 4,507 homes and businesses; and

Whereas, the large number of floods, the actual damages caused by the floods, and the sociological damages to persons requiring rehabilitation or relocation evidence the necessity for immediate design and construction of flood control measures to prevent or reduce future damages from floods in the Commonwealth; and

Whereas, the benefit/cost ratio can be arbitrarily applied so that costs exceed benefits and deny construction of flood control measures for counties of the Commonwealth subject to flooding;

Now, therefore,

*Be it resolved by the Senate of the General Assembly of the Commonwealth of Kentucky, the House of Representatives concurring therein:*

SECTION 1. That the United States Congress is hereby requested to enact legislation prohibiting the U.S. Army Corps of Engineers, when determining the necessity for flood control measures, from applying the benefit/cost ratio to flood control projects in the Commonwealth of Kentucky.

SEC. 2. That the Clerk be directed to send copies of this resolution to the President of the Senate, Speaker of the House, and members of the Kentucky delegation of the United States Congress.

---

HOUSE RESOLUTION No. 128

Whereas, the Republic of China was a founding member of the United Nations and has always been a law abiding member of the community of nations; and

Whereas, the Republic of China is an important trading partner of the United States; and

Whereas, President Jimmy Carter has repeatedly stated that he will pursue an open and just foreign policy, base on morality; and

Whereas, President Jimmy Carter has also repeatedly stated that he will not compromise the freedom and security of the people of the Republic of China and will stand by the U.S. commitments to that country;

Now, therefore,

*Be it resolved by the House of Representatives of the General Assembly of the Commonwealth of Kentucky:*

SECTION 1. That this Body strongly endorses the positions of President Jimmy Carter as stated above.

SEC. 2. That the Government of the United States is hereby strongly urged to maintain its diplomatic relations and the Mutual Defense Treaty with the Republic of China.

SEC. 3. That the Clerk of the House of Representatives is hereby authorized and directed to transmit an appropriate copy of this resolution to the President and the Secretary of State of the United States of America, the members of Congress from the state of Kentucky and the Ambassador of the Republic of China to the United States.

---

HOUSE RESOLUTION No. 142

Whereas, sodium nitrate is used in the preservation of red meat to keep it free of botulism and safe for human consumption; and

Whereas, the U.S. Food and Drug Administration has threatened to ban the use of sodium nitrate and, further, this proposed ban has been endorsed by Assistant Secretary of Agriculture Carol Foreman; and

Whereas, such a ban would sharply increase the cost of fresh meat to consumers and would thereby be likely to reduce consumption of fresh meat, which is important to human health and nutrition; and

Whereas, the agricultural economy of Kentucky depends on the production and sale of hogs, sheep and cattle as well as the production and sale of grain used in raising cattle, and such economy would suffer if a ban on sodium nitrate were imposed; and

Whereas, test results indicate that a one hundred fifty-four-pound man would have to consume the equivalent of 46,000 pounds of bacon daily in order to show any harmful effects from sodium nitrate consumption;

Now, therefore,

*Be it resolved by the House of Representatives of the General Assembly of the Commonwealth of Kentucky:*

SECTION 1. That the House of Representatives does hereby urge members of Congress, the President and the Secretary of Agriculture to oppose any ban on the use of sodium nitrate as a fresh meat preservative.

SEC. 2. That the House of Representatives does further call upon the President to replace immediately Carol Foreman as Assistant Secretary of Agriculture with someone who is more in sympathy with the needs of Kentucky's and the nation's farmers.

SEC. 3. That the Clerk is hereby directed to forward copies of this resolution to the President, the U.S. Secretary of Agriculture and each member of Kentucky's congressional delegation.

---

SENATE RESOLUTION No. 72

Whereas, sodium nitrate is used in the preservation of red meat to keep it free of botulism and safe for human consumption; and

Whereas, the U.S. Food and Drug Administration has threatened to ban the use of sodium nitrate and, further, this proposed ban has been endorsed by Assistant Secretary of Agriculture Carol Foreman; and

Whereas, such a ban would sharply increase the cost of fresh meat to consumers and would thereby be likely to reduce consumption of fresh meat, which is important to human health and nutrition; and

Whereas, the agricultural economy of Kentucky depends on the production and sale of hogs, sheep and cattle as well as the production and sale of grain used in raising cattle, and such economy would suffer if a ban on sodium nitrate were imposed; and

Whereas, test results indicate that a one hundred fifty-four-pound man would have to consume the equivalent of 46,000 pounds of bacon daily in order to show any harmful effects from sodium nitrate consumption;

Now, therefore,

*Be it resolved in the Senate of the General Assembly of the Commonwealth of Kentucky:*

SECTION 1. That the Senate does hereby urge members of Congress, the President and the Secretary of Agriculture to oppose any ban on the use of sodium nitrate as a fresh meat preservative.

SEC. 2. That the Senate does further call upon the President to replace immediately Carol Foreman as Assistant Secretary of Agriculture with someone who is more in sympathy with the needs of Kentucky's and the nation's farmers.

SEC. 3. That the Clerk is hereby directed to forward copies of this resolution to the President, the U.S. Secretary of Agriculture and each member of Kentucky's congressional delegation.

---

HOUSE RESOLUTION No. 7

*Be it resolved by the House of Representatives of the General Assembly of the Commonwealth of Kentucky, the Senate concurring therein:*

Section 1. That the Congress of the United States be, and hereby is, requested to call a convention for the sole purpose of proposing the following article as an amendment to the Constitution of the United States:

ARTICLE

SECTION 1. With respect to the right to life, the word person as used in this article and in the Fifth and Fourteenth Articles of Amendment to this Constitution applies to all human beings irrespective of age, health, function, or condition of dependency, including their unborn offspring at every stage of their biological development.

SEC. 2. No unborn person shall be deprived of life by any person, provided, however, that nothing in this article shall prohibit a law permitting only those medical procedures required to prevent the death of the mother.

SEC. 3. The Congress and the several states shall have the power to enforce this article by appropriate legislation.

Section 2. That this application by the General Assembly of the Commonwealth of Kentucky constitutes a continuing application, in accordance with Article V of the Constitution of the United States, until at least two-thirds of the legislatures of the several states have made similar applications.

Section 3. That a duly attested copy of this resolution be immediately transmitted by the Clerk of the House of Representatives to the Secretary of the Senate of the United States, the Clerk of the House of Representatives, to each member of Congress from this Commonwealth, and to each house of each state legislature in the United States.

---

## NEW DIPLOMATIC ALTERNATIVES NEEDED FOR CYPRUS

● Mr. KENNEDY. Mr. President, a great deal has been said in recent days about the President's evolving policy toward the Eastern Mediterranean area—and especially about his key recommendation that Congress lift the arms embargo on Turkey.

I have carefully reviewed the administration's proposals. And as a Member of the Senate, who has closely followed developments in the Eastern Mediterranean, I share the administration's concern over the festering problems in that part of the world. I also recognize the many complex issues at stake. And I fully appreciate the urgent need to resolve these issues and to revitalize our relations with the countries of the area.

I shall not belabor the record at this time with any lengthy comment on the administration's recommendations. But as Congress begins its consideration of these recommendations—especially the appeal to lift the arms embargo on Turkey—I do want to comment on the Cyprus priority in pursuing our objectives in the Eastern Mediterranean.

Whether American diplomats like it or not, real progress toward an honorable and just resolution of the Cyprus problem is crucial in repairing and revitalizing our traditionally good relations with the people and Governments of both Turkey and Greece. And real progress on the Cyprus problem is also crucial in bolstering and stabilizing our security interests in the Eastern Mediterranean. It is illusory to assume that these relations can be fully repaired and our interests fully stabilized without real progress on Cyprus.

Cyprus is the issue at hand, and not the arms embargo on Turkey.

Mr. President, over the next few weeks, as Congress considers the administration's recommendations, there is time enough for our own country and others to give the Cyprus problem the priority it needs and deserves. There is time enough for all sides on this troubling issue to show some good faith. There is time enough for some real progress in resolving the problems that divide this troubled island.

But what will give new priority to Cyprus? What is good faith? And what is real progress?

I submit that the answers to these questions do not lie in the expression of new optimism. They do not lie in the rhetoric of new promises. And they do not lie in good intentions and the routine exchange of new proposals for settlement. Such answers merely repeat the tired patterns and failures of the past—and give false hope and little comfort to a beleaguered people, both Cypriot-Greeks and Cypriot-Turks; for their plight remains unchanged, and their country is still torn apart.

But the answers may lie in new initiatives, to promote concrete actions in the field.

I firmly believe that the coming weeks offer an unusually good opportunity to promote real progress on Cyprus. The Government of Cyprus and the Cypriot Turkish administration seem prepared for serious negotiations. Both Greece and Turkey have responsible leaders, with a longstanding and serious interest in contributing to the peaceful development of the eastern Mediterranean. And their readiness to take risks for peace was clearly demonstrated in the recent Geneva discussions between Prime Minister Caramanlis of Greece and Prime Minister Ecevit of Turkey.

And so today I appeal to the President to seize the opportunity at hand. I appeal to the President for a major diplomatic initiative in behalf of the people of Cyprus—an initiative which will bring real progress toward restoring the full independence, sovereignty and territorial integrity of the island Republic.

Such an initiative should be carried out in full cooperation with the United Nations, under whose auspices intercommunal talks have been held in the past. And I want to pay special tribute to Secretary General Kurt Waldheim, who will visit Cyprus later this week, for his tireless efforts in behalf of the Cypriot people and peaceful development in the Eastern Mediterranean.

The immediate objective of these new diplomatic initiatives should be an early statement of negotiating principles agreed to by the parties concerned—concrete agreements, in principle, which would lay the basis and define the perimeter of an overall settlement on the future of Cyprus.

The statement of principles should cover four areas of concern to the people of Cyprus and those who share their goal of justice and peace:

First, a concrete argeement, in principle, over territorial issues, which fully recognize the ethnic composition of the Cypriot people;

Second, a concrete agreement, in principle, over constitutional issues—especially the national responsibilities of a strong Federal Government;

Third, a concrete agreement, in principle, over the Cypriot people's right of free movement, freedom of settlement and right of ownership; and

Fourth, a concrete agreement, in principle, on new arrangements, under international auspices, for the future security of a unified Cyprus and the people who live there.

Mr. President, 1978 must finally bring a new priority to the Cyprus problem in American diplomacy, and a new determination by our Government to work with others in facilitating real progress in normalizing the life of the Cypriot people.

The imperative for American diplomacy has rarely been more clear, and, if we fail to act, so too is the threat of further erosions in our relations and interests in the eastern Mediterranean.

We must finally put peace ahead of arms in this conflict-ridden part of the world.●

## PROPOSED ARMS SALES

● Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I submit for the RECORD the notification I have just received.

The notification follows:

DEFENSE SECURITY ASSISTANCE AGENCY,
*Washington, D.C., April 13, 1978.*

In reply refer to: I–7877/77ct.

Hon. JOHN J. SPARKMAN,
*Chairman, Committee on Foreign Relations, U.S. Senate,*
*Washington, D.C.*

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78–30, concerning the Department of the Navy's proposed Letter of Offer to Iran for other than major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $45.6 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

ERICH F. VON MARBOD,
*Acting Director.*

TRANSMITTAL NO. 78–30

(Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act)

(i) Prospective Purchaser: Iran.

(ii) Total Estimated Value:

| | Millions |
|---|---|
| Major Defense Equipment* | $ 0.0 |
| Other | 45.6 |
| Total | 45.6 |

(iii) Description of Articles or Services Offered: Provides capitalization of supply support arrangement to support the Iranian F–14/PHOENIX weapon system.

(iv) Military Department: Navy.

(v) Sales Commission, Fees, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: April 13, 1978.

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).●

## PRELIMINARY NOTIFICATION PROPOSED ARMS SALES

● Mr. SPARKMAN. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million, or in the case of major defense equipment as defined in the act, those in excess of $7 million. Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the RECORD in accordance with previous practice.

I wish to inform Members of the Senate that four such notifications were received on April 12, 1978.

Interested Senators may inquire as to the details of these preliminary notifications at the offices of the Committee on Foreign Relations, room S–116 in the Capitol.

The four notifications follow:

DEFENSE SECURITY ASSISTANCE AGENCY,
*Washington, D.C., April 12, 1978.*

In reply refer to: I–13430/77ct

Mr. WILLIAM RICHARDSON,
*Professional Staff Member, Subcommittee on Foreign Assistance, Committee on Foreign Relations, U.S. Senate, Washington, D.C.*

DEAR MR. RICHARDSON: By letter dated 18 February 1976, the Director, Defense Security Assistance Agency, indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a Northeast Asian country tentatively estimated to cost in excess of $25 million.

Sincerely,

ERICH F. VON MARBOD,
*Acting Director.*

---

DEFENSE SECURITY ASSISTANCE AGENCY,
*Washington, D.C., April 12, 1978.*

In reply refer to: I–13428/77ct

Mr. WILLIAM RICHARDSON,
*Professional Staff Member, Subcommittee on Foreign Assistance Committee on Foreign Relations, U.S. Senate, Washington, D.C.*

DEAR MR. RICHARDSON: By letter dated 18 February 1976, the Director, Defense Se-

curity Assistance Agency, indicated that you would be advised of possible transmittals to Congress of information as required by Section 36(b) of the Arms Export Control Act. At the instruction of the Department of State, I wish to provide the following advance notification.

The Department of State is considering an offer to a Northeast Asian country tentatively estimated to cost in excess of $25 million.

Sincerely,

ERICH F. VON MARBOD,
*Acting Director.*

---

DEFENSE SECURITY ASSISTANCE AGENCY,
*Washington, D.C., April 12, 1978.*

In reply refer to:
I–13480/77ct
Mr. WILLIAM RICHARDSON,

Sincerely,

ERICH F. VON MARBOD,
*Acting Director.*●

## THE CONSUMER AND AGRICULTURE PROTECTION ACT OF 1978

● Mr. SASSER. Mr. President, today I am declaring my support for S. 2626, the Consumer and Agriculture Protection Act of 1978.

I have joined my distinguished colleagues, Senators BUMPERS and HODGES, as a cosponsor of this important bill. I believe that S. 2626 can provide the long-range solution to the basic problems that confront the farmer, while at the same time protecting the interests of the consumer.

There is no question that a great American institution inherent in the social and economic fabric of our Nation—the family farm—is in trouble. There is no question but that Congress must seek a solution to the problems facing American farmers. There is no question that the inability of farmers to make a fair return on their investment is the bedrock problem.

The farmer has too long been the victim of inflationary pressures without recourse to the marketplace. The cost of production has increased while the farmer's return on investment has decreased. The bottom line on the farmer's ledger is written in red; he is losing money.

The agricultural movement of the past months marks a reawakening of the rural economy. The American farmer understands the importance of his position, and he has taken steps to shape his own destiny.

There has never been representation in Washington by the farmer like that we have seen this year. I welcome that representation, and I appreciate the opportunity to better understand the problems of Tennessee farmers as Congress deliberates on farm policy decisions.

Mr. President, this bill will provide for grassroots participation in the decisions regarding farm policy. It will also allow the agriculture economy to operate within the free market in much the same manner as other sectors of the economy do. Basically, S. 2626 will:

Create an Agricultural Board of Governors with the authority and responsibility to advise Congress and the administration on farm policy and problems. The Board will be composed of growers and producers and will be independent of the Department of Agriculture.

Guarantee a cost of production price for commodities. The factors which will be considered in setting the cost of production include the costs of labor, management, machinery, and use of land. Commodity loan levels will reflect the entire cost of production based on these factors.

It is imperative that the Senate begin work now to devise a farm program for next year and for subsequent years. As the Agriculture Committee considers its legislative options, I hope that it will include the provisions of the Consumer and Agriculture Protection Act of 1978.

The agriculture movement in Tennessee has endorsed the concepts embodied in S. 2626. I have studied the situation very carefully, and I agree that the proposals in the bill are in the best interests of farmers and consumers alike. I urge my colleagues to give serious consideration to the approach, and I hope that Congress will act soon in an effort to protect the American family farm and the viability of the American rural economy.●

## SENATE CONCURRENT RESOLUTION 79 DISAPPROVING PROPOSED FIREARMS REGULATIONS

● Mr. HEINZ. Mr. President, recently, the Bureau of Alcohol, Tobacco, and Firearms proposed regulations to require a centralized reporting system for all firearms sales. In effect, BATF proposes a national firearm registration system which it waves, like a red flag, in the face of Congress.

Despite this obvious disregard of the will of Congress, as expressed on numerous occasions, let us look at some of the other features of these regulations.

First, BATF claims it needs these regulations to improve the tracing of firearms used in crimes. Yet in 1975, an official of BATF told Congress that firearms could be traced in 27 minutes under the existing system. How much improvement does BATF want?—at what cost?

Cost is another issue. BATF estimates that it could establish this system with $5 million which it will redirect from other BATF programs. However, past estimates point to a cost of from 7 to 20 times that amount. How much is this system really going to cost? Where will the money come from? How will those programs which will be stripped of all this money suffer? Mr. President, does Congress no longer have a voice in how the money it appropriates will be spent?

Third, what about the paperwork burden? As a member of the Congressional Paperwork Reduction Group, this is a special concern of mine. Under the proposed system, 688,000 additional pieces of paper per year will be required of 172,000 Americans. This is outrageous.

Mr. President, Congress, with my support has repeatedly gone on record against any national gun registration scheme. I believe the Congress properly recognizes that the concepts we have seen are unworkable, ineffective, restrictive and invade a constitutionally protected freedom: the right to bear arms. Despite these facts, in clear violation of the will of Congress, BACT proposes just such a system. While there are undoubtedly differing points of view among my colleagues concerning Federal gun control, I believe all Senators should be united against the creation of an unjustified, wasteful, unneeded and unwanted bureaucuracy by executive fiat. It is Congress that must have the final say in such matters. BATF proposes an unauthorized expansion of both its powers and its bureaucracy. We must say no to both, or resign ourselves to yielding our responsibilities and the rights of our constituents to the whims of unelected agency administrators.

Therefore, I join with my distinguished colleagues in cosponsoring Senate Concurrent Resolution 79, disapproving the proposed firearms regulations, introduced by the distinguished Senator from Idaho. I ask that the text be printed at this point.

The text of Senate Concurrent Resolution 79 follows:

TEXT OF CONCURRENT RESOLUTION

Whereas, the Bureau of Alcohol, Tobacco and Firearms of the Department of the Treasury, has proposed regulations which, although called "quantity reporting of firearms disposition," would constitute centralized federal registration of firearms; and

Whereas, the Congress has specifically re-

jected federal gun registration and centralized recordkeeping in the 1968 Gun Control Act and on numerous occasions since then; and

Whereas, there has been no claim that the Bureau of Alcohol, Tobacco and Firearms has been unable to trace firearms successfully under the present tracing system; and

Whereas, the increased paperwork, computerization, and cost of manufacture would be overburdensome to the taxpayer and the consumer; and

Whereas, the proposed regulations are an attempt to accomplish by regulation what Congress has refused to authorize by legislation:

Therefore, be it

*Resolved by the United States Senate (House of Representatives concurring)*. That the Bureau of Alcohol, Tobacco and Firearms regulations proposed by the Department of the Treasury in the March 21, 1978, Federal Register, requiring the reporting of all firearms transactions in Federally licensed commerce to be centrally maintained by the federal government, the placing of additional serial numbers on all firearms, and the implementation of certain other proposed changes, exceed powers conferred on that Department by the Congress, and that the proposed regulations be withdrawn.●

## OTTUMWA—AN ALL-AMERICAN CITY

● Mr. CULVER. Mr. President, this past weekend I had the pleasure of visiting the city of Ottumwa in my State of Iowa. It gave me the opportunity to extend personally my congratulations to Mayor Paul Derby and other civic leaders. Just 2 days earlier Ottumwa had received an All-American City citation from the National Municipal League.

This award—1 of 12 given in the entire Nation—salutes the citizens of Ottumwa for "the imaginative and vigorous action" they have taken "to improve their community, thus demonstrating an example of effective citizenship to the Nation."

I believe that Ottumwa's experience shows what can be achieved when imaginative public officials work together with an active, involved, and dedicated citizenry for the betterment of their community.

Ottumwa's success story can be measured by the changes which have occurred in the last 4 years:

Unemployment has been cut from 13 to 4 percent through the attraction of 14 new industries to the area;

Property value has grown by almost 30 percent while tax rates have been reduced;

Three new schools have been constructed and one remodeled;

A new pedestrian mall, construction of modern water supply and sewage treatment facilities, flood protection, and neighborhood development programs offer additional signs of the city's progress. It is understandable that this statistical and physical evidence is prominently cited to demonstrate what Ottumwa has accomplished. The Iowans who live there know, however, that it is only symptomatic of less tangible but more important features—community spirit, determination to overcome adversity, imagination, and a confidence in the future—which characterize their city. In Ottumwa these qualities have become virtual mandatory residence requirements.

As a Senator from Iowa, I take great pride in the achievements of Mayor Derby, the members of the Ottumwa area task force, and the citizens of this fine city. I ask that an editorial from the Ottumwa Courier, "A Reason To Brag," be printed in the RECORD.

The editorial follows:

A REASON TO BRAG

(By Jim Crane)

If we Ottumwans brag a little today, maybe the rest of the world will overlook that fault.

We're officially an "All America City," in the view of the National Municipal League.

Imagine that.

Ottumwa, the city that has been beset by floods, unemployment and urban decay.

Ottumwa, the city where jobs got so scarce just a couple of years ago that an estimated 14 out of 100 people who wanted work couldn't find it.

Ottumwa, the city where municipal efforts to demolish old downtown buildings in hopes of attracting new enterprises caused a storm of controversy.

Now, it's an All America City.

Of course, even in the darkest hours good things continued to happen, mainly because the local residents never quit pulling themselves up by the bootstraps.

If an employer pulls out? Organize a local, volunteer group to build new industrial sites and entice new employers to locate here. A lot of new employers came.

If floods periodically damage the city? Pass local bond issues to pay for a system of protective levees. The result—the claim that the city is virtually flood-proof.

If the downtown is decaying? Devise an urban renewal plan and halt the decline. The result—an attractive mall, new retail stores and new hope.

Ottumwa is an All American City today because Ottumwans never gave up on their community, because they cared and tried and kept trying.

And now it's official—All American City.

It has a nice ring to it, doesn't it? ●

## ARSON

● Mr. DURKIN. Mr. President, arson is one of the most pressing, persistent criminal problems confronting our Nation today.

In recent years, according to estimates, approximately 1,000 lives and $1 billion in property were lost in fires that are deliberately set to collect on the insured value of real estate.

And the trend seems to increase unabated for one simple reason: It is difficult to apprehend suspects and convict them in court because often the evidence normally associated with the commission of this crime is destroyed in the blaze.

There is a common misconception that arson is confined to blighted buildings in decaying urban areas. But New Hampshire is experiencing an ever-increasing incidence of arson.

The New Hampshire State fire marshal's case load for arson investigations has doubled in the past 4 years, and that still does not provide a total picture of arson problems in the State, since larger communities like Manchester and Concord have the personnel in their own fire departments to investigate suspicious fires.

These fires in New Hampshire cause an undetermined amount of property damage and, more important, they subject our courageous firefighters to unnecessary hazards in an already dangerous line of work.

Because I recognize the need for effective legislation to combat this very serious crime, I am pleased to join in the antiarson efforts of some of my Senate colleagues.

I am cosponsoring Senate bill 1882, which gives local law enforcement agencies the needed funds to bring persons responsible for burning buildings to justice.

This bill would permit the Law Enforcement Assistance Administration (LEAA) to make grants to local programs to detect arson and prevent it from happening.

Another section of this same bill was included in the new U.S. Criminal Code when it was approved by the Senate earlier this year. It permits the FBI to classify arson as a major crime and include it in the uniform crime reporting system, making it easier to coordinate arson investigations.

In addition, I am pleased to say that the Senate Commerce Committee—of which I am a member—authorized funds yesterday for a National Fire Academy here in Washington.

The Fire Academy will not only provide valuable training and guidance for upper level fire department personnel throughout the United States, but it will also place special emphasis on skills related to the investigation of suspicious fires.

A former school campus was purchased by the Federal Government last year to house the academy, and committee authorization of $6 million for startup costs and $1.2 million for operating expenses represents the first step toward getting the work of the Academy underway.●

## BARRING THE BACKDOOR TO FEDERAL FIREARM REGISTRATION

● Mr. CHURCH. Mr. President, the Treasury Department has recently announced proposals which are a major step toward Federal firearm registration, despite the fact that the Congress has repeatedly rejected these very measures. Unable to go through the front door by the legislative process to achieve their ends, the forces for Federal gun control are now trying to sneak through the back door by Federal fiat. The Senate must stand firmly against such misguided maneuvering, and I have joined in cosponsoring Senate concurrent Resolution 79, which would reaffirm the Senate's long-held position on this matter.

The Treasury Department's primary proposal would require unique serial numbers on all firearms and extensive recordkeeping on every licensed firearm transaction, all of which would be transmitted to a centralized Federal computer. On April 3, I wrote to the Treasury

Department voicing my strenuous opposition:

I believe that this proposal in its entirety is beyond the authority granted to the Department by the Congress. The unique serial number which would be required on all firearms would enable the planned central computerized record-bank to have all of the information necessary for Federal firearm registration by owner. Such registration proposals have been consistently defeated by the Senate.

One of the basic arguments against registration has been the amount of paperwork it would require, and that amount of paperwork is exactly what these proposals would generate. In rejecting registration, the Senate has reaffirmed that this paperwork is not desirable. Furthermore, although the Department's press release contains typical bureaucratic assurances of savings under these proposals, there have been some estimates that the registration they signify could cost more than $100 million for handguns alone.

Mr. President, I have helped lead the fight against Federal gun controls throughout my years in the Senate. Federal gun controls are an anathema in my State of Idaho, and State and local programs where they have been tried are proven failures. The Senate has repeatedly recognized the folly of firearm registration and voted in support of my position. In fact, the Senate has specfically voted to defeat the very Federal firearm inventory that the Treasury now seeks to establish, and to deny the kind of licensing it would accomplish. As I wrote to the Treasury:

The basic fact of this matter is that these proposals are tantamount to the Federal licensing of gun ownership without the license. The licensees will be numbers instead of names. Numbers are the language of computers, and I do not trust yours to preserve the people's right to keep and bear arms.

I am hopeful that the Congress will pass the resolution I have cosponsored and thus send this message to the Treasury Department. The Congress has tightly shut the legislative front door to firearm registration, and the Treasury should understand that the regulatory backdoor is also barred. I must admit, however, that it may be necessary to nail these bars down by legislative amendment. The appropriations bill for the Treasury Department will provide the nail holes, and I, for one, will have my hammer in hand.●

## THE HUMPHREY-HAWKINS BILL: A TOOL THAT IS ONLY AS GOOD AS THE PEOPLE WHO USE IT

● Mrs. HUMPHREY. Mr. President, after years of hearings, negotiations, revisions, condemnation, praise, attack, defense, torrents of rhetoric, cries of alarm, demands for action, and political maneuvering that would sustain the interest of the most jaundiced political science teacher—after all of this and more, the Humphrey-Hawkins Full Employment and Balanced Growth Act is nearing its final stage of congressional consideration.

The bill, following 3 days of often heated debate, has been amended and approved in the House. Hearings have been completed and markup has begun in the Subcommittee on Employment, Poverty and Migratory Labor of the Senate Human Resources Committee. The Senate Banking, Housing and Urban Affairs Committee will hold its hearings in May.

One would think that after all this attention, the resulting familiarity with the legislation would dampen the uproar surrounding it and promote calm and thoughtful examination of the bill's provisions. It is true the volume of sound has been turned down a few degrees, but the measure is still seen by some people as a threat to the Nation's economy, an empty promise, or something between these two extremes, and the clamor continues.

Mr. President, the Full Employment and Balanced Growth Act is neither threatening nor empty. Equally important, it is not an automatic panacea spelling an instant end to the Nation's recurring recessions and structural unemployment. Basically, the legislation sets forth the framework and the procedures to enable the administration, Congress, and the Federal Reserve Board to develop and implement comprehensive, coordinated policies and programs to achieve and sustain full employment and balanced growth. In a very real sense, it provides a cohesive, consistent way of using the fiscal and monetary policy and program tools that have always been at hand to do a better job of reaching and holding prosperity.

The question of whether the goals of the Humphrey-Hawkins Full Employment and Balanced Growth Act are ever achieved will depend on the caliber of leadership in the White House, on Capitol Hill, and at the Federal Reserve Board. Seen in this perspective, the Humphrey-Hawkins Full Employment and Balanced Growth Act provides those who lead Government with a better way of approaching and resolving our economic problems.

Mr. President, a recent article in the Christian Science Monitor clearly recognized this fundamentally important fact. In it, the newspaper emphasizes the point that the legislation does not have a life apart from those who form and lead our Government. I ask that the article be printed in the RECORD and I urge my colleagues to read this concise and brief comment on Humphrey-Hawkins.

The material follows:

AFTER HUMPHREY-HAWKINS

Let us assume that the Senate will pass the Humphrey-Hawkins jobs bill as the House of Representatives did last week. Then comes the hard part: ensuring that the legislation is carried out to the best of its intentions. It gives the White House a mandate all too easy to avoid unless the Congress and public insist that it be followed through in good faith.

The Senate should not pass the bill as a deserved monument to Sen. Hubert Humphrey but as what Sen. Muriel Humphrey calls "an essential first step in moving America toward a new era of full employment and vigorous, stable economic growth."

Seen in this measured way, the bill should escape the danger of raising false hopes about a federally guaranteed end to unemployment. (It is not a jobs bill in the sense of creating or funding jobs.) And the emphasis on "stable economic growth" is a reminder that the bill does not forget the control of inflation while placing jobs for everyone willing and able to work at the center of government policy.

Note that jobs and growth are combined in the title of the Humphrey-Hawkins Full Employment and Balanced Growth Act. Unlike the landmark Employment Act of 1946, which neglected the problem of inflation, Humphrey-Hawkins makes price stability a goal along with its effort, three decades later, to fulfill the spirit of the earlier act.

To combat inflation Humphrey-Hawkins proposes such measures as stockpiling critical raw materials, strongly enforcing anti-trust laws, and instituting early warning systems to prepare against industrial capacity shortages. Suppose the mandated jobs goals—3 percent adult unemployment and 4 percent overall unemployment within five years of passage—conflict with inflation control. Then the bill allows the president to propose modifications of the goals.

It suggests governmental avenues of attacking structural unemployment through such means as targeted revenue sharing and public works. But the main thrust is toward use of the private sector and appropriate government policies to foster it. Gone is the specter seen in the original bill of generous government jobs drawing people away from the private sector.

Doubters on one side now call Humphrey-Hawkins, as adjusted to satisfy President Carter, a "sanitized" or toothless document, a paper tiger. On the other side, there are estimates of the billions of dollars required if the unemployment reductions are seriously sought.

Yet is there any economic goal more worthy of investment than ensuring jobs for all who want to work, especially in view of America's traditional commitment to and benefit from the worth ethic? And even the sanitized Humphrey-Hawkins takes the unprecedented step of requiring the president each year to state explicit employment goals and recommend the fiscal and monetary policies to achieve these goals. The Federal Reserve System would have to submit a written report on how its monetary policies were designed to support the president's numerical goals for employment, prices, and production.

Would such statements and reports become just rhetoric and more rhetoric? Not in the hands of a responsible president, a cooperative Federal Reserve Board, and a Congress diligent enough to demand its legislation not be ignored and to follow through with action.●

## THE IMPASSE AT THE LAW OF THE SEA CONFERENCE

● Mr. MOYNIHAN. Mr. President, it is now two decades since the nations of the world under the auspices of the United Nations began an attempt to write a new body of international law governing the oceans of the globe. And the most recent manifestation of the effort, the Third Law of the Sea Conference, is now in its seventh session in Geneva. Since early last year, the U.S. delegation thereto has been headed by one of our most distinguished citizens and certainly one of the most experienced of all our public officials, Ambassador-at-Large Elliot L. Richardson.

These are important negotiations with profound long term consequences. Therefore when a man of Ambassador Richardson's reputation and judgment tells us that this international undertaking is now in jeopardy we must take heed. I shall ask that there be printed in the RECORD an article from the Washington Post of April 14 wherein Ambas-

sador Richardson describes the current impasse at the conference. I must say that the article is accompanied by a photograph of the Ambassador with an uncharacteristically grim expression on his face. I dare suggest his mien is indicative of his determination to defend American interests and to carry on to a successful conclusion. Because I believe the issues before the Law of the Sea Conference deserve greater public understanding, I ask that the Washington Post article be printed in the RECORD and that a speech I delivered on the Law of the Sea Conference almost a year ago be printed also.

The material follows:

[From the Washington Post, Apr. 14, 1978]

U.S. AMBASSADOR PESSIMISTIC ABOUT AGREEMENT ON SEAS

(By William Claiborne)

The decade-old U.N. Law of the Sea Conference has bogged down in internecine squabbling without substantive work on its agenda and faces the "probability" of failure, Special Ambassador Elliot L. Richardson said yesterday.

"We have to recognize the possibility, indeed the probability, that we won't succeed," Richardson, head of the U.S. delegation, said in an interview during a brief visit in Washington. The conference is already in the third week of a scheduled seven-week final session in Geneva.

Richardson said there have been a few encouraging signs—notably a renewed determination on the part of many delegates to bridge the gulf between The Third World and the industrial nations—but he noted the conference now has little enough time in which to finish.

"It's about a wash," Richardson said, reiterating his belief the conference has about a one-in-three chance of reaching agreement on the key issues, particularly on a system of governing the exploitation of vast mineral resources on the oceans' floors.

Repeatedly, Richardson sought to put as good a face as possible on the future of the conference, saying that new procedural ground rules make it less likely that contentious delegates among the 147 nations attending can scuttle the session unilaterally. But just as emphatically, Richardson offered what seemed to be pessimistic odds.

"When you say there is a one-in-three chance of success, you have to say there is a probability of failure under those circumstances," Richardson said at one point. At another, he said, "If the odds are worse than 50-50, you have to use the word 'probably' when you talk about failure."

For 10 years, the Law of the Sea Conference has been engaged in a global tug-of-war, trying to reach agreement on a treaty whose foundation is based on the principal that all resources under the sea are the common heritage of mankind.

At stake is the sharing of what could be trillions of dollars worth of potato-sized nodules of minerals lying at depths of up to 15,000 feet, mostly in the Pacific beween Hawaii and Mexico.

The negotiations have mired in disputes over and international authority that would control exploitation of the rich deposits of nickel, cobalt, manganese and copper, and manage the distribution of profits among nations.

Generally, the Third World has favored the creation of an operating body, called "The Enterprise," that would harvest the minerals for all nations, while the United States and other industrialized nations favor a dual system under which "The Enterprise" and private mining firms would operate simultaneously.

But the conference has not even reached those issues as it approaches the midway point.

For two weeks, delegates fought bitterly over the election of a president. Shirley Amerasinghe of Sri Lanka, and a number of Latin America nations staged a brief walkout in protest. Then the delegates began fighting over procedures and the wording of the agenda, prompting Amerasinghe to complain, "We will look ridiculous if we go on like this."

Displaying increasing frustration Richardson told the conference he did not see how substantive negotiations would be influenced by the wording of an agenda, and then he headed home for previously scheduled testimony before the House Ways and Means Committee.

In yesterday's interview, Richardson said the conference conceivably could adjourn at the end of the seven weeks and resume next year, providing it was close to agreement and only peripheral issues remained unresolved.

However, many observers believe the present session is a last chance to set seabed mining guidelines, and Richardson previously has said as much. Several consortiums of mining firms already have begun experimental seabed mining, and a few are poised to begin fullscale operations, having invested up to $50 million each in research and development.

If there is to be another session, Richardson said, "it would only be justified by demonstrating that enough progress had been made in this session to leave only residual points to be cleared up."

Apart from the question of seabed minerals, one of the most difficult issues the conference faces is the right of access of landlocked and "geographically-disadvantaged" nations to predetermined "economic zones" in the oceans.

Diplomatic sources said, in fact, that this issue has nearly eclipsed the seabed mining controversy in the minds of some of the delegates from developing nations.

Once the United States accepted a dual system of exploitation, the conference sources said, the Third World seemed satisfied that they had established several basic principles pointing vaguely to a new economic order: world acceptance of the principle of common heritage of resources, acceptance of international authority and a socialist "Enterprise" and acquiescence by industrialized nations to at least some level of transfer of technology to lesser developed nations.

As the conference continues, the House is working on a bill that would authorize and encourage U.S. mining companies to unilaterally begin seabed mining operations.

Conference sources said some delegates have been warning that if the bill is passed during the Geneva session, it would destroy the chances for a treaty. But, it is unlikely the Senate will act before then.

---

ADDRESS BY SENATOR DANIEL PATRICK MOYNIHAN

Trying to describe what Venice meant to the Mediterranean world of the 15th or 16th Century, the French historian Fernand Braudel writes: "Venice dominated the 'Interior Sea' as New York dominates the western world today."

We welcome this newest dimension to our influence, the nuclear attack submarine *New York City*. I would like to take this occasion to comment on developments now in evidence at the United Nations Law of the Sea Conference, now underway in New York City.

It will seem odd, perhaps, but my thoughts on the occasion go back three years almost to this day when I found myself sitting on the bank of the Thimphu Chu River which flows past the palace in the Himalayan kingdom of Bhutan, where I was attending the coronation of His Majesty Jigme Sinye Wangchuck. It was a memorable occasion on several scores. Of the greater personal significance was the day's fishing. A Scotsman devoted the first quarter of this century getting brown trout into those incomparable streams, but the Bhutanese, as Buddhists, won't kill them. So there they were awaiting me, and for the first and last time in my life I caught all the fish I could hope for. Indeed I grew weary of the work, and fell into conversation with the young Foreign Minister of Bhutan who was watching, tolerantly, from the stream bank. How much, I said, I would regret leaving this incomparable country, at the very top of the world, touching the heavens if any country could be said to do, the very outermost reach of human habitat. The Foreign Minister remarked that he, too, was sorry that he would be leaving. For what, I enquired? Why, for the Law of the Sea Conference, he answered.

That was indeed a bright confident morning, and it seems so far past. In 1970 the United Nations Seabed Committee declared that the resources of the seabed and the ocean floor were the "common heritage of mankind." The United States, far from resisting this proposal, embraced it in the most forthcoming manner. President Nixon's statement on U.S. Oceans policy of that year supported the concept, and the United States entered the negotiations which led to the opening of the Law of the Sea Conference in Caracas, Venezuela on June 20, 1974.

Three years have passed, however, and confidence is fading. Just this week our chief negotiator Elliot L. Richardson, who has played a singular role in American government over so many years now, and who commands a unique respect among the American people and in the United States Congress, spoke of stalemate, and warned that the entire effort "now hangs in the balance."

This is not good news. Not for the seafaring nations of the world; not for the landlocked, not for those, as it were, in between. For the assertion that the seabeds were a common heritage gave to nations everywhere a common interest—Bhutan no less than Iceland, Hungary as much as New Zealand—in how this common heritage is shared.

Nor is it good news that the Soviets appear to have judged that the prospects for failure are sufficiently strong that they should no longer invest any energies in pursuing success. For a long period the Soviets in effect acknowledged that they shared the common interests of the seafaring and technologically advanced nations in getting a good treaty. Now they appear to have cut any ideological losses that might have occasioned, and are routinely supporting the most counterproductive demands of the Group of 77. Thus if the Conference fails, they will have been on the side that will blame us for the failure. If it succeeds, we will have won for them the terms they desire.

Let me state that the United States negotiators do not at all share the Soviet view. Ambassador Richardson's statement on June 13 had the desired effect of bringing forth a new draft which could be described as very substantially improved—from, that is, its predecessor which was plain unacceptable.

Some general comment might accordingly be of use from someone who was marginally involved in these negotiations at an earlier stage, and who will be one of those assessing the final result if, hopefully, a treaty is agreed upon at an early date and sent to the Senate for ratification.

I speak now to the Group of 77, now 114 countries in all, and I shall speak to what I believe to be the two principal questions involved here.

First, do the developing nations under-

stand that by entering into these negotiations, and remaining faithfully with them, the United States and the western nations generally have agreed to negotiate for and, in the bargaining sense, to pay for rights which exist in the absence of a treaty? We did not have to do this; we wanted to do it. We wanted to do it, among other reasons, because we wanted to establish a regime for the use of the resources of the seabed which would produce resources that would be shared with the farmers of the Thimpu Chu River in Bhutan—and the Yangtze, and the Congo, and the Amazon. We did not have to do this. We have under existing international law, including as Dr. S. Fred Singer has noted, the 1958 Geneva Convention, the perfect right to extract mineral resources from the deep ocean beyond the continental shelf. Moreover, we have the technology to do so.

I remember at the United Nations I had breakfast one morning with officers of the Kennecott Corporation, which has its headquarters on 42nd Street in New York. We spoke of the matter, and I asked the company's President: if it were decided to go into deap sea mining that day, how long would it be before manganese nodule copper would be used in lamps on sale in Brooklyn? 1985 was his reply. That was two years ago, and so I assume his answer today would be 1987. We have lost two years and the developing world has lost two years also.

And, we need some of those metals. We now import 82 percent of our nickel and manganese, 72 percent of our cobalt. We are dependent on other nations for minerals which verge on the strategic. And we would not have to be—we could quickly become almost wholly self-sufficient—if we simply went ahead to do what we have the right to do and the know-how to do.

What we do not have to do is to bog down in an endless parley in which every concession we make is instantly transformed into the next item to be negotiated.

There is a second and larger question. It is well known that the greatest obstacle to agreement at this point has to do with the nature of the Seabed Resource Authority. How will it be run? Will it have complete control over who may or who may not undertake seabed mining, or will there exist a right of access by all parties, public and private?

The Group of 77 clearly opts for an all powerful international authority. Their newest draft states: "All activities in the area shall be conducted on the Authority's behalf." ". . . All activities in the area shall be conducted, organized, and controlled by the Authority . . ." We resist this. We want to make sure, among other things, that the seabeds will be open to private businesses which meet internationally agreed standards for such operations. We remind ourselves of Grotius' great dictum: the oceans "can neither be seized nor enclosed." (*Mare Liberum*)

Here once again we glimpse what my senior colleague Senator Javits, in a brilliant address to the Senate reporting on the recent (and failed) North-South conference in Paris (the Conference on International Economic Cooperation), termed "the abyss of difference between the developing countries and the developed world."

There is a simple point to be made here. The members of the Group of 77 will not like hearing it, but if they really want a Law of the Sea Treaty they are going to have to try to understand us, just as we must try to understand them.

The simple point is this: Most of us in the West—not all of us, by any means, but most of us—regard free economic activity as an indispensable condition of free political activity. We know that most nations in the Group of 77 do not believe this, or don't think it matters. We do not ask them to change their views. But we do ask them to understand that we do believe this and we do think it matters.

It comes to this: Of the 114 nations in the Group of 77, the Freedom House survey can find only sixteen that could be listed as Free, which is to say, these are nations in which citizens enjoy free political activity. Now obviously for many of the governments of the other 98 nations free economic activity—after a point at least—poses as much a threat to their way of doing things as would free political activity. And so they will not have it. Which is all well and good.

But they must not tell us that we cannot have it. For to do so is to tell us that we must risk losing the political freedoms that are precious to us beyond all things.

The Group of 77, so adept at asserting principles, must understand that for us, too, there is an issue of principle at stake in these negotiations.

We will not abandon the economic and political principles that have created our society in order to provide ideological sanction for the dictatorships of the Group of 77. I speak not as a negotiator of course, but as a Senator. I speak in the desire that there should be a treaty, but in the conviction that nothing would be worse than a bad treaty. I speak as one who wholly supports the efforts of Senator Lee Metcalf of Montana to make it possible for American firms to get on with the job pretty soon now, treaty or no treaty.

We want a treaty. We want a regime of shared responsibility and shared resources. But we remind the new nations of the world that by law the seas are free today, and we are not about to negotiate away that freedom in order to provide international sanction for political systems that are so painfully different from and usually opposed to our own. Do not suppose we do not understand you on this. We understand you well enough.

Do not suppose it is going to come as any surprise to us when some regime accuses a Woods Hole survey of stealing vital secrets of its continental shelf. The freedom of science is as threatening to repressive regimes as is any other freedom.

But this does not mean we cannot work together. It means only that we must seek agreement in open awareness of the complexity of each other's concerns.

At whatever cost in the small change of diplomatic niceties, the Group of 77 must acquaint themselves with the full range of our interests in this negotiation and the steadfastness of purpose with which we will pursue these interests.●

## PRODUCT LIABILITY INSURANCE

● Mr. EAGLETON. Mr. President, the increasing cost of product liability insurance coverage is a source of concern to the entire business community. While all businesses are affected to some extent, I believe the problem has reached crisis proportions for small businesses.

In my own State of Missouri, the State legislature has been quite active in seeking a workable solution to this problem. In addition, the Missouri Division of Insurance has just recently implemented the market assistance program, which is a voluntary participation scheme whereby product liability insurance coverage is made available to all businesses in need of it.

While I am heartened by this activity on the State level, I believe that it is imperative for the Federal Government to involve itself in providing some financial relief from the burden of product liability insurance for small businesses. Three major measures have been introduced in the Senate to provide this relief. Our colleague from Indiana, Mr. LUGAR, has introduced S. 1706, known as the Emergency Product Liability Act. This measure provides for a statute of limitations on product liability claims, alters the manufacturer's liability where a product has been altered after leaving his hands and provides for a state of the art defense, among other things, S. 527, a bill authorizing the Small Business Administration to furnish reinsurance for property liability insurers for small business concerns which would not otherwise be able to obtain product liability insurance on reasonable terms has been proposed by our able colleagues, Mr. CULVER of Iowa and Mr. NELSON of Wisconsin. A third measure, and one which I personally favor, is a self-insurance program that would allow manufacturers to deduct from Federal income tax certain funds and to transfer them to a product liability loss reserve. This bill, S. 1611, was introduced by Mr. CULVER, of Iowa.

Mr. President, I believe that the time has come for the Congress to seriously consider these proposals and to enact some positive legislation on the product liability problem. Therefore, I wish to bring to the attention of my colleagues the timely announcement of the Department of Commerce's recommendations regarding Federal action that should be undertaken to address the product liability problem. I think it is important to note that the Commerce Department's options paper favorably mentions a tax set-aside program as an effective short-range solution to the high price of product liability insurance. I ask that a summary of the Department's recommendations be printed in the RECORD at this time, along with a copy of the bill proposed by the Department.

The material follows:

COMMERCE PROPOSES SET-ASIDE OF PRE-TAX INCOME AS RESERVE FOR PRODUCT LIABILITY CLAIMS

The U.S. Department of Commerce today proposed an amendment to the Internal Revenue Code that would permit qualified businesses to set aside a portion of their pre-tax income as a reserve for self-insurance against product liability claims.

The Department also recommended that the Administration establish an interagency council to develop a consistent overall policy with respect to compensation to victims of accidents and crimes.

Speaking at a news conference at which the Commerce Department released an options paper on product liability and accident compensation issues, C. L. Haslam, General Counsel, said:

"A set-aside is an admittedly short-range solution to the high price of product liability insurance but we think it will be effective. It will lead to lower premiums by encouraging small businesses—which find product liability a heavy burden—to use higher deductibles and by stimulating greater efforts to reduce product liability loss. Furthermore, as another kind of product liability insurance it may also promote a more competitive rate structure."

Mr. Haslam emphasized that the Commerce Department recommendations are currently under review by the Executive

Branch and are being released to allow the public to comment.

Mr. Haslam also emphasized that the Treasury Department has primary responsibility within the Executive Branch for evaluating tax policy. Commerce has forwarded a model bill to Treasury in order to obtain its expert evaluation.

The Commerce Department options paper prepared under the guidance of Professor Victor E. Schwartz, Chairman, Working Task Force, Interagency Task Force on Product Liability, resulted from the findings of the Interagency Task Force on Product Liability which issued its final report in November 1977.

That study, Mr. Haslam said, "highlighted the *ad hoc* method by which the Federal Government tends to address issues relating to accident compensation and insurance. Problems relating to accident compensation are unlikely to fade away within the next few years—in point of fact, all signs suggest that they will grow worse.

As the options paper outlines, there is already a multiplicity of Federal legislative and research initiatives being undertaken in the area of accident compensation and insurance. While the Administration through the Office of Management and Budget makes every effort to coordinate these initiatives, there is a clear and present need to have more specialization and analysis on an ongoing basis."

The Interagency Task Force, in which the Commerce Department was the lead agency, identified insurer rate-making procedures, uncertainties in the tort system and unsafe manufacturing procedures as the chief causes of rising costs of product liability insurance.

With respect to these longer-term problems, the Commerce Department options paper called for:

A report including draft standards for rate-making and recommendations on the extend to which rate-making should be subject to Federal regulation.

Development of a model product liability law that could be implemented at the Federal level or utilized by the states;

Provision in Federal standards currently being prepared at the Department of Labor that Worker Compensation at increased rates be made the sole source of monetary compensation to workers injured in product-related work-place accidents. In light of the fact that most workers will receive benefits under such standards, the approach is intended to balance the interests of manufacturers, employers and workers while cutting costs of bringing product liability suits, and

A Federal program for more effective distribution of product risk information to manufacturers, distributors and retailers, as a means of helping industry. Much information available to Government agencies, the report said, is not "necessarily consolidated or shared with companies that might use it effectively."

In addition, the options papers recommended a study of a no-fault liability system for consumer products; legislation to facilitate formation of captive insurance agencies by trade association and small business groups and development of Federal administrative or legislative guidelines to help private insurers form voluntary insurance pools.

The Commerce Department's "Options Paper on Product Liability and Accident Insurance" is being printed in the *Federal Register* of April 6, 1978. Copies at 75 cents each may be obtained by writing the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

OPTIONS PAPER: SYNOPSIS OF RECOMMENDATIONS

*A. Short-term solutions*

1. The Internal Revenue Code should be amended to permit qualified businesses to set aside a portion of their pre-tax income to fund a specific reserve for self-insurance against product liability claims and related costs.

2. The Department recommends that the Administration not pursue either a federal insurance or a reinsurance program relating to product liability.

*B. Long-term solutions*

1. Prepare a report that would include draft product liability insurance regulation standards. The report should indicate whether and to what extent direct federal regulation of product liability insurance is warranted.

(a) Indicate what data should be supplied by product liability insurers.

(b) Indicate whether premiums should be based in part on an insured's past loss experience and/or implementation of product liability loss prevention techniques.

(c) Establish a mechanism that would assure that product liability insurance rates and premiums are fair, non-discriminatory, and reasonably related to product risk.

(d) Indicate how insurers should report profit and loss specifically for product liability.

(e) Indicate whether it is necessary to regulate insurers in regard to their providing loss prevention assistance to their insureds.

2. Draft a model product liability law that could be implemented at the federal level or utilized by the states.

3. Draft legislation for federal standards in the area of Worker Compensation should include a provision that would render Worker Compensation a sole source of monetary recovery for workers injured in product-related accidents.

4. A study should be conducted to determine whether a practical no-fault product liability system can be developed, in whole or in part, for consumer products.

5. A program should be developed whereby the Federal Government more effectively distributes product risk information to manufacturers, distributors, and retailers.

6. A special loan program that would permit qualified small businesses to obtain product liability loss prevention technical assistance.

7. Legislation should be drafted that would permit the formation of captive insurance companies in the area of product liability.

8. Administrative or legislative guidelines should be developed that would assist private insurers in the formation of voluntary insurance pools. Legislation that would require insurers to pool product liability insurer risks should not be developed at this time.

9. The Administration should establish an Interagency Council on Accident Compensation. The Council would have the initial responsibility for reviewing and coordinating federal initiatives in the area of accident compensation.

---

A bill to amend the Internal Revenue Code of 1954 to provide for a deduction for certain amounts paid into a reserve for product liability losses and expenses, to provide a deduction for certain amounts paid to captive insurers, and for other purposes

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SHORT TITLE

SEC. 1. This Act may be cited as the "Product Liability Self-Insurance Act of 1978".

SELF-INSURANCE FOR PRODUCT LIABILITY LOSSES

SEC. 2. Section 165 of the Internal Revenue Code of 1954 (the Code) (relating to losses) is amended by redesignating subsection (i) as (j) and by inserting after subsection (h) the following new subsection:

"(i) SELF-INSURANCE FOR PRODUCT LIABILITY LOSSES AND EXPENSES.—

"(1) GENERAL RULE.—In the case of a taxpayer engaged during the taxable year in a trade or business which involves the manufacture, importation, distribution, lease, or sale of a product with respect to which the taxpayer may incur any product liability, at the election of the taxpayer, there shall be allowed as a deduction under subsection (a)—

"(A) Amounts transferred by the taxpayer for such taxable year to his product liability loss reserve account, and

"(B) Amounts paid by the taxpayer for such taxable year to a captive insurer with respect to the product liability of the taxpayer.

"(2) DETERMINATION OF AMOUNT.—

"(A) For a taxpayer which qualifies as having a severe product liability insurance problem (as set forth in paragraph (11) below), the amount of the deduction allowed by paragraph (1) shall not exceed the lesser of—

"(i) Five percent of the gross receipts of the taxpayer for such taxable year from the manufacture, importation, distribution, lease, or sale of such product,

"(ii) the amount which, when added to the sum of the balance of the taxpayer's product liability loss reserve account and the net contributions of the taxpayer to his captive insurer, if any, equals 15 percent of the taxpayer's average yearly gross receipts from the manufacture, importation, distribution, or sale of such product during the base period, or

"(iii) $100,000.

"(B) For a taxpayer who does not qualify as having a severe product liability insurance problem, the amount of the deduction allowed by paragraph (1) shall not exceed the lesser of—

"(i) Two percent of the gross receipts of the taxpayer for such taxable year from the manufacture, importation, distribution, lease, or sale of such product,

"(ii) the amount which, when added to the sum of the balance of the product liability loss reserve account and the net contributions of the taxpayer to his captive insurer, if any, equals 10 percent of the taxpayer's average yearly gross receipts from the manufacture, importation, distribution, lease, or sale of such product during the base period, or

"(iii) $25,000.

"(C) For the purpose of paragraph (2), the term "base period" shall mean the shorter of:

"(i) the period during which the election under paragraph (1) continuously applies; or

"(ii) the five years ending in the taxable year for which the current deduction is taken.

"(3) DISALLOWANCE OF DEDUCTION FOR CERTAIN LOSSES.—In determining the amount of the deduction allowable for the taxable year under subsection (a), no deduction shall be allowed for any product liability loss paid or incurred by the taxpayer during the taxable year except to the extent that the aggregate amount of such losses during such year exceeds the sum of—

"(A) The amount in the product liability loss reserve account of the taxpayer at the beginning of such taxable year, plus

"(B) The aggregate amount of payments by the taxpayer to such account within the taxable year which are allowable as a deduction under paragraph (1).

"(4) USE OF FUNDS OF ACCOUNT FOR INAPPROPRIATE PURPOSE.—

"(A) IN GENERAL.—If any amount in a product liability loss reserve account is, during a taxable year, used for any purpose which is inconsistent with the provisions of paragraph (9) below—

"(i) an amount equal to the amount so used shall be included as taxable income (without regard to other income or deduc-

tions) to the taxpayer for the taxable year in which such use commences, and

"(ii) the liability of the taxpayer for the tax imposed by this chapter for such taxable year shall be increased by an amount equal to 50 percent of the amount so used.

"(B) EXCEPTION.—Subparagraph (A) shall not apply to amounts paid out of any product liability loss reserve account not later than the last day prescribed by law (including extensions thereof) for filing the taxpayer's return with respect to the tax imposed by this chapter for the taxable year to the extent the amount of such payment is not more than the excess of—

"(i) the aggregate amount of payments by the taxpayer to such account for the taxable year, over

"(ii) the maximum amount of such payments which may be deducted under paragraph (2).

"(5) TIME WHEN PAYMENTS TO ACCOUNT DEEMED MADE.—For the purposes of this subsection, a taxpayer shall be deemed to have made a payment to his product liability loss reserve account on the last day of the preceding taxable year if the payment is made on account of such taxable year and not later than the last day prescribed by law (including extensions thereof) for filing the taxpayer's return with respect to the tax imposed by this chapter for such taxable year.

"(6) PAYMENTS TO ACCOUNT TO BE IN CASH OR CERTAIN OTHER ITEMS.—No deduction shall be allowed under paragraph (1) with respect to any payment to a taxpayer's product liability loss reserve account other than a payment in cash or in items in which the assets in said account may be invested under paragraph (10) below.

"(7) SPECIAL RULE FOR CONTROLLED GROUPS.—

"(A) IN GENERAL.—For the purpose of paragraph (2)—

"(i) In the case of any taxpayer who, during a calendar year, is a component member of a controlled group of corporations, only gross receipts properly attributable under section 482 to such taxpayer for such year shall be taken into account; and

"(ii) the aggregate deductions under this subsection taken by all of the component members of a controlled group of corporations for each taxable year shall be limited to the amount that would be permitted under paragraph (2) if all the component members of such group were considered to be a single taxpayer.

"(B) DEFINITION OF CONTROLLED GROUP.—For the purpose of subparagraph (A), the term 'controlled group of corporations' has the meaning given such term by paragraphs (1), (2), and (3) of subsection (a) of section 1563, except that the determination of whether a taxpayer is a component member of a controlled group of corporations at any time during a calendar year shall be made on December 31 of such year.

"(C) CONTROLLED GROUPS CONTAINING PERSONS OTHER THAN CORPORATIONS.—Under regulations prescribed by the Secretary, principles similar to the principles of subparagraphs (A) and (B) shall be applied to groups of taxpayers under common control where one or more of such taxpayers is not a corporation.

"(8) ELECTION AND DISSOLUTION OF ACCOUNT.

"(A) The Secretary shall prescribe by regulations—

"(i) the time and manner in which the election under paragraph (1) shall be made by a taxpayer; and

"(ii) the time, manner, and conditions under which a taxpayer may terminate his product liability loss reserve account, and the funds accumulated therein, if any, may be distributed to the taxpayer without being subject to the penalty described in paragraph (4).

"(B) The regulations prescribed by the Secretary regarding the election under paragraph (1) shall require the taxpayer to indicate whether he is electing to transfer all, or any portion, of the net income earned on amounts previously transferred to his product liability loss reserve account to that account. Net income so earned which the taxpayer does not elect to transfer to his product liability loss reserve account shall be withdrawn from that account without penalty under paragraph (4).

"(9) DEFINITIONS.—For purposes of this subsection—

"(A) PRODUCT LIABILITY.—The term 'product liability' includes liability for damages arising out of operations after the operation has been completed or abandoned and for damages arising out of physical injuries to persons or property attributable to negligence in, breach of warranty regarding, or defects in a product manufactured, imported, distributed, leased, or sold by the taxpayer.

"(B) PRODUCT LIABILITY LOSS.—The term 'product liability loss' means any loss attributable to the product liability of the taxpayer.

"(C) PRODUCT LIABILITY LOSS RESERVE ACCOUNT.—The term 'product liability loss reserve account' means any trust—

"(i) established in writing which is created or organized under the laws of the United States or of any State (including the District of Columbia) for the taxpayer;

"(ii) the trustee of which is a bank (as defined in section 581) or another person (other than the taxpayer or any component member of a controlled group of corporations, within the meaning of paragraph (7), of which the taxpayer is a component member) who demonstrates to the satisfaction of the Secretary that the manner in which that other person will administer the trust will be consistent with the purposes for which the trust is established;

"(iii) the exclusive purpose of which is to satisfy, in whole or in part, the product liability losses sustained by the taxpayer and the expenses incurred in the investigation, settlement, and opposition of any claims for compensation against the taxpayer with respect to his product liability, and to pay administrative and other incidental expenses of such trust in connection with the operation of the trust and the processing of claims against the taxpayer;

"(iv) the assets of which will not be commingled with any other property other than in a common trust fund and will only be invested as permitted in paragraph (10); and

"(v) the assets of which may not be borrowed, used as security for a loan, or otherwise used by the taxpayer for any purpose other than those described in subparagraph (9)(C)(iii).

"(D) CAPTIVE INSURER.—The term 'captive insurer' means any insurer wholly or partially owned, directly or indirectly, by the taxpayer which is licensed to provide product liability insurance to the taxpayer under the laws of a State of the United States.

"(E) NET CONTRIBUTIONS OF TAXPAYER TO CAPTIVE INSURER.—For the purpose of paragraph (2), the term 'net contributions of taxpayer to his captive insurer' shall mean the greater of: (i) the sum of all premiums paid by the taxpayer to his captive insurer for product liability insurance, less all amounts paid by his captive insurer for claims against the taxpayer for compensation with respect to the product liability of the taxpayer, or (ii) zero.

"(10) RESTRICTIONS ON INVESTMENT OF ASSETS.—Investment of the assets of a taxpayer's product liability loss reserve account shall be limited to—

"(A) public debt securities of the United States,

"(B) obligations of a State or local government which are not in default as to principal or interest, or

"(C) time or demand deposits in a bank (as defined in section 581) or an insured credit union (as defined in section 107(6) of the Federal Credit Union Act) located in the United States.

"(11) SEVERE PRODUCT LIABILITY INSURANCE PROBLEM.—For the purpose of paragraph (2), a taxpayer shall qualify as having a severe product liability insurance problem for a taxable year if, for such taxable year, either—

"(A) the taxpayer was unable to obtain a premium quotation for product liability insurance, with coverage of up to $1,000,000, from any insurer other than a captive insurer; or

"(B) the lowest insurance premium quotation for product liability insurance, with coverage of up to $1,000,000, obtained by the taxpayer was equal to more than 3 percent of the gross receipts of the taxpayer for such taxable year.

"(12) DEDUCTIBILITY OF AMOUNTS PAID TO CAPTIVE INSURER AS AN ORDINARY BUSINESS EXPENSE.—The deductibility, in whole or in part, of amounts paid by a taxpayer to a captive insurer for product liability insurance coverage under this subsection shall not affect the deductibility of such amounts under Section 162 (relating to ordinary and necessary business expenses), except that such amounts shall not be deducted more than once.

"(13) DISCHARGE OF INDEBTEDNESS OF TAXPAYER BY PRODUCT LIABILITY LOSS RESERVE.—For the purpose of Section 61 (relating to gross income), the payment by the trustee of a taxpayer's product liability loss reserve account of product liability losses sustained by the taxpayer, expenses incurred in the investigation, settlement, and opposition of any claims for compensation against the taxpayer with respect to his product liability, or other expenses permitted to be paid by the trustee of such account under subsection 165(1)(9), shall not be included in the gross income of the taxpayer.

ACCUMULATED EARNINGS TAX

SEC. 3. Section 537 of the Code (related to the accumulated earnings tax) is amended by redesignating paragraph (b)(4) as (b)(5) and by inserting after paragraph (b)(3) the following new paragraph:

"(b)(4) Amounts accumulated in a taxpayer's product liability loss reserve account and amounts paid by a taxpayer to his captive insurer for liability insurance shall be treated as amounts accumulated for the reasonably anticipated needs of the business of the taxpayer to the extent those amounts are deductible pursuant to Section 165(1). Amounts so accumulated or paid which are not deductible pursuant to Section 165(1) remain subject to the burden of proof set forth in Section 534.

SEC. 4. The amendments made by this Act apply to taxable years beginning after December 31, 1977.●

## SISTER HELEN FRANCES

● Mr. CHURCH. Mr. President, one of Idaho's most remarkable women, Sister Helen Frances, died recently in Lewiston.

Sister Helen Frances was the administrator of St. Joseph's Hospital in Lewiston. But she was known as one of the most influential leaders in Idaho medical circles for more than two decades. Her contributions to medical care in her home community and in the State at large were many, and were marked not only by great administrative skill, but by devotion and warmth.

The death of this great woman is a loss to all of Idaho.

I submit for the RECORD, an article from the April 3 issue of the Lewiston Morning Tribune.

ST. JOSEPH'S SISTER HELEN FRANCES DIES

(By Cassandra Tate)

Sister Helen Frances, administrator of St. Joseph's Hospital and a leader in Idaho medical circles for more than 20 years, died at 7:05 p.m. Sunday.

She died at age 67 in a room at the hospital she had helped forge into a multimillion dollar regional health care center, of the breast cancer she had battled for more than a year.

John Ernsdorff had been named acting administrator last month, but Sister Helen Frances continued working in an advisory role until the day before she died.

"When I was told I had cancer, I accepted it," she said in an interview in September. "And I thought, all right, other women have gone through it, why can't I? Why don't I accept it? And just keep on doing what I'm doing as long as I can?"

Ernsdorff, her associate administrator for many years, spoke for the hospital staff in expressing "a deep, personal sense of loss."

"She was a tremendous lady," he said. "She deserved and earned the respect of the entire medical community."

She had been hospitalized in December, but she spent more time in her office than in her hospital bed at first. Dr. Burton Stein, her longtime personal physician, said she often refused pain killers in order to keep her mind clear. When she could no longer walk down to her office, she insisted on being taken there in a wheelchair.

Work, she said often, is the best therapy.

She came to Lewiston as supervisor of orthopedic and pediatric nursing in 1957 and was appointed director of nursing services in 1958. She had served as administrator and president of the board of directors since 1966.

The hospital, operated by the Sisters of St. Joseph of Carondelet, employs about 350 and operates on an annual budget of $6 million. The administrator and members of the board are appointed by the order's provincial council in Los Angeles.

The council is not expected to name a replacement for Sister Helen Frances for three to six months. Ernsdorff will serve as administrator in the interim.

Sister Helen Frances was born Jan. 13, 1911 in Hancock, Mich., to Guido and Mabel Campioni and baptized as Constance Mary Campioni. She grew up in Hancock, attending parochial and public schools there. She completed nurses' training at St. Joseph's Hospital School of Nursing in Hancock in 1934.

She worked as a surgical nurse for an orthopedic surgeon in Hancock for 4½ years, until contracting tuberculosis. She spent three years in a tuberculosis hospital in Arizona. After her release, she worked as a private duty nurse for a short time and then she returned to the hospital—as an instructor in its school of nursing.

During the summers, she attended classes at Mount St. Mary's College in Los Angeles, graduating with a bachelor's degree in science in 1944. A short time later, she fulfilled a lifelong ambition by entering the order of the Sisters of St. Joseph.

Sister Helen Frances served as director of nursing at St. Mary's Hospital School of Nursing in Tucson, Ariz., for 19 years before being transferred to St. Joseph's Hospital in September of 1957.

She brought with her a master's degree in education, earned during summer schools at the University of Arizona.

She served on the board of dozens of various health care and civil groups, and helped organize a few of them. She inaugurated the Lewis-Clark State College nursing school. She established a program of periodic refresher classes for nurses in the Lewiston-Clarkston area. She served a five-year term as a director of the Lewiston Chamber of Commerce.

She was president-elect of the Idaho Hospital Association, a member of the American College of Hospital Administrators and a fellow in the American Academy of Medical Administrators.

The highlight of her professional life was the completion last year of a four-story new wing to the hospital complex. She had wanted that wing to include a cancer radiation therapy unit. That it did not was her biggest professional disappointment.

The hospital has applied to various state health planning agencies for permission to build such a unit. The plans calls for a $650,000 unit equipped with a $250,000 linear accelerator, operating on an annual budget of $180,000. It would be named after her.

Sister Helen Frances is survived by two brothers, Louis J. Campioni of Hancock and Paul J. Campioni of Huntington Park, Calif., and numerous nephews, nieces and grandnephews and grandnieces. Another brother, Joseph Campioni preceded her in death.

Funeral services are pending at Vassar-Rawls Funeral Home.

It was Sister Helen Frances' wish that any memorials in her honor be made to the Radiation Therapy Center Fund.●

## OVERLAPPING SENATE COMMITTEE JURISDICTIONS WITH RESPECT TO TAX SPENDING AND DIRECT SPENDING PROGRAMS

● Mr. KENNEDY. Mr. President, one of the most important but least understood aspects of Federal spending is the role of tax expenditures and their relationship to direct expenditures.

Both types of Federal spending deserve close scrutiny by Congress in this era of increasingly intense competition for scarce Federal budget dollars. Yet tax spending continues to receive far less rigorous examination than direct Federal spending, even though tax spending is simply another form of spending Federal dollars to achieve Federal goals.

An analysis of tax subsidies that I have prepared illustrates the serious overlap between tax-spending and direct-spending programs, and equally serious overlaps between the jurisdictions of the Senate committees handling the two types of Federal spending.

In fact, this analysis of tax subsidies demonstrates a "crazy quilt" pattern of Federal spending through the Internal Revenue Code, and wholesale intrusions by the tax-writing committees into the jurisdictions of other congressional committees.

The heart of the problem is the chaotic jurisdictional rules in the House and Senate that allow the tax-writing committees to legislate Federal tax-spending programs in areas traditionally within the expertise of other congressional committees. The result is that committees with well-developed legislative experience in critical areas like energy, housing, urban policy, education, and health care have no voice in the spending of tens of billions of Federal dollars in these areas by the Finance Committee in the Senate and the Ways and Means Committee in the House of Representatives.

The analysis lists 85 existing tax-spending programs, as identified by the Treasury Department and the congressional Joint Tax Committee. Under the analysis, each of the tax-spending programs is recast into an alternative form as a direct spending program. The result demonstrates that every Federal tax subsidy goal could also be achieved by a nontax approach involving grants, low-interest loans, loan guarantees, or other well-known types of Federal subsidies.

There is no mystery about tax spending. Once the complexities of the tax code are stripped away, tax subsidies become simply another way of spending Federal dollars.

Especially at this time of year, when millions of taxpayers are racing the deadline to file their tax returns, it is essential for Congress to resolve to do a better job of policing tax spending and justifying the ways in which the taxpayers' hard-earned tax dollars are being spent. Direct Federal spending is already on the griddle. It is time to subject tax spending to the same rigorous scrutiny that direct spending now receives.

The last of the big-time spenders in Congress are the tax spenders. Tax dollars are not "funny" dollars. They are real dollars that cost real taxpayers real money. It is ironic that so many in Congress who call themselves fiscal conservatives and who consistently vote against increased direct spending for basic Federal programs are so often among the first to propose costly new spending programs through the tax laws.

All tax-spending programs come under the sole jurisdiction of the Finance Committee in the Senate and the Ways and Means Committee in the House of Representatives. For each tax-spending program, the analysis shows the Senate committee that would have jurisdiction over the program if it were a direct subsidy.

For example, the analysis shows that in the Senate, with revenue figures based on fiscal year 1979:

The Finance Committee is running 33 different Federal spending programs for the Human Resources Committee, totaling $47.7 billion, and involving areas like health care, aid to education and old-age assistance.

It is running 14 spending programs for the Commerce Committee, totaling $42.4 billion, and including incentives areas like health care, aid to education for research and development, and for consumer credit.

It is also running 14 spending programs for the Banking Committee, totaling $22.6 billion, and ranging from incentives for housing construction and homeownership to subsidies for commercial banks, for U.S. savings bonds, and for State and local government bonds.

The current congressional controversy over tax credits for tuition costs in colleges and secondary schools is only the latest example of the overlap between

the Finance Committee and other committees of the Senate—in this case, the Human Resources Committee, which has traditional jurisdiction over Federal education policy. However, the current controversy is also the best example so far of the increasing awareness by Congress that tax credits are simply one form of Federal spending, and that alternative forms of Federal aid to education must also be considered.

The most costly single tax spending program is the $15 billion a year investment tax credit, which allows individuals and corporations to reduce their taxes by an amount equal to 10 percent of their annual purchase costs for business equipment and machinery. The analysis shows that this tax subsidy could be recast as a grant in the same amount, obtainable from the Department of Commerce.

The question is why this investment program should be run by the Internal Revenue Service, when it could just as easily be carried out by a Federal agency—the Commerce Department—with far greater experience in the area. The Commerce Department spending program would be no more bureaucratic than the tax spending program. In fact, it would be more efficient, since firms making equipment purchases could obtain their grants immediately from the Commerce Department, instead of waiting until their tax returns are filed with the IRS. The Commerce Department program would also be more equitable, since the 10-percent investment rebate would be available to all purchasers, not just those who happen to have enough tax liability to take full advantage of the tax credit.

These arbitrary limitations are among the most serious defects of tax spending programs. If Congress decides it wants a subsidy for business investment, the subsidy ought to be broadly available to all businesses, without the arbitrary limitations that are inherent in the Tax Code but that have nothing to do with the purpose of the subsidy. By using tax credits to subsidize investment, the subsidy is irrationally being denied to thousands of firms that purchase equipment each year but fail to meet the irrelevant tests of the tax laws.

Mr. President, the current analysis is not intended as an attack on the Ways and Means Committee or the Finance Committee, but as a plea to Congress to understand the problem of tax spending and to put its houses in order, so that committees with expertise in particular areas will have a role in all Federal spending programs in these areas.

It is humanly impossible for the 18 members of the Finance Committee and the 37 members of the Ways and Means Committee to be Renaissance men and women in employment, commerce, energy, health, education, housing, banking, State and local finance, transportation, investment, the cities, shipping, agriculture, foreign trade, life insurance, the environment, military personnel, veterans, the elderly, the handicapped, and all the other areas in which tax spending programs are now being used and in which expertise in the areas is obviously required.

The problem is deeply ingrained in the history of the income tax laws and the failure of both Congress and the executive branch until recent years to understand that tax subsidies have little or nothing to do with the proper role of the Internal Revenue Code. Such subsidies are simply Federal spending programs, carried out through the tax laws and designed to encourage various social and economic goals of the Federal Government.

In each case, tax subsidies can be transposed into direct spending programs designed to achieve the same goals, such as encouraging home ownership, providing aid to charities, stimulating business investment, or promoting the production of oil and gas. The fact that these Federal subsidies are now designed as tax spending programs is a result of various factors, including the aggressive development of tax spending programs by the Finance Committee and the Ways and Means Committee, the adeptness of lobbyists and special interest groups in drilling new loopholes into the Internal Revenue Code, and the failure of other Senate committees to undertake adequate oversight responsibility over all types of Federal spending in their traditional areas of jurisdiction.

The analysis could also be used in reverse. Direct spending programs now within the jurisdiction of various congressional committees could be recast as tax spending programs within the jurisdiction of the Ways and Means Committee and the Finance Committee. In that case, the other congressional committees could be abolished, and we could all become members of the tax-writing committees.

The three basic questions in each case are whether a Federal subsidy is needed at all, which form of subsidy should be used, and whether the benefits of the subsidy are fairly distributed.

The description of the tax spending programs illustrates the fact that many of the programs are ostensibly for worthwhile goals that should be supported by the Federal Government. The problem, however, is that these same goals are also being addressed by other programs fashioned by other congressional committees. At best, in many cases, the tax spending programs are duplicative of other efforts and, therefore, wasteful of Federal dollars. At worst, the tax spending programs may be diametrically opposed to the objectives sought in direct spending programs. As a result, the fact that a tax-spending program has a useful goal tells nothing about whether the tax program is needed, is equitable and efficient, and is coordinated properly with other programs.

The congressional committee system works much more effectively in answering these questions of need, program design, and equity in the case of direct spending programs than it does in the case of tax-spending programs. In both the Senate and the House, direct spending programs must survive the scrutiny of two committees—the authorizing committee with jurisdiction to propose the subsidy, and the Appropriations Committee with jurisdiction to fund the program in light of competing demands for Federal dollars.

In the case of tax spending, however, there is no second committee. The Ways and Means Committee and the Finance Committee are both the "proposing" and "disposing" committees in their respective Houses. Since tax spending is not part of the appropriations process, the tax-writing committees act as both judge and jury over tax-spending programs, and no coordination with other spending programs is achieved.

In November 1977, I introduced a Senate resolution, Senate Resolution 326, to require tax spending bills reported by the Finance Committee to be referred for a 2-week period to the Senate Appropriations Committee and to the Senate authorizing committee with jurisdiction over the subject matter. In this way, Senate committees with experience in areas for which tax spending is proposed will have the opportunity to review the proposals before they are sent to the full Senate. Senate Resolution 326, which is cosponsored by Senators HOLLINGS, ANDERSON, and FORD, is now pending in the Senate Rules Committee.

Mr. President, tax spending programs in fiscal year 1979, which begins October 1, 1978, will total $136 billion, or 27 percent of the $500 billion in direct spending proposed by President Carter in his January budget message to Congress. In other words, the real Federal spending level for fiscal year 1979 is actually $636 billion, with $136 billion of that total representing Federal spending through the Internal Revenue Code. That amount is far too large for Congress to tolerate the ineffective review procedures that have governed such spending for so long.

Mr. President, I ask that the text of Senate Resolution 326 may be printed in the RECORD. I also ask that two tables may be printed in the RECORD. The first table describes the 85 current Federal tax spending programs under the jurisdiction of the Senate Finance Committee and shows how they can be recast as direct spending programs under the jurisdiction of other Senate committees. The second table groups the tax spending programs according to the authorizing committees of the Senate which would have jurisdiction over the counterpart direct spending programs.

The material follows:

S. RES. 326

*Resolved,* That rule XXVI of the Standing Rules of the Senate is amended by adding at the end thereof the following new paragraph:

"4. (a) Whenever the Committee on Finance reports a bill or joint resolution which, as reported, contains or extends one or more tax expenditure provisions, or whenever an amendment which contains or extends one or more tax expenditure provisions is proposed by floor amendment on behalf of, at the direction of, or with the approval of the Committee on Finance, such bill or joint resolution or such amendment shall be referred to—

"(1) the Committee on Appropriations, for consideration of the tax expenditure provisions contained or extended in such bill or joint resolution or such amendment; and

"(2) each other committee of the Senate which has legislative jurisdiction over the subject matter of any tax expenditure provi-

sion contained or extended in such bill or joint resolution or such amendment, for consideration of such tax expenditure provision.

"(b) Each committee to which a bill or joint resolution or an amendment is referred under subparagraph (a), shall report it to the Senate, together with its recommendations, within 14 calendar days (or such lesser number of days as the Senate may order) after the day on which such bill or joint resolution or such amendment is referred to it. In the event that any such committee fails to report such bill or joint resolution or such amendment within the specified period, it shall automatically be discharged from further consideration of such bill or joint resolution or such amendment.

"(c) For purposes of this paragraph, the term 'tax expenditure provision' means any provision of the Internal Revenue Code of 1954, or of any other law, which allows a special exclusion, exemption, or deduction in determining liability for any tax or which provides a special credit against any tax, a preferential rate of tax, or a deferral of tax liability.".

TABLE 1.—OVERLAPPING SENATE COMMITTEE JURISDICTION BETWEEN TAX SPENDING PROGRAMS AND DIRECT SPENDING PROGRAMS

| Tax spending program | Budget function | Committee with jurisdiction over tax spending program | Tax spending program recast as direct spending program | Committee with authorizing jurisdiction over direct spending program | Committee with appropriation jurisdiction over direct spending program | Annual cost of tax spending program fiscal year 1979 (millions) |
|---|---|---|---|---|---|---|
| 1. Exclusion from income of Armed Forces personnel of: in-kind benefits (quarters, meals); cash allowances for such purposes; combat pay; etc. | National defense | Finance Committee | Increased pay by Department of Defense for Armed Forces personnel to defray such costs. | Armed Services Committee. | Appropriations Committee | $1,370 |
| 2. Exclusion from income of disability pensions for Armed Forces personnel. | do | do | Increased disability pensions by Department of Defense for armed services personnel. | do | do | 120 |
| 3. Exclusion from income of certain income earned abroad by U.S. citizens. | International affairs | do | Grants by Department of Commerce to firms to provide additional compensation of U.S. employees working abroad. | Banking, Housing, and Urban Affairs Committee. | do | 385 |
| 4. Deferral of tax on income earned from exports by domestic international sales corporations (DICS). | do | do | Interest-free loans by Department of Commerce to firms to promote exports. | do | do | 1,335 |
| 5. Deferral of tax on income earned by foreign subsidiaries of U.S. multinational corporations. | do | do | Interest-free loans by Department of Commerce to provide financial assistance to U.S. corporations that build plants and conduct operations overseas. | do | do | 665 |
| 6. Special rate for U.S. corporations operating solely in the Western Hemisphere. | do | do | Grants by Department of Commerce to provide financial assistance to U.S. corporations that conduct operations in the Western Hemisphere. | do | do | 15 |
| 7. Immediate deduction, rather than amortization, of research and development costs. | General science, space, and technology. | do | Interest-free loans by Department of Commerce to promote research and development. | Commerce, Science, and Transportation Committee. | do | 1,550 |
| 8. Immediate deduction, rather than amortization, of intangible costs of exploration, drilling and development. | Energy | do | Interest-free loans by Department of Energy to encourage discovery of oil and gas and other resources. | Energy and Natural Resources Committee. | do | 1,265 |
| 9. Percentage depletion allowance for production of oil and gas and other minerals. | do | do | Grants by Department of Energy to encourage production of oil and gas and other minerals. | do | do | 1,580 |
| 10. Capital gains treatment of royalties on coal. | do | do | Grants by Department of Energy to encourage coal production. | do | do | 75 |
| 11. Exclusion from income of interest on State and local government pollution control bonds. | Natural resources and environment. | do | Interest subsidy by Environmental Protection Agency for State and local pollution control bonds. | Environment and Public Works Committee. | do | 395 |
| 12. Exclusion from income of payments to public utilities for the construction of water or sewage disposal facilities. | do | do | Interest-free loans by Environmental Protection Agency to public utilities to construct water or sewage disposal facilities. | do | do | 10 |
| 13. 5-yr amortization of pollution control facilities. | do | do | Interest-free loans by Environmental Protection Agency for construction of pollution control facilities. | do | do | −45 |
| 14. 5-yr amortization, accelerated depreciation, and charitable deductions for preservation of historic structures. | do | do | Interest-free loans and matching grants by Department of Interior for preservation of historic structures. | Energy and Natural Resources Committee. | do | 10 |
| 15. Capital gains treatment of timber income. | do | do | Grants by Department of Agriculture for timber production and conservation. | Agriculture, Nutrition, and Forestry Committee. | do | 295 |
| 16. Capital gains treatment of royalties on iron ore. | do | do | Grants by Department of Interior to encourage production of iron ore. | Energy and Natural Resources Committee. | do | 20 |
| 17. Cash method of accounting for farmers, and immediate deduction, rather than amortization, for certain conservation costs. | Agriculture | do | Interest-free loans by Department of Agriculture for farmers. | Agriculture, Nutrition, and Forestry Committee. | do | 535 |
| 18. Capital gains, rather than ordinary income, treatment of sale of farm assets. | do | do | Grants by Department of Agriculture for farmers. | do | do | 375 |
| 19. Deduction for noncash patronage dividends and other items of farm cooperatives. | do | do | Grants by Department of Agriculture to encourage farm cooperatives. | do | do | 340 |
| 20. Exclusion from income of $100 ($200 on joint return) of dividends received from domestic corporations. | Commerce and housing credit. | do | Grants by Department of Commerce to encourage purchase of dividend-paying corporate stock. | Commerce, Science and Transportation Committee. | do | 505 |
| 21. Exclusion from income of interest on State and local industrial development bonds. | do | do | Interest subsidies by Department of Commerce to private industry for industrial construction. | do | do | 405 |
| 22. Exemption of credit union income | do | do | Grants by Department of Commerce to credit unions to encourage savings. | Banking, Housing and Urban Affairs Committee. | do | 90 |
| 23. Bad debt deductions of banks and other financial institutions in excess of actual losses. | do | do | Grants by Department of Commerce to assist banks and other financial institutions. | do | do | 790 |
| 24. Homeowner's deduction for mortgage interest. | do | do | Matching grants by Department of Housing and Urban Development to encourage residential construction and home ownership. | do | do | 5,530 |
| 25. Homeowner's deduction for property taxes. | do | do | Matching grants by Department of Housing and Urban Development to encourage home ownership and for aid to State and local governments. | do | do | 5,180 |

TABLE 1.—OVERLAPPING SENATE COMMITTEE JURISDICTION BETWEEN TAX SPENDING PROGRAMS AND DIRECT SPENDING PROGRAMS—Continued

| Tax spending program | Budget function | Committee with jurisdiction over tax spending program | Tax spending program recast as direct spending program | Committee with authorizing jurisdiction over direct spending program | Committee with appropriation jurisdiction over direct spending program | Annual cost of tax spending program fiscal year 1979 (millions) |
|---|---|---|---|---|---|---|
| 26. Consumer's deduction for interest on credit purchases. | do | do | Grants by Department of Commerce to encourage consumer purchases. | Commerce, Science and Transportation Committee. | do | $2,350 |
| 27. Immediate deduction, rather than amortization, of construction period interest and taxes. | do | do | Interest-free loans by Department of Housing and Urban Development to encourage construction. | Banking, Housing and Urban Affairs Committee. | do | 615 |
| 28. Excess 1st year depreciation on small business property. | do | do | Interest-free loans by Small Business Administration to encourage investment by small business. | Small Business Committee. | do | 205 |
| 29. Accelerated depreciation on rental housing. | do | do | Interest-free loans by Department of Housing and Urban Development to encourage construction of rental housing. | Banking, Housing, and Urban Affairs Committee. | do | 360 |
| 30. Accelerated depreciation on buildings other than rental housing. | do | do | Interest-free loans by Department of Commerce to encourage nonresidential construction. | Commerce, Science, and Transportation Committee. | do | 245 |
| 31. Asset depreciation range (ADR) method of accelerated depreciation. | do | do | Interest-free loans by Department of Commerce to encourage purchase of business assets. | do | do | 2,775 |
| 32. Capital gains treatment of income from sale of stock and other assets (other than farming, timber, iron ore, and coal). | do | do | Grants by Department of Commerce to encourage investment in stock and other assets. | do | do | 8,565 |
| 33. Deferral of capital gains on the sale of a residence, when a new residence is purchased. | do | do | Interest-free loans by Department of Housing and Urban development to encourage investment in homes. | Banking, Housing, and Urban Affairs Committee. | do | 980 |
| 34. Nontaxation of capital gains at death. | do | do | Grants by Department of Commerce to encourage investment in stock and other assets. | Commerce, Science and Transportation Committee. | do | 8,975 |
| 35. Corporate surtax exemption (lower tax rates on the 1st $50,000 of corporate income). | do | do | Grants by Small Business Administration to assist small business corporations. | Small Business Committee. | do | 3,540 |
| 36. Investment tax credit (10 percent credit for investment in equipment and machinery). | do | do | Grants by Department of Commerce equal to 10 percent of purchase price for equipment and machinery. | Commerce, Science and Transportation Committee. | do | 15,045 |
| 37. Deduction for nonbusiness State and local gasoline taxes. | Transportation | do | Grants by Department of Transportation to State and local governments to defray highway maintenance costs, and to reduce the cost of gasoline to drivers. | do | do | 840 |
| 38. 5-yr amortization of railroad rolling stock. | do | do | Interest-free loans by Department of Transportation to modernize railroad equipment and reduce freight car shortages. | do | do | —40 |
| 39. Deferral of tax on income used for construction of new vessels by shipping companies. | do | do | Interest-free loans by Maritime Administration in Department of Commerce for ship construction. | do | do | 85 |
| 40. 5-yr amortization for expenses of low-income housing rehabilitation. | Community and regional development. | do | Interest-free loans by Department of Housing and Urban Development for low-income housing rehabilitation. | Banking, Housing and Urban Affairs Committee. | do | 10 |
| 41. Exclusion of income from scholarships and fellowships. | Education, training, employment and social services. | do | Grants by Department of Health, Education, and Welfare to supplement scholarships and fellowships. | Human Resources Committee. | do | 330 |
| 42. Parents' $750 exemption for students age 19 or over. | do | do | Grants by Department of Health, Education, and Welfare for aid to parents with children in college. | do | do | 790 |
| 43. Exclusion from income of meals and lodging provided employees (other than military). | do | do | Grants by Department of Health, Education, and Welfare to defray employee costs for meals and lodging. | do | do | 325 |
| 44. Exclusion from income of contributions to prepaid legal services plans. | do | do | Grants by Legal Services Corporation to encourage prepaid legal service plans. | do | do | 15 |
| 45. 1 percent investment credit for employee stock ownership plans (ESOP's). | do | do | Grants by Department of Commerce to firms to encourage employee investment in employer's stock. | Commerce, Science, and Transportation Committee. | do | 305 |

| 25. Homeowner's deduction for property taxes | 5,180 |
| 27. Immediate deduction, rather than amortization, of construction period interest and taxes | 615 |
| 29. Accelerated depreciation on rental housing | 360 |
| 33. Deferral of capital gains on the sale of a residence, when a new residence is purchased | 980 |
| 40. Five-year amortization for expenses of housing rehabilitation | 10 |
| 82. Exclusion from income of interest on general purpose state and local government bonds | 6,015 |
| 85. Deferral of tax on interest on savings bonds | 670 |
| Total | 22,640 |

Commerce, Science and Transportation Committee:

| | |
|---|---|
| 7. Immediate deduction, rather than amortization, of research and development costs | 1,550 |
| 20. Exclusion from income of $100 ($200 on joint return) of dividends received from domestic corporations | 505 |
| 21. Exclusion from income of interest on state and local industrial development bonds | 405 |
| 26. Consumer's deduction for interest on credit purchases | 2,350 |
| 30. Accelerated depreciation on buildings other than rental housing | 245 |
| 31. Asset depreciation range (ADR) method of accelerated depreciation by reducing useful life of assets | 2,775 |
| 32. Capital gains treatment of income from sale of stock and other assets (other than farming, timber, iron ore and coal) | 8,565 |
| 34. Nontaxation of capital gains at death | 8,975 |
| 36. Investment tax credit (10-percent credit for investment in equipment and machinery) | 15,045 |
| 37. Deduction for nonbusiness state and local gasoline taxes | 840 |
| 38. Five-year amortization of railroad rolling stock | —40 |
| 39. Deferral of tax on income used for construction of new vessels by shipping companies | 85 |
| 45 One-percent investment credit for employee stock ownership plans (ESOP's) | 305 |
| 48. Maximum 50-percent tax on earned income | 800 |
| Total | 42,405 |

Energy and Natural Resource Committee:

| | |
|---|---|
| 8. Immediate deduction, rather than amortization, of intangible costs of exploration, drilling and development | 1,265 |
| 9. Percentage depletion allowance for production of oil and gas and other minerals | 1,580 |
| 10. Capital gains treatment of royalties on coal | 75 |
| 14. Five-year amortization, accelerated depreciation, and charitable deductions for preservation of historic structures | 10 |
| 16. Capital gains treatment of royalties on iron ore | 20 |
| 84. Tax credit for corporations doing business in U.S. possessions | 520 |
| Total | 3,470 |

Environment and Public Works Committee:

| | |
|---|---|
| 11. Exclusion from income of interest on State and local government pollution control bonds | 395 |
| 12. Exclusion from income of payments to public utilities for the construction of water or sewage disposal of facilities | 10 |
| 13. Five-year amortization of pollution control facilities | —45 |
| Total | 360 |

Governmental Affairs Committee:

| | |
|---|---|
| 83. Deduction for State and local sales, income and personal property taxes | 9,440 |

Human Resources Committee:

| | |
|---|---|
| 41. Exclusion of income from scholarships and fellowships | 330 |
| 42. Parents' $750 exemption for students age 19 and over | 790 |
| 43. Exclusion from income of meals and lodging provided employees (other than military) | 325 |
| 44. Exclusion from income of contributions to prepaid legal services plans | 15 |
| 46. Deduction for contributions to educational institutions | 930 |
| 47. Deduction for contributions to noneducational and nonhealth institutions | 5,205 |
| 49. Credit for expense of child care and dependent care | 575 |
| 50. Credit for employment of AFDC recipients and public assistance recipients under work-incentive programs | 20 |
| 52. Exclusion from income of employer contributions for health insurance premiums and health care | 7,225 |
| 53. Deduction for medical expenses | 2,655 |
| 54. Immediate deduction, rather than amortization, of expenses of removing architectural and transportation barriers to the handicapped | 10 |
| 55. Deduction for contributions to health institutions | 1,145 |
| 56. Exclusion from income of social security benefits for disabled persons | 605 |
| 57. Exclusion from income of social security benefits for retired workers | 4,700 |
| 58. Exclusion from income of social security benefits for dependents and survivors | 1,040 |
| 59. Exclusion from income of railroad retirement benefits | 280 |
| 60. Exclusion from income of workman's compensation benefits | 970 |
| 61. Exclusion from income of special benefits for disabled coal miners | 50 |
| 62. Exclusion from income of unemployment insurance benefits | 1,135 |
| 63. Exclusion from income of public assistance benefits | 360 |
| 64. Exclusion from income of sick pay | 60 |

*This table groups the tax spending programs in Table I according to the Senate committees that would have authorizing jurisdiction if the tax spending programs were recast as direct spending programs. The numbers in the left hand margin identify the tax spending programs in Table I.

## ORDER FOR RECOGNITION OF MR. MORGAN ON WEDNESDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order that was previously entered for tomorrow for the recognition of the distinguished Senator from North Carolina (Mr. MORGAN) be vitiated and that it be restored for the following day, Wednesday, immediately after the prayer.

The PRESIDING OFFICER. Without objection, it is so ordered.

## ATLANTA CONSTITUTION WRITER, GENE THARPE, ANALYZES COAL STRIKE

Mr. HELMS. Mr. President, as in legislative session, the so-called labor reform bill which may be considered by the Senate in the coming months has always enjoyed the support of President Carter and his administration. However, in this matter—as in so many other matters of late, such as the giveaway of the Panama Canal and opposition to tuition tax credit legislation—the administration's position seems to be out of touch with the views of the American people.

There is little doubt that the majority of the American people oppose the granting of enormous new power to the big labor bosses. Indeed, surveys show that even the majority of union members believe that union leaders have too much rather than too little power.

If there was any doubt, the recent coal strike has resolved that doubt in the minds of many Americans. That strike brought home once again just how devastating the misuse of union power can be and how many innocent persons suffer in its wake. Abusive union power has largely contributed to the erosion of industrial power in the Northeast and Midwest. Our national economy cannot afford to have this unchecked power unleashed to stifle the budding industrial development of the South and West.

It is noteworthy, therefore, that an article appearing in a Georgia newspaper, the Atlanta Constitution, grasps the essence of what is happening: That the coal strike is but a harbinger of things to come if this dangerous so-called labor reform bill should be enacted into law.

Mr. President, I ask unanimous consent that an article entitled "Thanks, Dear Coal Miners, for Striking" appearing in the March 16 edition of the Atlanta Constitution be printed in the RECORD at the conclusion of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THANKS, DEAR COAL MINERS, FOR STRIKING

(By Gene Tharpe)

Many thanks for the coal strike, which is 101 days old today. It's teaching us a good lesson badly needed, and from it we likely shall reap a blessing.

And the lesson isn't that children and teachers in northern states enjoy wearing coats in classrooms cold because of reduced heating because of dwindling coal supplies. And it's not that industrial workers, facing food and mortgage bills, enjoy working reduced hours or being laid off because their plants are running out of coal.

And the blessing isn't that the miners may soon be going back to work, if they accept the current offered contract which provides a 35–40 percent boost in pay and benefits over the next three years, which will translate into nicely increased inflation for us all since the price of energy passes right through the economy down to John and Jane Consumer.

And the blessing isn't that the Teamsters a year from now may decide it can get a generous new contract simply by waiting for a trucking shutdown to create an air of national crisis. Or that postal workers might do the same when their contracts expire this summer, or that railroad workers might do the same when their contracts expire Dec. 31.

And the lesson isn't that the nation certainly can count on coal miners (who apparently can't develop sufficient initiative and education on their own to help their sons, if not themselves, escape their coal mine dungeons) to be very concerned about helping America escape impending economic collapse by making our energy transfer from oil to coal any easier or less costly.

No, the lesson and blessing aren't any of the above, although they are true or probably will prove true.

The lesson is that Big Labor, such as the United Mine Workers, has grown far too strong, so strong that it can thumb its nose at an act of Congress, the Taft-Hartley Act, break the law and get away with it, so strong that a group of workers who carry rifles and shotguns in their pickup trucks can use violence to person and property to force other workers not to work, so strong that a few thousand workers can dictate to millions of Americans.

But from the lesson, most likely, shall flow the blessing.

And the blessing, it is hoped, is that strikes such as the coal strike are going to fan the embers of anti-union feeling that have begun to glow in recent years into prairie fire, burning into a widespread resolve to stop unions from gaining further life-and-death power over the nation.

And the place for that blessing to begin is for the Senate to kill Big Labor's pet legislative project now awaiting action—the Labor Law Reform bill. The House version of the bill has already been passed, but the illegal, unfair, and ignorant actions of the coal miners during the past three months should stop Senate passage of the measure.

The labor bills aim at "reforming" the Wagner Act of 1935, the prime federal labor legislation which outlawed what was considered unfair labor practices by employers and required an employer to bargain in good faith with a union which his employers chose to be their collective bargaining agent. It also set up the National Labor Relations Board to adjudicate violations of the Wagner Act. The unions contend that it's too easy for companies to violate or skirt around Wagner Act regulations, and so it needs strengthening to "fulfill the promises made" by the act.

But the labor reform bills—which, unfortunately, have the support of the Carter administration—go far beyond fulfilling such promises. There may well be need to streamline some activities of the NLRB, but the current measures go too far. They significantly tilt the balance of labor-management relations toward unions in election and first-contract situations, plus placing the government too much on the side of labor in organizing attempts. In brief, the bills stack the deck toward labor.

Every high school student has studied—at least read about—the "checks and balances" of American government, the division of power between the legislative, executive and judicial branches, an arrangement which, despite some drawbacks, has served us well over the years. In today's complicated America, there's another system of checks and balances—Big Government, Big Business, and Big Labor. It's a system that, delicately balanced, would serve us well.

But the delicate balance is all important, Big Labor, as so ably demonstrated by the coal strike, has too much power now—and is moving toward monopoly power. The labor reform bills would give unions more power than ever.

Thanks to the striking coal miners, those bills are almost certainly dead in the Senate. If our senators have any sense, the bills are dead for sure.

## APRIL IS POULTRY AND EGG MONTH IN NORTH CAROLINA

Mr. HELMS. Mr. President, it gives me great pleasure to take this occasion to commend the many citizens of my State who earn their livelihood in the poultry industry.

It is very fitting that April is officially declared "Poultry and Egg Month" in North Carolina. The contribution poultry makes to our State and to the employment of so many thousands of our citizens is substantial and increasing every year.

Poultry is North Carolina's fastest growing food industry. In terms of gross farm income it has increased from about $90 million in 1947 to $625 million in 1977—almost a 700 percent increase in 30 years. Additionally, nearly $150 million worth of marketing services have been added to this farm value thereby increasing the gross economic impact to approximately $775 million.

Payment for these marketing services provides jobs for countless thousands of our people in poultry and egg processing plants, markets for carton and packing material manufacturers, trucking, and shipping just to name a few.

Obviously, our poultry industry is a fine example of the free enterprise system at work. Let me illustrate:

Last year, North Carolina poultry farmers provided consumers with approximately 966 million pounds of dressed, ready-to-cook poultry with the highest quality in history.

The retail price of chicken is about the same as it was 20 years ago—while consumer prices in general have doubled.

Tar Heel consumers have the opportunity of purchasing the freshest poultry available because they live within one of the largest broiler producing areas of the country.

And other States benefit as well. North Carolina's broiler industry ships more than three-quarters of its production to out-of-State markets meeting the needs of 18 million consumers in addition to the 5.5 million consumers within North Carolina. Turkeys shipped from North Carolina graced the tables of 24 million consumers—and North Carolina is now No. 3 in turkey production nationally.

Mr. President, the egg aspect of the poultry industry is just as impressive as broiler and turkey production. In 1977 North Carolina poultrymen sent almost 3 billion eggs to market. And eggs continue to be one of the best buys among protein foods. A dozen large eggs weigh 1½ pounds. When their price is 72 cents a dozen, the consumer is paying only 48 cents a pound for a high quality, nutritional food.

The North Carolina poultry industry has many dedicated leaders who are recognized nationally. The North Carolina Poultry Federation is a very effective promotion arm of the industry, and all poultrymen receive tremendous support from the North Carolina Department of Agriculture and Agricultural Extension Service.

We are proud of our citizens who earn their livelihood in the production of broilers, turkeys, and eggs, and who have proven that the American free enterprise system does work and will benefit producers and consumers with a plentiful supply of quality products at a very reasonable price.

I commend the North Carolina poultry industry and congratulate them for a job well done.

## DR. CARROLL T. MANN III—EFFECTIVE LEADER AND SPOKESMAN FOR SAFARI CLUB INTERNATIONAL

Mr. HELMS. Mr. President, as in legislative session, this past Friday, a good friend and a splendid North Carolinian, Dr. Carroll T. Mann III, of Raleigh, came to Washington to testify before the Senate Subcommittee on Resource Protection in connection with oversight hearings on the Endangered Species Act of 1973. He was accompanied by an equally distinguished North Carolinian, C. Allen Foster, Esq., of Greensboro.

Dr. Mann is a highly-regarded neurosurgeon and currently serves as president of Safari Club International. Under his leadership, the Safari Club has been turned from a largely social organization into a highly effective group expressing the concerns and viewpoints of hunters and sportsmen everywhere. His appearance before the subcommittee is evidence of the new efficacy of Safari Club International.

Dr. Mann is also the past president of the North Carolina Wildlife Federation and is a member of such diverse outdoor organizations as the Alaska Professional Hunters Association and the Society for the Conservation of Bighorn Sheep. His articles have appeared in Outdoor Life, American Rifleman, National Sportsman's Digest, Friend O'Wildlife, Wildlife in North Carolina, and Safari.

Mr. C. Allen Foster, a Greensboro attorney who appeared with Dr. Mann, has developed an excellent knowledge of the intricacies and variations of game laws throughout the world and with that knowledge has become a valuable member of Safari Club International. A magna cum laude graduate of Harvard Law School, he is also a member of the National Panel of Labor Arbitrators of the American Arbitration Association and a public member of the North Carolina Tax Review Board.

American sportsmen could not hope to have two better representatives, and I am very proud of them. It is unfortunate that too often we hear from only the extremist elements of the environmental lobby. Frankly, at least up until now, they have done a much better job of advocating their viewpoint in the media and before the Congress. There is another viewpoint—a sensible and serious viewpoint—that needs to be heard, and it is a most fortunate development that there are those, like Dr. Mann, who are willing to take on that task.

Thus, it is fitting that the highly articulate and excellent prepared testimony given by Dr. Mann before the Resource Protection Subcommittee be available for public perusal. Therefore, Mr. President, I ask unanimous consent that the prepared statement of Dr. Carroll Mann III before the Resource Protection Subcommittee of the Senate Committee on Environment and Public Works on April 14, 1978, be printed in the RECORD at this point.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF DR. CARROLL MANN

Mr. Chairman, members of the committee: My name is Dr. Carroll Mann of Raleigh, North Carolina. Professionally, I am a neurosurgeon, but I am also a wildlife biologist and President of the Safari Club International. I am appearing today on behalf of the Safari Club International, the Safari Club International Conservation Fund and The American Hunters Educational and Legal Protection Fund. Details with regard to the background of these organizations are attached as Exhibit 1 to the written statement of my testimony. With me is C. Allen Foster, an attorney from Greensboro, North Carolina, who is the Managing Director of The American Hunters Educational and Legal Protection Fund and who has prepared the legal portion of this statement.

The groups on behalf of whom I am appearing have a membership in excess of 1 million American citizens and, through their activities, represent over $60 million other Americans who are active hunters, fishermen, trappers and target shooters, these statistics being reflected in the Fish & Wildlife Service Survey on Outdoor Recreation.

These groups wish initially to express their support for the concept of wildlife management, including the full spectrum from seasonal harvest by sportsmen and others to, where necessary, short-term species protection, all leading to the maintenance of viable, balanced populations at levels consistent with available habitat. As a result, these groups supported the passage of the Endangered Species Act of 1973 and, subject to the suggested modifications of statutory language and administrative interpretation set forth in this statement, support the extension of appropriation authorization which is before this Committee.

Because the groups on behalf of whom I am appearing represent sport hunters all over the world, they have probably had as much practical experience with the Endangered Species Act and the species listed thereunder as any other group. As a result, we hope that the following comments concerning the substance of the Act and its implementation will be helpful to this Committee.

1. We believe that the Act should be amended to exempt from its prohibitions hunting trophies which are taken by sports hunters in compliance with the laws of foreign jurisdictions in which the species in question is found. There are a number of reasons why such an exemption is both appropriate and would also further the Act's goal of long term conservation or preservation.

First, there are many people who question the propriety of Americans' determining the conservation status of species which do not occur within the boundaries of the United States. The reaction of foreign governments to the International Convention on Trade in Endangered Species would seem to indicate that our government seriously overestimated the international support for such activities.

Moreover, the administrators who implement the Endangered Species Act have little or no knowledge of the local conditions peculiar to the countries of origin of the listed species. As a result, American legislation and regulation creates foreign resentment which detrimentally affects the very goals we are seeking to achieve. For example, in a recent paper presented to the 43rd North American Wildlife and Natural Resources Conference on March 20, 1978, a copy of which is attached as Exhibit 2, Messrs. Teer and Swank, who had been employed by the Department of the Interior to conduct a status review of the leopard, stated:

"In our recent study of the leopard practically every representative of natural resources agencies that we contacted in Africa expressed the opinion that the United States was presumptive in making rules and regulations which vitally affected their internal affairs * * * They wished to make it clearly understood that they were quite capable and surely had more knowledge of their resources than any person or government whose contact and tenure in their country was usually short and desultory." (Pg. 13)

Second, it is common knowledge, and the Endangered Species Act recognizes, that the primary forces which present danger to the survival of certain species are (1) habitat deterioration and (2) overutilization for commercial purposes. As to the former, hunters have historically been, along with federal and state governments, the *only* source of funds for habitat acquisition and improvement. I know I need not cite to this committee the use of the Pittman-Robertson and Dingell-Johnson Funds in wildlife management nor the activities of Ducks Unlimited in habitat acquisition. It is difficult to name even one group which opposes sport hunting but which has made any significant contribution to the solution of the problem of habitat deterioration. As to commercial overutilization, it is well known that sports hunters are not involved in their activities for monetary gain; in fact, such considerations impinge upon their self-perceptions of the value and meaning of their trophies. More important from the regulatory context, the relationship of sport hunting to commercial activity becomes even more remote when one considers the almost negligible number of trophies involved annually in comparison to species populations. For example, in the case of the African elephant, as to which a proposed threatened listing is now pending before the Office of Endangered Species, trophy hunting in 1977 comprised approximately of 577 animals or less than .04 percent of the minimum population estimate with regard to the species. The scientific evidence is that elephant populations can sustain an annual offtake of 2.6 percent to 5.7 percent, over 100 times the annual offtake by trophy hunters. The same thing is true with regard to virtually every other species which is listed as endangered or threatened under the Act.

Third, the parallel regulatory framework represented by the International Convention on Trade in Endangered Species is not, in the vast majority of signatory countries, interpretated to encompass sport hunters within the prohibitions thereunder, even with regard to species which are listed as endangered. The contrary interpretation of the United States is in a tiny minority. The organizations which I represent have urged the Department of the Interior to institute a reexamination of the United States' position which was developed during a prior administration, and it is my understanding that such a reexamination may even be currently underway.

Fourth, even current regulations promulgated by the Secretary with regard to species listed under the Act as threatened recognize sport hunting as a legitimate utilization of wildlife resources and an appropriate exception to generalized prohibitions of taking or even sale. For example, the grizzly bear which is listed as threatened in the 48 contiguous states, can be hunted in limited numbers in certain portions of its range. More substantially, the alligator may be hunted in portions of its range subject only to the regulations imposed by the local wildlife authorities, in this case the state of Louisiana. We submit that this is precisely the type of exemption which should be generalized for hunting trophies under the Act. Surely, the local authorities are the most able to determine population goals and levels of annual offtake.

Finally, an exemption for sports hunters would actively promote the goals of long-term species conservation. As pointed out above, sport hunting has a negligible impact on population levels. Even more important, in many cases the presence of sport hunters in remote areas, helps to control illegal poaching. As Mr. A. L. Archer of Kenya, a knowledgeable observer of the situation regarding the elephant in that country, recently commented:

"The majority of the uniformed overseas critics do not realize that many of the major elephant hunting areas offer little else other than elephants to hunt, therefore through banning elephant hunting one is playing directly into the poacher's hands by at once removing a controlling factor in the presence of the professional and his often influential and vocal overseas client. The field is thus left wide open for large scale and unreported poaching activities."

Innumerable members of Safari Club International report annually of their own personal efforts toward the control of poaching, ranging from the removal of hundreds of snares in a single day to actually chasing and apprehending the poachers themselves. Furthermore, sports hunting provides a major source of funds for the economies and wildlife programs of affected countries. A game trophy has a far greater economic value as such than any other economic utilization of the resource. The organizations which I represent have recently compiled statistics in this regard concerning trophy hunting of the African elephant. In 1977, the approximately 577 elephants taken by sports hunters produced in excess of $750,000.00 in license fees and taxes all or most of which was used in the affected countries' conservation programs, an average of $1,360.00 per elephant. In addition, the same approximately 577 elephants contributed to total of over $9 million dollars to the economies of the affected countries, an average of $14,373.00 per elephant. Thus, the total economic value per elephant was $15,733.00.

I would again like to quote from the Teer and Swank paper attached to my testimony as Exhibit 2,

"Many developing countries are abysmally poor in GNP and budgets for conservation are likewise very poor. Thus agencies charged with administering and managing wildlife resources have in the past earned funds to operate their programs through licensing systems and sales of animal products. Often these funds provide for an infrastructure in the capital city but almost nothing is left for program implementation through a professional field force.

"Funds urgently needed for conservation work have been cut off by the closure of hunting seasons and by gazetting of species such as the leopard to endangered status. Admittedly, the amount of financial loss attributable to the removal of a game species from game status may be small, but relatively speaking, it is an important loss to an agency whose budgets are already small. Moreover, it is unlikely that any money will be forthcoming from general revenue to offset this loss. The leopard can be taken legally in several countries in Africa, but its present status as an endangered species prevents it from being imported into countries which are the primary sources of hunters for safares in Africa. In addition to economic losses to wildlife agencies the losses of revenue to local people engaged in these commercial enterprises can be substantial.

"The potential economic return from many game animals provides an incentive to the private landowner to protect and manage them for commercial purposes. On the other hand, if the animal is a predator, real or imagined, of the landowner's livestock, or depredator on his crops, and if he has no way to profitably market the animal, the result is almost surely the elimination of the animal on that ranch or farm despite its status as endangered to the conservationst.

"In short, the market place can be the most important preservation technique available to conservationists when wildlife species are present on private lands. The placement of a species of economic importance on a protected list can defeat efforts to protect or save it in some contexts." (Pgs. 15–16)

I would again emphasize that the authors of this paper were employed by the Department of the Interior to conduct a status review of the leopard, and these are their comments about the detrimental effect of banning the importation of leopards as sports hunting trophies.

Two recent comments in this regard concerning the situation of the elephant in Zambia and Botswana are particularly instructive. As for Zambia, the following telegram was received:

"U.S. Authorities dumb if elephant put on threatened list banning trophy imports from Zambia. So abundant recent UNFAO Luangua Valley Reports stated elephants causing excessive damage habitat. Advocated cropping some 1,000 annually for six years. Not implemented due to lack funds. Foreign revenue to Zambia annually exceeding $2,750,000.00. Ban exceeding detrimental and lost employment underprivileged rural areas. Disastrous. Ban will not affect poaching."

Similarly, a letter regarding Botswana:

"Should the bill to treat these animals as endangered species be successful, it would prevent the very person who is able to generate the money which will motivate people to keep more elephants, from hunting in this country—the American sportsmen. The Botswana government places great store on the foreign currency they receive from hunting licenses and in fact this easily gleaned revenue frequently offsets public pressure to put land to better use—i.e., ranching with domestic stock."

Thus, the groups which I represent submit that the Endangered Species Act should be amended to exempt from its restrictions the trophies of sportsmen who obtain the same under legal hunting licenses issued by the country of origin of the species.

2. The second primary comment which these organizations would like to present is that listings of species as endangered or threatened under the Act, have, in the past, been made in a manner which violates both the letter and the spirit of the Act. 16 U.S.C. § 1533(b)(1) clearly provides that "the Secretary shall make determinations [with regard to endangered or threatened listings] on the basis of the best scientific and commercial data available to him . . ." We have concrete proof that the listing of the leopard as endangered was based upon hysterical emotion instead of scientific and commercial data as required by the Act. Again citing the statement of Messrs. Teer and Swank to the 43rd North American Wildlife and Natural Resources Conference:

"In spite of the fact that the leopard is the symbol of the rare and endangered species movement and is featured as a species brought to the verge of extinction by commercialization, our conclusion was: The

placement of the leopard on the list of endangered species of the International Union for the Conservation of Nature and the U.S. Fish and Wildlife Service, and its assignment to Appendix I of the International Convention of Trade in Endangered Species of Wild Fauna and Flora is not defensible. The leopard is not endangered under commonly used definitions that endangered status implies, and it has been improperly gazetted to that status."

Similarly, a 1976 report by Dr. Randall L. Eaton, a member of the Cat Specialist Group of the International Union for the Conservation of Nature, which report was presented to the Department of the Interior as part of a Petition to delist the leopard as endangered, concluded:

"I was ashamed for having so readily adopted and further contributed to the now widespread belief that the leopard is endangered in Africa. Such a belief was and is scientifically unfounded, and by all present evidence, entirely false. Such action by myself and others can only foster division between scientific conservation and the concerned citizens and societies whose responsibility it is to manage their wildlife resources. Scientifically based conservation has lost credibility; it cannot withstand succumbing to faultless emotionalism and its repercussions if it is to play the necessary role it should."

The organizations which I represent submit to the Committee that there are numerous additional species which have been listed as endangered or threatened under the Endangered Species Act which did not then nor do they now fit the Act's definition of such status. It is our information and belief that numerous species have been listed as endangered or threatened without any scientific information whatsoever. I am pleased to report to this committee that, through the efforts of Safari Club International and the American Hunters Educational and Legal Protection Fund, litigation is being instituted to compel the Secretary of the Interior and his administrators to delist these species which have been listed illegally and to enjoin the Secretary from further listings in the absence of the statutorily required scientific and commercial data.

We would submit, however, that this Committee should be concerned that it became necessary for interested citizens to initiate litigation to compel governmental officials to comply with the explicit provisions of the statute under review. It is difficult for me to envision how the statute could be amended to make its commands more explicit. What is needed at the present time is a congressional insistence that the administrators in question fulfill their legal responsibilities.

We do not however, lay all the blame at the door of the Department of the Interior. There exists in this country a small but vocal minority of persons who would like to preclude any utilization of wildlife resources which includes mortality other than from natural causes. These groups have mounted well-financed and publicized campaigns not to promote habitat acquisition or scientifically controlled utilization, but instead to inflame emotions, frequently with exaggerated rumors or downright misrepresentations, leading to absolute protection measures. These groups manipulate public opinion to produce a constant and unrelenting pressure upon the Department of the Interior to make these listings which are not based upon scientific data. We submit that this Committee and the Congress can and should by resolution communicate the insistence of our citizens and their representatives that administrative action be taken pursuant to the requirements of the Act for scientific evidence and not because of baseless, albeit well-articulated, emotionalism.

I might add that the same absence of scientific data in connection with species listing has existed with respect to the International Convention on Trade in Endangered Species. Just recently, a Working Group established under the Endangered Species Scientific Authority considered the biology and management of the bobcat, the lynx and the river otter in the face of urgent pressures from preservationist groups to move these species from Appendix II (threatened) to Appendix I (endangered) status under the Convention. The draft report of this Working Group, a copy of which is attached hereto in full as Exhibit 3, makes the following poignant points:

"It became clear early in the deliberations of the Working Group that members felt extremely uncomfortable about their charge. This discomfort arose from the feeling that the bobcat, lynx and river otter had been placed on Appendix II from political rather than biological reasons. Furthermore, concern was voiced by several members that neither status nor recognized authorities on the status of the subject species were consulted before the inclusion of the species in Appendix II. In view of this sentiment the following resolutions were passed:

"Whereas species of Lutrinae and Felidae have been included on Appendix II of the Convention on International Trade in Endangered Species of Wild Fauna and Flora, and are thereby subject to regulation in international trade, and

"Whereas these taxa in the United States were listed on Appendix II without adequate consideration of the available biological information, and

"Whereas the Working Group expresses its dissatisfaction with the manner in which they were listed on Appendix II, and

"Whereas the available data indicate that there are regional differences in populations of river otters and bobcats and that individual states' management programs differ markedly, and

"Whereas seven members of the Working Group believe that the river otter and bobcat are clearly not currently threatened by unregulated international export (5 abstentions; no negative votes), but 5 members believe that the lynx is clearly currently threatened by unregulated international export (seven abstentions; no negative votes)

"Now therefore be it resolved that the Working Group expresses its reservations about the appropriateness of the blanket inclusion of these species on Appendix II, and recommends that as soon as possible the management authority examine all available information pursuant to this question and re-evaluate the inclusion of these species in Appendix II." (Passed ten-zero, one abstention)

Mr. Chairman, and members of this Committee, where have we come in this country when a panel of scientists appointed by the government of the United States is forced to pass a resolution such as this criticizing the "political rather than scientific" basis for the decisions of our governmental officials?

3. A problem, parallel to the foregoing comments with regard to scientifically unfounded listings, exists in connection with the Secretary's failure to abide by 16 USC § 1533(c)(1) which requires that—

"Each list . . . shall specify with respect to each such species over what portion of its range it is endangered or threatened."

The organizations which I represent submit that the Secretary has no discretion to do what has been done in the past—listing a species as endangered or threatend throughout its range when the "best scientific and commercial data avaliable" indicates that it does not have that status except in certain areas.

We would invite the Committee to review the list of endangered and threatened wildlife contained in 50 CFR § 17.11. Of the over 800 species listed as endangered or threatened, all but three are listed as having the specified status in their entire range. It is simply not intellectually comprehensible or believable that all of these species are actually endangered or threatened throughout their entire range. In his testimony before the Committee on Merchant Marine and Fisheries of the United States House of Representatives in its hearings on the elephant as a potentially endangered species, Mr. Assistant Secretary Herbst explicitly recognized the statutory requirement of limited listing:

"The fact that there are a number of distinct populations of the elephant in Africa raises the possibility of different listings for elephants from different countries. This has been done in this country with the American alligator and the bald eagle. Elephants in some areas might be listed as endangered, those in other areas as threatened, and those in still other areas might not be listed at all. This alternative might reflect most closely the actual status of the elephant in Africa."

In the face of the clear command of the statute and the recognition of Assistant Herbst of the proper method of listing species, one can only conclude that actual listings which violate these principles are the result of administrative sloppiness, political pressure or craven desires for ease of enforcement, or some combination of the three. I have already spoken to the first two points; as to the question of ease of enforcement, the groups which I represent recognize that detailed treatment pursuant to the statutory command will potentially increase administrative workloads and make enforcement more difficult. Our government, however, should not curtail its citizens' liberties and privileges merely to make its own tasks less troublesome. When ease of administration is in the balance with individual liberties, the latter should always prevail except when the enforcement difficulties are utterly unsurmountable. And that is not the case here. The Endangered Species Act and the regulations thereunder, specifically 16 USC § 1533 (e) and 50 CFR § 17.52, explicitly contemplate regulatory mechanisms to deal with similarity of appearance cases and the enforcement problems created thereby. Again, Mr. Assistant Secretary Herbst recognized this option:

"The Act makes provision for similarity-of-appearance situations and allows non-endangered or non-threatened species to be listed as such to better protect the listed species."

We respectfully submit that these mechanisms can just as easily be applied when some species populations are not listed at all; at the very least, populations as to which the scientific and commercial data does not support an endangered or threatened status should be listed only under the similarity-of-apperance provisions so that permits will be available under 50 CFR § 40.52. In addition, candor compels me to say that such permits should not be accompanied by the calculated inattention and predetermined disinclinations to issue same that have characterized permit applications under 50 CFR § 17.22, e.g. permit applications for import of specimens taken for scientific research and for enhancing the propagation and survival of the species.

The only objection which I have heard voiced to the foregoing flexible approach to listing, that is, listing only within those portions of their ranges in which species are actually endangered or threatened, is that, in the absence of regulation either by the Endangered Species Act or by the International Convention, the otherwise applicable mechanisms under the Lacey Act and the Tariff Classification Act are inadequate. The allegation is that, because certain foreign governments are in complicity with the violation of their own laws, the documentation required under the Lacey and Tariff Classification Acts is not worth the paper it is printed on. The groups which I represent submit that such fears are groundless in all

but a few, well-known and specific instances. In such cases, in the event that the Fish and Wildlife Service determines that the documentation is unreliable from a country in which a species has not been listed as endangered or threatened, a listing can be proposed under 16 USC § 15.33(a)(1)(4)—"the inadequacy of existing regulatory mechanism". The "ham-handed" approach previously used by the Department of the Interior to list species throughout their range abandons the flexibility under the Act for distinguishing among countries based upon the effectiveness of their management schemes. It is the regulatory equivalent of using an atomic bomb to drive a nail, and results in profit to no one except our federal administrators while causing extreme detriment to millions of American sport hunters.

4. Another area in which the administration of the Act has been contrary to both its language and spirit is in the requirement that, prior to listing a species as endangered or threatened, the Secretary shall consult with the states or countries, as the case may be "in which the species concerned is normally found . . .". In actual fact, there has been little, if any, communication in the ordinary bilateral sense of that word. Instead, what we have had is really a notification from Interior to the state or country that such-and-such action is being taken. A case in point is the listing of the leopard as an endangered species which was accomplished by a mere notification to the countries involved wih an effective date so quickly after the notification that any meaningful exchange of views was impossible.

At the present time, the proposed listing of the elephant as threatened has been met with empassioned objections from at least four African countries in which large numbers of elephants are found. These countries, together with other commenting organizations, have furnished the Department of Interior with detailed evidence relating to the biological and commercial status of the elephant, all indicating that the elephant is neither endangered nor threatened in many countries. We all await with interest the action of the Department of the Interior from which we will know whether the statutory command of consultation has any meaning to the Department other than bare notification of unilateral American action.

Nor is the statutory requirement of consultation merely a placebo inserted to soothe the affected countries or states; instead, it is a provision with a realistic purpose. As Messrs. Teer and Swank state in the presentation attached hereto as Exhibit 3,

"Familiarity with the local scene and personnel can be most helpful in sorting out motives and values. It is often useful to make contracts with field and research scientists in addition to state spokesmen when positions of government are to be evaluated."

Similarily, the draft report to the Endangered Species Scientific Authority by the working group, quoted above, deals directly with the problem I am addressing here:

"Whereas U.S. diplomatic contracts between nations and to international bodies are traditionally accomplished by political appointees and career diplomats with extensive legal, economic and political experience or training; and

"Whereas those delegations often deal with conventions or agreements which affect wildlife species; and

"Whereas it is generally accepted that states possess management responsibility for resident wildlife species; and

"Whereas, U.S. National Delegations usually fail to include state representatives or even seek information and concurrence from them; and

"Whereas persons with pertinent professional, biological expertise are seldom included in these delegations, and adequate biological imput is thereby not provided;

"Therefore, this working group recommends that in the future the U.S. National Delegations to conventions affecting wildlife seek adequate consultation, ensure flow of information, and invite state and/agency participation to guarantee a balanced, biologically sound, and documented presentation by the U.S. delegation. (Passed unanimously).

Throughout the Endangered Species Act, there is a theme of proposed consultation and cooperation between the Department of the Interior and affected states and countries which, as is demonstrated by the foregoing, simply has not been the case in fact. As a result, the groups which I represent recommend an amendment to the Act of substitute concurrence and consent to the part of affected states and foreign countries for the current language of conference and cooperation. Only when the respective parties are truly equal in power can there be a realistic expectation of meaningful cooperation and governmental interaction.

5. I have briefly mentioned above the total disinclination of the Department of the Interior to issue permits for importation of certain listed species, despite the clear contemplation of and provision for such permits under the act and the regulations issued thereunder. In particular, 50 CFR § 17.52 contains detailed provisions for the issuance of permits for the importation of species which have been listed as endangered or threatened due to similarity of appearance. Because of the broad-brush approach taken by the Department of the Interior in listing species as endangered or threatened throughout their range, rather than in those portions of their range in which they are actually endangered or threatened, the Department has administratively nullified this flexible provision. The effect upon sport hunters is to effectively eliminate such species from utilization even though, in certain areas, they may be no more endangered or threatened than the common housefly.

Similarly, 60 USC § 15.39(a) provides that the Secretary may issue permits for otherwise prohibited acts "for scientfic purposes or to enhance the propagation or survival of the affected species." While the terms "for scientific purposes" and "to enhance the propagation or survival of the affected species" are not specifically defined in the Act, 16 USC §15.32(2) does define "conservation" (which would certainly seem to be a term even more restrictive than the conditions for the issuance of a permit for scientific purposes) to include regulated taking "where population pressures within a given ecosystem cannot otherwise be relieved . . .". To our knowledge, however, the Secretary has never issued a permit for the importation of an endangered or threatened species under the permit provisions of 16 USC § 15.39(a). As a specific case in point, one member of Safari Club International obtained a permit issued by the Mexican government for the regulated taking of a jaguar in an area where the population pressure of jaguars was in excess of the carrying capacity of the ecosystem. Such permits are issued annually by the Mexican government in order that the specimens collected may be examined and recorded to further the scant scientific information available with regard to the species as to growth rates, preferred diet, presence or absence of various disease organisms and other similar scientific inquiries. In each case, a Mexican government official and staff biologists accompanies the permittee to gather and record the foregoing and other information. Despite the obvious scientific purposes which are the object of the permit letting and the indubitable beneficial effect upon the long range propagation and survival of the jaguar as a species, the Secretary has consistently declined to issue permits for the importation of this and other similarly situated species.

Mr. Chairman and Members of the Committee, the inaction and refusal to act on the part of the Department of Interior in these permit cases speaks loudly and clearly to the sportsmen of America. The Department is under the thumb of persons who are opposed to the scientific management of wildlife, including regulated sports hunting. The Department is the handmaiden of the few but vocal and wealthy so-called "preservationists" who look upon hunting as immoral and who would prefer to have the surplus population of a species die the painful and wasteful death of starvation rather than be usefully taken and consumed by Americans in pursuit of their traditional heritage of sport hunting. We do not think that this is the attitude that was intended by Congress when it adopted the Endangered Species Act of 1973, nor do we think that this is the attitude of Congress today or of the vast majority of the American people. We respectfully invite and urge this Committee to take whatever action may be necessary to redress the highhanded way in which the Department of the Interior is perverting the language and the spirit of the Act.

6. The groups which I represent feel that they must also bring to this Committee's attention the inconsistent, deceptive and sometimes even apparently malicious action of agents of the Fish and Wildlife Service in enforcing the Endangered Species Act. Some of the most egregious cases seem to have arisen in the case of lechwe. One hunter inquired of the Fish and Wildlife Service for a ilst of all endangered and threatened species so that he could be certain not to shoot any such species. He was provided such a list by the Los Angeles office of the Service and the list did not indicate that there were any prohibitions with regard to the lechwe. As a result, the hunter in question proceeded on his safari and, in the course of it, took a red lechwe pursuant to a valid hunting license issued by the government of Botswana. On his return, his trophy was confiscated. Upon checking, the hunter discovered that he had been sent an out-of-date endangered species list by the Fish and Wildlife Service and that the Service was still sending out such outdated lists from their offices in Houston, Sacramento, Denver and Washington, D.C., a full year after the lechwe had been added to the endangered species list. Nor had any notice been given to potentially affected parties, such as the largest taxidermy firms in the world, of over 200 new animals which had been added to the Endangered Species list. Under these circumstances, one might have anticipated that the Service would have revised its list and would have granted permit exceptions to all hunters in the meantime. Instead, however, the Service assessed a civil penalty of $200 and insisted upon a signed acknowledgement of guilt and abandonment of the hunter's trophy. The citizen in question has been forced to pursue his rights to clear his good name in an administrative proceeding which is costing him thousands of dollars and in which the result is still not yet known.

Perhaps an even more offensive case involves a hunter from the Northeast who took a lechwe one or two days after the animal had been added to the Endangered Species list and sometime after his safari had already begun. In other words, this hunter was on safari in Africa when the lechwe was added to the list by publication in the Federal Register. I am sure I do not need to tell this Committee that the citizen in question was not having copies of the Federal Register shipped to him in Botswana so that he could be aware of administrative actions while he was on his hunting trip. Upon returning to the United States, this hunter imported his trophy which passed through customs and Fish and Wildlife clearance without difficulty. As the case later developed,

the Fish and Wildlife agents who examined his trophy upon importation were as unaware of the addition of the lechwe to the endangered species list as the citizen was. Some time later, the sportsman was contacted by officials of the Fish and Wildlife Service who asked to see the lechwe horns to identify them. The hunter agreed after receiving a promise from the agent that it was not his intention to seize the horns. At the appointed time, however, the agent appeared at the hunter's home with a search warrant and demanded the horns, which were confiscated. Throughout the hunter and representatives of Safari Club International had been in personal contact with the Department of the Interior under the understanding that the Department and its agents would cooperate in reaching a mutually acceptable solution. In fact, the hunter agreed that he would not contact his attorney and begin a legal proceeding under the Act because of this understanding. Needless to say, there is at least one American who is convinced that he was defrauded by his own government.

Unfortunately, I can cite you other examples of similar conduct. Government by regulation pursuant to publication in the Federal Register is offensive enough to the ordinary citizen who is constrained thereby, but when not even minimal efforts are made by the agencies in question to disseminate accurate information concerning regulations appearing in the Federal Register, it becomes intolerable. The groups which I represent submit that the Act should be amended to suspend any prohibitions resulting from listing a species as endangered or threatened for at least one year following such listing to allow the adequate dissemination of the information thereof to potentially affected persons and firms. In this way, government agencies and agents can enforce their rules and regulations consistently and fairly and the public trust of the citizen in his government can be restored.

7. Finally, the groups which I represent believe that the provisions of the Act and regulations thereunder dealing with legally held captive, self-sustaining populations do not now operate to further the purposes of the Act. Obviously, the existence of legally held captive, self-sustaining populations tends to enhance the potential for survival of a species because of the scientific research, controlled breeding and protective care available to these populations. Furthermore, the more widely distributed the captive species are, the less likely additional ones will be taken either legally or illegally from the wild. Thus, the Act and the regulations should encourage captive populations and the further dissemination thereof.

At the present time, intra-state transactions in captive, self-sustaining populations are not regulated by the Act, but interstate transactions are. As a result, the vast majority of all transactions in species held in captive, self-sustaining populations are regulated. 50 CFR § 17.33 allows a permit to be issued allowing any activity otherwise prohibited in the case of such captive, self-sustaining populations. Unfortunately, however, the permit procedure is typically involved, and delays in issuance or refusal to issue the permits are the rule rather than the exception.

As a result, we would submit that the Act should be amended to exempt captive, self-sustaining populations from its prohibitions. At the very least, the Act should be amended to exempt the progeny of captive, self-sustaining populations which existed on December 28, 1973 (the effective date of the Act) which are themselves exempted pursuant to 16 USC § 15.38(b) so long as the same were not held in the course of commercial activity. We would also submit that the condition of the exemption—noncommercial holding—should be eliminated because of the beneficial effect that these captive, self-sustaining populations have upon the particular endangered or threatened species. In the event that no amendment is made, the permits available under 50 CFR § 17.33 should be granted expeditiously and generously, for the same reasons.

Mr. Chairman, members of the committee, the groups which I represent sincerely appreciate this opportunity to present our views to your committee. I would be happy to answer any questions which you might have.

---

## DISAPPROVAL OF ENERGY ACTION DOE NO. 1

Mr. MATSUNAGA. Mr. President, as in legislative session, I ask unanimous consent that the Senate proceed to the consideration of Senate Resolution 429, Calendar No. 673. This matter has been cleared with the majority leader, the minority leader, and Senator JACKSON.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 429) to disapprove Senate action DOE numbered 1.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. MATSUNAGA. Mr. President, I rise in strong support of Senate Resolution 429 to disapprove energy action DOE No. 1, a proposed amendment to the strategic petroleum reserve plan.

Energy action DOE No. 1 proposes: (1) an overall expansion of the reserve size from 500 million barrels to 1 billion barrels, as authorized by the Energy Policy and Conservation Act; (2) an implementation plan for storage of the third 250 million barrels; and (3) storage of 20 million barrels of petroleum product for the U.S. East Coast, including New England.

Let me state at the outset that I strongly support the expansion of the size of the reserve to 1 billion barrels.

Mr. President, passage of the Energy Policy Conservation Act, which established the strategic petroleum reserve, was a major accomplishment in the area of energy by the 94th Congress. Few decisions made by Congress on the wide variety of topics covered in this omnibus piece of legislation were as widely accepted as the concept of establishing a national strategic petroleum reserve. It fulfilled an urgent need to assure protection against the severe impact of any future disruptions in foreign petroleum supply. There is no better, more cost effective way to remove the threat of another embargo than to establish this reserve. A billion barrel reserve represents the minimum level of security acceptable to our country.

My opposition to the administration plan is based on the fact that it does not adequately address the question of regional storage. While the plan expressly states that it does not consider the question of whether or not noncontiguous storage should be provided in the State of Hawaii or in Puerto Rico, the imposition of an arbitrary cap on storage costs, as implied in the plan, would most certainly lead to no storage outside of the central storage located along the gulf coast.

In considering the requirement for storage in New England, the plan states that "20,000 barrels of product will be stored for the east coast at sites whose costs are approximately the same as gulf coast salt dome storage; higher cost storage will not be considered." Thus, approval of the plan will foreclose the possibility of any regional storage, since it is an accepted fact that no storage facility outside of the gulf coast can meet this criteria.

Mr. President, while I concede that cost is an important consideration, the primary purpose of the strategic petroleum reserve is to provide security of supply in an emergency.

The people of Hawaii are deeply concerned about this matter because of their overwhelming dependence on petroleum for satisfying their energy requirements, and their unique vulnerability to any disruptions in supply. The economic sanctions with the pain and suffering endured during the 1973–74 Middle East oil embargo are still too poignant in their memory. Hawaii, as you know, lies over 2,000 miles from the west coast, and its economy and lifestyle are heavily dependent upon importation of nearly all vital necessities, including over 97 percent of its energy supply. Locating Hawaii's component of the strategic reserve on the gulf coast would be just as unsatisfactory as asking the Eastern States to rely on storage in the Middle East, which would be a comparable distance away.

In enacting the legislation to establish the SPR, Congress was quite specific with respect to noncontiguous areas such as Hawaii, when it set forth under section 154(d) of the Energy policy and Conservation Act:

The Strategic Petroleum Reserve Plan shall be designed to assure, to the maximum extent practicable, that each noncontiguous area of the United States which does not have overland access to domestic crude oil production has its component of the Strategic Petroleum Reserve within its respective territory.

Elsewhere, it is stated that the intent of the legislation is that such areas are to be assured "ready and nondiscriminatory access" to the reserve.

Mr. President, the Department of Energy has failed to demonstrate that storage in Hawaii is not practicable. On the other hand, the State has supplied ample evidence to prove that the installation of a component of the SPR in Hawaii is not only practicable, but that it can be cost effective and responsive to the basic objectives of the SPR.

In voting unanimously to support Senate Resolution 429 to disapprove the administration plan, the Senate Committee on Energy and Natural Resources made clear that it was in full accord with the expansion of the reserve, but took strong exception to the proposed regional storage plan. Let me quote the committee report supporting the resolution introduced by the Senator from Massachusetts, Mr. KENNEDY, which states:

The Committee's concern, shared by the

sponsors of the resolution, is directed to that part of the proposed Amendment to the SPR Plan pertaining to the regional storage scheme. Specifically, the Committee feels that the Congress should not agree to the principle that a reserve established to guarantee national security must be judged solely on the basis of a uniform cost, using as a ceiling the least expensive sites available. Although the estimated costs of regional and noncontiguous storage constitute an important criteria in the formulation of a national security plan, the Committee believes that they should not be the overriding consideration in the decisionmaking process. The lowest-cost storage sites might or might not be the optimum storage sites that would provide the nation with the requisite national security and protection from the impacts of future oil supply interruptions. The Department should carefully review the regional storage concept with due consideration to all relevant factors, not just cost.

The report furthermore goes on to express the committee's view on storage for Hawaii and Puerto Rico, by stating "* * * the committee is greatly concerned about the absence in the current SPR plan of any planned storage components within the State of Hawaii and Puerto Rico."

Mr. President, the administration plan is in complete disregard of the basic purpose of the Energy Policy and Conservation Act as clearly intended by Congress, and should be rejected. I urge this adoption of Senate Resolution 429.

Mr. President, I ask unanimous consent that statements by Senator HASKELL, Senator KENNEDY, and Senator DURKIN be printed in the RECORD at this point, together with attachments.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY MR. HASKELL

Senate Resolution 429 is a proposed rejection of an energy action and, as such, is the prescribed procedure for taking such action contained in section 551 of the Energy Policy and Conservation Act of 1975 (42 U.S.C. 6421), the statute that authorized the creation of the Strategic Petroleum Reserve.

The statute requires that any proposed amendments to the Strategic Petroleum Reserve Plan be transmitted to the Congress for its review. Amendments become effective and may be implemented if neither the Senate nor the House of Representatives approves a resolution stating in substance that it does not favor such action. Such a resolution of disapproval must be passed prior to the end of the first period of 15 calendar days of continuous session of Congress after the date on which the energy action is transmitted. The proposed energy action was transmitted to Congress on April 4, 1978, therefore the statutory deadline for Congressional action of disapproval is April 19, 1978.

Senate Resolution 429 was considered by the Committee on Energy and Natural Resources on April 11, 1978. By a vote of 16-to-0, the Committee reported the resolution to the Senate with a recommendation that it be approved.

The resolution, introduced on April 7, 1978, by Senator Kennedy, is co-sponsored by Senators Brooke, Stafford, Hathaway, Pell, Durkin, Leahy, Chaffee, Javits, Ribicoff, McIntyre, and Muskie. It would disapprove Energy Action DOE No. 1, which is a proposed Amendment to the Strategic Petroleum Reserve Plan. The Amendment would authorize an increase in the size of the Reserve from 500 million barrels to one billion barrels and would also establish a 20 million barrel regional storage component for New England users.

A hearing on the Strategic Petroleum Reserve and Energy Action DOE No. 1 was conducted by the Subcommittee on Energy Production and Supply on April 10, 1978. We heard testimony from the Department of Energy and from Senators Kennedy and Matsunaga, who expressed their views and concerns regarding the program for creating a viable national stockpile of petroleum.

As the report of the Committee on Energy and Natural Resources clearly indicates, a Strategic Petroleum Reserve of one billion barrels is strongly supported by the Committee. Doubling the size of the Reserve would greatly enhance the nation's protection against damaging effects of any future emergency or interruption of oil imports.

I hope that no one will misinterpret the Committee's steadfast support for the concept of a viable Strategic Petroleum Reserve. Such a Reserve must be large enough to provide the United States with a meaningful stockpile of petroleum for use in any future emergency situation.

The proposed Amendment is objectionable to the Committee only with respect to its provisions relating to the establishment of a regional petroleum products component designed to meet the needs of the New England area. This proposed regional storage component would consist of 20 million barrels of residual fuel or substitutes therefor. These petroleum products would be stored, for the most part, either in the Gulf Coast or in storage sites located on the east coast of Canada.

The regional storage proposal is not acceptable to the Committee, because it is nothing more than a premature plan. Definite locations of the storage sites that would be utilized are not identified in the proposed Amendment. The United States and Canada are currently engaged in a joint study of the feasibility of using Canadian sites for the storage of SPR petroleum, but negotiations which might lead to an agreement for such storage are still some months away. As a matter of fact, negotiations on an agreement are dependent upon the outcome of the joint study and I understand that it will not be finalized until sometime later next month. The Department of Energy also indicated to the Subcommittee that it is still assessing the possibility of utilizing some storage sites in the New England area.

In addition to being premature, the proposed regional storage scheme outlined in the Amendment contains what the Committee considers an arbitrary pre-condition for any regional storage. The approach taken by the proposed regional storage component for New England would not allow any storage sites to be considered unless the costs of such storage would be approximately the same as for salt dome caverns in the Gulf Coast. The Committee feels strongly that the Congress should not agree to the principle that a Strategic Petroleum Reserve established for the purpose of providing national security must be judged solely on the basis of a uniform cost. Costs are important, but they should not be allowed to constitute the most important criterion in decisions regarding essential storage components of the Reserve.

In taking its action on the resolution, the Committee also expressed its concern that the current SPR Plan does not provide for the creation of any storage sites in the State of Hawaii or Puerto Rico. The proposed Amendment did not purport to address the noncontiguous area storage question, because that subject is still being studied by the Department of Energy. Rejection of the proposed pre-condition that regional storage costs must not exceed the costs of Gulf Coast salt dome storage may assist the Department in making its current reexamination of noncontiguous storage more objectively.

In recommending favorable action on the resolution and therefore, the disapproval of the proposed Amendment to the SPR Plan, the Committee is convinced that it is not delaying the development of a strong Strategic Petroleum Reserve. The schedule for filling the Reserve to its 500 million barrel target is now delayed by about 6 months and the Department of Energy will have ample time to re-submit another Amendment to double the size of the Reserve.

The Subcommittee on Energy Production and Supply intends to conduct periodic oversight hearings regarding the status of the development program of the Strategic Petroleum Reserve. Our hearings will also monitor closely the progress made by the Department of Energy in over-coming a myriad number of obstacles and problems which have resulted in dangerous delays insofar as the fill-rate of storage is concerned. We also intend to stay abreast of any proposals to remedy the current lack of any regional or noncontiguous storage components of the Reserve.

---

STATEMENT BY MR. KENNEDY

I support Senate Resolution 429 which I offered on the Senate floor on April 7, for the purpose of disapproving energy action number one submitted by the Department of Energy on behalf of the President on April 4. I am pleased that the Senate Energy and Natural Resources Committee has so quickly held hearings, unanimously approved my resolution and brought it back to the Senate floor in less than a week.

Speed was important. Under the Energy Policy and Conservation Act the Congress has 15 days in which either House could disapprove energy action submitted by the President. The committee has shown extraordinary diligence and speed and has demonstrated a very deep concern for the welfare of the people of New England as well as for the success of the National Strategic Petroleum Reserve program.

I want to thank particularly Senator Haskell who has done an outstanding job in examining every aspect of this problem, and Senator Jackson whose leadership has made possible the rapid disposition of my resolution. I offer them my appreciation and that of the co-sponsors of my resolution: Senators Brooke, Stafford, Hathaway, Pell, Durkin, Leahy, Chaffe, Javits, Ribicoff, Muskie and McIntyre.

When I testified before Senator Haskell's Subcommittee on Energy Production and Supply on Monday, April 10, I said that it was not my contention, nor my reason for submitting the resolution of disapproval, to oppose the establishment of a one billion barrel strategic reserve. On the contrary, I, and members of the Energy Committee, approve the concept and want to see establishment of the reserve move forward with the greatest possible speed.

Nor do I oppose the designation of 20 million barrels of petroleum product as a strategic reserve to supply the needs of the northeast, for whom this reserve is intended. I support both the amount and the fact the storages in the form of product, as opposed to crude. This is precisely what we need in New England in a time of emergency.

Rather, I said, my concern was that the energy action stipulated that this reserve must be established at one uniform cost: that of storage in salt domes in the gulf coast. It is my contention that imposing the uniform cost of storage, no matter what the needs of each region, no matter whether the storage is of crude or petroleum product, is a serious mistake. I regard the decision of the Department of Energy to send up this energy action at this time as arbitrary and indefensible.

I said in my testimony before the Haskell subcommittee Monday that, at the very least, this submission is premature. It has been submitted before the studies have been completed on storage within New England. Nor have studies been completed on the possibilities of storage in Canada.

Mr. Jack O'Leary, the Deputy Secretary, met with Senators Hathaway, Chafee and I on January 26th and asked us to delay our pressing of our real interest of New England until these studies were completed. Yet before the studies were finished, this energy action has submissed.

Although I have by letter requested it, I have not been able to get the details of all the proposals which the Department has in hand to store oil in New England. I want to know their location and cost but I have not received that information.

Without the studies completed on New England and on Canada for the Department to come in here and suggest that we should impose the cost standard of the Gulf States is, at the very least, premature and, in my opinion, arbitrary and indefensible.

When the last embargo hit in New England we experienced price jumps of five, six and seven times in the course of a month. In a shortage market, with hoarding going on, the same thing could occur in some future emergency. Unless petroleum product is sitting in the region and can be put on the market by the United States Government, there is every chance that price explosions will take place and New England consumers will be badly hurt. It is possible that we could experience widespread and disastrous curtailments simply because transportation is not available.

We do not have to go into all the scare tactics and possible scenarios and weigh every possibility to make the claim that the Department of Energy must come back to the Congress with a plan which includes products storage within the region. That is the clear messages of the Committee's action. That is the message which we will send to the Department with our vote today.

We do not intend to force every possibility or ask for more than we need. We want only the minimum. I said this in committee and I say it again today.

As Chairman Jackson said Tuesday we can now expect the department to go back and prepare a separate plan and a separate energy action for storage within the New England region and work out a plan for Hawaii. We do not want another incomplete package before the Senate. The department must now work with the States and the congressional delegation to come up with a plan which includes a substantial amount of storage within the region. If this takes until the end of the year to get it right, that should be acceptable. We want all deliberate speed. We want the storage in place as soon as possible, certainly early in the 1980's. But above all we want a well-conceived plan.

Beyond the regional interest, I would also like to draw the attention of the Senate to certain other national aspects of the strategic reserve program which has concerned me and has concerned Senator Haskell, namely the manner in which the reserve is being filled.

Before submitting the resolution I tried to determine whether the entire United States petroleum reserve of one billion barrels could be reasonably and economically stored in a few sites in Louisiana and Texas. That is what the administration proposes. I must say I have grave concern that the reserve may fall short of its goals and its timetable. More important, in filing the reserves as we are doing we may be missing a significant opportunity to initiate important national policy strategies the opportunity for which may never come again.

I believe the strategic reserve offers an unparalleled opportunity to investigate new ways of bringing oil into the market place. It is entirely possible to purchase portions of the strategic reserve in such a way as to minimize the control of OPEC and demonstrate how a governmental presence in the marketing process could not only influence price favorably for American consumers but improve our bargaining position in regards to OPEC for some years to come.

The Federal Government is not negotiating on a government-to-government basis to find the best price and make large purchases in frontier areas or those areas or in those countries where we might expect a substantial price break. The Government is not auctioning off the right to import oil. Instead, just like any other trader, it is going into the market place and buying on the spot market.

I believe this policy deserves serious review and it is my understanding that Senator Haskell intends to continue this review and to ask the crucial questions about whether we do not have other opportunities to achieve foreign policy and national security goals as well as fill the reserve. I commend the distinguished senator from Colorado for this course of action. I think he is doing the right thing. I support him. And I hope as he pushes through on this he will be able to report that some changes are in the wind.

Likewise, I question whether we have adequately explored the possibility of using the national treasury we have in Alaska to fill the strategic reserve. I have said many times that it was a mistake to build a pipeline to Valdez and my prediction has been borne out. We now have a surplus of crude on the west coast. Yet we have chosen not to sell that crude to the Japanese or otherwise put it on the world market, as we might; instead we are contending with a west coast "glut". On the basis of the information I have so far, I am not satisfied that every effort has been made to use that glut to fill the strategic reserve.

We are told that the character and composition of that oil is in question. If, for technical reasons, the oil does not meet the needs and the national security is endangered, obviously we should not use that oil supply. I am not yet convinced that is the case and I am not convinced that every option has been explored.

By the same token I question whether we have done all that we could to explore ways of putting Alaskan oil on the world market particulary by using authority of the Federal Government, which must approve all exports of oil, to auction off that supply.

I would hope that the energy committee could explore these possibilities thoroughly and that the administration would understand the seriousness with which we regard all the elements of this plan.

In order to amplify the reasons for our concern over this issue and to provide a better understanding of the energy committee's decision I ask that there may appear at the end of my remarks the testimony I submitted on Monday.

May I again extend my thanks and congratulations to Senator Jackson, Senator Haskell, to the members of the committee and to the ranking minority member, Senator Hansen. I urge adoption of resolution number 429.

STATEMENT BY SENATOR EDWARD M. KENNEDY

Mr. Chairman and members of the Subcommittee, I appear before you today to ask your support for a Senate Resolution Number 429 disapproving Energy Action Number One which I submitted on March 9 and which has now been referred to your Subcommittee. I make this appeal on behalf of Senators Brooke, Stafford, Hathaway, Pell, Durkin, Leahy, Chafee, Javits, Ribicoff, Muskie, McIntyre and the people of New England.

Our concern about this Energy Action is a limited one. We applaud the decision, embodied in this document, to establish a one billion barrel strategic reserve. We applaud the recognition that for our region to be protected in time of emergency we will need, in readily available storage, at least 20 million barrels of petroleum product—as opposed to crude—which would supply our utilities and industries.

Our concern is focused on the requirement stipulated in the Energy Action that the storage of this reserve must be at one uniform cost: that of storage in salt domes in the Gulf Coast.

It is our contention that this principle of equal cost for storage, no matter what the needs of each region, is at best premature and at worst injurious to the national security which an emergency reserve is designed to protect. It is penny wise and pound foolish, placing economy over the overriding purposes of the strategic reserve.

Specifically, we contend that this standard completely eliminates the possibility of storage within the New England region. It leaves open the possibility of storage in Canada but long before the facts about that option are known. By failing to disapprove this Energy Action the Congress will endorse the principle of storage only at Gulf Coast costs, leaving only the uncertain Canadian alternative available.

Under the terms of Title V, Section 551, of the Energy Conservation Policy and Conservation Act each house of the Congress must disapprove of an Energy Action within the 15 day statutory period or the Energy Action becomes effective. But it may not amend the submission. We ask that this Energy Action be disapproved but with report language which indicates the limited extent of the objection. In this manner, the document could be resubmitted and quickly receive approval.

In the remainder of my statement I will discuss three reasons why the Energy Action should be disapproved:

First, it is premature on a national basis;

Second, it is premature on a regional basis;

Third, it is unwise public policy which could do substantial injury to New England in time of emergency.

AN UNCERTAIN NATIONAL PICTURE

My first contention is that the Energy Action should be disapproved for reasons of national concern that have nothing to do with New England. It is, I contend, far too early to stipulate one uniform cost for storing petroleum. In fact, the actions of the Department of Energy make this abundantly clear.

We have no assurance that the petroleum reserve will reach the 250 million barrel goal established for the end of this year. On the contrary, it would be surprising if that goal were achieved. No less than seven lawsuits have been filed against the federal government in the area of storage where the salt domes are located. Condemnation rights are in dispute. Environmental problems have yet to be overcome. Technical problems which could lead to seepage out of the salt domes have yet to be overcome.

As a consequence of these problems and delays all along the line, the Department of Energy is actively searching for other sites. They are searching for defense facilities, private sites, and even sites out of the country.

To its credit, the Department is trying to work with the government of Hawaii to find some protection acceptable to the citizens of that state. But certainly we must understand that storage in or for Hawaii would not be available at the estimated for the Gulf Coast facilities.

The entire search for alternatives *must*, therefore, be predicated on differential, rather than uniform, costs of storage. To approve a uniform cost criteria at this time is to lock in not only the Congress but the Department of Energy to a standard which probably cannot be met over the seven year life of the reserve-fill program.

PREMATURE JUDGMENT ON REGIONAL STORAGE IN THE NORTHEAST

As for New England, I hope the Committee will understand that this issue has been

important to us for many years. In 1976 the Congress accepted my amendment requiring regional storage as part of the national reserve system. That amendment enjoyed strong and universal support in our region. As prices have risen and two Administrations have warned of dwindling oil supplies, concern about this issue has continued to increase.

For example, when the Director of the SPERL office met last week with representatives of the governors from the New England states plus New York and Pennsylvania, every state took the position that storage within the region was necessary and that reliance on storage in Louisiana would be a mistake. These strongly held feelings cannot be dismissed. They are based upon our experience in 1973 and fears of a re-run in the future.

In this atmosphere insistence on the Gulf Coast cost standard is premature and mistaken. My own experience bears this out.

On January 26th, Senator Hathaway, Senator Chafee and I met with Deputy Secretary of Energy, Jack O'Leary, on regional emergency storage. The meeting was called to discuss our concern for the New England states. Mr. O'Leary, however, spoke favorably of the possibility of storage in Canada and detailed for us Vice President Mondale's negotiations with Prime Minister Trudeau. He asked for our understanding during the 90 days of a joint study to be undertaken by the two governments.

Now, with the study scheduled for completion a month late—in mid-May—the Department sends up an energy action which locks in a single cost standard.

If Mr. O'Leary and the Department of Energy are offered New England storage in Canada as an alternative to Louisiana, it does not help the cause to submit the Energy Action at this time. The storage sites in Canada are subject to environmental and technical problems. The Wabana iron mine site, for example, runs under water and may be subject to leakage. What obligations and rights the Canadian government will assume and how it would guarantee United States access to this oil in time of emergency is unclear. Also, the two governments have tied this issue to the supply of Canadian oil to the Northern Tier refineries in the Upper Midwest, another uncertainty. We know little about transportation from these sites to the Northeastern states in time of emergency.

Surely no one should expect New England to be content that storage in Canada will satisfy our needs and allay our fears when so many uncertainties are outstanding. The study to be completed in May will not even answer all of these questions and a second study, to be completed in the fall, will be necessary and may not, itself, be dispositive.

THE INSURANCE POLICY NO ONE WOULD BUY

Now I turn to the heart of our long-time concern, the risks New England runs during an oil emergency and the insurance system we are being asked to buy to cover those risks.

To appreciate our point of view, the Committee should realize that New England is far and away the most oil dependent region of the United States. Seventy percent of our energy is supplied from oil which comes entirely by sea.

You must also understand that during the 1973 embargo prices went above 25 dollars a barrel. As stocks declined, ships lay at anchor in Boston Harbor waiting for the price to get sufficiently high to bring the oil ashore.

There are some Irish in Boston who remember the Battle of the Boyne as if it were yesterday although it occurred four hundred years ago. You can be sure we remember the lessons of 1973.

We are being asked to buy an insurance policy in the form of oil stored, in the best case, in Canada and, in the worst case, in Louisiana. We are really being asked to buy a pig in a poke.

I have already discussed the uncertainties surrounding the Canadian sites. Uncertainties also cloud the Louisiana option.

We are told that oil could be delivered readily to New England. But what if the emergency should occur in the middle of a severe winter? How can we be sure what the United States tanker capacity will be and where those ships will be located at a time of emergency five or ten years from now?

We have been assured that if U.S. tankers are not available, foreign tankers can be utilized. But the Jones Act requires the use of United States tankers and would surely apply to the transportation of oil owned by the government. In a time of any shortage, transportation costs at the margin could easily multiply five or ten times, adding as much as $10 to a barrel of oil.

We are told the Jones Act could be waived. Is this so self-evident? No such waiver policy has been outlined or established and ship owners and maritime unions will want clear assurances about the emergency circumstances which would have to surround the departure from a clearly defined national policy as that which favors U.S. bottoms.

Thus we are being asked to sign the insurance policy before another major risk has been defined and satisfied.

We are likewise told that the price equalization laws would be utilized to insure that the costs of an emergency would be spread uniformly over the country through the entitlements system. Yet anyone who is close to the situation knows that the entitlements systems is extremely complex and that changes occur with all the speed of a spring thaw in mountain lakes. We have been assured constantly that the Administration wants to improve or eliminate the entitlements systems but I find little reason to believe we can know what the entitlements system will look like five or ten years from now or that it will be utilized with dispatch.

Now let us turn to the cost issue.

As a threshold question, we in Massachusetts raise doubts about the Department's cost estimates. Mr. O'Leary told us the cost of storage in New Englad would be from $6 to $10 more per barrel than Louisiana storage. However, our information indicates that storage in rock caverns in New Bedford, Massachusetts, could be obtained for $4.50 per barrel over Louisiana costs, taking the Administration at its word for the costs in the Gulf.

But, more to the point, how can cost alone be the basis for a national security decision?

The total cost of the emergency oil reserve will be in excess of $15 billion dollars, and probably much more, by 1985. Yet the cost of providing the Northeast with the protection it needs would in no event exceed $100 million. Storing ten million barrels in rock caverns would, for example, cost an extra $30 million by our estimates. This would amount to .2% of the total cost of the program.

Stated another way, if we established a reserve of 997 million barrels instead of one billion barrels, the Northeast would have at least a minimum level of protection.

It is important to stress, as well, the effect of in region storage on the psychology of the market. In an emergency a hoarding mentality is inevitable and price gouging an ever-present temptation. At the onset of an embargo, for example, the uncertainty of the availability of delivery from Louisiana would tend to drive up the price. With the storage sitting in the middle of market this would be far less likely. Release of the reserve by the government could immediately influence price.

Without such assurance the savings to the government by storage in Louisiana would quickly evaporate. The government would be protected but consumers would not. Excess profits would accrue to tank owners and anyone who held oil at the time.

This is our case, Mr. Chairman and members of the Subcommittee. We hope you will consider it carefully and provide us the remedy we seek.

THE STRATEGIC RESERVE AND OPEC

Before closing I would like to discuss briefly with you a related question which has concerned me for several years and that is the manner in which the strategic reserve is filled.

I have contended that the reserve should be filled by sealed bid. I have said that particular emphasis should be paid to purchase from frontier areas not in OPEC and, as a second line, to those non-Arab countries which are most likely to supply oil on a competitive basis.

I believe this course is necessary in order to introduce as much price competition as possible into the OPEC dominated market.

More than seventy percent of the oil imported into the United States enters through integrated, multi-national oil companies. These companies give OPEC assured access to our market on a long-term basis yet they are bound to honor prices set by the OPEC countries. This arrangement is a substantial factor in assuring the continued health of the cartel.

Only by dealing with those countries which do not have such assured access and which are anxious to sell an extra volume of oil can we introduce price competition and bring down the price at the margin.

I do not believe this approach has been pursued aggressively so far but for the remaining 90 percent yet to be purchased I respectively suggest that your committee impress upon the Department of Energy the importance of sealed bids. This is my conclusion after several years of investigation in both the Anti-Trust Subcommittee and the Subcommittee on Energy of the Joint Economic Committee and it was also the judgment of the Multi-National Corporations Subcommittee of the Senate Foreign Relations Committee.

I thank you for the speed with which you have convened these hearings and your concern for a national strategic reserve which truly protects all of our citizens.

STATEMENT OF SENATOR JOHN A. DURKIN

I support the resolution opposing the Administration's amendment to the Strategic Petroleum Reserve Plan. Every member of this body recognizes the Strategic Petroleum Reserve's vital role in ensuring against the devastating effects of import disruptions of our vital petroleum supply. That is why I support the concept, embodied in the Department of Energy's SPR amendment No. 1, of increasing the reserve from 500 million to one billion barrels. This increase is necessary to protect the United States against the disasterous effects of an interruption in our growing imports of OPEC oil.

Equally important to the Nation's security and economic well-being is the problem of regional distribution of the reserve. In event of a supply disruption, stocks of petroleum must be equitably distributed throughout the country. Otherwise, the price gouging and gasoline lines of the 1974 embargo are bound to recur. The Senate recognized the problem of regional distribution when legislating the Strategic Petroleum Reserve in 1976 by requiring regional storage as an integral part of the SPR program. Unfortunately, the latest SPR amendment fails to adequately comply with Congressional intent regarding regional storage. For these and other reasons which are discussed below, I must oppose the SPR amendment under consideration.

The Administration's failure to address regional storage problems is especially acute in New Hampshire and New England.

New England is more dependent on foreign fuel than any other region. In effect, the Administration's SPR amendment continues the federal energy policy of discrimination against New Hampshire and New England. The security needs of New England require that oil be stored in the region, not thousands of miles away, to guard against another oil boycott, and all its attendant adverse economic effects.

Storage of petroleum product in Louisiana for use in New Hampshire and New England cannot be condoned or tolerated. In event of a supply disruption, weather, tanker unavailability, or other problems could delay the shipment of needed oil to New England from the Gulf Coast.

Furthermore, the cost of this transportation to New England, particularly during an embargo when tankers may be scarce, belies the basic premise of lower costs the Administration has used to justify Gulf Coast storage. It certainly isn't worth the lower cost of Louisiana storage, if the oil cannot be shipped to New England in an economic and timely manner. And it is certainly not clear that it can be in event of supply disruption. It would make far more sense to store petroleum product in New England where the availability and costs of transportation would not be at issue.

The Administration's option of storage in Canada is at best presumptuous and premature because it is uncertain that Canadian storage will be proven feasible or economic. The Canadian proposal is still undergoing joint study, which will not be completed until next month. At that time the question of Canadian storage should be addressed, not now when the facts are not all in. It is presumptuous to assume that Canadian storage is feasible when questions regarding sharing of the reserve, transportation, security of supplies, and technical problems, still remain unanswered.

The incredible cost of the Strategic Petroleum Reserve Program—over four billion dollars next fiscal year alone—demands that we give this program every chance of success. But it will not be successful if regional needs are ignored, if storage is thousands of miles from where the oil is needed, or if stored oil cannot be transported to where it is needed. These considerations must enter into the development of the SPR plan. Unfortunately from the looks of this amendment, they have not and until these concerns are addressed. Congress must reject the amendment under consideration.

Even though I strongly support the doubling of size of the reserve to a billion barrels, I must oppose the SPR amendment on the grounds that it does not provide adequate protection for New England, and I urge my colleagues to support the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 429) was agreed to, as follows:

*Resolved*, That the Senate does not favor the energy action numbered DOE Number 1 transmitted to Congress on April 4, 1978.

## QUORUM CALL

Mr. MATSUNAGA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

(Mr. MATSUNAGA assumed the chair.)

Mr. SARBANES. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

## RECESS UNTIL 7:30 A.M. TOMORROW

Mr. SARBANES. Mr. President, if there be no further business to come before the Senate, I move that the Senate stand in recess, as in executive session, pursuant to the previous order entered, until 7:30 a.m. tomorrow.

The motion was agreed to; and at 10:02 p.m., the Senate, in executive session, recessed until Tuesday, April 18, 1978, at 7:30 a.m.

## NOMINATIONS

Executive nomination received by the Senate April 14, 1978, pursuant to the order of the Senate of April 13, 1978:

DEPARTMENT OF STATE

William B. Edmundson, of Nebraska, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of South Africa.

IN THE NAVY

The following-named (Naval Reserve Officers Training Corps candidates) to be permanent ensigns in the line or staff corps of the Navy, subject to the qualifications therefor as provided by law:

Wade A. Armstrong
Donna M. Hawkins

The following-named (U.S. Navy Reserve officers) to be appointed permanent commanders in the Medical Corps in the U.S. Navy, subject to the qualifications therefor as provided by law:

Cdr Stephen B. Lewis, MC, USNR.
Cdr William A. O'Neil, MC, USNR.

The following-named (U.S. Navy Reserve officers) to be appointed permanent lieutenant commanders in the Medical Corps in the U.S. Navy, subject to the qualifications therefor as provided by law:

Lcdr Dante A. Baral, MC, USNR.
Cdr Michael L. Cowan, MC, USNR.
Lcdr Sally K. Cowles, MC, USNR.
Lcdr Sylvia R. Gunnett, MC, USNR.
Cdr Robert B. Halder, MC, USNR.
Lcdr Delroy Hire, MC, USNR.
Cdr Yu-Jin Lee, MC, USNR.
Lcdr Bruce J. McIntosh, MC, USNR.
Lcdr Harry L. Parlette, III, MC, USNR.
Lcdr Joseph M. Ricciardi, MC, USNR.
Cdr Jerome J. Roche, Jr., MC, USNR.
Lcdr Cheryl D. C. Rosenblatt, MC, USNR.
Lcdr Elias S. Rosenblatt, MC, USNR.
Cdr Jay S. Smith, MC, USNR.
Lcdr Eugene J. Wolski, MC, USNR.
Lcdr Lance K. Wozniak, MC, USNR.
Cdr Dennis I. Wright, MC, USNR.

The following-named temporary chief warrant officer to be appointed a permanent chief warrant officer, in the U.S. Navy, subject to the qualifications therefor as provided by law:

Roger A. Lovitt

The following-named (U.S. Navy Reserve officers) to be appointed temporary commanders in the Medical Corps in the U.S.

Navy, subject to the qualifications therefor as provided by law:

Cdr Michael L. Cowan, MC, USNR.
Cdr Robert B. Halder, MC, USNR.
Cdr Yu-Jin Lee, MC, USNR.
Cdr Jerome J. Roche, Jr., MC, USNR.
Cdr Jay S. Smith, MC, USNR.
Cdr Dennis I. Wright, MC, USNR.

The following-named temporary chief warrant officer to be appointed a lieutenant (junior grade) in the U.S. Navy, for limited duty, for temporary service, in the classification indicated, subject to the qualifications therefor as provided by law:

Roger A. Lovitt, Engineering/Repair-Surface.

The following-named Navy enlisted candidates to be appointed temporary chief warrant officers, W-2, in the U.S. Navy, subject to the qualifications therefor as provided by law:

Donald J. Bondzio
Michael E. Butler
Edwin H. Castle, Jr.
James A. Conlon
Jerry R. Gabbard

The following-named (U.S. Navy Reserve officer) to be appointed a temporary commander in the Medical Corps in the Reserve of the U.S. Navy, subject to the qualifications therefor as provided by law:

Robert E. Hain

The following-named (U.S. Navy officer) to be appointed a temporary commander in the Medical Corps in the Reserve of the U.S. Navy, subject to the qualifications therefor as provided by law:

Graham Gilmer, III.

# EXTENSIONS OF REMARKS

## VETS DESERVE BETTER

### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. EDWARDS of California. Mr. Speaker, if the Carter administration and our colleagues in the Congress want to know the subject of conversation in grassroots America they need only glance at the front pages of Midwest newspapers.

I have in my hand a sheaf of clippings from them and I would like to read some banner headlines.

From the Grand Island, Nebr., Daily Independent:

Budget Cuts Hit VA Hospitals . . .

Representative JOHN CAVANAUGH of Nebraska is quoted as saying he will fully support House Veterans' Affairs Committee Chairman RAY ROBERTS of Texas in his fight to restore full funding to the VA medical program.

From the Wichita, Kans., Eagle:

Kansas VA Centers Facing Budget Cuts.

The Director of the VA Center in Wichita is quoted:

I'm very discouraged about how we'll be able to continue our excellent medical health services to veterans.

From the Ypsilanti, Mich., Press:

VA Hospital Could Lose Beds.

Local VA hospital officials and veterans groups say they are worried that cutbacks in the Ann Arbor VA hospital will reduce the quality of medical care.

From the Madison, Wis., Press Connection:

VA Could Lose $1 Million; Cuts Would Hit Patient Beds, Staff, Labs.

This story quotes the VA hospital's Assistant Director as saying the city's VA hospital will lose $500,000 in patient care funds and $400,000 in research appropriations.

Mr. Speaker, these newspaper clippings are representative of hundreds more. They tell a story of the American people's deep concern about administration plans to reduce the VA medical program. One of the most eloquent protests was an editorial in the Mankato, Minn., Free Press. It was headed, "VA Hospital Cuts—Vets Deserve Better." I request permission to reprint this editorial in the RECORD.

VA HOSPITAL CUTS—VETS DESERVE BETTER

Much has been written about proposed federal hospital guidelines that threaten the closing of some vitally needed rural hospitals, including some in Minnesota.

But too little has been said about how Minnesota stands to also lose 64 VA hospital beds in the Veterans Administration budget for fiscal year 1979. The beds in question would be cut from VA facilities in Minneapolis, according to the Disabled American Veterans (DAV), whose nationwide membership totals 550,000 (and whose past national commander is Lyle Pearson, N. Mankato).

The 64 beds slated for reduction in Minnesota are only a small part of the picture; 3,132 beds are scheduled to be trimmed, nationally. As well, 36 major construction projects have been eliminated, a 67 percent cut in grants for construction of state extended-care facilities has been set, and further reductions in the VA's medical research program have been earmarked. There is no question that the quality of care provided the nation's two-and-a-half million disabled veterans has been slipping, in the last decade. Yet the DAV has learned that the administration plans a further reduction of 2,100 hospital beds in the 1980 fiscal year. One Democratic congressman from Texas has said that "If the President's budget is permitted to stand, the VA's decline into mediocrity will rapidly gain momentum," perhaps even "sink into a medical slum."

The war in Vietnam may well be over, and a lot of Americans might like to forget it permanently. We have peace, now; but we cannot be at peace with ourselves if we let the unpopularity of our last major war make us callous to the continuing needs of people seriously injured or afflicted in that war, and earlier ones.

There are other ways of reducing the federal budget than by kicking people who are already down, and whose only "crime" was service to country.●

## AN ODE TO INCOME TAX DAY

### HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. DORNAN. Mr. Speaker, with this being the final day on which one can legally file to satiate the tax collectors with IRS, it is only fitting that we should have read into the RECORD Dr. Milton Friedman's brilliant essay, "Is Tax Reform Possible?"

It is said of angels to illustrate their perfection that they can divine the history of knowledge and write it on the head of a pin. For mortals, the trick is to condense it into a paragraph. Dr. Milton Friedman has always been the most learned of the practical men of economics this side of eternity. He says in an essay what most others are not able to say in a book, and he says it better and clearer.

In the essay which I now read into the RECORD, Dr. Friedman concludes that tax reform is possible; that it is possible without having to disavow prosperity or tax ourselves out of existence. Though the present tax code remains a Rube Goldberg inspired house of mirrors, Dr. Friedman's concise analysis gives us a road map through the maze. It is as much an inspiration as a revelation, and I hope that all of us will reflect on its implications:

IS TAX REFORM POSSIBLE?

(By Dr. Milton Friedman)

(NOTE.—Dr. Friedman is generally acknowledged to be one of the foremost economists in the world today. In 1976 he was awarded the Nobel Memorial Prize in Economic Science. This text is abridged from his address to Americanism Educational League.)

Everyone in this country today has a deep, personal interest in tax reform . . . for we are all involved in devoting about 40% of our working lives to supporting governmental activities. And very few of us believe that we are getting our money's worth for the 40% of our incomes being used to support government!

Yet, that percentage keeps growing. Now we do have a democratic system. We have elected representatives. They do what the public at large wants. And year by year they vote on our behalf to spend more and more of our money. What is it that produces a result not in line with the wants of the people?

Everybody agrees on the desirability of tax reform . . . but is it possible? My answer is that it is possible, but not by the usual route. We are not going to get tax reform by Congressional committees in Washington, or committees in the State houses of this nation, voting for an improved tax structure. It is the way we've been trying for years on end. That way is hopeless!

The only effective tax reform is tax reduction. But even that is too ambitious a target now. In my opinion, the most we can hope for in the near future is to stop the steady increase in the percentage of our income being spent by government. And I believe that the only feasible way of stopping tax increases is by a Constitutional limitation on government spending and taxing!

To render this view plausible, we must clear away some of the misconceptions about taxes. There are three main sets of such erroneous ideas. They involve (1) the use of Orwellian "new-speak"; (2) the idea of what

really constitutes fiscal responsibility; and (3) the view that tax simplification is possible, rather than a pipe dream. Let's examine these errors, one by one:

(1) Orwellian "New-speak." This is the government's saying one thing when the substance of it is the opposite. In the book "1984", one of the chief devices used by the government to keep its citizens in line was "new-speak." The great example in the book was the slogan "War is Peace."

That is the kind of talk that always emamates from Washington. An immediate example is the talk about proposals to cut taxes. The Administration says it is proposing a $25 billion cut in taxes. Other politicians are trying to outbid this figure. The plain fact is that nobody is really proposing to cut taxes, but simply to *shift* taxes from one kind to another.

In the first place, the proposed increases in social security and energy taxes will between them amount to more than the proposed income tax cut. In the second place, without anybody voting for it, your taxes are going to go up, because inflation will inevitably drive more and more of your income into higher brackets. The increase in the taxes our people will bear, as the indirect result of inflation, will be more than the tax cut that President Carter is talking about.

But even that isn't the whole story. . . . because the real tax that the American people bear is not measured alone by those payments that are called "taxes." The real tax on the American people is what government spends.

If the government spends $60 billion more than it takes in—which is roughly what President Carter proposes—who do you suppose pays that extra $60 billion? You are going to pay it, because it does have to be paid. But instead of direct taxes—such as income, excise or payroll taxes—it will be paid for indirectly in the form of inflation. There is no other source. The proposal to cut explicit taxes is simply a proposal to raise less money by income taxes and more money through the hidden tax of inflation!

(2) Now let's turn to the second erroneous view that I think impedes proper tax reform. It is the idea—held by so-called fiscal conservatives—that the real test of fiscal responsibility is whether you have a deficit or not. Many well-meaning citizens have been seeking a Constitutional amendment to require a balanced budget. Now, I am not against a balanced budget. But I submit that in emphasizing primarily the deficit, the fiscal conservatives have ended up being the front men for the big spenders.

The big spenders have voted government expenditures that produce a deficit. The fiscal conservatives have said, "That's terrible, we mustn't have a deficit" . . . and so, they have worked for higher taxes to balance the budget. And . . . as soon as taxes have been increased, the big spenders are off again! And the end result is more and more government spending! Remember the real tax is what the government spends, not what it collects in so-called taxes. The real problem is not the deficit. The real problem is not government debt. The real problem is government spending!

I would much rather have a government budget of $200 billion with a $100 billion deficit than to have a government budget of $400 billion with no deficit . . . because the government budget of $400 billion is simply twice as much taken from the disposition of the citizens and spent on their behalf by government.

(3) Now let's turn to the third set of erroneous views—that somehow tax simplification is possible. Why is it that the tax system is so complicated? Why does the system have so many rules and regulations that nobody can possibly know them all? Why do rates go from 14% for an individual up to 70%? Why do we have such a system?

Some people say that this is for equity. That is not so. Hardly anyone in the political spectrum, from left to right, will say that our present personal income tax system is equitable. People in fundamentally the same economic position will pay very different taxes according to all sorts of accidental elements.

Well then, if this complex and highly graduated system is not for equity, it must be for revenue. Not so! It doesn't yield much additional revenue. Suppose the tax law is changed to replace every tax rate higher than 25% with a 25% ceiling. No other changes are made. You might think that would cost the Treasury a lot of money. Not so! If everybody reported exactly the same amount of income he now reports, tax receipts would go down only 7½%.

But that would be just the first step. If the top rate were 25%, would it pay you to spend 50 cents on the dollar to get a tax shelter? Would it pay you to hire expensive tax lawyers and accountants? No! If you had a top tax rate of 25%, the amount of income reported for tax purposes would go up sharply. If you will take the time to look at the detailed figures, you will agree that a top rate of 25%, with the law otherwise the same, would yield more revenue than the present law.

If the top tax rate were 25%, nobody would get hurt . . . except for two important groups, and this is why tax simplification is impossible! Who are these two groups? One is obvious—the tax lawyers and accountants. The other is less obvious, but more important. It is the members of Congress!

With a 25% top tax rate, what would Congressmen have to sell in order to raise campaign funds? If you are a Congressman, you have to engage in activities that will enable you to get re-elected. One of the most important activities is to make the tax system more complicated. By this means you get people who are willing to contribute to you to get a special privilege that will benefit them. Also you will have people willing to contribute in order to avoid having a special burden placed upon them. If you had a simple tax system, that possibility would disappear!

How can we proceed? Why is it that we have a situation, in a democratic society, with government spending that keeps going up as a percentage of income even though very few voters feel they are getting their money's worth? I believe that the fundamental explanation is that there is a defect in our political structure. I believe the fundamental defect is the way in which our government budgets are constructed—by voting individual pieces and then adding them up.

With each individual piece there is a group that feels very strongly about it. They are going to make a big effort to get it included in the budget. The cost is comparatively small and spread over all taxpayers. And nobody makes a real effort to stop it. But when you get one little piece piled on top of another, and another, the total adds up to more than the public at large wants to spend.

How can this defect be remedied? There is only one fundamental way: by political change in the form of Constitutional provisions setting a limit on government spending. What we need to do is give our legislators a budget—to say "This much and no more." Then the special interests can fight with one another instead of ganging up on you and me. That's the fundamental, first step toward making tax reform possible! ●

## BILL FOR THE RELIEF OF ISLAND TRAWLERS

### HON. JACK EDWARDS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. EDWARDS of Alabama. Mr. Speaker, I am introducing legislation today for the relief of Island Trawlers of Mobile, Ala., and others, from payment of social security taxes alleged to be owed for the years 1966 through early 1968.

For years, American fishing vessels have operated under an arrangement whereby members of the crew of each vessel take a percentage of the vessel's catch as compensation for work. There is no guaranteed income, as this is actually a joint venture rather than an employment situation; and the crew's size and members vary with each fishing trip. Because of this unique arrangement, it is difficult, if not impossible, to require boat operators to keep the necessary records to calculate tax and social security obligations as employers. For that reason, in the Tax Reform Act of 1976, we agreed to clarify the status of independent fishermen to allow crewmembers to be treated as self-employed for purposes of income tax and social security laws. These provisions were extended to prior years (to services performed after December 31, 1971) to prevent the assessment of sizable, retroactive tax deficiencies, and to cover the period of disagreement. The retroactive date was intended to cover all situations still open under the statute of limitations. We understood at that time that no taxes for past years would be collectable with this retroactive effective date.

In the case of Island Trawlers, however, their statutory period of limitation was voluntarily extended and their tax deficiency is, therefore, still in question. The IRS agrees that it was the intention of Congress to relieve the taxpayers of these social security obligations, but argues that in this particular case where the statutory period of limitation was voluntarily extended they still have a right to collect the tax. This is clearly contrary to the intention of the Congress in adopting the provisions of the 1976 act. The Senate Finance Committee, in fact, has recognized that the Tax Reform Act of 1976 did not finally solve the problem for all cases, and has recommended that the provisions affecting independent fishermen in that act be extended even further, to cover all services performed after 1954.

In view of the fact that the Congress clearly intended for the provisions of the Tax Reform Act of 1976 to settle this issue once and for all, I believe that it is entirely inequitable for Island Trawlers to be singled out to pay these taxes. My bill would relieve the corporation of this alleged tax deficiency and allow the repayment of any such taxes which are collected before my bill becomes law. I urge that my bill be acted upon favorably and in a timely manner.●

## DEVELOPMENT ADVOCATES SORELY NEEDED IN CARTER ADMINISTRATION

### HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. BOB WILSON. Mr. Speaker, the United States has always been a nation on the move. "Progress" and "America" are all but synonymous in the minds of both our citizens and those of other countries. Working today for a better tomorrow is not just a slogan to us, but a way of life.

That is, until recently. In less than two decades, our goals as a Nation have become confused, our purpose muddled. A prime example is our tack on energy policy. We are told on the one hand that we are running out of oil and gas, but rather than attack the problem and solve it, we equivocate. I cannot fathom why we do this, but perhaps one reason is suggested by the following editorial from the April 3d issue of the Oil and Gas Journal and I commend it to my colleagues for their consideration:

DEVELOPMENT ADVOCATES SORELY NEEDED IN CARTER ADMINISTRATION

Once upon a time, there was in Washington a cabinet-level department committed to development of U.S. natural resources. It operated under the philosophy that one of its primary functions in administering the vast realm of federal lands and waters was to see that they contributed energy supplies to help fuel a growing U.S. economy which would provide jobs and a better standard of living for a growing population. Development advocates often held top jobs in this department. It was called the Department of Interior.

Actually, it's still called that. But it shouldn't be. A better name, we suggest, would be the Environmental Department of Interior. No development advocates hold top jobs there now. The key positions are occupied by environmentalists.

This is the lineup that is advising Interior Sec. Cecil Andrus on withdrawal of federal lands from the multiple-use category, on putting great hunks of them in the sacrosanct wilderness grouping, on where and when offshore lease sales should be held or not held, and on how operators should be required to operate in the federal domain.

With some incredulity we've heard spokesmen for Interior contend—along with some like-thinking congressmen—that withdrawing certain lands with mineral potential from multiple use isn't damaging to the U.S. energy effort, because exploration of such lands could always be approved by Congress sometime in the future if the U.S. ever should really need the oil and gas! The dollar is coming unglued all over the world thanks largely to a U.S. oil-import bill last year of $42.1 billion which resulted in a record trade deficit of $26.7 billion. Admittedly those figures will worsen the way things are going. But it seems glaringly obvious that the U.S. desperately needs the oil and gas right now.

Interior officials contend they have carefully screened lands considered for wilderness designation to keep open those areas with good oil and gas potential. If so, the screening process uses a very wide mesh. As one instance, Interior opposes any exploration of the Arctic Wildlife Refuge in Alaska which contains a multitude of promising structures—one of them a Prudhoe Baysized feature, the Marsh Creek anticlinal trend.

These officials and Andrus himself insist that Interior is trying to strike a balance between energy needs and environmental goals. They may well be sincere. But their concept of "balance," as one might expect, is a far cry from the balance that would result if development advocates had meaningful input.

Proof of the actual imbalance is that every major Interior policy move since Andrus's appointment has had the effect either of restricting access to the federal domain or adding further delay in exploration and development.

There are some signs at last that Andrus may realize he's gone overboard on the environmental side. He has met with oil men twice recently and reportedly promised to respond to their complaints. We hope this isn't just window dressing and that he not only responds but also takes remedial steps.

The problem with having an Environmental Department of Interior is that this makes it unanimous. We now have an Environmental Federal Government, encompassing such as the Environmental Protection Agency, an Environmental Department of Energy (which is pressing hard for solar and wind energy while holding oil prices even below legal limits under control), an Environmental Department of Transportation (Have you tried to build an oil superport recently?), and all the rest.

Isn't it about time someone in Washington pressed for development of the only kind of energy—fossil fuels—that could ease the country's energy/fiscal plight during the next 10–20 years?●

## SENATE PRAISES HOUSE ACTION ON PEOPLE'S RIGHT TO VOTE

### HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. VANDER JAGT. Mr. Speaker, as far as I know from my years of service in the Congress it is unprecedented for the Members of the Senate to adopt a resolution praising the action of Members of the House. I therefore insert in the record for the benefit of my colleagues a resolution adopted by the Republican Members of the Senate of the United States applauding our minority leader, JOHN J. RHODES, and all Republicans in the House for a stalwart defense of the people's right to vote without governmental intimidation and control in their opposition to H.R. 11315.

The resolution follows:

RESOLUTION

Whereas the House of Representatives did, on March 21, 1978, resoundingly defeat legislation inimical to the American people and dangerous to our system of two-party government, and

Whereas the Republican Members of the House of Representatives stood steadfast, to a man, in opposing that legislation, the purpose of which was as transparent as the air over Flagstaff, and

Whereas the Minority Leader of the House of Representatives, John Rhodes of Arizona, led his troops through a legislative wasteland as thorny as a stand of saguaro cactus, and

Whereas future elections will be more open, more competitive, and more receptive to the will of the American people because of Congressman Rhodes' leadership against the brazen attempt of the House Majority Leadership to steamroll malevolent amendments to the Federal Elections Commission law, Now, Therefore, Be It

Resolved that the Republican Members of the Senate of the United States applaud Congressman Rhodes, our fellow Republicans in the House (and those of their Democratic colleagues who voted to put fair and free elections above party considerations and partisan guile) for a stalwart defense of the people's right to vote without governmental intimidation and control.

Done in the United States Senate this 4th day of April, 1978.

CARL T. CURTIS,
*Senate Republican Conference Chairman.*

JOHN TOWER,
*Senate Republican Policy Committee Chairman.*

HOWARD H. BAKER, JR.,
*Senate Minority Leader.*

CLIFFORD P. HANSEN,
*Senate Republican Conference Committee Secretary.*

TED STEVENS,
*Senate Minority Whip.*●

## LEGISLATION TO CURB "PERKS"

### HON. PETER H. KOSTMAYER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. KOSTMAYER. Mr. Speaker, my colleague, BILL ARMSTRONG of Colorado, and I are introducing a resolution today to curb some of the "perks" provided Members of Congress, and thereby save the taxpayers a considerable amount of money.

While many of the benefits we receive—for staff, district offices, research materials, et cetera—are worthwhile, many of the "perks" we receive are not, and have justly been the subject of innumerable articles criticizing the excesses of Congress. It is several of these perquisites, especially publications, that the resolution addresses.

The grossest excesses are in the area of Government publications available to Members for mass distribution to constituents over the frank. Walking through the halls of the House office buildings, I am amazed at the huge quantities of printed material being mailed by Members. The Legislative Appropriations Subcommittee to its credit has over the past few years been reducing free material to Members. Unfortunately, far too much waste continues.

Last year during consideration of the legislative appropriations bill I offered an amendment to delete funds for the 2,500 free calendars given each Member annually. Last year over 1 million calendars at a cost of over one-half million dollars (not including postage) went out. I shall offer that amendment again this year.

Like so many other publications, the calendars cost the taxpayer, and lack a genuine business purpose. These publications serve us precisely for the reason our critics contend they do—they help us politically. Rather than increase our standing, they only reduce it.

While the resolution will not directly "stop the presses," it will require Members to reimburse from their official expense allowance the cost of publications

intended for mass distribution. This printed material is not "free," Mr. Speaker, at least not to the taxpayer—and if Members want to mass mail calendars and other items, they should use their allowances to cover the costs, and the Clerk of the House should so inform the public in his quarterly reports.

I trust the House will respond favorably to the rule change, Mr. Speaker, and support us in our effort to eliminate a few of our wasteful and excessive habits.●

## DENIAL OF HUMAN RIGHTS TO FBI AGENT KEARNEY—AND OTHERS

### HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. McCLORY. Mr. Speaker, as this administration touts itself on advancing the cause of human rights, the public should take careful note of the flagrant abuse of human rights by the Justice Department and other agencies of our Federal Government—inflicting irreparable injury on loyal American citizens.

The well-publicized indictment and eventual dismissal of charges against former FBI agent John J. Kearney are but one example of numerous unjustified attacks which strike at the very roots of our free society.

While President Carter has made a big issue of the imprisonment of numerous individuals in other countries—without trial—he should be reminded of the virtual conviction of many innocent Americans who have been tried and condemned by administration publicity and leaks in the most unfair and unjustified actions during my Washington experience.

Mr. Speaker, the highly questionable, more recent attacks upon present and former FBI officials may satisfy the appetites of some who are intent upon attributing wrongdoing to virtually all who have public responsibility, but the injury to individual reputations as well as the nurturing of disrespect for law enforcement officials at the highest levels impinge upon our entire concept of traditional human rights.

Mr. Speaker, the courageous and perceptive Bob Wiedrich of the Chicago Tribune devoted his columnn on Friday, April 14, to the matter of FBI agent John J. Kearney and subsequent developments which now involve former acting FBI Director L. Patrick Gray and other former high-ranking investigative officials in the FBI.

Mr. Speaker, I am attaching Bob Wiedrich's revealing column for the edification of my colleagues and all who have occasion to gleam these pages of the CONGRESSIONAL RECORD:

[From the Chicago Tribune, Apr. 14, 1978]

THE WRONG PEOPLE ARE INDICTED AGAIN

(By Bob Wiedrich)

Former FBI agent John J. Kearney should be honored to have served as the unwitting foil for Griffin Bell's apprenticeship as United States attorney general.

Otherwise, there doesn't seem to be much else to salvage from what appears to have been one of the more deplorable chapters in the annals of American justice.

Bell now admits that he erred in authorizing the indictment of Kearney last year for having allegedly conspired to deprive others of their civil rights in the hunt for fugitive leaders of the radical Weatherman Underground.

He has ordered the charges against Kearney dropped. And he begs that the indictment was a mistake born of inexperience as the nation's leading lawyer.

Perhaps he is right. The indictment, after all, was returned in New York City only shortly after Bell took office last year as President Carter's appointee.

However, I thought when you got into those big leagues, you already knew your business before you got the job.

And that there wasn't any need for on-the-job training for an attorney who already had served 15 years on the federal appellate bench.

Now, that appears to have been a false premise. Bell admits that he and his prosecution team of last year were wrong in not having indicted somebody else.

So Bell has substituted former Acting FBI Director L. Patrick Gray and two other former high-ranking Federal Bureau of Investigation officials as scapegoats for illegal eavesdropping practices that were privately sanctioned by American Presidents from Dwight D. Eisenhower on through John F. Kennedy, Lyndon B. Johnson, and Richard M. Nixon.

Kearney, I suppose, should feel proud that he has rendered a public service by helping to hone the attorney general's understanding of the grand jury process and the selection of targets for indictment.

But that should be small consolation to the retired FBI man after having suffered the anguish, indignity, public embarrassment, and financial stresses of being a professional lawman under indictment for violating the law.

It makes you wonder how many other inept or inexperienced prosecutors have improved their skills at the expense of the reputations of others.

It may be true, as some of Bell's close associates have claimed, that Bell regretted his decision to seek Kearney's indictment and felt the prosecution team had misled him.

It is a matter of record that the original bunch of government lawyers assigned to investigate allegations of illegal FBI mail openings, break-ins, and wiretaps in the Weatherman hunt did quit in a huff last December in a dispute with Bell.

It also is possible that as the fledgling attorney general, Bell was subtly sandbagged by ambitious civil rights division lawyers with a longtime antagonism toward the FBI.

The Justice Department, after all, is a big shop. There are a lot of things that can happen there without the boss being aware, especially if he is new on the job.

But to say the least, Bell's remarks about the Kearney case were clumsy. They suggested a serious flaw in the grand jury system. And raised questions about how many more may have been gored.

A person's reputation, after all, is a delicate thing. It bruises easily. And an indictment in the case of a man in Kearney's position is almost like a conviction. When you've been a cop, the exoneration is not remembered as clearly as the original charge. It often turns up in a guy's obituary.

In announcing the dropping of the charges against Kearney, Bell noted that he was not condoning Kearney's alleged activities. He said, however, that it would not be just to prosecute the ex-agent for acts done at his level and for activities that Bell said would not be permitted today, "given present attitudes."

He made it clear he wanted the blame attached to those who authorized the illegal actions, not those who allegedly carried them out. That may be charitably selective prosecution.

It ignores, however, ample evidence in the Justice Department's own files that members of the President's Foreign Intelligence Advisory Board during the Kennedy and Johnson administrations were aware of domestic mail openings by the Central Intelligence Agency and the FBI.

And that those Presidents would have had to have been blind not to know what was going on.

These facts were included in a quixotic Justice Department report last year that absorbed CIA agents for having opened mail in search of foreign intelligence plots, but did not give a pass to the FBI agents hunting down domestic subversives accused of having blown up buildings.

If, in fact, there were implied presidential sanction of the acts viewed as illegal today, then Bell again has indicted the wrong people. He ought to instead keelhaul four deceased Presidents in absentia. And make a public spectacle out of them.

Better yet, he ought to forget the whole thing instead of trying to apply today's standards retroactively to men who thought they were working in the best interests of their country with White House approval.●

## NATIONAL OCEANS WEEK

### HON. JOHN B. BREAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. BREAUX. Mr. Speaker, pursuant to Senate Joint Resolution 124, the week of April 16 through 22 has been designated as "National Oceans Week." The purpose of Oceans Week is to increase public awareness of the importance of the oceans to this country.

Over 70 percent of the Earth's surface is covered by water. We rely upon the oceans as a vital source of food, energy, and recreation as well as a medium for transportation and waste disposal.

Today, the ocean's enormous store of wealth remains relatively untapped. As the world's terrestrial resources become depleted and more costly to develop and utilize, mankind will be forced to rely even more on the oceans as a source of world nutrition, energy, and minerals.

The United States, being the world's greatest scientific and technologically developed country in the world, will play an important role in helping to discover and implement new and better ways to develop and utilize the vast resources of the ocean for the benefit of mankind.

Oceans Week is an attempt to bring to the attention of the public and especially the youth of this country our important national efforts to rationally develop, utilize, and conserve our marine resources.

In support of designation, the American Oceanic Organization has scheduled a series of interesting events. The celebration will feature ship visits, aquatic art and craft shows, Government and technical exhibits, public discussion forums, waterside concerts, and AOO's Neptune Awards Banquet.

The Nation's Capital was chosen for the Oceans Week celebration in recognition of the key role national policy, legislation, and regulation play in the development and preservation of our ocean

and coastal resources. Coastal States are also joining in the effort to illustrate what has been done in the oceans, and what must be done to best utilize marine resources for the benefit of society.●

## SELF-DIRECTED PLACEMENT

### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. EDWARDS of California. Mr. Speaker, Mr. Charles D. Hoffman, president of Self-Directed Placement of San Diego, has a unique method for solving a part of our unemployment problem. I say unique, because Chuck's methods work.

In Self-Directed Placement, Chuck teaches the unemployed to get their own jobs, boosting their sense of self-esteem and worthwhileness. You really cannot argue with results. According to an informal survey by a Labor Department official, he now has the best job placement percentage in the country. Over a period of 1 full year, 83 percent of his students found their own jobs in private industry, and they did is in an average of 93 hours. That is hours, not days. The average starting salary was $3.46 an hour, and the dropout rate was 10 percent.

These are startling figures for a job assistance program and bear marked tribute to Chuck's job placement philosophy. A more detailed insight into the program is given in the following series of articles and I seriously recommend it to the attention of my colleagues as a possible solution to our employment problems.

On November 21, 1977, the Business and Finance section of the Los Angeles Times carried an article by staff writer Margaret Kilgore. Part of the article is as follows:

To be uneducated, unskilled, out of work and perhaps have a criminal record is more than enough to destroy a person's confidence.

Enter the Self Directed Placement Corporation of San Diego, a pioneer government funded effort to give potential job seekers the attitudes and know-how to personally apply for a job and, with luck, be successful.

The corporation is headed by Charles D. Hoffman, former Vista volunteer, who mixes a fair amount of positive thinking and how-to-win friends into the short courses he teaches federal CETA (Comprehensive Employment Training Act, which governs the major federal hiring program) participants.

His suggestions, although perhaps elementary to the disciplined worker, mirror the gripes many employers have against their help.

"I tell them right off that they have to be on time whether it's work or class," Hoffman says. "If an employee is 25 minutes late every day, an employer should fire him or her. That person is unreliable."

He also teaches his classes such basics as how to use a telephone in a polite and businesslike manner, how to approach a personnel department officer by phone to ask for a job (don't give "yeah" and "nope" answers to questions); be aggressive, but polite.

Hoffman's theory of job placement is: why use a middleman to find a job? He is critical of most federal and state job placement programs which hire a battery of job finders to search for jobs which, he says, the applicant should find for himself.

"Our philosophy is incredibly simple," Hoffman says. "We strongly believe the unemployed can be taught self job placement methods. If one can take a person with no experience, and teach that person how to be a job placement specialist, why not bypass that middleman and directly teach the applicant?"

Hoffman has incredible success. Of the 400 people who have passed through the program within the past two years, 83% have been successfully self-placed into full-time jobs in the private business sector with a later drop out rate of 10%, he says. He adds that the average placement time period is 93 hours, including 35 hours of classroom instruction.

An article in "Worklife," the U.S. Labor Department magazine says "Statistically, the program has been working well for everyone, including minority group members, young adults, older workers and clients for whom English is a second language. A program for ex-offenders already is under way." The experimental program is being considered by state officials and Hoffman hopes to interest Los Angeles County officials in it.

As the month-long class and job search program progresses, effective interviewing is covered in detail, but traditional job-related skills are minimized as a means of "selling" the interviewee to the employer. The students learn to recognize and communicate their positive personal attributes.

"At the entry level and sometimes beyond, employers hire people, not only skills," says Hoffman. "Enthusiasm, reliability and the ability to get along with others are vital. Plenty of our students who don't even meet an employer's minimum requirements are hired with a promise of training."

Self Directed Placement Corporation, a San Diego-based operation, was created four years ago by the originator of the self-directed approach, Charles D. Hoffman. This incredibly successful method is now being evaluated from Atlanta to San Francisco, from Chicago to Dallas, and in both large cities like Washington, D.C. and small, fishing and lumber coast towns like Arcada, California.

Old myths are being destroyed in the process, such as "You can't teach these people how to get a job. They simply don't want to learn," and finally, "Even if you could teach them how to help themselves, they won't; because you can't motivate them." All these myths and more are left broken by the roadside after the student goes through a self-directed placement program. People who didn't think they could help themselves, and in some cases had indeed never had any control over their own destinies, and were devoid of any confidence, have responded with great enthusiasm and realized tremendous success.

Staff writer Michael Grant, of the San Diego Union, who himself monitored the program wrote the following article that appeared in the Union on July 31, 1977:

Last week, Robert, an illiterate young man with more jail than jobs on his resume, landed himself a position . . . indoor painting at $4.50 per hour. The first job he had ever acquired without assistance. Robert was bouncing off the walls.

"Man, I'm GOOD," he strutted. Others in the job search room at Self Directed Placement Corporation were glad for him and left their own telephones to come and shake his hand.

Then Chuck Hoffman, to whose office the word had been flashed, entered the room. Robert swaggered over, swept Hoffman off his feet and spun him about. They clapped each other on the back.

Hoffman is the president of SDP, which is in the business, mostly through contracts with social agencies, of teaching people how to get jobs. Many of the students, like Robert, are rather on the down-and-out side.

Robert is 27 years old. His intemperate ways have had him in and out of jail—mostly in—for the past eight years. He last was released in June.

He can't read or write, Hoffman said, not even his own name. Sometimes he misunderstands the spoken word as well, and it was by this that he lost a job interview earlier in the week. At that point, Robert's spirits bottomed out. He began talking, Hoffman's aides told him, of going back to making a living on the street. First, he would need a gun.

But he stuck to the phone for two more days, and now he had got himself a job. Nobody did it for him. His self-stock had skyrocketed.

"Man, I'm proud of ME!" he squeaked, jutting his chest forward to meet his jabbing forefinger. SDP has contracts with the Regional Employment and Training Consortium, and with Project JOVE, the agency that offers job counseling to "model ex-offenders." Robert was a referral from the latter, Hoffman accepts very few applicants off the street.

The classroom work—it's closer to an encounter group, actually—takes five full days. The written material, Hoffman said, is copyrighted, but it's impossible to copyright the give-and-take, which becomes a weave of self-analysis, confrontation, confession (either open or inward), practice in self-assertion, frank critique and blunt challenge.

First the instructor assumes an employer's role and, in front of a videotape camera, interviews each student. At week's end, he will interview them again. Generally, the contrast between the two tapes is remarkable.

The first couple of days, Hoffman concentrates on establishing his credibility, or more accurately, erasing the skepticism that, with some of his students, amounts to defiance.

To do this, he comes on straight and hard, talking to them at almost, but from slightly above, their level. He is facile at fitting one-on-one exchanges into the class context. He is adept at touching nerves without pinching them.

He softens these realities with a delivery in the Don Rickles style and, though one recent class included nine women, he swears smoothly, without hesitation.

Most of his students don't take the entire week to find work. Robert took 18 days, but he was a hard case.

Statistics like these eventually attracted the attention of the state, and last week its Employment Development Department gave Hoffman a contract to put two groups of 25 welfare recipients through the course on a pilot basis. Hoffman expects to match his track record, though this is a slightly different proposition.

"You tell me what they draw in welfare, food stamps, and so on," he said. "If they are receiving X amount of dollars now, it means they will have to make X amount of dollars on their job."

This hints at a sort of work evangelism, with salary the salvation. Its potential is intriguing.

"Not only would the ones who gets jobs no longer be drawing (welfare), they would be paying in, in income taxes," Hoffman said. "The success factor (of a job discoveries) can be incredibly small to be incredibly valuable to the government."

SDP has grown slowly since it opened in mid-1974. A second full-time instructor David Flack, has been hired, and Hoffman is looking about for larger quarters He would seem to have an inside track for a continued agreement with RETC, which is in the process of receiving contract bid for the new fiscal year beginning October 1.

Tom Nagle, formerly with the League of National Cities, now Executive Director of the San Diego Regional Employment and Training Consortium, which distributes approximately 83 million dollars into the San Diego economy each year, stated:

"Mr. Hoffman has been retained as a

contractor for 'Job Search' under our Title I activities for the past two years.

"Doing business as Assertive Training Institute, and most recently as Self Directed Placement Corporation, Mr. Hoffman has performed an excellent service. More than meeting his contractual obligations, however, Mr. Hoffman has introduced a concept of exceptional value into training programs. We have, for too long, been restricted in our vision to the design of programs previously instituted. The structure of a program, its duration, its conformance with past techniques, have too often become more important than the client.

"The process has become an outcome in itself. Mr. Hoffman deals with people, their strengths, weaknesses, moderations and limitations. He deals with issues that transcend structural unemployment and challenges the individuals to help themselves and develop the necessary skills to realize their own capabilities. We have found through experience that training alone, without the necessary motivation of the individual willing and able to benefit from that training, can become just another form of welfare. Mr. Hoffman attempts to break through this cycle with considerable success. He has taken individuals who have been trained and yet have failed to be placed and in a very short, intensive format, has motivated these individuals to seek employment.

"I would expect the initial efforts by Mr. Hoffman to be duplicated in other areas as more people become aware of his results. He has a good product and a proven record.

"I am available to discuss these issues in more detail as desirable."

Any of the many different types of training programs that are now in operation around the country would be well-advised to take a closer look at the very old, yet dramatically new, method that continues to score incredibly high self-placement figures as developed by Charles D. Hoffman of Self Directed Placement Corporation, 3010 Cowley Way, San Diego, Ca. 92117.●

## VOTES FOR SALE

### HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. DORNAN. Mr. Speaker, on Monday, April 10, I read into the CONGRESSIONAL RECORD a recent broadcast by Dean Manion and Mr. Clay J. Claiborne, the national director, National Black Silent Majority Committee. The topic of the broadcast was Mr. Claiborne's recent trip to Panama and his many conversations with Panamanians and Zonians.

I have recently received a copy of the transcript of another Manion Forum broadcast which I would like included in the RECORD at this time. This supplement was broadcast on April 2 and deals with deals * * * the kind that have been struck between the White House and certain Senators in return for their "aye" votes on the Panama Canal Treaties. I quote it here as part of my remarks:

No. 1513—VOTES FOR SALE

DEAN MANION: If an ordinary citizen is caught selling his vote to a candidate at the polling place, both will be humiliated, and in some jurisdictions both buyer and seller might be prosecuted. Nevertheless, a United States Senator may cast his vote for the ratification of a treaty against the wishes of his constituents in return for a gift by the President of the United States and be publicly lauded for his courage.

It is no longer a secret that the Senate's approval of the first Panama Treaty was thus made possible by the generous intercession of President Carter. The *Wall Street Journal* revealed all of the sordid details in its March 16 editorial entitled "Let's Make A Deal." It concludes:

"The money thus used to buy (Senate) votes has to come from American citizens. . . . It is especially galling to see that even if the Administration loses, the rest of us have to pay. The next Panama Treaty ought to give us some protection. The text ought at least to stipulate that if it is not ratified by the United States Senate, all political promises offered to secure its passage become null and void."

According to the figures stated by the *Journal*, the result of its suggested nullification clause would save American taxpayers more than onee billion dollars. Incidentally, that is approximately one-tenth of what the President proposes to give Panama for taking the Canal off our hands.

After due consideration of how badly he was short-changed, I am sure that Senator Moynihan of New York will be glad to return the Havana cigar that he received from Fidel Castro.●

## 1978 WORLD REFUGEE REPORT

### HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

Mr. DRINAN. Mr. Speaker, the United States Committee for Refugees, a private, nonprofit organization, has recently published its 1978 World Refugee Report. The survey attempts to answer three questions: First, how many refugees are there and where are they coming from? Second, what political situations are causing large numbers of people to flee from their homelands? Third, what is the response of the international community to the plight of the world's refugees?

The United Nations defines a refugee as one who is outside the country of his or her nationality and is unable or unwilling to return to that country because of persecution or a well-founded fear of persecution based on race, religion, nationality, or political opinion. The World Refugee Report surveys this group as well as those who are stateless and those who have been displaced within their own countries or fled abroad because of war or civil strife. The report estimates that 13 million people are included in these categories.

The concern of the U.S. Committee on Refugees is not merely the gathering of statistical information but also, in their own words, "(to) generate a movement that would see the political and human rights of refugees guaranteed in international law and respected by all nations in the human community."

An active concern for human rights throughout the world has become a central part of our foreign policy. Yet what we say about human rights violations in other nations is not matched by how we provide in our laws for the admission of refugees. United States law does not yet recognize the United Nations definition of a refugee, and no orderly process exists for the admission of groups of refugees. The Judiciary Subcommittee on Immigration has held hearings on formulating a refugee admission policy for the United States. Central in those discussions is the task of determining what our role should be as a humanitarian society, as signatory to the United Nations Protocol concerning protection of refugees, and as an advocate in the world community for human rights including the right of immigration.

The 1978 World Refugee Report is a valuable contribution to these discussions and I commend it to all of my colleagues. Over the next few days I shall highlight segments of the report. Following is a look at existing protections for refugees within the international community and a summary of present procedures followed by the United States for the admission of refugees.

The report follows:

I. INTERNATIONAL LEGAL PROTECTION

Under traditional international law, a state is free to admit or exclude aliens, including refugees. Thus, those refugees who lack the protection of a state, have no guarantee that their basic human rights and freedoms will be protected. The 1951 Convention relating to the Status of Refugees is a milestone in the field of refugee protection, for it codifies internationally, a "bill of rights" for refugees. It sets forth a definition of a refugee, provides for an international refugee travel document and strictly forbids the forcible return of refugees to their country of exile (refoulement). In addition, the Convention states that refugees should be given the same basic human rights and freedoms as nationals of the country of asylum.

But the 1951 Convention only obliges its Contracting Parties to apply its provisions to persons who had become refugees before January 1, 1951. Furthermore, Signatories have the option of limiting the Convention's provisions to refugees from Europe.

In 1967, an international Protocol was adopted to remove the time limitation of the 1951 Convention and thus extend its provisions to future refugee groups. Though the adoption of the 1967 Protocol has broadened the scope of refugee status in the body of international law, there are many refugee groups which are not protected by its provisions. The Protocol accords refugee status to persons who are outside their homeland because of a "well-founded fear of being persecuted." This definition, however. excludes persons who have been uprooted because of civil strife, a major cause of large-scale refugee migration in recent years.

It should be noted, however, that in 1959, the United Nations General Assembly passed a resolution authorizing the High Commissioner to use his "good offices" in the transmission of contributions for assistance to refugees who are outside the definitional limits of the 1951 Convention and the 1967 Protocol. In practice these persons are referred to as "displaced persons" rather than refugees. The term "refugee" in international parlance is usually reserved for those persons who meet the definitional requirements of the 1951 Convention and the 1967 Protocol.

Neither the 1951 Convention nor the 1967 Protocol requires nations to take in refugees who reside outside their territory, only those who have already entered. There exists no provision affirming the refugee's right to cross borders in quest of asylum.

In Africa, a continent of frequent mass refugee migrations, the Organization for African Unity (OAU) Convention Governing Specific Aspects of Refugee Problems contains important provisions which are absent from the 1951 Convention and 1967 Protocol. First, this

Convention broadens the categories of persons to be accorded the refugee status by including individuals generally seeking refuge from violence of any kind of foreign occupation, whether or not they are in fear of persecution. Secondly, the Convention specifically states that the granting of asylum should not be regarded by any state as an unfriendly act and that no person should be subjected by a member state to rejection at the frontier, or return or expulsion to a territory where life, liberty or physical integrity would be theatened.

The absence of international legal instruments relating to diplomatic and territorial asylum—the respective right of a refugee to be granted asylum at a diplomatic post or in the territory of another state—constitutes a major gap in international law. A report by the World Peace Through Law Center, an international association of jurists, concludes that diplomatic asylum is not a practice sanctioned by international law but a regional practice which has a long tradition in Latin America and Western Europe. The report encourages United Nations efforts to adopt conventions on diplomatic and territorial asylum.

A U.N. Conference on Territorial Asylum, attended by representatives of ninety-two nations, was held in Geneva from January 10, 1977 to February 4, 1977. Although it proved to be the most far-reaching intergovernmental exchange on the subject in recent years, the conference failed to adopt a Convention on Territorial Asylum. At the heart of the debate was the delicate task of reconciling the individual's claim to be granted asylum with the sovereign prerogative of the state. It is expected that another conference will be convened at some future date.

Less than half of the U.N. membership has even formally acceded to existing instruments of international legal protection. In Asia, an area of massive refugee migration, not a single nation has ratified either the 1951 Convention or the 1967 Protocol. The lack of refugee protection in this part of the world has been dramatically exemplified by the plight of the Vietnamese "boat people" who have been refused asylum in many Asia ports and left to the perils of the sea.

Under a grant from the United Nations High Commissioner for Refugees (UNHCR), the World Peace Through Law Center undertook a project from 1974 to 1976 to increase awareness of the rights of refugees, and press for their implementation. A Permanent Committee on Refugee Law was established for this purpose in countries which either had not ratified the Convention and the Protocol or had ratified them with reservations.

At the World Law Conference in Manila in August of 1977, Resolution No. 9 was adopted concerning the international legal protection of refugees. The resolution deals with five areas: (1) international legal instruments relating to refugees; (2) asylum; (3) family unity; (4) the implementation of the legal rights of refugees and (5) international solidarity in support of refugees.

The resolution calls on nations to accede to the Convention and the Protocol and to withdraw any geographical limitations or reservations to these instruments. It reaffirms the granting of asylum as a peaceful, humanitarian act which should not be regarded as unfriendly by any state and the principle that no person should be forcibly returned to a country where he may be subject to persecution. Finally, the resolution expresses the hope that governments will take all necessary steps to reunite separated families and within the framework of international solidarity share the responsibility to seek permanent humanitarian solutions to the problems of refugees. These resolutions, of course, do not have the force of law, and it is up to the individual states to adopt such measures in their national laws.

A. MAJOR INTERNATIONAL CONVENTIONS RELATING TO REFUGEES

THE GENEVA CONVENTION RELATING TO THE STATES OF REFUGEES OF JULY 28, 1951

Defines a refugee as any person who "as a result of events occurring before January 1, 1951, and owing to well-founded fear of being persecuted for reasons of race, religion, nationality, membership in a particular social group or political opinion, is outside the country of his nationality and is unable, or owing to such fear, is unwilling to avail himself of the protection of that country; or who, not having a nationality and being outside the country of his former habitual residence as a result of such events, is unable or, owing to such fear, is unwilling to return to it." The Convention requires the Contracting States to accord to refugees, without discrimination, freedom of religion, access to courts, and exemption from legislative reciprocity after three years. It also sets minimum standards for treatment of refugees as to gainful employment, housing, education and welfare.

THE 1967 PROTOCOL RELATING TO THE STATUS OF REFUGEES

The Protocol broadens the scope of the 1951 Convention by removing the time limitation from the definition of a refugee. It incorporates all the substantive provisions of the 1951 Convention and requires the Contracting States to cooperate with the Office of the United Nations High Commissioner for Refugees.

THE 1954 CONVENTION RELATING TO THE STATUS OF STATELESS PERSONS

The purpose of this Convention is to supplement the 1951 Convention relating to the Status of Refugees by regulating the status of previously unprotected "stateless persons." A "stateless person" is one "who is not considered a national by any state under the operation of the state's laws."

THE 1961 CONVENTION ON THE REDUCTION OF STATELESSNESS

This convention is designed to eliminate the perpetuation of statelessness. Provides for the acquisition, by operation of law, of the nationality of the Contracting State by the children born of stateless parents in its territory.

THE 1967 HAGUE AGREEMENT RELATING TO REFUGEE SEAMEN AND ITS 1973 PROTOCOL

Parties agree to issue refugee seamen travel documents and admit them to their territory. The 1973 Protocol extends the agreement to those seamen who became refugees after 1951.

1949 GENEVA CONVENTION RELATIVE TO THE PROTECTION OF CIVILIAN PERSONS IN TIME OF WAR

In May of 1977, Article 64 of Protocol I to the Convention was adopted by a Diplomatic Conference to include refugees in the category of "protected persons" governed by the Convention. The Article specifically states that "persons who, before the beginning of hostilities were considered as stateless persons or refugees under the relevent international instruments accepted by the Parties concerned, or under the national legislation of the States of refuge or State of residence shall be protected persons within the meaning of Parts I and III of the Fourth Convention, in all circumstances and without any adverse distinction." The Article was prepared by the International Committee of the Red Cross and the United Nations High Commissioner for Refugees.

UNITED STATES OF AMERICA

The Local Director of the Immigration and Naturalization Service, under the Department of Justice, makes the determination of refugee status. The decision of the District Director is not subject to appeal. But if the Director proposes to give a negative decision, he must first seek an advisory opinion from the Department of State. If the District Director of the INS chooses to deny the application despite a favorable recommendation of the Department of State, the application is then referred to the Regional Commissioner of the INS for a final decision.

The UNHCR representative in New York maintains periodic contact with the Department of State Office of Refugee and Migration Affairs on questions relating to the determination of refugee status. The State Department also refers certain groups of asylum cases to the UNHCR for advisory opinion on the merits of the individual application.

Refugees whose applications have been approved are issued an I–94 form in which their status as "parolee" for the purposes of political asylum is indicated. In addition, the INS may issue a Refuge Travel Document in accordance with the provisions of the 1951 Convention relating to the Status of Refugees. This document is valid for one year.

A refugee is admitted to the United States on the basis of the conditional entry provision of U.S. Immigration Law or under the "parole authority" of the Attorney General.

To qualify for conditional entry, a person must have fled from a country where he or she fears persecution, and this country must either be Communist or fall within the general area of the Middle East. Under this provision, the Middle East is defined as follows: from Libya in the west to Pakistan in the east, and from Ethiopia in the south to Turkey in the north. In addition, persons who have been uprooted by natural disasters, such as earthquakes and typhoons, qualify as conditional entrants, if they are unable to return to their normal place of residence.

An applicant for conditional entry to the U.S. may apply at any of the U.S. immigration posts abroad, located in Austria, Belgium, France, Germany, Greece, Hong Kong, Italy and Lebanon. The officer in charge of each immigration office in authorized to approve an application for conditional entry. After two years' residence in the U.S., the refugee is required to appear before an immigration officer to determine eligibilty for permanent residence. There is presently a limit of 10,200 persons who may be admitted as conditional entrants from the Eastern Hemisphere and 7,200 from the Western Hemisphere. It should be noted that most refugees from the Western Hemisphere who would otherwise seek conditional entry to the United States are precluded from doing so because of the statutory requirement that they be fleeing from a communist or communist-dominated country.

In addition to refugees admitted under the conditional entry provision, the Attorney General of the United States may, at his discretion, authorize the admission on a parole basis of refugees in an emergency situation who otherwise would not be admissible to the U.S. There is technically no limit to the number of parolees the Attorney General may admit to the U.S. at a given time. However, in practice, the Attorney General usually consults with Congress on the numbers who are to be admitted. This authority was originally used for individuals in emergency circumstances. But, in recent years, it has been used to admit large groups of refugees from Cuba, Hungary, and Indochina. In all of these cases, the refugees met the criteria for conditional entry, but their numbers were far greater than the annual quota. In the case of Cuba, there was no conditional entry provision under the immigration regulations governing the Western Hemisphere. The parole authority has also been used to admit a small number of refugees from non-communist countries, including 1,000 Uganda Asians, 400 Chilean heads of households, plus family members and 2200 Latin Americans from Argentina, mostly Chilean, along with their family members. After two years' residence, each parolee's status is reviewed. An Act of

Congress is required to change their status to that of permanent resident.

A large network of private U.S. voluntary agencies provides sponsorships and resettlement assistance for refugees.

In addition to its contributions to the United Nation's High Commissioner for Refugees, and the International Committee of the Red Cross, the United States operates several refugee programs of its own. The U.S. Refugee Program, which began in 1952, assists refugees from Eastern Europe (Albania, Bulgaria, Czecheslovakia, Hungary, Poland, Romania and the Soviet Union) who seek asylum in Western Europe, the Middle East and elsewhere. Its objective is to provide supplementary assistance for the temporary care and maintenance of these refugees, and facilitate their permanent resettlement as promptly as possible. About 8,000 refugees are registered for USRP assistance through voluntary agencies.

The Far East Refugee Program, established in 1954, assists Chinese refugees from Hong Kong through temporary care and maintenance, local resettlement and counseling for emigration to the U.S., for those refugees who qualify under the conditional entry provisions of U.S. immigration law. This program is administered through contracts with several voluntary agencies, including: Catholic Relief Services (CRS), Hong Hong Christian Service (HKCS), the International Rescue Committee and International Social Service (ISS).

A program for assistance to Soviet Jews, who resettle in Israel, was authorized by the U.S. Congress in 1972. The funds are administered in the Department of State by the Office of Rights and Humanitarian Affairs. U.S. funds to Israel for this program are channeled through the United Israel Appeal, a voluntary agency. The expenditures cover care and resettlement assistance, scholarships, vocational training, etc.

The U.S. also operates educational and training programs for refugee students from Southern Africa, both in the U.S. and in independent African countries.●

## TRIBUTE TO ALBERT C. CARRINGTON

### HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. STARK. Mr. Speaker, I would like to take a moment to pay tribute to Albert C. Carrington on the occasion of his 90th birthday.

While most of us are content to rest on our laurels after a few years of public and community service, Mr. Carrington continues his extraordinary service to the communities of the east San Francisco Bay area. He is presently serving as a director of the East Bay Municipal Utility District having only recently completed 31 years service with this agency. Twenty of those thirty-three years on the board of directors were spent as vice president of the board.

In addition to this remarkable record of leadership, he has also served his community in a wide variety of other ways:

As a member of the Alameda City Council.

As president of the Alameda Chamber of Commerce.

As president of the board of trustees of the Alameda Hospital.

As associate guardian of Bethel 12 of Job's Daughters.

As a member of the American Red Cross and the Community Chest.

Mr. Carrington is a respected member of the business community and served his associates there as a director of the California State Manufacturers' Association.

## PLIGHT OF THE PEOPLE OF EAST EUROPE

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. DERWINSKI. Mr. Speaker, Rev. Joseph Prunskis, director of information of the Lithuanian American Council, is a leading and most knowledgeable spokesman for the Lithuanian people held captive in the U.S.S.R.

In a featured column in the April 11 Chicago Tribune, Rev. Prunskis discusses the plight of the people of Eastern Europe. The conditions there have existed for too long. It is time for the Carter administration to direct the necessary attention to the most consistent application of our national foreign policy in this area in regard to human rights. The article follows:

EAST EUROPE: A JAIL THAT KEEPS PEOPLE IN, KNOWLEDGE OUT

The population of American workers is like a colorful mosaic composed of representatives of many nations. A considerable part of the immigrants came to this country without family, having in mind to establish themselves first, to entrench themselves in stable work, to assure proper income and lodging, and then to bring their families from overseas.

There is no problem with those who came from Western Europe. However, workers who emigrated from Central and Eastern Europe, from the countries now dominated by totalitarian Communists, meet insurmountable difficulties when they try to bring their families from behind the Iron Curtain. For 10, 20, 30, and more years they continue to send official invitations, as required by the Soviet Union, but to no avail.

Many of these workers in the United States are getting old. They need their wives and children to alleviate the hardships of their old age, their loneliness. However, the Soviet Union pays no attention to the humanitarian requirements and denies permission to reunite family members with their husbands and fathers. That is a kind of oppression which is unknown in the more civilized world.

The living and working conditions for legal immigrants in the U.S. are mostly excellent—much better than in the majority of the countries throughout the world. Because of such working opportunities, the U.S. has problems with persons who enter illegally—in contrast with the situation in the Soviet Union, which has to construct walls of shame to keep its people inside, as if in jail.

Therefore, American workers are against communism. Making good incomes, American workers can travel, even to foreign countries. Many of them indicate an interest in their roots and take vacation trips to the lands from which they or their ancestors came. Unfortunately if they travel to countries which are under the control of a Communist dictatorship, their movements are considerably restricted. For example, those who travel to Lithuania are allowed to stop only in the capital, Vilnius, to take part in conducted tours directed by Soviet guides. They might be allowed to visit a few other cities such as the second largest city, Kaunas, historical Trakai, or the resort, Druskininkai, but they do not have the freedom to visit their home towns, the graves of their parents, or even their relatives residing in rural areas.

The propaganda of the Soviet Union speaks about great progress, prosperity, and unanimous acceptance of the Communist system by the inhabitants. However, such restrictions on travel are indicative that this is a lie, that Moscow is ashamed to show under what oppression the people are living and how many difficulties they encounter in their daily life.

Goodhearted and prosperous American workers are eager to help their old, sickly parents or other living in their native lands. However, last year the Soviet Union imposed such enormous customs duties on gift parcels that payments greatly exceed the value of articles sent. And this is a real robbery of people who want to brighten what may be the last days of their parents or other relatives. No other civilized country has such adverse regulations concerning gift parcels. Only Moscow practices such injustice.

Many workers in the U.S. have high school educations or more. In many instances they would like to brighten the horizons of knowledge of their relatives and friends in the countries from which they came. If those countries are behind the Iron Curtain, American workers cannot send books, magazines, or newspapers printed in the free world. Not even prayerbooks or religious articles can be sent. They are confiscated at the border.

These and many other restrictions are against the civilized norms of life. They are against humanitarian principles and even against the United Nations Declaration of Human Rights, against the Helsinki Agreement, and against International postal stipulations. They show under what oppression people are living behind the Iron Curtain and how Moscow acts against the humanitarian aspirations of the American workers.●

## TRIBUTE TO MAYOR BOB BROWNE

### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. EDWARDS of California. Mr. Speaker, I want to bring to my colleagues attention the outstanding record of Mayor Bob Browne of Milpitas, Calif. Bob is retiring this year after serving the people of Milpitas for 12 years. Bob was first elected to the Milpitas City Council in 1966, reelected in 1970 and 1974. He was Vice-Mayor 1970–76 and Mayor 1968–70 and 1976–78. He has been President of the Santa Clara County Inter-City Council and is presently Vice-President of the Santa Clara County Planning Policy Committee.

Bob has been serving the people of Milpitas since 1966 when Milpitas was a small town of 19,831 souls. He has helped to shape the future of this fine city until today it is a thriving, alive and proud city of 32,800. Bob goes back to the time when Calaveras Boulevard was a two lane country road and ranchers were driving cattle down Calaveras across the expanse of railroad track and into the

railyards. Mayor Browne's administration has seen the completion of city hall, the Calaveras Overpass, new fire stations and the geological survey of the hills.

We certainly can be justified in honoring Bob for his accomplishments with the planned growth of Milpitas. However, I believe Bob's major contributions have to do with his sense of commitment to service to the people of his community. Bob said it best, "I'm proud to have been a part of the overall long-term planning process, but most importantly to lend in whatever way I can to the stability and decorum of the conduct of the government's business." I know Bob is looking forward to more time with his wife, Victoria and their 5 children and two grandchildren. I'm sure that Bob will continue to serve and participate in community affairs as private citizen, Bob Browne.●

I am most pleased to join Mr. Carrington's many admirers and associates in honoring this fine record of service. It sets a standard for excellence that few, if any, can match.●

## HOW A BILL BECOMES LAW

### HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. MICHEL. Mr. Speaker, those of us in Congress are so close to the legislative process that we sometimes forget that the way in which a bill becomes law is not clearly understood by many of our fellow Americans. I receive inquiries from time to time about this question. I have prepared a brief summary of the process in the hope it may be useful to anyone who is interested in the machinery of Government.

At this point in the RECORD, then, I would like to insert, "How a Bill Becomes Law":

HOW A BILL BECOMES LAW

Ours is a government "of the people, by the people, for the people." It is not a pure democracy. It is a republic in a democracy. It is a representative democracy.

Our laws are the embodiment of the wishes and wants, the ideas and ideals of the American people as expressed through their representatives in the Congress: 435 in the House of Representatives and 100 in the Senate. Any Member of the House or Senate may introduce a bill embodying a proposed law or revision of existing laws, at any time when his respective house is in session. When introduced the bill will be entered in the Journal of the house, and the title and sponsors of it printed in the Congressional Record of that day.

Each bill introduced is assigned a number by the Clerk of each house and referred to the Committee having jurisdiction over the subject matter by the presiding officer, i.e., the Speaker of the House or the President of the Senate. Copies of the bill are printed by the Government Printing Office and made publicly available from the congressional document rooms.

Acting through its Chairman, the Committee decides whether a bill should be taken up by the full Committee or referred to a subcommittee for its initial consideration. The Committee's deliberations are the most important stage of the legislative process. It is here that detailed study of the proposed legislation is made and where people are given the right to present their views in public hearings. When the Chairman has set a date for public hearings it is generally announced by publication in the Congressional Record.

Copies of the bill under consideration by the Committee are customarily sent to the Executive Departments or agencies concerned with the subject matter for their official views to be presented in writing or by oral testimony before the Committee. The number of witnesses, pro and con, heard by the Committee is largely dictated by the importance of the proposed legislation and degree of public interest in it.

The transcript of the testimony taken is available for inspection in the individual Committee offices. Quite frequently, dependent on the importance of the subject matter, the Committee hearings on a bill are printed and copies made available to the public.

After conclusion of the hearings the Committee proceeds to meet in Executive Sessions (sometimes referred to as "mark-up" sessions) to discuss the bill in detail and to consider such amendments as any member of the Committee may wish to offer. Each Committee has its own rules of procedure but they generally conform to the rules of the House itself.

By a formal vote of the Committee, it decides whether to report favorably to the House the bill with or without Committee amendments. A Committee report must accompany the bill, setting forth the nature of the bill and reasons for the Committee's recommended approval. The Report sets forth specifically the Committee amendments and, in compliance of the rules of each house, indicate all changes the bill would make in existing law. Any Committee member, individually or jointly, may file additional supplemental or minority views to accompany the majority Committee Report. The Committee Report, accompanying the bill, is viewed by the courts and the administrative agencies as the most important document as to the intent of the Congress in the proposed legislation.

When a bill is reported by the Committee it is placed on the appropriate calendar. The Majority Leadership decides how and when the bill will be considered on the Floor. In general the bill is allowed to remain on the Calendar for several days to enable members to become acquainted with its provisions.

In both the House and the Senate innumerable measures of relatively minor importance are disposed of by unanimous consent. In the Senate, where debate is unlimited, major bills are brought up on motion of the Majority leader and in the House are called up under a privileged resolution reported from the Rules Committee which fixes the limits of debate and whether amendments may be offered from the Floor. The Rules Committee resolution is called a "rule" for consideration of a bill: a "closed rule" if no amendments are allowed, as is generally the case in tax bills, and an "open rule" if amendments can be offered.

While there are distinct differences between the House and Senate procedures, in general a bill is debated at length with the proponents and opponents presenting their views to acquaint the membership, as well as the general public, with the issues involved, and all with a view to arriving at the consensus. Amendments are frequently offered to make the measure more in conformity with the judgment of the majority. In the course of consideration of the bill there are various parliamentary motions, in both the House and the Senate, which may be offered to determine the sentiment of the members with respect to the pending legislation. The measure may be postponed to some future date or referred back to the Committee which reported it.

With the conclusion of general debate and the reading of the bill for amendment, the question becomes whether the House or Senate, as the case may be, will pass the bill in its final form. The Congressional Record of the day the bill was under consideration will set forth the verbatim debate on the bill and the disposition made of such amendments as were offered.

With the passage of a bill by either body it is messaged to the other with the request that they concur. If no action has been taken on the like measure by the body receiving the message the bill is usually referred to the appropriate committee of that body for consideration. Hearings are again held and the bill reported for Floor action. On relatively minor or non-controversial matters the Senate or the House accepts the measure as messaged to it by the other body.

If there are substantial differences between the House and Senate versions of a given bill, the measure is sent to a Conference Committee which is appointed by the Speaker and the President of the Senate from the ranking Committee members of each body having original jurisdiction over the bill. The object of the Conference Committee is to adjust the differences between the two bodies, and to report back to each its agreement. The report of the Conference Committee must be in writing and signed by those agreeing thereto and must have the signature of the majority of the conferees of each house.

The report of the Conference Committee cannot be amended and must be accepted or rejected by each house as it stands. If either house finds itself unable to accept the Conference Committee report a further conference is usually requested.

When the bill has been agreed to in identical form by both bodies a copy of the bill is enrolled, signed by the Speaker and by the President of the Senate, for presentation to the President. The bill becomes law with the President's signature of approval, or it may become law without his signature if he does not return it, with his objections, to the Congress within 10 days of its presentation to him.

If the President should return the bill, with his objections, to the originating body of the Congress, his "veto" may be overridden by two-thirds of both the House and Senate respectively voting to have the measure become law the President's objections to the contrary notwithstanding. Both the President's veto Message and a record of the vote of the individual members in the motion to override are required by the Constitution to be set forth in the Congressional Record.●

## ST. MARY'S RIVER WILDERNESS AREA

### HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. WHITEHURST. Mr. Speaker, today I received a copy of House Joint Resolution No. 134, which was enacted by the 1978 Virginia General Assembly. It was sent to me by Mr. Joseph H. Holleman, Jr., clerk of the Virginia House of Delegates and keeper of the rolls of the State.

Since the St. Mary's River area is one of those which would be placed in the National Wilderness Preservation System under the provisions of H.R. 7970

which I have introduced, I am particularly gratified by this endorsement, and I am pleased to take this opportunity to share it with my colleagues.

Thank you, Mr. Speaker.

The resolution follows:

HOUSE JOINT RESOLUTION No. 134

Whereas, the Commonwealth of Virginia has long recognized the great blessings with which it is endowed by nature, and has regularly sought to protect those natural resources for the continuing benefit of the people; and

Whereas, an opportunity has been called to the attention of the General Assembly of Virginia to permanently assure to the people the continuing benefits now available on publicly-owned wild land which possesses extraordinary natural values in the way of scenery, sparkling clear streams, native trout fishery, wildlife habitat, rare mountain bogs and forested mountains offering high-quality outdoor recreation; and

Whereas, this tract of land, identified as the St. Mary's River Watershed, consisting of approximately 10,695 acres, is located entirely on the George Washington National Forest in Augusta County, Virginia and involves no privately owned lands; and

Whereas, this tract of land contains the St. Mary's River which has been studied and recommended to the Virginia General Assembly for inclusion in the State's Scenic River System, due to its outstanding scenic, natural and recreation values; and

Whereas, by placing this area in the National Wilderness Preservation System under the Wilderness Act (while remaining a part of the National Forest System and administered by the U.S. Forest Service), we can assure that the outstanding natural values of the area will be maintained unimpaired for present and future generations, while at the same time permitting their free use by citizens in ways which neither consume these values, nor interfere with the normal processes of nature; and

Whereas, encroachment on this area by the construction of roads, buildings, dams and logging or any other works of man prohibited under the Wilderness Act, would severely damage its existing high-quality natural values and so deprive the public of their increasingly scarce, natural benefits; and

Whereas, the protection of the Wilderness Act will enhance the valuable scientific study of nature's process in this area, by preventing intrusions upon, or interruptions of such studies, and will assure a genetic reserve of plant and animal species which elsewhere are being altered or destroyed; and

Whereas, increasingly, men and women are seeking temporary escape from the noise and speed of machines, the confines of steel and concrete, and the crowding of man upon man, protective wilderness, as herein proposed, will provide a place for humans to go when the need is felt to be in harmony with nature and to know its peace and beauty, undisturbed by the things of man; and

Whereas, wilderness, being the unique heritage of the American nation, the character of its people having been forged in the wilderness, it is fitting that appropriate portions of our remaining wilderness be preserved as a reminder of that heritage, just as we commonly preserve other historic shrines for the benefit and enjoyment of the people; now, therefore, be it

Resolved by the House of Delegates, the Senate concurring, That the Virginia General Assembly hereby endorses the placement in the National Wilderness Preservation System under the Wilderness Act, the St. Mary's River Watershed, located within the George Washington National Forest, in Augusta County, on the west slope of the Blue Ridge Mountains, about twenty miles south of Staunton, consisting of approximately 10,695 acres; and, be it

Resolved further, That the Clerk of the House of Delegates is hereby instructed to send copies of this resolution to the members of the Virginia Congressional Delegation and all other members of the 95th Congress, to actively support and vote for appropriate legislation to this end.●

## CONSUMER-CHOICE HEALTH PLAN

### HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. WAXMAN. Mr. Speaker, yesterday's CONGRESSIONAL RECORD contained the first installment of an article in the March 30 issue of the New England Journal of Medicine on Dr. Alain Enthoven's consumer choice health plan proposal. The second installment is reprinted below. While I do not at this time endorse Dr. Enthoven's plan, I feel it is a fresh approach to the national health insurance issue which deserves our serious study.

The article follows:

CONSUMER-CHOICE HEALTH PLAN

INCREMENTAL CHANGES

CCHP is not an immediate radical replacement of the present financing system with a whole new one. Rather, it is a set of incremental "mid-course corrections" in the present financing and regulatory system, each one of which is comparatively simple and familiar taken by itself, but whose cumulative effect is intended to alter the system radically, but gradually and voluntarily, in the long run. CCHP corrects the faulty incentives produced by present government programs, and seeks to correct known market imperfections. CCHP preserves flexibility. If these changes do not produce the desired results, after experience has been gained, more corrections can be made. CCHP recognizes that there is no "final solution" to problems of health-care financing, as experience in countries with national health insurance clearly demonstrates. CCHP is not necessarily incompatible with some proposed regulation such as health planning, hospital-cost controls and physician-fee controls. On the contrary, CCHP would increase the effectiveness of the Health Systems Agencies by giving them the incentives to control costs that they now lack. But CCHP would reduce the need for such regulation and, if successful, render it superfluous.

CCHP can be thought of in two related parts: a financing system and rules to create a socially desirable competition.

THE FINANCING SYSTEM

Actuarial Categories and Costs—The flow of government subsidies to individuals to help them buy health insurance in CCHP would be based on actuarial cost—i.e., the average total costs of covered benefits (insured and out-of-pocket) in the base year, updated each year by a suitable price index, for persons in each actuarial category. For persons not covered by Medicare, the actuarial categories might be the single and familiar three-part structure of "individual, individual plus one dependent, and individual plus two or more dependents." However, in a competitive situation, this classification might give health plans too strong an incentive to attempt to select preferred risks by design of benefit packages (e.g., good maternity benefits to attract healthy young families), location of facilities, or emphasis in specialty mix (strength in pediatrics, weakness in cardiology). Carried to a logical extreme, such a system could lead to poor care for high-risk persons (though open enrollment—described below—would always assure the right of high-risk persons to join any qualified health plan). So experience might show that a more complex set of actuarial categories is desirable. For example, the three-part structure might be supplemented by special categories for persons 45 to 54 and 55 to 64 years of age. In the limit, one might go to a structure based on individual age (e.g., in 10-year steps) and sex, though I doubt whether this development would be necessary.

Actuarial cost would also reflect location, because there are large regional differentials in health-care costs. The appropriate geographic unit would probably be the state. However, regional differences in real per capita subsidies based on actuarial cost would be phased out over a decade.

The appropriate price index for updating actuarial cost would probably be the "all-services" component of the Consumer Price Index.

The average per capita cost for physician and hospital care in 1978 will be about $200 for people under 19, and about $475 for people 19 to 64 years of age (1976 costs inflated to 1978 at 10.3 per cent per year[20]). So, if these are the covered benefits, actuarial cost for a "typical" family of four would be $1,350. A higher or lower amount, based on a more or less generous benefit package and on broad political judgments about priorities, might be chosen.

In CCHP, premiums would be set by each health plan for each actuarial category and benefit package, on the basis of its own costs and its own judgment of what it can charge in a competitive market. Thus, persons in more costly actuarial categories would pay higher premiums. This step is desirable because we want competing plans to be motivated to serve them and is made socially acceptable by giving such people higher subsidies through tax credits or vouchers.

Tax Credit—The present exclusion of health-insurance premium contributions by employers (and health and welfare funds) from employees' taxable incomes, and the deductibility of individual premium contributions, would be replaced by a refundable tax credit equal to 60 percent of the family's actuarial cost. (The deductibility of direct medical expenses would be limited to those in excess of 10 percent of adjusted gross income instead of today's 3 percent.) Tax withholdings would be adjusted to make the taxpayer's estimated net remaining tax liability at the end of the year approximate zero, so that he would not have to wait until the end of the year to receive the cash. Employers and health and welfare funds would continue contributing to employee health insurance under existing agreements, but they would report such contributions as part of total pay on W–2 forms. The tax credit is allowed only if spent on premiums for a qualified health plan. To the ordinary employee, then, CCHP would appear initially as a quite simple change in the way in which his compensation is taxed.

Consider a typical employee with a family whose employer is contributing, say, $1,600 per year to his health-benefits plan. Under CCHP, his personal income tax would increase roughly $480 because of the inclusion of the $1,600 in taxable income (assuming he is in the 30 per cent bracket), and decline by $810 (60 per cent of the estimated actuarial cost of $1,350) because of the tax credit, for a net saving of $330. The $330 would, of course, have to be financed through some combination of special taxes and federal general revenues. The importance of the change is that the $810 subsidy would be the same for people with higher and lower incomes (above the welfare line), and that the

subsidy would not increase if the employee chose a more costly health plan.

The choice of 60 per cent of actuarial cost as the level for the tax credit is based on a judgment that balances a number of factors.

The first is that if the tax credit were too low (e.g., below 25 per cent of actuarial cost), many low-risk employee groups might find it advantageous to form a nonqualified plan and stay out of the system. For the incentive effects of the system to be pervasive, most people must find it to their interest to join qualified plans. Moreover, a tax credit at least as large as the tax benefit in the present law for middle-income taxpayers would help to minimize political opposition to the change from that group. Secondly, if the tax credit were too high (e.g., over 80 per cent of actuarial cost), the incentives of health plans to be truly efficient would be weakened. There would be no point in plans reducing premiums below the tax-credit level. But Medicare experience suggests that prepaid group practices can deliver comprehensive health-care services for an average of 73 per cent of the cost of their fee-for-service counterparts. Similarly, if the tax credit were too high, middle-class consumers would see too little of their own money going into premiums to be motivated to shop for or help form more efficient systems. A tax credit at 60 per cent of actuarial cost would limit the potential for people to manipulate the system to their advantage by taking a minimum-cost "catastrophic insurance" plan when they expected to be healthy, and then switching to a full-benefit plan when they anticipated elective surgical procedures or pregnancy. This level approximates the FEHBP, which has worked well. However, other levels could be chosen, depending on the availability of funds. For example, it could start at 30 per cent, with higher levels phased in as revenues permitted.

Vouchers for the Poor—The poor need more subsidy to assure their access to an acceptable plan. CCHP would provide them with a voucher usable only as a premium contribution to the qualified plan of their choice. It should be administered through the reformed cash-assistance welfare system proposed by the Carter Administration, or whatever program is chosen to assist low-income people. The value of the voucher should be related to family income on a sliding scale that preserves work incentives. Here is one example. The Carter Administration welfare reform would guarantee a family of four a minimum cash income of $4,200; the cash assistance would be reduced 50 cents for each dollar of earned income until it reached zero at a family income of $8,400 (the "cash assistance breakeven" point). Related to this, one could set the health-insurance premium voucher at $1,350 for a family with a total income, including cash assistance, of $4,200 (i.e., zero earned income), and phase it down to $810—the tax-credit level for nonpoor families—at a total income of $8,400. The result would be a "benefit-reduction rate" (i.e., the cents worth of cash assistance and voucher lost for each additional dollar earned of 56 per cent, which would not be inconsistent with the goal of preserving work incentives underlying the Administration's proposed welfare reform. (If the voucher exceeded the family's health-insurance premium, the extra money could be used to buy additional health benefits such as dentistry, or left on deposit to offset cost sharing.) The voucher system can be integrated with the tax system and the unemployment-insurance system.

To illustrate how the voucher system might work, support that the rate now in effect for childless couples in the California Public Employees' health-benefits plan were the rates in effect in CCHP. They include $55.88 per month for Kaiser Northern California, $73.17 for the Family Health Program, $92.00 for the United Foundations for Medical Care, $93.15 for Blue Cross-Blue Shield, and others. Suppose a couple were totally dependent on reformed welfare. Using the Administration's proposed amounts for welfare plus CCHP, they would receive a voucher worth $79.17 per month ($950 per year) for health premiums, and cash assistance of $183.33 per month ($2,200 per year). They could elect the Kaiser plan and have $23.29 per month left over for additional health benefits (such as copayments, dentistry and eyeglasses), elect Family Health Program and have $6 per month for such additional benefits, or elect the Foundations plan and have to contribute $12.83 per month out of their cash assistance. If, instead, their income were at or above the "cash assistance breakeven" for childless couples of $4,400, their voucher could be worth $47.50 per month, and they would have to contribute $8.38 per month of their own money to join Kaiser, or $44.50 to join the Foundations plan. (These numbers are illustrative; the actual voucher level might be different, depending on such factors as political judgments and regional cost levels, and I would expect competition to narrow the difference in premiums.)

Medicare would be retained for the aged, disabled and victims of end-stage renal disease. Eligibility would be expanded to all legal residents 65 years of age and over for Part A (institutional service) and Part B (physicians' services). The benefits should be expanded to conform to the benefits for the rest of the population. The 150-day limit on hospital days should be removed—in effect providing catastrophic coverage. Better still, an annual limit on out-of-pocket expenses on covered benefits by any individual subscriber should be enacted.

The most important change needed in Medicare is a freedom-of-choice provision that would permit any beneficiary to direct that the "Adjusted Average per Capita Cost" (AAPCC) to the Medicare program for people in his actuarial category be paid to the qualified plan of his choice in the form of a fixed prospective periodic payment. If done properly, this change would end the Medicare subsidy to those who choose a more costly system of care, and would permit beneficiaries to reap the benefit of their economizing choices in the form of reduced cost sharing or better benefits.
